

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

MILTON.*

BY THOMAS BABINGTON MACAULAY.

TOWARDS the close of the year 1823, Mr. Lemon, deputy keeper of the state papers, in the course of his researches among the presses of his office, met with a large Latin manuscript. With it were found corrected copies of the foreign despatches written by Milton, while he filled the office of Secretary, and several papers relating to the Popish Trials and the Rye-house Plot. The whole was wrapped up in an envelope, superscribed *To Mr. Skinner, Merchant*. On examination, the large manuscript proved to be the long lost *Essay on the Doctrines of Christianity*, which, according to Wood and Toland, Milton finished after the Restoration, and deposited with Cyriac Skinner. Skinner, it is well known, held the same political opinions with his illustrious friend. It is therefore probable, as Mr. Lemon conjectures, that he may have fallen under the suspicions of the government during that persecution of the Whigs which followed the dissolution of the Oxford parliament, and that, in consequence of a general seizure of his papers, this work may have been brought to the office in which it has been found. But whatever the adventures of the manuscript may have been, no doubt can exist that it is a genuine relic of the great poet.

Mr. Sumner, who was commanded by his Majesty to edit and translate the treatise, has acquitted himself of his task in a manner honorable to his talents and to his character. His version is not indeed very easy or elegant; but it is entitled to the praise of clearness and fidelity. His notes abound with interesting quotations, and have the rare merit of really elucidating the text. The preface is evidently the work of a sensible and candid man, firm in his own religious opinions, and tolerant towards those of others.

The book itself will not add much to the fame of Milton. It is, like all his Latin works, well written, though not exactly in the style

of the prize essays of Oxford and Cambridge. There is no elaborate imitation of classical antiquity, no scrupulous purity, none of the ceremonial cleanness which characterizes the diction of our academical Pharisees. The author does not attempt to polish and brighten his composition into the Ciceronian gloss and brilliancy. He does not in short sacrifice sense and spirit to pedantic refinements. The nature of his subject compelled him to use many words

"That would have made Quintilian stare and gasp."

But he writes with as much ease and freedom as if Latin were his mother tongue; and, where he is least happy, his failure seems to arise from the carelessness of a native, not from the ignorance of a foreigner. We may apply to him what Denham with great felicity says of Cowley. He wears the garb, but not the clothes of the ancients.

Throughout the volume are discernible the traces of a powerful and independent mind, emancipated from the influence of authority, and devoted to the search of truth. Milton professes to form his system from the Bible alone; and his digest of scriptural texts is certainly among the best that have appeared. But he is not always so happy in his inferences as in his citations.

Some of the heterodox doctrines which he avows seemed to have excited considerable amazement, particularly his Arianism, and his theory on the subject of polygamy. Yet we can scarcely conceive that any person could have read the *Paradise Lost* without suspecting him of the former; nor do we think that any reader, acquainted with the history of his life, ought to be much startled at the latter. The opinions which he has expressed respecting the nature of the Deity, the eternity of matter, and the observation of the Sabbath, might, we think, have caused more just surprise.

But we will not go into the discussion of these points. The book, were it far more orthodox or far more heretical than it is, would not much edify or corrupt the present genera-

* *Joannis Miltoni Angli, de Doctrina Christiana libri duo posthumus. A Treatise on Christian Doctrine, compiled from the Holy Scriptures alone. By JOHN MILTON, translated from the Original by Charles E. Sumner, M.A., etc. etc. 1835.*

tion. The men of our time are not to be converted or perverted by quartos. A few more days, and this essay will follow the *Defensio Populi*, to the dust and silence of the upper shelf. The name of its author, and the remarkable circumstances attending its publication, will secure to it a certain degree of attention. For a month or two it will occupy a few minutes of chat in every drawing-room; and a few columns in every magazine; and it will then, to borrow the elegant language of the play-bills, be withdrawn, to make room for the forthcoming novelties.

We wish however to avail ourselves of the interest, transient as it may be, which this work has excited. The dexterous Capuchins never choose to preach on the life and miracles of a saint, till they have awakened the devotional feelings of their auditors by exhibiting some relic of him, a thread of his garment, a lock of his hair, or a drop of his blood. On the same principle, we intend to take advantage of the late interesting discovery, and, while this memorial of a great and good man is still in the hands of all, to say something of his moral and intellectual qualities. Nor, we are convinced, will the severest of our readers blame us if, on an occasion like the present, we turn for a short time from the topics of the day, to commemorate, in all love and reverence, the genius and virtues of John Milton, the poet, the statesman, the philosopher, the glory of English literature, the champion and the martyr of English liberty.

It is by his poetry that Milton is best known; and it is of his poetry that we wish first to speak. By the general suffrage of the civilized world, his place has been assigned among the greatest masters of the art. His detractors, however, though outvoted, have not been silenced. There are many critics, and some of great name, who contrive in the same breath to extol the poems and to decry the poet. The works they acknowledge, considered in themselves, may be classed among the noblest productions of the human mind. But they will not allow the author to rank with those great men who, born in the infancy of civilization, supplied, by their own powers, the want of instruction, and, though destitute of models themselves, bequeathed to posterity models which defy imitation. Milton, it is said, inherited what his predecessors created; he lived in an enlightened age; he received a finished education; and we must therefore, if we would form a just estimate of his powers, make large deductions in consideration of these advantages.

We venture to say, on the contrary, paradoxical as the remark may appear, that no

poet has ever had to struggle with more unfavorable circumstances than Milton. He doubted, as he has himself owned, whether he had not been born "an age too late." For this notion Johnson has thought fit to make him the butt of much clumsy ridicule. The poet, we believe, understood the nature of his art better than the critic. He knew that his poetical genius derived no advantage from the civilization which surrounded him, or from the learning which he had acquired; and he looked back with something like regret to the ruder age of simple words and vivid impressions.

We think that, as civilization advances, poetry almost necessarily declines. Therefore, though we fervently admire those great works of imagination which have appeared in dark ages, we do not admire them the more, because they have appeared in dark ages. On the contrary, we hold that the most wonderful and splendid proof of genius is a great poem produced in a civilized age. We cannot understand why those who believe in that most orthodox article of literary faith, that the earliest poets are generally the best, should wonder at the rule as if it were the exception. Surely the uniformity of the phenomenon indicates a corresponding uniformity in the cause.

The fact is, that common observers reason from the progress of the experimental science to that of the imitative arts. The improvement of the former is gradual and slow. Ages are spent in collecting materials, ages more in separating and combining them. Even when a system has been formed, there is still something to add, to alter, or to reject. Every generation enjoys the use of a vast hoard bequeathed to it by antiquity, and transmits that hoard, augmented by fresh acquisitions, to future ages. In these pursuits, therefore, the first speculators lie under great disadvantages, and, even when they fail, are entitled to praise. Their pupils, with far inferior intellectual powers, speedily surpass them in actual attainments. Every girl who has read Mrs. Marcet's little dialogues on Political Economy could teach Montague or Walpole many lessons in finance. Any intelligent man may now, by resolutely applying himself for a few years to mathematics, learn more than the great Newton knew after half a century of study and meditation.

But it is not thus with music, with painting, or with sculpture. Still less is it thus with poetry. The progress of refinement rarely supplies these arts with better objects of imitation. It may indeed improve the instruments which are necessary to the mechanical

operations of the musician, the sculptor, and the painter. But language, the machine of the poet, is best fitted for his purpose in its rudest state. Nations, like individuals, first perceive, and then abstract. They advance from particular images to general terms. Hence the vocabulary of an enlightened society is philosophical, that of a half-civilized people is poetical.

This change in the language of men is partly the cause and partly the effect of a corresponding change in the nature of their intellectual operations, of a change by which science gains and poetry loses. Generalization is necessary to the advancement of knowledge; but particularly is indispensable to the creations of the imagination. In proportion as men know more and think more, they look less at individuals and more at classes. They therefore make better theories and worse poems. They give us vague phrases instead of images, and personified qualities instead of men. They may be better able to analyze human nature than their predecessors. But analysis is not the business of the poet. His office is to portray, not to dissect. He may believe in a moral sense, like Shaftesbury; he may refer all human actions to self-interest, like Helvetius; or he may never think about the matter at all. His creed on such subjects will no more influence his poetry, properly so called, than the notions which a painter may have conceived respecting the lacrymal glands, or the circulation of the blood, will affect the tears of his Niobe, or the blushes of his Aurora. If Shakespeare had written a book on the motives of human actions, it is by no means certain that it would have been a good one. It is extremely improbable that it would have contained half so much able reasoning on the subject as is to be found in the Fable of the Bees. But could Mandeville have created an Iago? Well as he knew how to resolve characters into their elements, would he have been able to combine those elements in such a manner as to make up a man, a real, living, individual man?

Perhaps no person can be a poet, or can even enjoy poetry, without a certain unsoundness of mind, if any thing which gives so much pleasure ought to be called unsoundness. By poetry we mean not all writing in verse, nor even all good writing in verse. Our definition excludes many metrical compositions which, on other grounds, deserve the highest praise. By poetry we mean the art of employing words in such a manner as to produce an illusion on the imagination, the art of doing by means of words what the painter does by means of colors. Thus the

greatest of poets has described it, in lines universally admired for the vigor and felicity of their diction, and still more valuable on account of the just notion which they convey of the art in which he excelled:

"As imagination bodies forth
The forms of things unknown, the poet's pen
Turns them to shapes, and gives to airy nothing
A local habitation and a name."

These are the fruits of the "fine frenzy" which he ascribes to the poet,—a fine frenzy doubtless, but still a frenzy. Truth, indeed, is essential to poetry; but it is the truth of madness. The reasonings are just; but the premises are false. After the first suppositions have been made, every thing ought to be consistent; but those first suppositions require a degree of credulity which almost amounts to a partial and temporary derangement of the intellect. Hence of all people children are the most imaginative. They abandon themselves without reserve to every illusion. Every image which is strongly presented to their mental eye produces on them the effect of reality. No man, whatever his sensibility may be, is ever affected by Hamlet or Lear, as a little girl is affected by the story of poor Red Riding-hood. She knows that it is all false, that wolves cannot speak, that there are no wolves in England. Yet in spite of her knowledge she believes; she weeps; she trembles; she dares not go into a dark room lest she should feel the teeth of the monster at her throat. Such is the despotism of the imagination over uncultivated minds.

In a rude state of society men are children with a greater variety of ideas. It is therefore in such a state of society that we may expect to find the poetical temperament in its highest perfection. In an enlightened age there will be much intelligence, much science, much philosophy, abundance of just classification and subtle analysis, abundance of wit and eloquence, abundance of verses, and even of good ones; but little poetry. Men will judge and compare; but they will not create. They will talk about the old poets, and comment on them, and to a certain degree enjoy them. But they will scarcely be able to conceive the effect which poetry produced on their ruder ancestors, the agony, the ecstasy, the plenitude of belief. The Greek Rhapsodists, according to Plato, could scarce recite Homer without falling into convulsions. The Mohawk hardly feels the scalping knife while he shouts his death-song. The power which the ancient bards of Wales and Germany exercised over their auditors seems to modern readers almost miraculous. Such feelings are very rare in a civilized community, and

most rare among those who participate most in its improvements. They linger longest among the peasantry.

Poetry produces an illusion on the eye of the mind, as a magic lantern produces an illusion on the eye of the body. And, as the magic lantern acts best in a dark room, poetry effects its purpose most completely in a dark age. As the light of knowledge breaks in upon its exhibitions, as the outlines of certainty become more and more definite, and the shades of probability more and more distinct, the hues and lineaments of the phantoms which the poet calls up grow fainter and fainter. We cannot unite the incompatible advantages of reality and deception, the clear discernment of truth and the exquisite enjoyment of fiction.

He who, in an enlightened and literary society, aspires to be a great poet, must first become a little child. He must take to pieces the whole web of his mind. He must unlearn much of that knowledge which has perhaps constituted hitherto his chief title to superiority. His very talents will be a hindrance to him. His difficulties will be proportioned to his proficiency in the pursuits which are fashionable among his contemporaries; and that proficiency, will in general be proportioned to the vigor and activity of his mind. And it is well if, after all his sacrifices and exertions, his works do not resemble a lisping man or a modern ruin. We have seen in our own time great talents, intense labor, and long meditation, employed in this struggle against the spirit of the age, and employed, we will not say, absolutely in vain, but with dubious success and feeble applause.

If these reasonings be just, no poet has ever triumphed over greater difficulties than Milton. He received a learned education; he was a profound and elegant classical scholar; he had studied all the mysteries of Rabbinical literature; he was intimately acquainted with every language of modern Europe, from which either pleasure or information was then to be derived. He was perhaps the only great poet of later times who has been distinguished by the excellence of his Latin verse. The genius of Petrarch was scarcely of the first order; and his poems in the ancient language, though much praised by those who have never read them, are wretched compositions. Cowley, with all his admirable wit and ingenuity, had little imagination; nor indeed do we think his classical diction comparable to that of Milton. The authority of Johnson is against us on this point. But Johnson had studied the bad writers of the middle ages till he had become utterly insensible to the Augustan elegance, and was as

ill qualified to judge between two Latin styles as a habitual drunkard to set up for a wine-taster.

Versification in a dead language is an exotic, a far-fetched, costly, sickly, imitation of that which elsewhere may be found in healthful and spontaneous perfection. The soils on which this rarity flourishes are in general as ill-suited to the production of vigorous native poetry as the flower-pots of a hot-house to the growth of oaks. That the author of the *Paradise Lost* should have written the *Epistle to Manso* was truly wonderful. Never before were such marked originality and such exquisite mimicry found together. Indeed in all the Latin poems of Milton the artificial manner indispensable to such works is admirably preserved, while, at the same time, his genius gives to them a peculiar charm, an air of nobleness and freedom, which distinguishes them from all other writings of the same class. They remind us of the amusements of those angelic warriors who composed the cohort of Gabriel:

"About him exercised heroic games
The unarmed youth of heaven. But o'er their heads
Celestial armory, shield, helm, and spear,
Hung high, with diamond flaming and with gold."

We cannot look upon the sportive exercises for which the genius of Milton ungirds itself, without catching a glimpse of the gorgeous and terrible panoply which it is accustomed to wear. The strength of his imagination triumphed over every obstacle. So intense and ardent was the fire of his mind, that it not only was not suffocated beneath the weight of fuel, but penetrated the whole superincumbent mass with its own heat and radiance.

It is not our intention to attempt any thing like a complete examination of the poetry of Milton. The public has long been agreed as to the merit of the most remarkable passages, the incomparable harmony of the numbers, and the excellence of that style, which no rival has been able to equal, and no parodist to degrade, which displays in their highest perfection the idiomatic powers of the English tongue, and to which every ancient and every modern language has contributed something of grace, of energy, or of music. In the vast field of criticism on which we are entering innumerable reapers have already put their sickles. Yet the harvest is so abundant that the negligent search of a straggling gleaner may be rewarded with a sheaf.

The most striking characteristic of the poetry of Milton is the extreme remoteness of the associations by means of which it acts on the reader. Its effect is produced, not so

much by what it expresses, as by what it suggests; not so much by the ideas which it directly conveys, as by other ideas which are connected with them. He electrifies the mind through conductors. The most unimaginative man must understand the *Iliad*. Homer gives him no choice, and requires from him no exertion, but takes the whole upon himself, and sets the images in so clear a light, that it is impossible to be blind to them. The works of Milton cannot be comprehended or enjoyed, unless the mind of the reader co-operate with that of the writer. He does not paint a finished picture, or play for a mere passive listener. He sketches, and leaves others to fill up the outline. He strikes the key-note, and expects his hearer to make out the melody.

We often hear of the magical influence of poetry. The expression in general means nothing: but, applied to the writings of Milton, it is most appropriate. His poetry acts like an incantation. Its merit lies less in its obvious meaning than in its occult power. There would seem, at first sight, to be no more in his words than in other words. But they are words of enchantment. No sooner are they pronounced, than the past is present and the distant near. New forms of beauty start at once into existence, and all the burial-places of the memory give up their dead. Change the structure of the sentence; substitute one synonyme for another, and the whole effect is destroyed. The spell loses its power; and he who should then hope to conjure with it would find himself as much mistaken as Cassim in the Arabian tale, when he stood crying, "Open Wheat," "Open Barley," to the door which obeyed no sound but "Open Sesame." The miserable failure of Dryden in his attempt to translate into his own diction some part of the *Paradise Lost*, is a remarkable instance of this.

In support of these observations we may remark, that scarcely any passages in the poems of Milton are more generally known or more frequently repeated than those which are little more than muster-rolls of names. They are not always more appropriate or more melodious than other names. But they are charmed names. Every one of them is the first link in a long chain of associated ideas. Like the dwelling-place of our infancy revisited in manhood, like the song of our country heard in a strange land, they produce upon us an effect wholly independent of their intrinsic value. One transports us back to a remote period of history. Another places us among the novel scenes and manners of a distant region. A third evokes

all the dear classical recollections of childhood, the school-room, the dog-eared Virgil, the holiday, and the prize. A fourth brings before us the splendid phantoms of chivalrous romance, the trophied lists, the embroidered housings, the quaint devices, the haunted forests, the enchanted gardens, the achievements of enamored knights, and the smiles of rescued princesses.

In none of the works of Milton is his peculiar manner more happily displayed than in *Allegro* and the *Penseroso*. It is impossible to conceive that the mechanism of language can be brought to a more exquisite degree of perfection. These poems differ from others, as a star of roses differs from ordinary rose water, the close packed essence from the thin diluted mixture. They are indeed not so much poems, as collections of hints, from each of which the reader is to make out a poem for himself. Every epithet is a text for a stanza.

The *Comus* and the *Samson Agonistes* are works which, though of very different merit, offer some marked points of resemblance. Both are lyric poems in the form of plays. There are perhaps no two kinds of composition so essentially dissimilar as the drama and the ode. The business of the dramatist is to keep himself out of sight, and to let nothing appear but his characters. As soon as he attracts notice to his personal feelings, the illusion is broken. The effect is as unpleasant as that which is produced on the stage by the voice of the prompter or the entrance of a scene-shifter. Hence it was, that the tragedies of Byron were his least successful performances. They resemble those pasteboard pictures invented by the friend of children, Mr. Newbury, in which a single movable head goes round twenty different bodies, so that the same face looks out upon us successively, from the uniform of a hussar, the furs of a judge, and the rags of a beggar. In all the characters, patriots and tyrants, haters and lovers, the frown and sneer of Harold were discernible in an instant. But this species of egotism, though fatal to the drama, is the inspiration of the ode. It is the part of the lyric poet to abandon himself, without reserve, to his own emotion.

Between these hostile elements many great men have endeavored to effect an amalgamation, but never with complete success. The Greek Drama, on the model of which the *Samson* was written, sprang from the Ode. The dialogue was grafted on the chorus, and naturally partook of its character. The genius of the greatest of the Athenian dramatists co-operated with the circumstances under which tragedy made its first appearance.

Æschylus was, head and heart, a lyric poet. In his time, the Greeks had far more intercourse with the East than in the days of Homer, and they had not yet acquired that immense superiority in war, in science, and in the arts, which, in the following generation, led them to treat the Asiatics with contempt. From the narrative of Herodotus it should seem that they still looked up, with the disciples, to Egypt and Assyria. At this period, accordingly, it was natural that the literature of Greece should be tintured with the Oriental style. And that style, we think, is discernible in the works of Pindar and *Æschylus*. The latter often reminds us of the Hebrew writers. The book of Job, indeed, in conduct and diction, bears a considerable resemblance to some of his dramas. Considered as plays, his works are absurd; considered as choruses, they are above all praise. If, for instance, we examine the address of Clytemnestra to Agamemnon on his return, or the description of the seven Argive chiefs, by the principles of dramatic writing, we shall instantly condemn them as monstrous. But if we forget the characters, and think only of the poetry, we shall admit that it has never been surpassed in energy and magnificence. Sophocles made the Greek drama as dramatic as was consistent with its original form. His portraits of men have a sort of similarity; but it is the similarity not of a painting, but of a bas-relief. It suggests a resemblance; but it does not produce an illusion. Euripides attempted to carry the reform further. But it was a task far beyond his powers, perhaps beyond any powers. Instead of correcting what was bad, he destroyed what was excellent. He substituted crutches for stilts, bad sermons for good odes.

Milton, it is well known, admired Euripides highly, much more highly than, in our opinion, Euripides deserved. Indeed the caresses which this partiality leads our countryman to bestow on "sad Electra's poet," sometimes remind us of the beautiful Queen of Fairyland kissing the long ears of Bottom. At all events, there can be no doubt that this veneration for the Athenian, whether just or not, was injurious to the *Samson Agonistes*. Had Milton taken *Æschylus* for his model, he would have given himself up to the lyric inspiration, and poured out profusely all the treasures of his mind, without bestowing a thought on those dramatic proprieties which the nature of the work rendered it impossible to preserve. In the attempt to reconcile things in their own nature inconsistent, he has failed, as every one else must have failed. We cannot identify ourselves with the characters,

as in a good play. We cannot identify ourselves with the poet, as in a good ode. The conflicting ingredients, like an acid and an alkali mixed, neutralize each other. We are by no means insensible to the merits of this celebrated piece, to the severe dignity of the style, the graceful and pathetic solemnity of the opening speech, or the wild and barbaric melody which gives so striking an effect to the choral passages. But we think it, we confess, the least successful effort of the genius of Milton.

The *Comus* is framed on the model of the Italian Masque, as the *Samson* is framed on the model of the Greek Tragedy. It is certainly the noblest performance of the kind which exists in any language. It is as far superior to the Faithful Shepherdess, as the Faithful Shepherdess is to the *Aminta*, or the *Aminta* to the *Pastor Fido*. It was well for Milton that he had here no Euripides to mislead him. He understood and loved the literature of modern Italy. But he did not feel for it the same veneration which he entertained for the remains of Athenian and Roman poetry, consecrated by so many lofty and endearing recollections. The faults, moreover, of his Italian predecessors were of a kind to which his mind had a deadly antipathy. He could stoop to a plain style, sometimes even to a bald style; but false brilliancy was his utter aversion. His muse had no objection to a russet attire; but she turned with disgust from the finery of Guarini, as tawdry and as paltry as the rags of a chimney-sweeper on May-day. Whatever ornaments she wears are of massive gold, not only dazzling to the sight, but capable of standing the severest test of the crucible.

Milton attended in the *Comus* to the distinction which he afterwards neglected in the *Samson*. He made his Masque what it ought to be, essentially lyrical, and dramatic only in semblance. He has not attempted a fruitless struggle against a defect inherent in the nature of that species of composition; and he has therefore succeeded, wherever success was not impossible. The speeches must be read as majestic soliloquies; and he who so reads them will be enraptured with their eloquence, their sublimity, and their music. The interruptions of the dialogue, however, impose a constraint upon the writer, and break the illusion of the reader. The finest passages are those which are lyric in form as well as in spirit. "I should much commend," says the excellent Sir Henry Wotton in a letter to Milton, "the tragical part if the lyrical did not ravish me with a certain Dorique delicacy in your songs and odes, whereunto, I must plain-

ly confess to you, I have seen yet nothing parallel in our language." The criticism was just. It is when Milton escapes from the shackles of the dialogue, when he is discharged from the labor of uniting two incongruous styles, when he is at liberty to indulge his choral raptures without reserve, that he rises even above himself. Then, like his own good Genius bursting from the earthly form and weeds of Thyrsis, he stands forth in celestial freedom and beauty; he seems to cry exultingly,

"Now my task is smoothly done,
I can fly or I can run."

to skim the earth, to soar above the clouds, to bathe in the Elysian dew of the rainbow, and to inhale the balmy smells of nard and cassia, which the musky winds of the zephyr scatter through the cedared alleys of the Hesperides.

There are several of the minor poems of Milton on which we would willingly make a few remarks. Still more willingly would we enter into a detailed examination of that admirable poem, the *Paradise Regained*, which, strangely enough, is scarcely ever mentioned except as an instance of the blindness of the parental affection which men of letters bear towards the offspring of their intellects. That Milton was mistaken in preferring this work, excellent as it is, to the *Paradise Lost*, we readily admit. But we are sure that the superiority of the *Paradise Lost* to the *Paradise Regained* is not more decided, than the superiority of the *Paradise Regained* to every poem which has since made its appearance. Our limits, however, prevent us from discussing the point at length. We hasten on to that extraordinary production which the general suffrage of critics has placed in the highest class of human compositions.

The only poem of modern times which can be compared with the *Paradise Lost* is the *Divine Comedy*. The subject of Milton, in some points, resembled that of Dante; but he has treated it in a widely different manner. We cannot, we think, better illustrate our opinion respecting our own great poet, than by contrasting him with the father of Tuscan literature.

The poetry of Milton differs from that of Dante, as the hieroglyphics of Egypt differed from the picture-writing of Mexico. The images which Dante employs speak for themselves; they stand simply for what they are. Those of Milton have a signification which is often discernible only to the initiated. Their value depends less on what they directly represent than on what they remotely suggest. However strange, however grotesque, may be

the appearance which Dante undertakes to describe, he never shrinks from describing it. He gives us the shape, the color, the sound, the smell, the taste; he counts the numbers; he measures the size. His similes are the illustrations of a traveller. Unlike those of other poets, and especially of Milton, they are introduced in a plain, business-like manner; not for the sake of any beauty in the objects from which they are drawn; not for the sake of any ornament which they may impart to the poem; but simply in order to make the meaning of the writer as clear to the reader as it is to himself. The ruins of the precipice which led from the sixth to the seventh circle of hell were like those of the rock which fell into the Adige on the south of Trent. The cataract of Phlegethon was like that of Aqua Cheta at the monastery of St. Benedict. The place where the heretics were confined in burning tombs resembled the vast cemetery of Arles.

Now let us compare with the exact details of Dante the dim intimations of Milton. We will cite a few examples. The English poet has never thought of taking the measure of Satan. He gives us merely a vague idea of vast bulk. In one passage the fiend lies stretched out huge in length, floating many a rood, equal in size to the earth-born enemies of Jove, or to the sea-monster which the mariner mistakes for an island. When he addresses himself to battle against the guardian angels, he stands like Teneriffe or Atlas: his stature reaches the sky. Contrast with these descriptions the lines in which Dante has described the gigantic spectre of Nimrod. "His face seemed to me as long and as broad as the ball of St. Peter's at Rome; and his other limbs were in proportion; so that the bank, which concealed him from the waist downwards, nevertheless showed so much of him, that three tall Germans would in vain have attempted to reach to his hair." We are sensible that we do no justice to the admirable style of the Florentine poet. But Mr. Cary's translation is not at hand; and our version, however rude, is sufficient to illustrate our meaning.

Once more, compare the lazar-house in the eleventh book of the *Paradise Lost* with the last ward of Malebolge in Dante. Milton avoids the loathsome details, and takes refuge in indistinct but solemn and tremendous imagery, Despair hurrying from couch to couch to mock the wretches with his attendance, Death shaking his dart over them, but, in spite of supplications, delaying to strike. What says Dante? "There was such a moan there as there would be if all the sick who, between July and September, are in the hospitals of Valdichiana, and of the Tuscan swamps, and

of Sardinia were in one pit together; and such a stench was issuing forth as is wont to issue from decayed limbs."

We will not take upon ourselves the invidious office of settling precedence between two such writers. Each in his own department is incomparable; and each, we may remark, has wisely, or fortunately, taken a subject adapted to exhibit his peculiar talent to the greatest advantage. The *Divine Comedy* is a personal narrative. Dante is the eye-witness and ear-witness of that which he relates. He is the very man who has heard the tormented spirits crying out for the second death, who has read the dusky characters on the portal within which there is no hope, who has hidden his face from the terrors of the Gorgon, who has fled from the hooks and the seething pitch of *Barbariccia* and *Draghignazzo*. His own hands have grasped the shaggy sides of *Lucifer*. His own feet have climbed the mountain of expiation. His own brow has been marked by the purifying angel. The reader would throw aside such a tale in incredulous disgust, unless it were told with the strongest air of veracity, with a sobriety even in its horrors, with the greatest precision and multiplicity in its details. The narrative of Milton in this respect differs from that of Dante, as the adventures of *Amadis* differ from those of *Gulliver*. The author of *Amadis* would have made his book ridiculous if he had introduced those minute particulars which give such a charm to the work of Swift, the nautical observations, the affected delicacy about names, the official documents transcribed at full length, and all the unmeaning gossip and scandal of the court, springing out of nothing, and tending to nothing. We are not shocked at being told that a man who lived, nobody knows when, saw many very strange sights, and we can easily abandon ourselves to the illusion of the romance. But when *Lemuel Gulliver*, surgeon, resident at *Rotherhithe*, tells us of pygmies and giants, dying islands, and philosophizing horses, nothing but such circumstantial touches could produce for a single moment a deception on the imagination.

Of all the poets who have introduced into their works the agency of supernatural beings, Milton has succeeded best. Here Dante decidedly yields to him: and as this is a point on which many rash and ill-considered judgments have been pronounced, we feel inclined to dwell on it a little longer. The most fatal error which a poet can possibly commit in the management of his machinery, is that of attempting to philosophize too much. Milton has been often censured for ascribing to spirits

many functions of which spirits must be incapable. But these objections, though sanctioned by eminent names, originate, we venture to say, in profound ignorance of the art of poetry.

What is a spirit? What are our own minds, the portion of spirit with which we are best acquainted? We observe certain phenomena. We cannot explain them into material causes. We therefore infer that there exists something which is not material. But of this something we have no idea. We can define it only by negatives. We can reason about it only by symbols. We use the word: but we have no image of the thing; and the business of poetry is with images, and not with words. The poet uses words indeed; but they are merely the instruments of his art, not its objects. They are the materials which he is to dispose in such a manner as to present a picture to the mental eye. And if they are not so disposed, they are no more entitled to be called poetry than a bale of canvas and a box of colors to be called a painting.

Logicians may reason about abstractions. But the great mass of men must have images. The strong tendency of the multitude in all ages and nations to idolatry can be explained on no other principle. The first inhabitants of Greece, there is reason to believe, worshipped one invisible Deity. But the necessity of having something more definite to adore produced, in a few centuries, the innumerable crowd of Gods and Goddesses. In like manner the ancient Persians thought it impious to exhibit the Creator under a human form. Yet even these transferred to the Sun the worship which, in speculation, they considered due only to the Supreme Mind. The History of the Jews is the record of a continued struggle between pure Theism, supported by the most terrible sanctions, and the strangely fascinating desire of having some visible and tangible object of adoration. Perhaps none of the secondary causes which Gibbon has assigned for the rapidity with which Christianity spread over the world, while Judaism scarcely ever acquired a proselyte, operated more powerfully than this feeling. God, the uncreated, the incomprehensible, the invisible, attracted few worshippers. A philosopher might admire so noble a conception: but the crowd turned away in disgust from words which presented no image to their minds. It was before Deity embodied in a human form, walking among men, partaking of their infirmities, leaning on their bosoms, weeping over their graves, slumbering in the manger, bleeding on the cross, that the prejudices of the Synagogue, and the doubts of the Academy,

and the pride of the portico, and the fasces of the Lictor, and the swords of thirty legions, were humbled in the dust. Soon after Christianity had achieved its triumph, the principle which had assisted it began to corrupt it. It became a new Paganism. Patron saints assumed the offices of household gods. St. George took the place of Mars. St. Elmo consoled the mariner for the loss of Castor and Pollux. The Virgin Mother and Cecilia succeeded to Venus and the Muses. The fascination of sex and loveliness was again joined to that of celestial dignity; and the homage of chivalry was blended with that of religion. Reformers have often made a stand against these feelings; but never with more than apparent and partial success. The men who demolished the images in Cathedrals have not always been able to demolish those which were enshrined in their minds. It would not be difficult to show that in politics the same rule holds good. Doctrines, we are afraid, must generally be embodied before they can excite a strong public feeling. The multitude is more easily interested for the most unmeaning badge, or the most insignificant name, than for the most important principle.

From these considerations, we infer that no poet, who should affect that metaphysical accuracy for the want of which Milton has been blamed, would escape a disgraceful failure. Still, however, there was another extreme, which, though far less dangerous, was also to be avoided. The imaginations of men are in a great measure under the control of their opinions. The most exquisite art of poetical coloring can produce no illusion, when it is employed to represent that which is at once perceived to be incongruous and absurd. Milton wrote in an age of philosophers and theologians. It was necessary, therefore, for him to abstain from giving such a shock to their understandings as might break the charm which it was his object to throw over their imaginations. This is the real explanation of the indistinctness and inconsistency with which he has often been reproached. Dr. Johnson acknowledges that it was absolutely necessary that the spirit should be clothed with material forms. "But," says he, "the poet should have secured the consistency of his system by keeping immateriality out of sight, and seducing the reader to drop it from his thoughts." This is easily said; but what if Milton could not seduce his readers to drop immateriality from their thoughts? What if the contrary opinion had so fully taken possession of the minds of men as to leave no room even for the half belief which poetry requires? Such we suspect to have been the

case. It was impossible for the poet to adopt altogether the material or the immaterial system. He therefore took his stand on the debatable ground. He left the whole in ambiguity. He has, doubtless, by so doing laid himself open to the charge of inconsistency. But, though philosophically in the wrong, we cannot but believe that he was poetically in the right. This task, which almost any other writer would have found impracticable, was easy to him. The peculiar art which he possessed of communicating his meaning circuitously through a long succession of associated ideas, and of intimating more than he expressed, enabled him to disguise those incongruities which he could not avoid.

Poetry which relates to the beings of another world ought to be at once mysterious and picturesque. That of Milton is so. That of Dante is picturesque indeed beyond any that was ever written. Its effect approaches to that produced by the pencil or the chisel. But it is picturesque to the exclusion of all mystery. This a fault on the right side, a fault inseparable from the plan of Dante's poem, which, as we have already observed, rendered the utmost accuracy of description necessary. Still it is a fault. The supernatural agents excite an interest; but it is not the interest which is proper to supernatural agents. We feel that we could talk to the ghosts and demons without any emotion of unearthly awe. We could, like Don Juan, ask them to supper, and eat heartily in their company. Dante's angels are good men with wings. His devils are spiteful ugly executioners. His dead men are merely living men in strange situations. The scene which passes between the poet and Farinata is justly celebrated. Still, Farinata in the burning tomb is exactly what Farinata would have been at an *auto da fe*. Nothing can be more touching than the first interview of Dante and Beatrice. Yet what is it, but a lovely woman chiding, with sweet austere composure, the lover for whose affection she is grateful, but whose vices she reprobates? The feelings which give the passage its charm would suit the streets of Florence as well as the summit of the Mount of Purgatory.

The spirits of Milton are unlike those of almost all other writers. His fiends, in particular, are wonderful creations. They are not metaphysical abstractions. They are not wicked men. They are not ugly beasts. They have no horns, no tails, none of the fee-faw-fum of Tasso and Klopstock. They have just enough in common with human nature to be intelligible to human beings. Their characters are, like their forms, marked by a certain dim resemblance to those of men, but exaggerated

to gigantic dimensions, and veiled in mysterious gloom.

Perhaps the gods and dæmons of Æschylus may best bear a comparison with the angels and devils of Milton. The style of the Athenian had, as we have remarked, something of the Oriental character; and the same peculiarity may be traced in his mythology. It has nothing of the amenity and elegance which we generally find in the superstitions of Greece. All is rugged, barbaric, and colossal. The legends of Æschylus seem to harmonize less with the fragrant groves and graceful porticoes in which his countrymen paid their vows to the God of Light and Goddess of Desire, than with those huge and grotesque labyrinths of eternal granite in which Egypt enshrined her mystic Osiris, or in which Hindostan still bows down to her seven-headed idols. His favorite gods are those of the elder generation, the sons of heaven and earth, compared with whom Jupiter himself was a stripling and an upstart, the gigantic Titans, and the inexorable Furies. Foremost among his creations of this class stands Prometheus, half fiend, half redeemer, the friend of man, the sullen and implacable enemy of heaven. Prometheus bears undoubtedly a considerable resemblance to the Satan of Milton. In both we find the same impatience of control, the same ferocity, the same unconquerable pride. In both characters also are mingled, though in very different proportions, some kind and generous feelings. Prometheus, however, is hardly superhuman enough. He talks too much of his chains and his uneasy posture: he is rather too much depressed and agitated. His resolution seems to depend on the knowledge which he possesses that he holds the fate of his torturer in his hands, and that the hour of his release will surely come. But Satan is a creature of another sphere. The might of his intellectual nature is victorious over the extremity of pain. Amidst agonies which cannot be conceived without horror, he deliberates, resolves, and even exults. Against the sword of Michael, against the thunder of Jehovah, against the flaming lake, and the marl burning with solid fire, against the prospect of an eternity of unintermitted misery, his spirit bears up unbroken, resting on its own innate energies, requiring no support from anything external, nor even from hope itself.

To return for a moment to the parallel which we have been attempting to draw between Milton and Dante, we would add that the poetry of these great men has in a considerable degree taken its character from their moral qualities. They are not egotists. They rarely obtrude their idiosyncrasies on

their readers. They have nothing in common with those modern beggars for fame, who extorts a pittance from the compassion of the inexperienced by exposing the nakedness and sores of their minds. Yet it would be difficult to name two writers whose works have been more completely, though undesignedly, colored by their personal feelings.

The character of Milton was peculiarly distinguished by loftiness of spirit; that of Dante by intensity of feeling. In every line of the Divine Comedy we discern the asperity which is produced by pride struggling with misery. There is perhaps no work in the world so deeply and uniformly sorrowful. The melancholy of Dante was no fantastic caprice. It was not, as far as at this distance of time can be judged, the effect of external circumstances. It was from within. Neither love nor glory, neither the conflicts of earth nor the hope of heaven could dispel it. It turned every consolation and every pleasure into its own nature. It resembled that noxious Sardinian soil of which the intense bitterness is said to have been perceptible even in its honey. His mind was, in the noble language of the Hebrew poet, "a land of darkness as darkness itself, and where the light was as darkness." The gloom of his characters discolours all the passions of men, and all the face of nature, and tinges with its own livid hue the flowers of Paradise and the glories of the eternal throne. All the portraits of him are singularly characteristic. No person can look on the features, noble even to ruggedness, the dark furrows of the cheek, the haggard and woful stare of the eye, the sullen and contemptuous curve of the lip, and doubt that they belong to a man too proud and too sensitive to be happy.

Milton was, like Dante, a statesman and a lover; and, like Dante, he had been unfortunate in ambition and in love. He had survived his health and his sight, the comforts of his home, and the prosperity of his party. Of the great men by whom he had been distinguished at his entrance into life, some had been taken away from the evil to come; some had carried into foreign climates their unconquerable hatred of oppression; some were pining in dungeons; and some had poured forth their blood on scaffolds. Venal and licentious scribblers, with just sufficient talent to clothe the thoughts of a pandar in the style of a bellman, were now the favorite writers of the Sovereign and of the public. It was a loathsome herd, which could be compared to nothing so fitly as to the rabble of Comus, grotesque monsters, half bestial, half human, dropping with wine, bloated with gluttony, and reeling in obscene dances.

Amidst these that fair Muse was placed, like the chaste lady of the Masque, lofty, spotless, and serene, to be chattered at, and pointed at, and grinned at, by the whole rout of Satyrs and Goblins. If ever despondency and asperity could be excused in any man, they might have been excused in Milton. But the strength of his mind overcame every calamity. Neither blindness, nor gout, nor age, nor penury, nor domestic afflictions, nor political disappointments, nor abuse, nor proscription, nor neglect, had power to disturb his sedate and majestic patience. His spirits do not seem to have been high, but they were singularly equable. His temper was serious, perhaps stern; but it was a temper which no sufferings could render sullen or fretful. Such as it was when, on the eve of great events, he returned from his travels, in the prime of health and manly beauty, loaded with literary distinctions, and glowing with patriotic hopes, such it continued to be when, after having experienced every calamity which is incident to our nature, old, poor, sightless and disgraced, he retired to his hovel to die.

Hence it was that, though he wrote the *Paradise Lost* at a time of life when images of beauty and tenderness are in general beginning to fade, even from those minds in which they have not been effaced by anxiety and disappointment, he adorned it with all that is most lovely and delightful in the physical and in the moral world. Neither Theocritus nor Ariosto had a finer or a more healthful sense of the pleasantness of external objects, or loved better to luxuriate amidst sunbeams and flowers, the songs of nightingales, the juice of summer fruits, and the coolness of shady fountains. His conception of love united all the voluptuousness of the Oriental harem, and all the gallantry of the chivalric tournament, with all the pure and quiet affection of an English fireside. His poetry reminds us of the miracles of Alpine scenery. Nooks and dells, beautiful as fairy land, are embosomed in its most rugged and gigantic elevations. The roses and myrtles bloom unchilled on the verge of the avalanche.

Traces, indeed, of the peculiar character of Milton may be found in all his works; but it is most strongly displayed in the *Sonnets*. Those remarkable poems have been undervalued by critics who have not understood their nature. They have no epigrammatic point. There is none of the ingenuity of Filicaja in the thought, none of the hard and brilliant enamel of Petrarch in the style. They are simple but majestic records of the feelings of the poet; as little tricked out for the public eye as his diary would have been. A

victory, an expected attack upon the city, a momentary fit of depression or exultation, a jest thrown out against one of his books, a dream which for a short time restored to him that beautiful face over which the grave had closed forever, led him to musings, which, without effort, shaped themselves into verse. The unity of sentiment and severity of style which characterize these little pieces remind us of the Greek Anthology, or perhaps still more of the *Collects* of the English Liturgy. The noble poem on the *Massacres of Piedmont* is strictly a *Collect* in verse.

The *Sonnets* are more or less striking according as the occasions which gave birth to them are more or less interesting. But they are, almost without exception, dignified by a sobriety and greatness of mind to which we know not where to look for a parallel. It would, indeed, be scarcely safe to draw any decided inferences as to the character of a writer from passages directly egotistical. But the qualities which we have ascribed to Milton, though perhaps most strongly marked in those parts of his works which treat of his personal feelings, are distinguishable in every page, and impart to all his writings, prose and poetry, English, Latin, and Italian, a strong family likeness.

His public conduct was such as was to be expected from a man of a spirit so high and of an intellect so powerful. He lived at one of the most memorable eras in the history of mankind, at the very crisis of the great conflict between Oromasdes and Arimanes, liberty and despotism, reason and prejudice. That great battle was fought for no single generation, for no single land. The destinies of the human race were staked on the same cast with the freedom of the English people. Then were first proclaimed those mighty principles which have since worked their way into the depths of the American forests, which have roused Greece from the slavery and degradation of two thousand years, and which, from one end of Europe to the other, have kindled an unquenchable fire in the hearts of the oppressed, and loosed the knees of the oppressors with an unwonted fear.

Of those principles, then struggling for their infant existence, Milton was the most devoted and eloquent literary champion. We need not say how much we admire his public conduct. But we cannot disguise from ourselves that a large portion of his countrymen still think it unjustifiable. The civil war, indeed, has been more discussed, and is less understood, than any event in English history. The friends of liberty la-

bored under the disadvantage of which the lion in the fable complained so bitterly. Though they were the conquerors, their enemies were the painters. As a body, the Roundheads had done their utmost to decry and ruin literature; and literature was even with them, as, in the long run, it always is with its enemies. The best book on their side of the question is the charming narrative of Mrs. Hutchinson. May's History of the Parliament is good; but it breaks off at the most interesting crisis of the struggle. The performance of Ludlow is foolish and violent: and most of the later writers who have espoused the same cause, Oldmixon for instance, and Catherine Macaulay, have, to say the least, been more distinguished by zeal than either by candor or by skill. On the other side are the most authoritative and the most popular historical works in our language, that of Clarendon, and that of Hume. The former is not only ably written and full of valuable information, but has also an air of dignity and sincerity which makes even the prejudices and errors with which it abounds respectable. Hume, from whose fascinating narrative the great mass of the reading public are still contented to take their opinions, hated religion so much that he hated liberty for having been allied with religion, and has pleaded the cause of tyranny with the dexterity of an advocate while affecting the impartiality of a judge.

The public conduct of Milton must be approved or condemned according as the resistance of the people to Charles the First shall appear to be justifiable or criminal. We shall therefore make no apology for dedicating a few pages to the discussion of that interesting and most important question. We shall not argue it on general grounds. We shall not recur to those primary principles from which the claim of any government to the obedience of its subjects is to be deduced. We are entitled to that vantage ground; but we will relinquish it. We are, on this point, so confident of superiority, that we are not unwilling to imitate the ostentatious generosity of those ancient knights, who vowed to joust without helmet or shield against all enemies, and to give their antagonists the advantage of sun and wind. We will take the naked constitutional question. We confidently affirm, that every reason which can be urged in favor of the Revolution of 1688 may be urged with at least equal force in favor of what is called the Great Rebellion.

In one respect, only, we think, can the warmest admirers of Charles venture to say that he was a better sovereign than his son.

He was not, in name and profession, a Papist; we say in name and profession, because both Charles himself and his creature Laud, while they abjured the innocent badges of Popery, retained all its worst vices, a complete subjection of reason to authority, a weak preference of form to substance, a childish passion for mummeries, an idolatrous veneration for the priestly character, and, above all, a merciless intolerance. This, however, we waive. We will concede that Charles was a good Protestant; but we say that his Protestantism does not make the slightest distinction between his case and that of James.

The principles of the Revolution have often been grossly misrepresented, and never more than in the course of the present year. There is a certain class of men, who, while they profess to hold in reverence the great names and great actions of former times, never look at them for any other purpose than in order to find in them some excuse for existing abuses. In every venerable precedent they pass by what is essential, and take only what is accidental: they keep out of sight what is beneficial, and hold up to public imitation all that is defective. If, in any part of any great example, there be anything unsound, these flesh flies detect it with an unerring instinct, and dart upon it with a ravenous delight. If some good end has been attained in spite of them, they feel, with their prototype, that

"Their labor must be to pervert that end,
And out of good still to find means of evil."

To the blessings which England has derived from the Revolution these people are utterly insensible. The expulsion of a tyrant, the solemn recognition of popular rights, liberty, security, toleration, all go for nothing with them. One sect there was, which, from unfortunate temporary causes, it was thought necessary to keep under close restraint. One part of the empire there was so unhappily circumstanced, that at that time its misery was necessary to our happiness, and its slavery to our freedom. These are the parts of the Revolution which the politicians of whom we speak, love to contemplate, and, which seem to them not indeed to vindicate, but in some degree to palliate, the good which it has produced. Talk to them of Naples, of Spain, or of South America. They stand forth zealous for the doctrine of Divine Right which has now come back to us, like a thief from transportation, under the *alias* of Legitimacy. But mention the miseries of Ireland. Then William is a hero. Then Somers and Shrewsbury are great men. Then the Revolution is a glorious era. The very same persons

who, in this country, never omit an opportunity of reviving every wretched Jacobite slander respecting the Whigs of that period, have no sooner crossed St. George's Channel than they begin to fill their bumpers to the glorious and immortal memory. They may truly boast that they look not at men, but at measures. So that evil be done, they care not who does it; the arbitrary Charles, or the liberal William, Ferdinand the Catholic, or Frederic the Protestant. On such occasions their deadliest opponents may reckon upon their candid construction. The bold assertions of these people have of late impressed a large portion of the public with an opinion that James the Second was expelled simply because he was a Catholic, and that the Revolution was essentially a Protestant Revolution.

But this certainly was not the case; nor can any person who has acquired more knowledge of the history of those times than is to be found in Goldsmith's Abridgment believe that, if James had held his own religious opinions without wishing to make proselytes, or if, wishing even to make proselytes, he had contented himself with exerting only his constitutional influence for that purpose, the Prince of Orange would ever have been invited over. Our ancestors, we suppose, knew their own meaning; and, if we may believe them, their hostility was primarily not to popery, but to tyranny. They did not drive out a tyrant because he was a Catholic; but they excluded Catholics from the crown, because they thought them likely to be tyrants. The ground on which they, in their famous resolution, declared the throne vacant, was this, "that James had broken the fundamental laws of the kingdom." Every man, therefore, who approves of the Revolution of 1688 must hold that the breach of fundamental laws on the part of the sovereign justifies resistance. The question, then, is this: Had Charles the First broken the fundamental laws of England?

No person can answer in the negative, unless he refuses credit, not merely to all the accusations brought against Charles by his opponents, but to the narratives of the warmest Royalists, and to the confessions of the King himself. If there be any truth in any historian of any party who has related the events of that reign, the conduct of Charles, from his accession to the meeting of the Long Parliament, had been a continued course of oppression and treachery. Let those who applaud the Revolution, and condemn the Rebellion, mention one act of James the Second to which a parallel is not to be found in the history of his father. Let them lay their

fingers on a single article in the Declaration of Right, presented by the two Houses to William and Mary, which Charles is not acknowledged to have violated. He had, according to the testimony of his own friends, usurped the functions of the legislature, raised taxes without the consent of parliament, and quartered troops on the people in the most illegal and vexatious manner. Not a single session of parliament had passed without some unconstitutional attack on the freedom of debate; the right of petition was grossly violated; arbitrary judgments, exorbitant fines, and unwarranted imprisonments were grievances of daily occurrence. If these things do not justify resistance, the Revolution was treason; if they do, the Great Rebellion was laudable.

But, it is said, why not adopt milder measures? Why, after the King had consented to so many reforms, and renounced so many oppressive prerogatives, did the parliament continue to rise in their demands at the risk of provoking a civil war? The ship-money had been given up. The Star Chamber had been abolished. Provision had been made for the frequent convocation and secure deliberation of parliaments. Why not pursue an end confessedly good by peaceable and regular means? We recur again to the analogy of the Revolution. Why was James driven from the throne? Why was he not retained upon conditions? He too had offered to call a free parliament and to submit to its decision all the matters in dispute. Yet we are in the habit of praising our forefathers, who preferred a revolution, a disputed succession, a dynasty of strangers, twenty years of foreign and intestine war, a standing army, and a national debt, to the rule, however restricted, of a tried and proved tyrant. The Long Parliament acted on the same principle and is entitled to the same praise. They could not trust the King. He had no doubt passed salutary laws; but what assurance was there that he would not break them? He had renounced oppressive prerogatives; but where was the security that he would not resume them? The nation had to deal with a man whom no tie could bind, a man who made and broke promises with equal facility, a man whose honor had been a hundred times pawned, and never redeemed.

Here, indeed, the Long Parliament stands on still stronger ground than the Convention of 1688. No action of James can be compared to the conduct of Charles with respect to the Petition of Right. The Lords and Commons present him with a bill in which the constitutional limits of his power are marked out.

He hesitates; he evades; at last he bargains to give his assent for five subsidies. The bill receives his solemn assent; the subsidies are voted; but no sooner is the tyrant relieved, than he returns at once to all the arbitrary measures which he had bound himself to abandon, and violates all the clauses of the very Act which he had been paid to pass.

For more than ten years the people had seen the rights which were theirs by a double claim, by immemorial inheritance and by recent purchase, infringed by the perfidious king who had recognized them. At length circumstances compelled Charles to summon another parliament: another chance was given to our fathers: were they to throw it away as they had thrown away the former? Were they again to be cozened by *le Roi le veut*? Were they again to advance their money on pledges which had been forfeited over and over again? Were they to lay a second Petition of Right at the foot of the throne, to grant another lavish aid in exchange for another unmeaning ceremony, and then to take their departure, till, after ten years more of fraud and oppression, their prince should again require a supply, and again repay it with a perjury? They were compelled to choose whether they would trust a tyrant or conquer him. We think that they chose wisely and nobly.

The advocates of Charles, like the advocates of other malefactors against whom overwhelming evidence is produced, generally decline all controversy about the facts, and content themselves with calling testimony to character. He had so many private virtues! And had James the Second no private virtues? Was Oliver Cromwell, his bitterest enemies themselves being judges, destitute of private virtues? And what, after all, are the virtues ascribed to Charles? A religious zeal, not more sincere than that of his son, and fully as weak and narrow-minded, and a few of the ordinary household decencies which half the tombstones in England claim for those who lie beneath them. A good father! A good husband! Ample apologies indeed for fifteen years of persecution, tyranny and falsehood!

We charge him with having broken his coronation oath; and we are told that he kept his marriage vow! We accuse him of having given up his people to the merciless inflictions of the most hot-headed and hard-hearted of prelates; and the defence is, that he took his little son on his knee and kissed him! We censure him for having violated the articles of the Petition of Right, after having, for good and valuable consideration, promised to observe them; and we are informed that he

was accustomed to hear prayers at six o'clock in the morning! It is to such considerations as these, together with his Vandyke dress, his handsome face, and his peaked beard, that he owes, we verily believe, most of his popularity with the present generation.

For ourselves, we own that we do not understand the common phrase, a good man, but a bad king. We can as easily conceive a good man and an unnatural father, or a good man and a treacherous friend. We cannot, in estimating the character of an individual, leave out of our consideration his conduct in the most important of all human relations; and if in that relation we find him to have been selfish, cruel, and deceitful, we shall take the liberty to call him a bad man, in spite of all his temperance at table, and all his regularity at chapel.

We cannot refrain from adding a few words respecting a topic on which the defenders of Charles are fond of dwelling. If, they say, he governed his people ill, he at least governed them after the example of his predecessors. If he violated their privileges, it was because those privileges had not been accurately defined. No act of oppression has ever been imputed to him which has not a parallel in the annals of the Tudors. This point Hume has labored, with an art which is as discreditable in a historical work as it would be admirable in a forensic address. The answer is short, clear, and decisive. Charles had assented to the Petition of Right. He had renounced the oppressive powers said to have been exercised by his predecessors, and he had renounced them for money. He was not entitled to set up his antiquated claims against his own recent release.

The arguments are so obvious, that it may seem superfluous to dwell upon them. But those who have observed how much the events of that time are misrepresented and misunderstood will not blame us for stating the case simply. It is a case of which the simplest statement is the strongest.

The enemies of the Parliament, indeed, rarely choose to take issue on the great points of the question. They content themselves with exposing some of the crimes and follies to which public commotions necessarily give birth. They bewail the unmerited fate of Strafford. They execrate the lawless violence of the army. They laugh at the Scriptural names of the preachers. Major-generals fleecing their districts; soldiers revelling on the spoils of a ruined peasantry; upstarts, enriched by the public plunder taking possession of the hospitable firesides and hereditary trees of the old gentry; boys smashing the

beautiful windows of cathedrals; Quakers riding naked through the market-place; Fifth-monarchy men shouting for King Jesus; agitators lecturing from the tops of tubs on the fate of Agag; all these, they tell us, were the offspring of the Great Rebellion.

Be it so. We are not careful to answer in this matter. These charges, were they infinitely more important, would not alter our opinion of an event which alone has made us to differ from the slaves who crouch beneath despotic sceptres. Many evils, no doubt, were produced by the civil war. They were the price of our liberty. Has the acquisition been worth the sacrifice? It is the nature of the Devil of tyranny to tear and rend the body which he leaves. Are the miseries of continued possession less horrible than the struggles of the tremendous exorcism?

If it were possible that a people brought up under an intolerant and arbitrary system could subvert that system without acts of cruelty and folly, half the objections to despotic power would be removed. We should, in that case, be compelled to acknowledge that it at least produces no pernicious effects on the intellectual and moral character of a nation. We deplore the outrages which accompany revolutions. But the more violent the outrages, the more assured we feel that a revolution was necessary. The violence of those outrages will always be proportioned to the ferocity and ignorance of the people; and the ferocity and ignorance of the people will be proportioned to the oppression and degradation under which they have been accustomed to live. Thus it was in our civil war. The heads of the church and state reaped only that which they had sown. The government had prohibited free discussion: it had done its best to keep the people unacquainted with their duties and their rights. The retribution was just and natural. If our rulers suffered from popular ignorance, it was because they had themselves taken away the key of knowledge. If they were assailed with blind fury, it was because they had exacted an equally blind submission.

It is the character of such revolutions that we always see the worst of them at first. Till men have been some time free, they know not how to use their freedom. The natives of wine countries are generally sober. In climates where wine is a rarity intemperance abounds. A newly liberated people may be compared to a northern army encamped on the Rhine or the Xeres. It is said that, when soldiers in such a situation first find themselves able to indulge without restraint in such a rare and expensive luxury, nothing is to be

seen but intoxication. Soon, however, plenty teaches discretion; and, after wine has been for a few months their daily fare, they become more temperate than they had ever been in their own country. In the same manner, the final and permanent fruits of liberty are wisdom, moderation and mercy. Its immediate effects are often atrocious crimes, conflicting errors, skepticism on points the most clear, dogmatism on points the most mysterious. It is just at this crisis that its enemies love to exhibit it. They pull down the scaffolding from the half-finished edifice: they point to the flying dust, the falling bricks, the comfortless rooms, the frightful irregularity of the whole appearance; and then ask in scorn where the promised splendor and comfort is to be found. If such miserable sophisms were to prevail there would never be a good house or a good government in the world.

Ariosto tells a pretty story of a fairy, who, by some mysterious law of her nature, was condemned to appear at certain seasons in the form of a foul and poisonous snake. Those who injured her during the period of her disguise were forever excluded from participation in the blessings which she bestowed. But to those who, in spite of her loathsome aspect, pitied and protected her, she afterwards revealed herself in the beautiful and celestial form which was natural to her, accompanied their steps, granted all their wishes, filled their houses with wealth, made them happy in love and victorious in war. Such a spirit is Liberty. At times she takes the form of a hateful reptile. She grovels, she hisses, she stings. But woe to those who in disgust shall venture to crush her! And happy are those who, having dared to receive her in her degraded and frightful shape, shall at length be rewarded by her in the time of her beauty and her glory!

There is only one cure for the evils which newly acquired freedom produces; and that cure is freedom. When a prisoner first leaves his cell he cannot bear the light of day: he is unable to discriminate colors, or recognize faces. But the remedy is not to remand him into his dungeon, but to accustom him to the rays of the sun. The blaze of truth and liberty may at first dazzle and bewilder nations which have become half blind in the house of bondage. But let them gaze on, and they will soon be able to bear it. In a few years men learn to reason. The extreme violence of opinions subsides. Hostile theories correct each other. The scattered elements of truth cease to contend, and begin to coalesce. And at length a system of justice and order is educes out of the chaos.

Many politicians of our time are in the habit of laying it down as a self-evident proposition, that no people ought to be free till they are fit to use their freedom. The maxim is worthy of the fool in the old story who resolved not to go into the water till he had learnt to swim. If men are to wait for liberty till they become wise and good in slavery, they may indeed wait forever.

Therefore it is that we decidedly approve of the conduct of Milton and the other wise and good men who, in spite of much that was ridiculous and hateful in the conduct of their associates, stood firmly by the cause of Public Liberty. We are not aware that the poet has been charged with personal participation in any of the blamable excesses of that time. The favorite topic of his enemies is the line of conduct which he pursued with regard to the execution of the King. Of that celebrated proceeding we by no means approve. Still we must say, in justice to the many eminent persons who concurred in it, and in justice more particularly to the eminent person who defended it, that nothing can be more absurd than the imputations which, for the last hundred and sixty years, it has been the fashion to cast upon the Regicides. We have, throughout, abstained from appealing to first principles. We will not appeal to them now. We recur again to the parallel case of the Revolution. What essential distinction can be drawn between the execution of the father and the deposition of the son? What constitutional maxim is there which applies to the former and not to the latter? The King can do no wrong. If so, James was as innocent as Charles could have been. The minister only ought to be responsible for the acts of the Sovereign. If so, why not impeach Jefferies and retain James? The person of a King is sacred. Was the person of James considered sacred at the Boyne? To discharge cannon against an army in which a King is known to be posted is to approach pretty near to regicide. Charles, too, it should always be remembered, was put to death by men who had been exasperated by the hostilities of several years, and who had never been bound to him by any other tie than that which was common to them with all their fellow-citizens. Those who drove James from his throne, who seduced his army, who alienated his friends, who first imprisoned him in his palace, and then turned him out of it, who broke in upon his very slumbers by imperious messages, who pursued him with fire and sword from one part of the empire to another, who hanged, drew, and quartered his adherents, and attainted his innocent heir, were his nephew and

his two daughters. When we reflect on all these things, we are at a loss to conceive how the same persons who, on the fifth of November, thank God for wonderfully conducting his servant William, and for making all opposition fall before him until he became our King and Governor, can, on the thirtieth of January, contrive to be afraid that the blood of the Royal Martyr may be visited on themselves and their children.

We disapprove, we repeat, of the execution of Charles; not because the constitution exempts the King from responsibility, for we know that all such maxims, however excellent, have their exceptions; nor because we feel any peculiar interest in his character, for we think that his sentence describes him with perfect justice as "a tyrant, a traitor, a murderer, and a public enemy;" but because we are convinced that the measure was most injurious to the cause of freedom. He whom it removed was a captive and a hostage: his heir, to whom the allegiance of every Royalist was instantly transferred, was at large. The Presbyterians could never have been perfectly reconciled to the father: they had no such rooted enmity to the son. The great body of the people, also, contemplated that proceeding with feelings which, however unreasonable, no government could safely venture to outrage.

But though we think the conduct of the Regicides blamable, that of Milton appears to us in a very different light. The deed was done. It could not be undone. The evil was incurred; and the object was to render it as small as possible. We censure the chiefs of the army for not yielding to the popular opinion; but we cannot censure Milton for wishing to change that opinion. The very feeling which would have restrained us from committing the act would have led us, after it had been committed, to defend it against the ravings of servility and superstition. For the sake of public liberty, we wish that the thing had not been done, while the people disapproved of it. But, for the sake of public liberty, we should also have wished the people to approve of it when it was done. If anything more were wanting to the justification of Milton, the book of Salmasius would furnish it. That miserable performance is now with justice considered only as a beacon to word-catchers, who wish to become statesmen. The celebrity of the man who refuted it, the "*Æneæ magni dextra*," gives it all its fame with the present generation. In that age the state of things was different. It was not then fully understood how vast an interval separates the mere classical scholar from the polit-

ical philosopher. Nor can it be doubted that a treatise which, bearing the name of so eminent a critic, attacked the fundamental principles of all free governments, must, if suffered to remain unanswered, have produced a most pernicious effect on the public mind.

We wish to add a few words relative to another subject, on which the enemies of Milton delight to dwell, his conduct during the administration of the Protector. That an enthusiastic votary of liberty should accept office under a military usurper seems, no doubt, at first sight, extraordinary. But all the circumstances in which the country was then placed were extraordinary. The ambition of Oliver was of no vulgar kind. He never seems to have coveted despotic power. He at first fought sincerely and manfully for the parliament, and never deserted it, till it had deserted its duty. If he dissolved it by force, it was not till he found that the few members who remained after so many deaths, secessions, and expulsions, were desirous to appropriate to themselves a power which they held only in trust, and to inflict upon England the curse of a Venetian oligarchy. But even when thus placed by violence at the head of affairs, he did not assume unlimited power. He gave the country a constitution far more perfect than any which had at that time been known in the world. He reformed the representative system in a manner which has extorted praise even from Lord Clarendon. For himself he demanded indeed the first place in the commonwealth; but with powers scarcely so great as those of a Dutch stadtholder, or an American president. He gave the parliament a voice in the appointment of ministers, and left to it the whole legislative authority, not even reserving to himself a veto on its enactments; and he did not require that the chief magistracy should be hereditary in his family. Thus far, we think, if the circumstances of the time and the opportunities which he had of aggrandizing himself be fairly considered, he will not lose by comparison with Washington or Bolivar. Had his moderation been met with corresponding moderation, there is no reason to think that he would have overstepped the line which he had traced for himself. But when he found that his parliaments questioned the authority under which they met, and that he was in danger of being deprived of the restricted power which was absolutely necessary to his personal safety, then, it must be acknowledged, he adopted a more arbitrary policy.

Yet, though we believe that the intentions of Cromwell were at first honest, though we believe that he was driven from the noble

course which he had marked out for himself by the almost irresistible force of circumstances, though we admire, in common with all men of all parties, the ability and energy of his splendid administration, we are not pleading for arbitrary and lawless power, even in his hands. We know that a good constitution is infinitely better than the best despot. But we suspect, that at the time of which we speak the violence of religious and political enmities rendered a stable and happy settlement next to impossible. The choice lay, not between Cromwell and liberty, but between Cromwell and the Stuarts. That Milton chose well, no man can doubt who fairly compares the events of the protectorate with those of the thirty years which succeeded it, the darkest and most disgraceful in the English annals. Cromwell was evidently laying, though in an irregular manner, the foundations of an admirable system. Never before had religious liberty and the freedom of discussion been enjoyed in a greater degree. Never had the national honor been better upheld abroad, or the seat of justice better filled at home. And it was rarely that any opposition which stopped short of open rebellion provoked the resentment of the liberal and magnanimous usurper. The institutions which he had established, as set down in the Instrument of Government, and the Humble Petition and Advice, were excellent. His practice, it is true, too often departed from the theory of these institutions. But, had he lived a few years longer, it is probable that his institutions would have survived him, and that his arbitrary practice would have died with him. His power had not been consecrated by ancient prejudices. It was upheld only by his great personal qualities. Little, therefore, was to be dreaded from a second protector, unless he was also a second Oliver Cromwell. The events which followed his decease are the most complete vindication of those who exerted themselves to uphold his authority. His death dissolved the whole frame of society. The army rose against the parliament, the different corps of the army against each other. Sect raved against sect. Party plotted against party. The Presbyterians, in their eagerness to be revenged on the Independents, sacrificed their own liberty, and deserted all their old principles. Without casting one glance on the past, or requiring one stipulation for the future, they threw down their freedom at the feet of the most frivolous and heartless of tyrants.

Then came those days, never to be recalled without a blush, the days of servitude without loyalty and sensuality without love, of dwarfish talents and gigantic vices, the paradise of

cold hearts and narrow minds, the golden age of the coward, the bigot, and the slave. The King cringed to his rival that he might trample on his people, sank into a viceroy of France, and pocketed, with complacent infamy, her degrading insults, and her more degrading gold. The caresses of harlots, and the jests of buffoons, regulated the policy of the state. The government had just ability enough to deceive, and just religion enough to persecute. The principles of liberty were the scoff of every grinning courtier, and the Anathema Maranatha of every fawning dean. In every high place, worship was paid to Charles and James, Belial and Moloch; and England propitiated those obscene and cruel idols with the blood of her best and bravest children. Crime succeeded to crime, and disgrace to disgrace, till the race accursed of God and man was a second time driven forth, to wander on the face of the earth, and to be a by-word and a shaking of the head to the nations.

Most of the remarks which we have hitherto made on the public character of Milton, apply to him only as one of a large body. We shall proceed to notice some of the peculiarities which distinguished him from his contemporaries. And, for that purpose, it is necessary to take a short survey of the parties into which the political world was at that time divided. We must premise, that our observations are intended to apply only to those who adhered, from a sincere preference, to one or to the other side. In days of public commotion, every faction, like an Oriental army, is attended by a crowd of camp-followers, an useless and heartless rabble, who prowl round its line of march in the hope of picking up something under its protection, but desert it in the day of battle, and often join to exterminate it after a defeat. England, at the time of which we are treating, abounded with fickle and selfish politicians, who transferred their support to every government as it rose, who kissed the hand of the King in 1640, and spat in his face in 1649, who shouted with equal glee when Cromwell was inaugurated in Westminster Hall, and when he was dug up to be hanged at Tyburn, who dined on calves' heads, or stuck up oak-branches, as circumstances altered, without the slightest shame or repugnance. These we leave out of the account. We take our estimate of parties from those who really deserved to be called partisans.

We would speak first of the Puritans, the most remarkable body of men, perhaps, which the world has ever produced. The odious and ridiculous parts of their character lie on the

surface. He that runs may read them; nor have there been wanting attentive and malicious observers to point them out. For many years after the Restoration they were the theme of unmeasured invective and derision. They were exposed to the utmost licentiousness of the press and of the stage, at the time when the press and the stage were most licentious. They were not men of letters; they were as a body, unpopular; they could not defend themselves; and the public would not take them under its protection. They were therefore abandoned, without reserve, to the tender mercies of the satirists and dramatists. The ostentatious simplicity of their dress, their sour aspect, their nasal twang, their stiff posture, their long graces, their Hebrew names, the Scriptural phrases which they introduced on every occasion, their contempt of human learning, their detestation of polite amusements, were indeed fair game for the laughers. But it is not from the laughers alone that the philosophy of history is to be learnt. And he who approaches this subject should carefully guard against the influence of that potent ridicule which has already misled so many excellent writers.

"Ecco il fonte del riso, ed ecco il rio
Che mortali perigli in se contiene:
Eor qui tener a fren nostro dealo,
Ed esser cauti molto a noi conviene."

Those who roused the people to resistance, who directed their measures through a long series of eventful years, who formed, out of the most unpromising materials, the finest army that Europe had ever seen, who trampled down King, Church, and Aristocracy, who, in the short intervals of domestic sedition and rebellion, made the name of England terrible to every nation on the face of the earth, were no vulgar fanatics. Most of their absurdities were mere external badges, like the signs of freemasonry, or the dresses of friars. We regret that these badges were not more attractive. We regret that a body to whose courage and talents mankind has owed inestimable obligations had not the lofty elegance which distinguished some of the adherents of Charles the First, or the easy good-breeding for which the court of Charles the Second was celebrated. But, if we must make our choice, we shall, like Bassanio in the play, turn from the specious caskets which contain only the Death's head and the Fool's head, and fix on the plain leaden chest which conceals the treasure.

The Puritans were men whose minds had derived a peculiar character from the daily contemplation of superior beings and eternal interests. Not content with acknowledging,

in general terms, an overruling Providence, they habitually ascribed every event to the will of the Great Being, for whose power nothing was too vast, for whose inspection nothing was too minute. To know him, to serve him, to enjoy him, was with them the great end of existence. They rejected with contempt the ceremonious homage which other sects substituted for the pure worship of the soul. Instead of catching occasional glimpses of the Deity through an obscuring veil, they aspired to gaze full on his intolerable brightness, and to commune with him face to face. Hence originated their contempt for terrestrial distinctions. The difference between the greatest and the meanest of mankind seemed to vanish, when compared with the boundless interval which separated the whole race from him on whom their own eyes were constantly fixed. They recognized no title to superiority but his favor; and, confident of that favor, they despised all the accomplishments and all the dignities of the world. If they were unacquainted with the works of philosophers and poets, they were deeply read in the oracles of God. If their names were not found in the registers of heralds, they were recorded in the Book of Life. If their steps were not accompanied by a splendid train of menials, legions of ministering angels had charge over them. Their palaces were houses not made with hands; their diadems crowns of glory which should never fade away. On the rich and the eloquent, on nobles and priests they looked down with contempt: for they esteemed themselves rich in a more precious treasure, and eloquent in a more sublime language, nobles by the right of an earlier creation, and priests by the imposition of a mightier hand. The very meanest of them was a being to whose fate a mysterious and terrible importance belonged, on whose slightest action the spirits of light and darkness looked with anxious interest, who had been destined, before heaven and earth were created, to enjoy a felicity which should continue when heaven and earth should have passed away. Events which short-sighted politicians ascribed to earthly causes, had been ordained on his account. For his sake empires had risen, and flourished, and decayed. For his sake the Almighty had proclaimed his will by the pen of the Evangelist, and the harp of the prophet. He had been wrested by no common deliverer from the grasp of no common foe. He had been ransomed by the sweat of no vulgar agony, by the blood of no earthly sacrifice. It was for him that the sun had been darkened, that the rocks

had been rent, that the dead had risen, that all nature had shuddered at the sufferings of her expiring God.

Thus the Puritan was made up of two different men, the one all self-abasement, penitence, gratitude, passion, the other proud, calm, inflexible, sagacious. He prostrated himself in the dust before his Maker: but he set his foot on the neck of his king. In his devotional retirement, he prayed with convulsions, and groans, and tears. He was half-maddened by glorious or terrible illusions. He heard the lyres of angels or the tempting whispers of fiends. He caught a gleam of the Beatific Vision, or woke screaming from dreams of everlasting fire. Like Vane, he thought himself intrusted with the sceptre of the millennial year. Like Fleetwood, he cried in the bitterness of his soul that God had hid his face from him. But when he took his seat in the council, or girt on his sword for war, these tempestuous workings of the soul had left no perceptible trace behind them. People who saw nothing of the godly but their uncouth visages, and heard nothing from them but their groans and their whining hymns, might laugh at them. But those had little reason to laugh who encountered them in the hall of debate or in the field of battle. These fanatics brought to civil and military affairs a coolness of judgment and an immutability of purpose which some writers have thought inconsistent with their religious zeal, but which were in fact the necessary effects of it. The intensity of their feelings on one subject made them tranquil on every other. One overpowering sentiment had subjected to itself pity and hatred, ambition and fear. Death had lost its terrors and pleasure its charms. They had their smiles and their tears, their raptures and their sorrows, but not for the things of this world. Enthusiasm had made them Stoics, had cleared their minds from every vulgar passion and prejudice, and raised them above the influence of danger and of corruption. It sometimes might lead them to pursue unwise ends, but never to choose unwise means. They went through the world, like Sir Artegal's iron man Talus with his flail, crushing and trampling down oppressors, mingling with human beings, but having neither part or lot in human infirmities, insensible to fatigue, to pleasure, and to pain, not to be pierced by any weapon, not to be withstood by any barrier.

Such we believe to have been the character of the Puritans. We perceive the absurdity of their manners. We dislike the sullen gloom of their domestic habits. We acknowl-

edge that the tone of their minds was often injured by straining after things too high for mortal reach: and we know that, in spite of their hatred of Popery, they too often fell into the worst vices of that bad system, intolerance and extravagant austerity, that they had their anchorites and their crusades, their Dunstons and their De Monforts, their Dominics and their Escobars. Yet, when all circumstances are taken into consideration, we do not hesitate to pronounce them a brave, a wise, an honest, and an useful body.

The Puritans espoused the cause of civil liberty mainly because it was the cause of religion. There was another party, by no means numerous, but distinguished by learning and ability, which acted with them on very different principles. We speak of those whom Cromwell was accustomed to call the Heathens, men who were, in the phraseology of that time, doubting Thomases or careless Gallios with regard to religious subjects, but passionate worshippers of freedom. Heated by the study of ancient literature, they set up their country as their idol, and proposed to themselves the heroes of Plutarch as their examples. They seem to have borne some resemblance to the Brissotines of the French Revolution. But it is not very easy to draw the line of distinction between them and their devout associates, whose tone and manner they sometimes found it convenient to affect, and sometimes, it is probable, imperceptibly adopted.

We now come to the Royalists. We shall attempt to speak of them, as we have spoken of their antagonists, with perfect candor. We shall not charge upon a whole party the profligacy and baseness of the horse-boys, gamblers and braves, whom the hope of license and plunder attracted from all the dens of Whitefriars to the standard of Charles, and who disgraced their associates by excesses which, under the stricter discipline of the Parliamentary armies, were never tolerated. We will select a more favorable specimen. Thinking as we do that the cause of the King was the cause of bigotry and tyranny, we yet cannot refrain from looking with complacency on the character of the honest old cavaliers. We feel a national pride in comparing them with the instruments which the despots of other countries are compelled to employ, with the mutes who throng their ante chambers, and the Janissaries who mount guard at their gates. Our royalist countrymen were not heartless, dangling courtiers, bowing at every step, and simpering at every word. They were not mere machines for destruction, dressed up in uniforms caned into skill, intox-

icated into valor, defending without love, destroying without hatred. There was a freedom in their subserviency, a nobleness in their very degradation. The sentiment of individual independence was strong within them. They were indeed misled, but by no base or selfish motive. Compassion and romantic honor, the prejudices of childhood, and the venerable names of history, threw over them a spell potent as that of Duessa; and like the Red-Cross Knight, they thought that they were doing battle for an injured beauty, while they defended a false and loathsome sorceress. In truth they scarcely entered at all into the merits of the political question. It was not for a treacherous king or an intolerant church that they fought, but for the old banner which had waved in so many battles over the heads of their fathers, and for the altars at which they had received the hands of their brides. Though nothing could be more erroneous than their political opinions, they possessed, in a far greater degree than their adversaries, those qualities which are the grace of private life. With many of the vices of the Round Table, they had also many of its virtues, courtesy, generosity, veracity, tenderness, and respect for women. They had far more both of profound and of polite learning than the Puritans. Their manners were more engaging, their tempers more amiable, their tastes more elegant, and their households more cheerful.

Milton did not strictly belong to any of the classes which we have described. He was not a Puritan. He was not a freethinker. He was not a Royalist. In his character the noblest qualities of every party were combined in harmonious union. From the Parliament and from the Court, from the conventical and from the Gothic cloister, from the gloomy and sepulchral circles of the Roundheads, and from the Christmas revel of the hospitable Cavalier, his nature selected and drew to itself whatever was great and good, while it rejected all the base and pernicious ingredients by which those finer elements were defiled. Like the Puritans, he lived

"As ever in his great task-master's eye."

Like them, he kept his mind continually fixed on an Almighty Judge and an eternal reward. And hence he acquired their contempt of external circumstances, their fortitude, their tranquillity, their inflexible resolution. But not the coolest skeptic or the most profane scoffer was more perfectly free from the contagion of their frantic delusions, their savage manners, their ludicrous jargon, their scorn of science, and their aversion to pleasure.

Hating tyranny with a perfect hatred, he had nevertheless all the estimable and ornamental qualities which were almost entirely monopolized by the party of the tyrant. There was none who had a stronger sense of the value of literature, a finer relish for every elegant amusement, or a more chivalrous delicacy of honor and love. Though his opinions were democratic, his tastes and his associations were such as harmonize best with monarchy and aristocracy. He was under the influence of all the feelings by which the gallant Cavaliers were misled. But of those feelings he was the master and not the slave. Like the hero of Homer, he enjoyed all the pleasures of fascination; but he was not fascinated. He listened to the song of the Syrens; yet he glided by without being seduced to their fatal shore. He tasted the cup of Circe; but he bore about him a sure antidote against the effects of its bewitching sweetness. The allusions which captivated his imagination never impaired his reasoning powers. The statesman was proof against the splendor, the solemnity, and the romance which enchanted the poet. Any person who will contrast the sentiments expressed in his treatises on Prelacy with the exquisite lines on ecclesiastical architecture and music in the *Penseroso*, which was published about the same time, will understand our meaning. This is an inconsistency which, more than any thing else, raises his character in our estimation, because it shows how many private tastes and feelings he sacrificed, in order to do what he considered his duty to mankind. It is the very struggle of the noble Othello. His heart relents; but his hand is firm. He does nought in hate, but all in honor. He kisses the beautiful deceiver before he destroys her.

That from which the public character of Milton derives its great and peculiar splendor, still remains to be mentioned. If he exerted himself to overthrow a forsworn king and a persecuting hierarchy, he exerted himself in conjunction with others. But the glory of the battle which he fought for the species of freedom which is the most valuable, and which was then the least understood, the freedom of the human mind, is all his own. Thousands and tens of thousands among his contemporaries raised their voices against Ship-money and the Star-chamber. But there were few indeed who discerned the more fearful evils of moral and intellectual slavery, and the benefits which would result from the liberty of the press and the unfettered exercise of private judgment. These were the objects which Milton justly conceived to be the most important. He was desirous that the people

should think for themselves as well as tax themselves, and should be emancipated from the dominion of prejudice as well as from that of Charles. He knew that those who, with the best intentions, overlooked these schemes of reform, and contented themselves with pulling down the King and imprisoning the malignants, acted like the heedless brothers in his own poem, who, in their eagerness to disperse the train of the sorcerer, neglected the means of liberating the captive. They thought only of conquering when they should have thought of disenchanting.

"Oh, he mistook! Ye should have snatched his wand
And bound him fast. Without the rod reversed,
And backward mutters of dissevering power,
We cannot free the lady that sits here
Bound in strong fetters fixed and motionless."

To reverse the rod, to spell the charm backward, to break the ties which bound a stupefied people to the seat of enchantment, was the noble aim of Milton. To this all his public conduct was directed. For this he joined the Presbyterians; for this he forsook them. He fought their perilous battle; but he turned away with disdain from their insolent triumph. He saw that they, like those whom they had vanquished, were hostile to the liberty of thought. He therefore joined the Independents, and called upon Cromwell to break the secular chain, and to save free conscience from the paw of the Presbyterian wolf. With a view to the same great object, he attacked the licensing system, in that sublime treatise which every statesman should wear as a sign upon his hand and as frontlets between his eyes. His attacks were, in general, directed less against particular abuses than against those deeply-seated errors on which almost all abuses are founded, the servile worship of eminent men and the irrational dread of innovation.

That he might shake the foundations of these debasing sentiments more effectually, he always selected for himself the boldest literary services. He never came up in the rear when the outworks had been carried and the breach entered. He pressed into the forlorn hope. At the beginning of the changes, he wrote with incomparable energy and eloquence against the bishops. But, when his opinion seemed likely to prevail, he passed on to other subjects, and abandoned prelacy to the crowd of writers who now hastened to insult a falling party. There is no more hazardous enterprise than that of bearing the torch of truth into those dark and infected recesses in which no light has ever shone. But it was the choice and the pleasure of Milton to penetrate the noisome vapors, and

to brave the terrible explosion. Those who most disapprove of his opinions must respect the hardihood with which he maintained them. He, in general, left to others the credit of expounding and defending the popular parts of his religious and political creed. He took his own stand upon those which the great body of his countrymen reprobated as criminal, or derided as paradoxical. He stood up for divorce and regicide. He attacked the prevailing systems of education. His radiant and beneficent career resembled that of the god of light and fertility.

"Nitor in adversum; nec me, qui cætera, vincit
Impetus, et rapido contrarius evehor orbi."

It is to be regretted that the prose writings of Milton should, in our time, be so little read. As compositions, they deserve the attention of every man who wishes to become acquainted with the full power of the English language. They abound with passages compared with which the finest declamations of Burke sink into insignificance. They are a perfect field of cloth of gold. The style is stiff with gorgeous embroidery. Not even in the earlier books of the *Paradise Lost* has the great poet ever risen higher than in those parts of his controversial works in which his feelings, excited by conflict, find a vent in bursts of devotional and lyric rapture. It is, to borrow his own majestic language, "a seven-fold chorus of hallelujahs and harping symphonies."

We had intended to look more closely at these performances, to analyze the peculiarities of the diction, to dwell at some length on the sublime wisdom of the *Areopagitica* and the nervous rhetoric of the *Iconoclast*, and to point out some of those magnificent passages which occur in the *Treatise of Reformation*, and the *Animadversions on the Remonstrant*. But the length to which our remarks have already extended renders this impossible.

We must conclude. And yet we can scarcely tear ourselves away from the subject. The days immediately following the publication of this relic of Milton appear to be peculiarly set apart, and consecrated to his memory. And we shall scarcely be censured if, on this his festival, we be found lingering near his shrine, how worthless soever may be the offering which we bring to it. While this book lies on our table, we seem to be contemporaries of the writer. We are transported a hundred and fifty years back. We can almost fancy that we are visiting him in his small lodging; that we see him sitting at the old organ beneath the faded green hangings; that we can catch the quick twinkle of

his eyes, rolling in vain to find the day; that we are reading in the lines of his noble countenance the proud and mournful history of his glory and his affliction. We image to ourselves the breathless silence in which we should listen to his slightest word, the passionate veneration with which we should kneel to kiss his hand and weep upon it, the earnestness with which we should endeavor to console him, if indeed such a spirit could need consolation, for the neglect of an age unworthy of his talents and his virtues, the eagerness with which we should contest with his daughters, or with his Quaker friend Elwood, the privilege of reading Homer to him, or of taking down the immortal accents which flowed from his lips.

These are perhaps foolish feelings. Yet we cannot be ashamed of them; nor shall we be sorry if what we have written shall in any degree excite them in other minds. We are not much in the habit of idolizing either the living or the dead. And we think that there is no more certain indication of a weak and ill-regulated intellect than that propensity which, for want of a better name, we will venture to christen *Boswellism*. But there are a few characters which have stood the closest scrutiny and the severest tests, which have been tried in the furnace and have proved pure, which have been weighed in the balance and have not been found wanting, which have been declared sterling by the general consent of mankind, and which are visibly stamped with the image and superscription of the Most High. These great men we trust that we know how to prize; and of these was Milton. The sight of his books, the sound of his name, are pleasant to us. His thoughts resemble those celestial fruits and flowers which the Virgin Martyr of Massinger sent down from the gardens of Paradise to the earth and which were distinguished from the productions of other soils, not only by superior bloom and sweetness, but by miraculous efficacy to invigorate and to heal. They are powerful, not only to delight, but to elevate and purify. Nor do we envy the man who can study either the life or the writings of the great poet and patriot, without aspiring to emulate, not indeed the sublime works with which his genius has enriched our literature, but the zeal with which he labored for the public good, the fortitude with which he endured every private calamity, the lofty disdain with which he looked down on temptations and dangers, the deadly hatred which he bore to bigots and tyrants, and the faith which he so sternly kept with his country and with his fame.

ON LIBERTY.

DEDICATION.

To the beloved and deplored memory of her who was the inspirer, and in part the author, of all that is best in my writings—the friend and wife whose exalted sense of truth and right was my strongest incitement, and whose approbation was my chief reward—I dedicate this volume. Like all that I have written for many years, it belongs as much to her as to me; but the work as it stands has had, in a very insufficient degree, the inestimable advantage of her revision; some of the most important portions having been reserved for a more careful re-examination, which they are now never destined to receive. Were I but capable of interpreting to the world one half the great thoughts and noble feelings which are buried in her grave, I should be the medium of a greater benefit to it, than is ever likely to arise from anything that I can write, unprompted and unassisted by her all but unrivalled wisdom.

CHAPTER I.

INTRODUCTORY.

THE subject of this Essay is not the so-called Liberty of the Will, so unfortunately opposed to the misnamed doctrine of Philosophical Necessity; but Civil, or Social Liberty: the nature and limits of the power which can be legitimately exercised by society over the individual. A question seldom stated, and hardly ever discussed, in general terms, but which profoundly influences the practical controversies of the age by its latent presence, and is likely soon to make itself recognized as the vital question of the future. It is so far from being new, that, in a certain sense, it has divided mankind, almost from the remotest ages; but in the stage of progress into which the more civilized portions of the species have now entered, it presents itself under new conditions, and requires a different and more fundamental treatment.

The struggle between Liberty and Authority is the most conspicuous feature in the portions of history with which we are earliest familiar, particularly in that of Greece, Rome, and England. But in old times this contest was between subjects, or some classes of subjects, and the Government. By liberty, was meant protection against the tyranny of the political rulers. The rulers were conceived (except in some of the popular governments of Greece) as in a necessarily antagonistic position to the people whom they ruled. They consisted of a governing One, or a governing

tribe or caste, who derived their authority from inheritance or conquest, who, at all events, did not hold it at the pleasure of the governed, and whose supremacy men did not venture, perhaps did not desire, to contest, whatever precautions might be taken against its oppressive exercise. Their power was regarded as necessary, but also as highly dangerous; as a weapon which they would attempt to use against their subjects, no less than against external enemies. To prevent the weaker members of the community from being preyed upon by innumerable vultures, it was needful that there should be an animal of prey stronger than the rest, commissioned to keep them down. But as the king of the vultures would be no less bent upon preying on the flock than any of the minor harpies, it was indispensable to be in a perpetual attitude of defence against his beak and claws. The aim, therefore, of patriots was to set limits to the power which the ruler should be suffered to exercise over the community; and this limitation was what they meant by liberty. It was attempted in two ways. First, by obtaining a recognition of certain immunities, called political liberties or rights, which it was to be regarded as a breach of duty in the ruler to infringe, and which if he did infringe, specific resistance, or general rebellion, was held to be justifiable. A second, and generally a later expedient, was the establishment of constitutional checks, by which the consent of the community, or of a body of some sort, supposed to represent its interests, was made a necessary condition to some of the more important acts of the governing power. To the first of these modes of limitation, the ruling power, in most European countries, was compelled, more or less, to submit. It was not so with the second; and, to attain this, or when already in some degree possessed, to attain it more completely, became everywhere the principal object of the lovers of liberty. And so long as mankind were content to combat one enemy by another, and to be ruled by a master, on condition of being guaranteed more or less efficaciously against his tyranny, they did not carry their aspirations beyond this point.

A time, however, came, in the progress of

human affairs, when men ceased to think it a necessity of nature that their governors should be an independent power, opposed in interest to themselves. It appeared to them much better that the various magistrates of the State should be their tenants or delegates, revocable at their pleasure. In that way alone, it seemed, they could have complete security that the powers of government would never be abused to their disadvantage. By degrees this new demand for elective and temporary rulers became the prominent object of the exertions of the popular party, wherever any such party existed; and superseded, to a considerable extent, the previous efforts to limit the power of rulers. As the struggle proceeded for making the ruling power emanate from the periodical choice of the ruled, some persons began to think that too much importance had been attached to the limitation of the power itself. *That* (it might seem) was a resource against rulers whose interests were habitually opposed to those of the people. What was now wanted was, that the rulers should be identified with the people; that their interest and will should be the interest and will of the nation. The nation did not need to be protected against its own will. There was no fear of its tyrannizing over itself. Let the rulers be effectually responsible to it, promptly removable by it, and it could afford to trust them with power of which it could itself dictate the use to be made. Their power was but the nation's own power, concentrated, and in a form convenient for exercise. This mode of thought, or rather perhaps of feeling, was common among the last generation of European liberalism, in the Continental section of which it still apparently predominates. Those who admit any limit to what a government may do, except in the case of such governments as they think ought not to exist, stand out as brilliant exceptions among the political thinkers of the Continent. A similar tone of sentiment might by this time have been prevalent in our own country, if the circumstances which for a time encouraged it, had continued unaltered.

But, in political and philosophical theories, as well as in persons, success discloses faults and infirmities which failure might have concealed from observation. The notion, that the people have no need to limit their power over themselves, might seem axiomatic, when popular government was a thing only dreamed about, or read of as having existed at some distant period of the past. Neither was that notion necessarily disturbed by such temporary aberrations as those of the French Revolution, the worst of which were the work of

an usurping few, and which, in any case, belonged, not to the permanent working of popular institutions, but to a sudden and convulsive outbreak against monarchical and aristocratic despotism. In time, however, a democratic republic came to occupy a large portion of the earth's surface, and made itself felt as one of the most powerful members of the community of nations; and elective and responsible government became subject to the observations and criticisms which wait upon a great existing fact. It was now perceived that such phrases as 'self-government,' and 'the power of the people over themselves,' do not express the true state of the case. The 'people' who exercise the power are not always the same people with those over whom it is exercised; and the 'self-government' spoken of is not the government of each by himself, but of each by all the rest. The will of the people, moreover, practically means the will of the most numerous or the most active *part* of the people; the majority, or those who succeed in making themselves accepted as the majority; the people, consequently, *may* desire to oppress a part of their number; and precautions are as much needed against this as against any other abuse of power. The limitation, therefore, of the power of government over individuals loses none of its importance when the holders of power are regularly accountable to the community, that is, to the strongest party therein. This view of things, recommending itself equally to the intelligence of thinkers and to the inclination of those important classes in European society to whose real or supposed interests democracy is adverse, has had no difficulty in establishing itself; and in political speculations 'the tyranny of the majority' is now generally included among the evils against which society requires to be on its guard.

Like other tyrannies, the tyranny of the majority was at first, and is still vulgarly held in dread, chiefly as operating through the acts of the public authorities. But reflecting persons perceived that when society is itself the tyrant—society collectively, over the separate individuals who compose it—its means of tyrannizing are not restricted to the acts which it may do by the hands of its political functionaries. Society can and does execute its own mandates: and if it issues wrong mandates instead of right, or any mandates at all in things with which it ought not to meddle, it practises a social tyranny more formidable than many kinds of political oppression since, though not usually upheld by such extreme penalties, it leaves fewer means of escape, penetrating much more

deeply into the details of life, and enslaving the soul itself. Protection, therefore, against the tyranny of the magistrate is not enough: there needs protection also against the tyranny of the prevailing opinion and feeling; against the tendency of society to impose, by other means than civil penalties, its own ideas and practices as rules of conduct on those who dissent from them; to fetter the development, and, if possible, prevent the formation, of any individuality not in harmony with its ways, and compels all characters to fashion themselves upon the model of its own. There is a limit to the legitimate interference of collective opinion with individual independence: and to find that limit, and maintain it against encroachment, is as indispensable to a good condition of human affairs, as protection against political despotism.

But though this proposition is not likely to be contested in general terms, the practical question, where to place the limit—how to make the fitting adjustment between individual independence and social control—is a subject on which nearly everything remains to be done. All that makes existence valuable to any one, depends on the enforcement of restraints upon the actions of other people. Some rules of conduct, therefore, must be imposed, by law in the first place, and by opinion on many things which are not fit subjects for the operation of law. What these rules should be, is the principal question in human affairs; but if we except a few of the most obvious cases, it is one of those which least progress has been made in resolving. No two ages, and scarcely any two countries, have decided it alike; and the decision of one age or country is a wonder to another. Yet the people of any given age and country no more suspect any difficulty in it, than if it were a subject on which mankind had always been agreed. The rules which obtain among themselves appear to them self-evident and self-justifying. This all but universal illusion is one of the examples of the magical influence of custom, which is not only, as the proverb says, a second nature, but is continually mistaken for the first. The effect of custom, in preventing any misgiving respecting the rules of conduct which mankind impose on one another, is all the more complete because the subject is one on which it is not generally considered necessary that reasons should be given, either by one person to others, or by each to himself. People are accustomed to believe, and have been encouraged in the belief by some who aspire to the character of philosophers, that their feelings, on subjects of this nature, are better than reasons, and

render reasons unnecessary. The practical principle which guides them to their opinions on the regulation of human conduct, is the feeling in each person's mind that everybody should be required to act as he, and those with whom he sympathizes, would like them to act. No one, indeed, acknowledges to himself that his standard of judgment is his own liking; but an opinion on a point of conduct, not supported by reasons, can only count as one person's preference; and if the reasons, when given, are a mere appeal to a similar preference felt by other people, it is still only many people's liking instead of one. To an ordinary man, however, his own preference, thus supported, is not only a perfectly satisfactory reason, but the only one he generally has for any of his notions of morality, taste, or propriety, which are not expressly written in his religious creed; and his chief guide in the interpretation even of that. Men's opinions, accordingly, on what is laudable or blamable, are affected by all the multifarious causes which influence their wishes in regard to the conduct of others, and which are as numerous as those which determine their wishes on any other subject. Sometimes their reason—at other times their prejudices or superstitions: often their social affections, not seldom their antisocial ones, their envy or jealousy, their arrogance or contemptuousness; but most commonly, their desires or fears for themselves—their legitimate or illegitimate self-interest. Wherever there is an ascendant class, a large portion of the morality of the country emanates from its class interests, and its feelings of class superiority. The morality between Spartans and Helots, between planters and negroes, between princes and subjects, between nobles and roturiers, between men and women, has been for the most part the creation of these class interests and feelings: and the sentiments thus generated, react in turn upon the moral feelings of the members of the ascendant class, in their relations among themselves. Where, on the other hand, a class, formerly ascendant, has lost its ascendancy, or where its ascendancy is unpopular, the prevailing moral sentiments frequently bear the impress of an impatient dislike of superiority. Another grand determining principle of the rules of conduct, both in act and forbearance, which have been enforced by law or opinion, has been the servility of mankind towards the supposed preferences or aversions of their temporal masters or of their gods. This servility, though essentially selfish, is not hypocrisy; it gives rise to perfectly genuine sentiments of abhorrence; it made men burn magicians and heretics.

Among so many baser influences, the general and obvious interests of society have of course had a share, and a large one, in the direction of the moral sentiments: less, however, as a matter of reason, and on their own account, than as a consequence of the sympathies and antipathies which grew out of them: and sympathies and antipathies which had little or nothing to do with the interests of society, have made themselves felt in the establishment of moralities with quite as great force.

The likings and dislikings of society, or of some powerful portion of it, are thus the main thing which has practically determined the rules laid down for general observance, under the penalties of law or opinion. And in general, those who have been in advance of society in thought and feeling, have left this condition of things unassailed in principle, however they may have come into conflict with it in some of its details. They have occupied themselves rather in inquiring what things society ought to like or dislike, than in questioning whether its likings or dislikings should be a law to individuals. They preferred endeavoring to alter the feelings of mankind on the particular points on which they were themselves heretical, rather than make common cause in defence of freedom, with heretics generally. The only case in which the higher ground has been taken on principle and maintained with consistency, by any but an individual here and there, is that of religious belief; a case instructive in many ways, and not least so as forming a most striking instance of the fallibility of what is called the moral sense: for the *odium theologicum*, in a sincere bigot, is one of the most unequivocal cases of moral feeling. Those who first broke the yoke of what called itself the Universal Church, were in general as little willing to permit difference of religious opinion as that church itself. But when the heat of the conflict was over, without giving a complete victory to any party, and each church or sect was reduced to limit its hopes to retaining possession of the ground it already occupied; minorities, seeing that they had no chance of becoming majorities, were under the necessity of pleading to those whom they could not convert, for permission to differ. It is accordingly on this battle field, almost solely, that the rights of the individual against society have been asserted on broad grounds of principle, and the claim of society to exercise authority over dissentients, openly controverted. The great writers to whom the world owes what religious liberty it possesses, have mostly asserted freedom of conscience as an indefeasible right, and denied absolutely

that a human being is accountable to others for his religious belief. Yet so natural to mankind is intolerance in whatever they really care about, that religious freedom has hardly anywhere been practically realized, except where religious indifference, which dislikes to have its peace disturbed by theological quarrels, has added its weight to the scale. In the minds of almost all religious persons, even in the most tolerant countries, the duty of toleration is admitted with tacit reserves. One person will bear with dissent in matters of church government, but not of dogma; another can tolerate everybody, short of a Papist or an Unitarian; another, every one who believes in revealed religion; a few extend their charity a little further, but stop at the belief in a God and in a future state. Wherever the sentiment of the majority is still genuine and intense, it is found to have abated little of its claim to be obeyed.

In England, from the peculiar circumstances of our political history, though the yoke of opinion is perhaps heavier, that of law is lighter, than in most other countries of Europe; and there is considerable jealousy of direct interference, by the legislative or the executive power, with private conduct; not so much from any just regard for the independence of the individual, as from the still subsisting habit of looking on the government as representing an opposite interest to the public. The majority have not yet learnt to feel the power of the government their power, or its opinions their opinions. When they do so, individual liberty will probably be as much exposed to invasion from the government, as it already is from public opinion. But, as yet, there is a considerable amount of feeling ready to be called forth against any attempt of the law to control individuals in things in which they have not hitherto been accustomed to be controlled by it; and this with very little discrimination as to whether the matter is, or is not, within the legitimate sphere of legal control; insomuch that the feeling, highly salutary on the whole, is perhaps quite as often misplaced as well grounded in the particular instances of its application. There is, in fact, no recognized principle by which the propriety or impropriety of government interference is customarily tested. People decide according to their personal preferences. Some, whenever they see any good to be done, or evil to be remedied, would willingly instigate the government to undertake the business; while others prefer to bear almost any amount of social evil, rather than add one to the departments of human interests amenable to governmental control. And men range themselves on

one or the other side in any particular case, according to this general direction of their sentiments; or according to the degree of interest which they feel in the particular thing which it is proposed that the government should do, or according to the belief they entertain that the government would, or would not, do it in the manner they prefer; but very rarely on account of any opinion to which they consistently adhere, as to what things are fit to be done by a government. And it seems to me that in consequence of this absence of rule or principle, one side is at present as often wrong as the other; the interference of government is, with about equal frequency, improperly invoked and improperly condemned.

The object of this Essay is to assert one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant. He cannot rightfully be compelled to do or forbear because it will be better for him to do so, because it will make him happier, because, in the opinions of others, to do so would be wise, or even right. These are good reasons for remonstrating with him, or reasoning with him, or persuading him, or entreating him, but not for compelling him, or visiting him with any evil in case he do otherwise. To justify that, the conduct from which it is desired to deter him, must be calculated to produce evil to some one else. The only part of the conduct of any one, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his independence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign.

It is, perhaps, hardly necessary to say that this doctrine is meant to apply only to human beings in the maturity of their faculties. We are not speaking of children, or of young persons below the age which the law may fix as that of manhood or womanhood. Those who are still in a state to require being taken care of by others, must be protected against their own actions as well as against external injury. For the same reason, we may leave out of

consideration those backward states of society in which the race itself may be considered as in its nonage. The early difficulties in the way of spontaneous progress are so great, that there is seldom any choice of means for overcoming them; and a ruler full of the spirit of improvement is warranted in the use of any expedients that will attain an end, perhaps otherwise unattainable. Despotism is a legitimate mode of government in dealing with barbarians, provided the end be their improvement, and the means justified by actually effecting that end. Liberty, as a principle, has no application to any state of things anterior to the time when mankind have become capable of being improved by free and equal discussion. Until then, there is nothing for them but implicit obedience to an Akbar or a Charlemagne, if they are so fortunate as to find one. But as soon as mankind have attained the capacity of being guided to their own improvement by conviction or persuasion (a period long since reached in all nations with whom we need here concern ourselves), compulsion, either in the direct form or in that of pains and penalties for non-compliance, is no longer admissible as a means to their own good, and justifiable only for the security of others.

It is proper to state that I forego any advantage which could be derived to my argument from the idea of abstract right, as a thing independent of utility. I regard utility as the ultimate appeal of all ethical questions: but it must be utility in the largest sense, grounded on the permanent interests of a man as a progressive being. Those interests, I contend, authorize the subjection of individual spontaneity to external control, only in respect to those actions of each, which concern the interest of other people. If any one does an act hurtful to others, there is a *prima facie* case for punishing him, by law, or, where legal penalties are not safely applicable, by general disapprobation. There are also many positive acts for the benefit of others, which he may rightfully be compelled to perform; such as to give evidence in a court of justice; to bear his fair share in the common defence, or in any other joint work necessary to the interest of the society of which he enjoys the protection; and to perform certain acts of individual beneficence, such as saving a fellow-creature's life, or interposing to protect the defenceless against ill-usage, things which whenever it is obviously a man's duty to do, he may rightfully be made responsible to society for not doing. A person may cause evil to others not only by his actions but by his inaction, and in either case he is justly ac-

countable to them for the injury. The latter case, it is true, requires a much more cautious exercise of compulsion than the former. To make any one answerable for doing evil to others, is the rule; to make him answerable for not preventing evil, is, comparatively speaking, the exception. Yet there are many cases clear enough and grave enough to justify that exception. In all things which regard the external relations of the individual, he is *de jure* amenable to those whose interests are concerned, and if need be, to society as their protector. There are often good reasons for not holding him to the responsibility; but these reasons must arise from the special expediences of the case: either because it is a kind of case in which he is on the whole likely to act better, when left to his own discretion, than when controlled in any way in which society have it in their power to control him; or because the attempt to exercise control would produce other evils, greater than those which it would prevent. When such reasons as these preclude the enforcement of responsibility, the conscience of the agent himself should step into the vacant judgment seat, and protect those interests of others which have no external protection; judging himself all the more rigidly, because the case does not admit of his being made accountable to the judgment of his fellow-creatures.

But there is a sphere of action in which society, as distinguished from the individual, has, if any, only an indirect interest; comprehending all that portion of a person's life and conduct which affects only himself, or if it also affects others, only with their free, voluntary, and undeceived consent and participation. When I say only himself, I mean directly and in the first instance: for whatever affects himself, may affect others through himself; and the objection which may be grounded on this contingency, will receive consideration in the sequel. This, then, is the appropriate region of human liberty. It comprises, first, the inward domain of consciousness; demanding liberty of conscience, in the most comprehensive sense; liberty of thought and feeling; absolute freedom of opinion and sentiment on all subjects, practical or speculative, scientific, moral, or theological. The liberty of expressing and publishing opinions may seem to fall under a different principle, since it belongs to that part of the conduct of an individual which concerns other people; but, being almost of as much importance as the liberty of thought itself, and resting in great part on the same reasons, is practically inseparable from it. Secondly, the principle requires liberty of tastes and pursuits; of

framing the plan of our life to suit our own character; of doing as we like, subject to such consequences as may follow: without impediment from our fellow-creatures, so long as what we do does not harm them, even though they should think our conduct foolish, perverse, or wrong. Thirdly, from this liberty of each individual, follows the liberty, within the same limits, of combination among individuals; freedom to unite, for any purpose not involving harm to others: the persons combining being supposed to be of full age, and not forced or deceived.

No society in which these liberties are not, on the whole, respected, is free, whatever may be its form of government; and none is completely free in which they do not exist absolutely and unqualified. The only freedom which deserves the name, is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs, or impede their efforts to obtain it. Each is the proper guardian of his own health, whether bodily, or mental and spiritual. Mankind are greater gainers by suffering each other to live as seems good to themselves, than by compelling each to live as seems good to the rest.

Though this doctrine is anything but new, and, to some persons, may have the air of a truism, there is no doctrine which stands more directly opposed to the general tendency of existing opinion and practice. Society has expended fully as much effort in the attempt (according to its lights) to compel people to conform to its notions of personal, as of social excellence. The ancient commonwealths thought themselves entitled to practice, and the ancient philosophers countenanced, the regulation of every part of private conduct by public authority, on the ground that the State had a deep interest in the whole bodily and mental discipline of every one of its citizens; a mode of thinking which may have been admissible in small republics surrounded by powerful enemies, in constant peril of being subverted by foreign attack or internal commotion, and to which even a short interval of relaxed energy and self-command might so easily be fatal, that they could not afford to wait for the salutary permanent effects of freedom. In the modern world, the greater size of political communities, and above all, the separation between spiritual and temporal authority (which placed the direction of men's consciences in other hands than those which controlled their worldly affairs), prevented so great an interference by law in the details of private life; but the engines of moral repression have been wielded more strenuously against divergence from the reigning opinion

in self-regarding, than even in social matters; religion, the most powerful of the elements which have entered into the formation of moral feeling, having almost always been governed either by the ambition of a hierarchy, seeking control over every department of human conduct, or by the spirit of Puritanism. And some of those modern reformers who have placed themselves in strongest opposition to the religions of the past, have been noway behind either churches or sects in their assertion of the right of spiritual domination: M. Comte, in particular, whose social system, as unfolded in his *Système de Politique Positive*, aims at establishing (though by moral more than by legal appliances) a despotism of society over the individual, surpassing anything contemplated in the political ideal of the most rigid disciplinarian among the ancient philosophers.

Apart from the peculiar tenets of individual thinkers, there is also in the world at large an increasing inclination to stretch unduly the powers of society over the individual, both by the force of opinion and even by that of legislation; and as the tendency of all the changes taking place in the world is to strengthen society, and diminish the power of the individual, this encroachment is not one of the evils which tend spontaneously to disappear, but, on the contrary, to grow more and more formidable. The disposition of mankind, whether as rulers or as fellow-citizens, to impose their own opinions and inclinations as a rule of conduct on others, is so energetically supported by some of the best and by some of the worst feelings incident to human nature, that it is hardly ever kept under restraint by anything but want of power; and as the power is not declining, but growing, unless a strong barrier of moral conviction can be raised against the mischief, we must expect, in the present circumstances of the world, to see it increase.

It will be convenient for the argument, if, instead of at once entering upon the general thesis, we confine ourselves in the first instance to a single branch of it, on which the principle here stated is, if not fully, yet to a certain point, recognized by the current opinions. This one branch is the Liberty of Thought: from which it is impossible to separate the cognate liberty of speaking and of writing. Although these liberties, to some considerable amount, form part of the political morality of all countries which profess religious toleration and free institutions, the grounds, both philosophical and practical, on which they rest, are perhaps not so familiar to the general mind, nor so thoroughly appreciated by many even of the leaders of opinion,

as might have been expected. Those grounds, when rightly understood, are of much wider application than to only one division of the subject, and a thorough consideration of this part of the question will be found the best introduction to the remainder. Those to whom nothing which I am about to say will be new, may therefore, I hope, excuse me, if on a subject which now for three centuries has been so often discussed, I venture on one discussion more.

CHAPTER II.

OF THE LIBERTY OF THOUGHT AND DISCUSSION.

THE time, it is to be hoped, is gone by, when any defence would be necessary of the 'liberty of the press' as one of the securities against corrupt or tyrannical government. No argument, we may suppose, can now be needed, against permitting a legislature or an executive, not identified in interest with the people, to prescribe opinions to them, and determine what doctrines or what arguments they shall be allowed to hear. This aspect of the question, besides, has been so often and so triumphantly enforced by preceding writers, that it needs not be specially insisted on in this place. Though the law of England on the subject of the press, is as servile to this day as it was in the time of the Tudors, there is little danger of its being actually put in force against political discussion, except during some temporary panic, when fear of insurrection drives ministers and judges from their propriety;* and, speaking generally, it is not,

* These words had scarcely been written, when, as if to give them an emphatic contradiction, occurred the Government Press Prosecutions of 1858. That ill-judged interference with the liberty of public discussion has not, however, induced me to alter a single word in the text, nor has it at all weakened my conviction that, moments of panic excepted, the era of pains and penalties for political discussion has, in our own country, passed away. For, in the first place, the prosecutions were not persisted in; and, in the second, they were never, properly speaking, political prosecutions. The offence charged was not that of criticising institutions, or the acts or persons of rulers, but of circulating what was deemed an immoral doctrine, the lawfulness of Tyrannicide.

If the arguments of the present chapter are of any validity, there ought to exist the fullest liberty of professing and discussing, as a matter of ethical conviction, any doctrine, however immoral it may be considered. It would, therefore, be irrelevant and out of place to examine here, whether the doctrine of Tyrannicide deserves that title. I shall content myself with saying that the subject has been at all times one of the open questions of morals; that the act of a private citizen in striking down a criminal, who, by raising himself above the law, has placed himself beyond the reach of legal punishment or control, has been accounted by whole nations, and by some of the best and wisest of men, not a crime, but an act of exalted virtue; and that, right or wrong, it is not of the nature of assassination, but of civil war. As such, I hold that the instigation to it, in a specific case, may be a proper subject of punishment, but only if an overt act has followed, and at least a probable connection can be established between the act

in constitutional countries, to be apprehended, that the government, whether completely responsible to the people or not, will often attempt to control the expression of opinion, except when in doing so it makes itself the organ of the general intolerance of the public. Let us suppose, therefore, that the government is entirely at one with the people, and never thinks of exerting any power of coercion unless in agreement with what it conceives to be their voice. But I deny the right of the people to exercise such coercion, either by themselves or by their government. The power itself is illegitimate. The best government has no more title to it than the worst. It is as noxious, or more noxious, when exerted in accordance with public opinion, than when in opposition to it. If all mankind minus one, were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind. Were an opinion a personal possession of no value except to the owner; if to be obstructed in the enjoyment of it were simply a private injury, it would make some difference whether the injury was inflicted only on a few persons or on many. But the peculiar evil of silencing the expression of an opinion is, that it is robbing the human race, posterity as well as the existing generation; those who dissent from the opinion, still more than those who hold it. If the opinion is right, they are deprived of the opportunity of exchanging error for truth: if wrong, they lose, what is almost as great a benefit, the clearer perception and livelier impression of truth, produced by its collision with error.

It is necessary to consider separately these two hypotheses, each of which has a distinct branch of the argument corresponding to it. We can never be sure that the opinion we are endeavoring to stifle is a false opinion; and if we were sure, stifling it would be an evil still.

First: the opinion which it is attempted to suppress by authority may possibly be true. Those who desire to suppress it, of course deny its truth; but they are not infallible. They have no authority to decide the question for all mankind, and exclude every other person from the means of judging. To refuse a hearing to an opinion, because they are sure that it is false, is to assume that *their* certainty is the same thing as *absolute* certainty.

and the instigation. Even then, it is not a foreign government but the very government assailed, which alone, in the exercise of self-defence, can legitimately punish attacks directed against its own existence.

All silencing of discussion is an assumption of infallibility. Its condemnation may be allowed to rest on this common argument, not the worse for being common.

Unfortunately for the good sense of mankind, the fact of their fallibility is far from carrying the weight in their practical judgment, which is always allowed to it in theory; for while every one well knows himself to be fallible, few think it necessary to take any precautions against their own fallibility, or admit the supposition that any opinion, of which they feel very certain, may be one of the examples of the error to which they acknowledge themselves to be liable. Absolute princes, or others who are accustomed to unlimited deference, usually feel this complete confidence in their own opinions on nearly all subjects. People more happily situated, who sometimes hear their opinions disputed, and are not wholly unused to be set right when they are wrong, place the same unbounded reliance only on such of their opinions as are shared by all who surround them, or to whom they habitually defer: for in proportion to a man's want of confidence in his own solitary judgment, does he usually repose with implicit trust on the infallibility of 'the world' in general. And the world, to each individual, means the part of it with which he comes in contact; his party, his sect, his church, his class of society: the man may be called, by comparison, almost liberal and large minded to whom it means anything so comprehensive as his own country or his own age. Nor is his faith in this collective authority at all shaken by his being aware that other ages, countries, sects, churches, classes, and parties have thought, and even now think, the exact reverse. He devolves upon his own world the responsibility of being in the right against the dissentient worlds of other people; and it never troubles him that mere accident has decided which of these numerous worlds is the object of his reliance, and that the same causes which make him a Churchman in London, would have made him a Buddhist or a Confucian in Peking. Yet it is as evident in itself, as any amount of argument can make it, that ages are no more infallible than individuals; every age having held many opinions which subsequent ages have deemed not only false but absurd; and it is as certain that many opinions, now general, will be rejected by future ages, as it is that many, once general, are rejected by the present.

The objection likely to be made to this argument, would probably take some such form as the following. There is no greater assumption of infallibility in forbidding the propaga-

tion of error, than in any other thing which is done by public authority on its own judgment and responsibility. Judgment is given to men that they may use it. Because it may be used erroneously, are men to be told that they ought not to use it at all? To prohibit what they think pernicious, is not claiming exemption from error, but fulfilling the duty incumbent on them, although fallible, of acting on their conscientious conviction. If we were never to act on our opinions, because those opinions may be wrong, we should leave all our interests uncared for, and all our duties unperformed. An objection which applies to all conduct, can be no valid objection to any conduct in particular. It is the duty of governments, and of individuals, to form the truest opinions they can; to form them carefully, and never impose them upon others unless they are quite sure of being right. But when they are sure (such reasoners may say), it is not conscientiousness but cowardice to shrink from acting on their opinions, and allow doctrines which they honestly think dangerous to the welfare of mankind, either in this life or in another, to be scattered abroad without restraint, because other people, in less enlightened times, have persecuted opinions now believed to be true. Let us take care, it may be said, not to make the same mistake: but governments and nations have made mistakes in other things which are not denied to be fit subjects for the exercise of authority: they have laid on bad taxes, made unjust wars. Ought we therefore to lay on no taxes, and, under whatever provocation, make no wars? Men, and governments, must act to the best of their ability. There is no such thing as absolute certainty, but there is assurance sufficient for the purposes of human life. We may, and must, assume our opinion to be true for the guidance of our own conduct: and it is assuming no more when we forbid bad men to pervert society by the propagation of opinions which we regard as false and pernicious.

I answer, that it is assuming very much more. There is the greatest difference between presuming an opinion to be true, because, with every opportunity for contesting it, it has not been refuted, and assuming its truth for the purpose of not permitting its refutation. Complete liberty of contradicting and disproving our opinion, is the very condition which justifies us in assuming its truth for purposes of action; and on no other terms can a being with human faculties have any rational assurance of being right.

When we consider either the history of opinion, or the ordinary conduct of human life, to

what is it to be ascribed that the one and the other are no worse than they are? Not certainly to the inherent force of the human understanding; for, on any matter not self-evident, there are ninety-nine persons totally incapable of judging of it, for one who is capable; and the capacity of the hundredth person is only comparative; for the majority of the eminent men of every past generation held many opinions now known to be erroneous, and did or approved numerous things which no one will now justify. Why is it, then, that there is on the whole a preponderance among mankind of rational opinions and rational conduct? If there really is this preponderance—which there must be unless human affairs are, and have always been, in an almost desperate state—it is owing to a quality of the human mind, the source of everything respectable in man either as an intellectual or as a moral being, namely, that his errors are corrigible. He is capable of rectifying his mistakes, by discussion and experience. Not by experience alone. There must be discussion, to show how experience is to be interpreted. Wrong opinions and practices gradually yield to fact and argument: but facts and arguments, to produce any effect on the mind, must be brought before it. Very few facts are able to tell their own story, without comments to bring out their meaning. The whole strength and value, then, of human judgment, depending on the one property, that it can be set right when it is wrong, reliance can be placed on it only when the means of setting it right are kept constantly at hand. In the case of any person whose judgment is really deserving of confidence, how has it become so? Because he has kept his mind open to criticism of his opinions and conduct. Because it has been his practice to listen to all that could be said against him; to profit by as much of it as was just, and expound to himself, and upon occasion to others, the fallacy of what was fallacious. Because he has felt, that the only way in which a human being can make some approach to knowing the whole of a subject, is by hearing what can be said about it by persons of every variety of opinion, and studying all modes in which it can be looked at by every character of mind. No wise man ever acquired his wisdom in any mode but this; nor is it in the nature of human intellect to become wise in any other manner. The steady habit of correcting and completing his own opinion by collating it with those of others, so far from causing doubt and hesitation in carrying it into practice, is the only stable foundation for a just reliance on it: for, being cognizant of all that can, at least

obviously, be said against him, and having taken up his position against all gainsayers—knowing that he has sought for objections and difficulties, instead of avoiding them, and has shut out no light which can be thrown upon the subject from any quarter—he has a right to think his judgment better than that of any person, or any multitude, who have not gone through a similar process.

It is not too much to require that what the wisest of mankind, those who are best entitled to trust their own judgment, find necessary to warrant their relying on it, should be submitted to by that miscellaneous collection of a few wise and many foolish individuals, called the public. The most intolerant of churches, the Roman Catholic Church, even at the canonization of a saint, admits, and listens patiently to, a 'devil's advocate.' The holiest of men, it appears, cannot be admitted to posthumous honors, until all that the devil could say against him is known and weighed. If even the Newtonian philosophy were not permitted to be questioned, mankind could not feel as complete assurance of its truth as they now do. The beliefs which we have most warrant for, have no safeguard to rest on, but a standing invitation to the whole world to prove them unfounded. If the challenge is not accepted, or is accepted and the attempt fails, we are far enough from certainty still; but we have done the best that the existing state of human reason admits of; we have neglected nothing that could give the truth a chance of reaching us: if the lists are kept open, we may hope that if there be a better truth, it will be found when the human mind is capable of receiving it; and in the mean time we may rely on having attained such approach to truth, as is possible in our own day. This is the amount of certainty attainable by a fallible being, and this the sole way of attaining it.

Strange it is, that men should admit the validity of the arguments for free discussion, but object to their being 'pushed to an extreme;' not seeing that unless the reasons are good for an extreme case, they are not good for any case. Strange that they should imagine that they are not assuming infallibility, when they acknowledge that there should be free discussion on all subjects which can possibly be *doubtful*, but think that some particular principle or doctrine should be forbidden to be questioned because it is so *certain*, that is, because *they are certain* that it is certain. To call any proposition certain, while there is any one who would deny its certainty if permitted, but who is not permitted, is to assume that we ourselves, and those who agree with

us, are the judges of certainty, and judges without hearing the other side.

In the present age—which has been described as 'destitute of faith, but terrified at scepticism'—in which people feel sure, not so much that their opinions are true, as that they should not know what to do without them—the claims of an opinion to be protected from public attack are rested not so much on its truth, as on its importance to society. There are, it is alleged, certain beliefs, so useful, not to say indispensable to well-being, that it is as much the duty of governments to uphold those beliefs, as to protect any other of the interests of society. In a case of such necessity, and so directly in the line of their duty, something less than infallibility may, it is maintained, warrant, and even bind, governments, to act on their own opinion, confirmed by the general opinion of mankind. It is also often argued, and still oftener thought, that none but bad men would desire to weaken these salutary beliefs; and there can be nothing wrong, it is thought, in restraining bad men, and prohibiting what only such men would wish to practice. This mode of thinking makes the justification of restraints on discussion not a question of the truth of doctrines, but of their usefulness; and flatters itself by that means to escape the responsibility of claiming to be an infallible judge of opinions. But those who thus satisfy themselves, do not perceive that the assumption of infallibility is merely shifted from one point to another. The usefulness of an opinion is itself matter of opinion: as disputable, as open to discussion, and requiring discussion as much, as the opinion itself. There is the same need of an infallible judge of opinions to decide an opinion to be noxious, as to decide it to be false, unless the opinion condemned has full opportunity of defending itself. And it will not do to say that the heretic may be allowed to maintain the utility or harmlessness of his opinion, though forbidden to maintain its truth. The truth of an opinion is part of its utility. If we would know whether or not it is desirable that a proposition should be believed, is it possible to exclude the consideration of whether or not it is true? In the opinion, not of bad men, but of the best men, no belief which is contrary to truth can be really useful: and can you prevent such men from urging that plea, when they are charged with culpability for denying some doctrine which they are told is useful, but which they believe to be false? Those who are on the side of received opinions, never fail to take all possible advantage of this plea; you do not find *them* handling the question of utility as if it could be completely abstracted from

that of truth: on the contrary, it is, above all, because their doctrine is 'the truth,' that the knowledge or the belief of it is held to be so indispensable. There can be no fair discussion of the question of usefulness, when an argument so vital may be employed on one side, but not on the other. And in point of fact, when law or public feeling do not permit the truth of an opinion to be disputed, they are just as little tolerant of a denial of its usefulness. The utmost they allow is an extenuation of its absolute necessity, or of the positive guilt of rejecting it.

In order more fully to illustrate the mischief of denying a hearing to opinions because we, in our own judgment, have condemned them, it will be desirable to fix down the discussion to a concrete case; and I choose, by preference, the cases which are least favorable to me—in which the argument against freedom of opinion, both on the score of truth and on that of utility, is considered the strongest. Let the opinions impugned be the belief in a God and in a future state, or any of the commonly received doctrines of morality. To fight the battle on such ground, gives a great advantage to an unfair antagonist; since he will be sure to say (and many who have no desire to be unfair will say it internally), Are these the doctrines which you do not deem sufficiently certain to be taken under the protection of law? Is the belief in a God one of the opinions, to feel sure of which, you hold to be assuming infallibility? But I must be permitted to observe, that it is not the feeling sure of a doctrine (be it what it may) which I call an assumption of infallibility. It is the undertaking to decide that question *for others*, without allowing them to hear what can be said on the contrary side. And I denounce and reprobate this pretension not the less, if put forth on the side of my most solemn convictions. However positive any one's persuasion may be, not only of the falsity but of the pernicious consequences—not only of the pernicious consequences, but (to adopt expressions which I altogether condemn) the immorality and impiety of an opinion; yet if, in pursuance of that private judgment, though backed by the public judgment of his country or his contemporaries, he prevents the opinion from being heard in its defence, he assumes infallibility. And so far from the assumption being less objectionable or less dangerous because the opinion is called immoral or impious, this is the case of all others in which it is most fatal. These are exactly the occasions on which the men of one generation commit those dreadful mistakes, which excite the astonishment and horror of posterity. It is among such that

we find the instances memorable in history, when the arm of the law has been employed to root out the best men and the noblest doctrines; with deplorable success as to the men, though some of the doctrines have survived to be (as if in mockery) invoked, in defence of similar conduct towards those who dissent from *them*, or from their received interpretation.

Mankind can hardly be too often reminded, that there was once a man named Socrates, between whom and the legal authorities and public opinion of his time, there took place a memorable collision. Born in an age and country abounding in individual greatness, this man has been handed down to us by those who best knew both him and the age, as the most virtuous man in it; while *we* know him as the head and prototype of all subsequent teachers of virtue, the source equally of the lofty inspiration of Plato and the judicious utilitarianism of Aristotle, '*i maestri di color che sanno*,' the two headsprings of ethical as of all other philosophy. This acknowledged master of all the eminent thinkers who have since lived—whose fame, still growing after more than two thousand years, all but outweighs the whole remainder of the names which make his native city illustrious—was put to death by his countrymen, after a judicial conviction, for impiety and immorality. Impiety, in denying the gods recognized by the State; indeed his accuser asserted (see the '*Apologia*') that he believed in no gods at all. Immorality, in being, by his doctrines and instructions, a 'corrupter of youth.' Of these charges the tribunal, there is every ground for believing, honestly found him guilty, and condemned the man who probably of all then born had deserved best of mankind, to be put to death as a criminal.

To pass from this to the only other instance of judicial iniquity, the mention of which, after the condemnation of Socrates, would not be an anti-climax: the event which took place on Calvary rather more than eighteen hundred years ago. The man who left on the memory of those who witnessed his life and conversation, such an impression of his moral grandeur, that eighteen subsequent centuries have done homage to him as the Almighty in person, was ignominiously put to death, as what? As a blasphemer. Men did not merely mistake their benefactor; they mistook him for the exact contrary of what he was, and treated him as that prodigy of impiety, which they themselves are now held to be, for their treatment of him. The feelings with which mankind now regard these lamentable transactions, especially the later of the two, render them

extremely unjust in their judgment of the unhappy actors. These were, to all appearance, not bad men—not worse than men commonly are, but rather the contrary; men who possessed in a full, or somewhat more than a full measure, the religious, moral, and patriotic feelings of their time and people: the very kind of men who, in all times, our own included, have every chance of passing through life blameless and respected. The high-priest who rent his garments when the words were pronounced, which, according to all the ideas of his country, constituted the blackest guilt, was in all probability quite as sincere in his horror and indignation, as the generality of respectable and pious men now are in the religious and moral sentiments they profess; and most of those who now shudder at his conduct, if they had lived in his time, and been born Jews, would have acted precisely as he did. Orthodox Christians who are tempted to think that those who stoned to death the first martyrs must have been worse men than they themselves are, ought to remember that one of those persecutors was Saint Paul.

Let us add one more example, the most striking of all, if the impressiveness of an error is measured by the wisdom and virtue of him who falls into it. If ever any one, possessed of power, had grounds for thinking himself the best and most enlightened among his cotemporaries, it was the Emperor Marcus Aurelius. Absolute monarch of the whole civilized world, he preserved through life not only the most unblemished justice, but what was less to be expected from his Stoical breeding, the tenderest heart. The few failings which are attributed to him, were all on the side of indulgence: while his writings, the highest ethical product of the ancient mind, differ scarcely perceptibly, if they differ at all, from the most characteristic teachings of Christ. This man, a better Christian in all but the dogmatic sense of the word, than almost any of the ostensibly Christian sovereigns who have since reigned, persecuted Christianity. Placed at the summit of all the previous attainments of humanity, with an open, unfettered intellect, and a character which led him of himself to embody in his moral writings the Christian ideal, he yet failed to see that Christianity was to be a good and not an evil to the world, with his duties to which he was so deeply penetrated. Existing society he knew to be in a deplorable state. But such as it was, he saw, or thought he saw, that it was held together, and prevented from being worse, by belief and reverence of the received divinities. As a ruler of

mankind, he deemed it his duty not to suffer society to fall in pieces; and saw not how, if its existing ties were removed, any others could be formed which could again knit it together. The new religion openly aimed at dissolving these ties: unless, therefore, it was his duty to adopt that religion, it seemed to be his duty to put it down. Inasmuch then as the theology of Christianity did not appear to him true or of divine origin; inasmuch as this strange history of a crucified God was not credible to him, and a system which purported to rest entirely upon a foundation to him so wholly unbelievable, could not be foreseen by him to be that renovating agency which, after all abatements, it has in fact proved to be; the gentlest and most amiable of philosophers and rulers, under a solemn sense of duty, authorized the persecution of Christianity. To my mind this is one of the most tragical facts in all history. It is a bitter thought, how different a thing the Christianity of the world might have been, if the Christian faith had been adopted as the religion of the empire under the auspices of Marcus Aurelius instead of those of Constantine. But it would be equally unjust to him and false to truth, to deny, that no one plea which can be urged for punishing anti-Christian teaching, was wanting to Marcus Aurelius for punishing, as he did, the propagation of Christianity. No Christian more firmly believes that Atheism is false, and tends to the dissolution of society, than Marcus Aurelius believed the same things of Christianity; he who, of all men then living, might have been thought the most capable of appreciating it. Unless any one who approves of punishment for the promulgation of opinions, flatters himself that he is a wiser and better man than Marcus Aurelius—more deeply versed in the wisdom of his time, more elevated in his intellect above it—more earnest in his search for truth, or more single-minded in his devotion to it when found; let him abstain from that assumption of the joint infallibility of himself and the multitude, which the great Antoninus made with so unfortunate a result.

Aware of the impossibility of defending the use of punishment for restraining irreligious opinions, by any argument which will not justify Marcus Antoninus, the enemies of religious freedom, when hard pressed, occasionally accept this consequence, and say, with Dr. Johnson, that the persecutors of Christianity were in the right; that persecution is an ordeal through which truth ought to pass, and always passes successfully, legal penalties being, in the end, powerless against truth, though sometimes beneficially effective

against mischievous errors. This is a form of the argument for religious intolerance, sufficiently remarkable not to be passed without notice.

A theory which maintains that truth may justifiably be persecuted because persecution cannot possibly do it any harm, cannot be charged with being intentionally hostile to the reception of new truths; but we cannot commend the generosity of its dealing with the persons to whom mankind are indebted for them. To discover to the world something which deeply concerns it, and of which it was previously ignorant; to prove to it that it had been mistaken on some vital point of temporal or spiritual interest, is as important a service as a human being can render to his fellow-creatures, and in certain cases, as in those of the early Christians and of the Reformers, those who think with Dr. Johnson believe it to have been the most precious gift which could be bestowed on mankind. That the authors of such splendid benefits should be requited by martyrdom; that their reward should be to be dealt with as the vilest of criminals, is not, upon this theory, a deplorable error and misfortune, for which humanity should mourn in sackcloth and ashes, but the normal and justifiable state of things. The propounder of a new truth, according to this doctrine, should stand, as stood, in the legislation of the Locrians, the proposer of a new law, with a halter round his neck, to be instantly tightened if the public assembly did not, on hearing his reasons, then and there adopt his proposition. People who defend this mode of treating benefactors, cannot be supposed to set much value on the benefit; and I believe this view of the subject is mostly confined to the sort of persons who think that new truths may have been desirable once, but that we have had enough of them now.

But, indeed, the dictum that truth always triumphs over persecution, is one of those pleasant falsehoods which men repeat after one another till they pass into commonplaces, but which all experience refutes. History teems with instances of truth put down by persecution. If not suppressed forever, it may be thrown back for centuries. To speak only of religious opinions: the Reformation broke out at least twenty times before Luther, and was put down. Arnold of Brescia was put down. Fra Dolcino was put down. Savonarola was put down. The Albigeois were put down. The Vaudois were put down. The Lollards were put down. The Hussites were put down. Even after the era of Luther, wherever persecution was persisted in, it was successful. In Spain, Italy, Flanders,

the Austrian empire, Protestantism was rooted out; and, most likely, would have been so in England, had Queen Mary lived, or Queen Elizabeth died. Persecution has always succeeded, save where the heretics were too strong a party to be effectually persecuted. No reasonable person can doubt that Christianity might have been extirpated in the Roman Empire. It spread, and became predominant, because the persecutions were only occasional, lasting but a short time, and separated by long intervals of almost undisturbed propagandism. It is a piece of idle sentimentality that truth, merely as truth, has any inherent power denied to error, of prevailing against the dungeon and the stake. Men are not more zealous for truth than they often are for error, and a sufficient application of legal or even of social penalties will generally succeed in stopping the propagation of either. The real advantage which truth has consists in this, that when an opinion is true, it may be extinguished once, twice, or many times, but in the course of ages there will generally be found persons to rediscover it, until some one of its reappearances falls on a time when from favorable circumstances it escapes persecution until it has made such head as to withstand all subsequent attempts to suppress it.

It will be said, that we do not now put to death the introducers of new opinions: we are not like our fathers who slew the prophets, we even build sepulchres to them. It is true we no longer put heretics to death; and the amount of penal infliction which modern feeling would probably tolerate, even against the most obnoxious opinions, is not sufficient to extirpate them. But let us not flatter ourselves that we are yet free from the stain even of legal persecution. Penalties for opinion, or at least for its expression, still exist by law; and their enforcement is not, even in these times, so unexampled as to make it at all incredible that they may some day be revived in full force. In the year 1857, at the summer assizes of the county of Cornwall, an unfortunate man * said to be of unexceptionable conduct in all relations of life, was sentenced to twenty-one months' imprisonment, for uttering and writing on a gate some offensive words concerning Christianity. Within a month of the same time, at the Old Bailey, two persons, on two separate occasions,† were rejected as jurymen, and one of them grossly insulted by the judge and by one of the coun-

* Thomas Pooley, Bodmin Assizes, July 31, 1857. In December following, he received a free pardon from the Crown.

sel, because they honestly declared that they had no theological belief; and a third, a forger,* for the same reason, was denied justice against a thief. This refusal of redress took place in virtue of the legal doctrine, that no person can be allowed to give evidence in a court of justice, who does not profess belief in a God (any god is sufficient) and in a future state; which is equivalent to declaring such persons to be outlaws, excluded from the protection of the tribunals; who may not only be robbed or assaulted with impunity, if no one but themselves, or persons of similar opinions be present, but any one else may be robbed or assaulted with impunity, if the proof of the fact depends on their evidence. The assumption on which this is grounded, is that the oath is worthless, of a person who does not believe in a future state; a proposition which betokens much ignorance of history in those who assent to it (since it is historically true that a large proportion of infidels in all ages have been persons of distinguished integrity and honor); and would be maintained by no one who had the smallest conception how many of the persons in greatest repute with the world, both for virtues and attainments, are well known, at least to their intimates, to be unbelievers. The rule, besides, is suicidal, and cuts away its own foundation. Under pretence that atheists must be liars, it admits the testimony of all atheists who are willing to lie, and rejects only those who brave the obloquy of publicly confessing a detested creed rather than affirm a falsehood. A rule thus self-convicted of absurdity so far as regards its professed purpose, can be kept in force only as a badge of hatred, a relic of persecution; a persecution, too, having the peculiarity, that the qualification for undergoing it, is the being clearly proved not to deserve it. The rule, and the theory it implies, are hardly less insulting to believers than to infidels. For if he who does not believe in a future state necessarily lies, it follows that they who do believe are only prevented from lying, if prevented they are, by the fear of hell. We will not do the authors and abettors of the rule the injury of supposing, that the conception which they have formed of Christian virtue is drawn from their own consciousness.

These, indeed, are but rags and remnants of persecution, and may be thought to be not so much an indication of the wish to persecute, as an example of that very frequent infirmity of English minds, which makes them take a preposterous pleasure in the assertion of a

bad principle, when they are no longer bad enough to desire to carry it really into practice. But unhappily there is no security in the state of the public mind, that the suspension of worse forms of legal persecution, which has lasted for about the space of a generation, will continue. In this age the quiet surface of routine is as often ruffled by attempts to resuscitate past evils, as to introduce new benefits. What is boasted of at the present time as the revival of religion, is always, in narrow and uncultivated minds, at least as much the revival of bigotry; and where there is the strong permanent leaven of intolerance in the feelings of a people, which at all times abides in the middle classes of this country, it needs but little to provoke them into actively persecuting those whom they have never ceased to think proper objects of persecution.* For it is this—it is the opinions men entertain, and the feelings they cherish, respecting those who disown the beliefs they deem important, which makes this country not a place of mental freedom. For a long time past, the chief mischief of the legal penalties is that they strengthen the social stigma. It is that stigma which is really effective, and so effective is it, that the profession of opinions which are under the ban of society is much less common in England, than is, in many other countries, the avowal of those which incur risk of judicial punishment. In respect to all persons but those whose pecuniary circumstances make them independent of the good will of other people, opinion, on this subject, is as efficacious as law; men might as well be imprisoned, as ex-

* Ample warning may be drawn from the large infusion of the passions of a persecutor, which mingled with the general display of the worst parts of our national character on the occasion of the Sepoy insurrection. The ravings of fanatics or charlatans from the pulpit may be unworthy of notice; but the heads of the Evangelical party have announced as their principle for the government of Hindoos and Mahomedans, that no schools be supported by public money in which the Bible is not taught, and by necessary consequence that no public employment be given to any but real or pretended Christians. An Under-Secretary of State, in a speech delivered to his constituents on the 12th of November, 1857, is reported to have said: 'Toleration of their faith' (the faith of a hundred millions of British subjects), 'the superstition which they called religion, by the British Government, had had the effect of retarding the ascendancy of the British name, and preventing the salutary growth of Christianity. . . . Toleration was the great corner-stone of the religious liberties of this country; but do not let them abuse that precious word toleration. As he understood it, it meant the complete liberty to all, freedom of worship, among Christians, who worshipped upon the same foundation. It meant toleration of all sects and denominations of Christians who believed in the one mediation.' I desire to call attention to the fact, that a man who has been deemed fit to fill a high office in the government of this country under a liberal Ministry, maintains the doctrine that all who do not believe in the divinity of Christ are beyond the pale of toleration. Who, after this imbecile display, can indulge the illusion that religious persecution has passed away, never to return?

* Baron de Gleichen, Marlborough Street Police Court, August 4, 1857.

cluded from the means of earning their bread. Those whose bread is already secured, and who desire no favors from men in power, or from bodies of men, or from the public, have nothing to fear from the open avowal of any opinions, but to be ill-thought of and ill-spoken of, and this it ought not to require a very heroic mould to enable them to bear. There is no room for any appeal *ad misericordiam* in behalf of such persons. But though we do not now inflict so much evil on those who think differently from us, as it was formerly our custom to do, it may be that we do ourselves as much evil as ever by our treatment of them. Socrates was put to death, but the Socratic philosophy rose like the sun in heaven, and spread its illumination over the whole intellectual firmament. Christians were cast to the lions, but the Christian church grew up a stately and spreading tree, overtopping the older and less vigorous growths, and stifling them by its shade. Our merely social intolerance kills no one, roots out no opinions, but induces men to disguise them or to abstain from any active effort for their diffusion. With us, heretical opinions do not perceptibly gain, or even lose, ground in each decade or generation; they never blaze out far and wide, but continue to smoulder in the narrow circles of thinking and studious persons among whom they originate, without ever lighting up the general affairs of mankind with either a true or a deceptive light. And thus is kept up a state of things very satisfactory to some minds, because, without the unpleasant process of fining or imprisoning anybody, it maintains all prevailing opinions outwardly undisturbed, while it does not absolutely interdict the exercise of reason by dissentients afflicted with the malady of thought. A convenient plan for having peace in the intellectual world, and keeping all things going on therein very much as they do already. But the price paid for this sort of intellectual pacification, is the sacrifice of the entire moral courage of the human mind. A state of things in which a large portion of the most active and inquiring intellects find it advisable to keep the general principles and grounds of their convictions within their own breasts, and attempt, in what they address to the public, to fit as much as they can of their own conclusions to premises which they have internally renounced, cannot send forth the open, fearless characters, and logical, consistent intellects who once adorned the thinking world. The sort of men who can be looked for under it, are either mere conformers to common-place, or time-servers for truth, whose arguments on all great subjects are

meant for their hearers, and are not those which have convinced themselves. Those who avoid this alternative, do so by narrowing their thoughts and interest to things which can be spoken of without venturing within the region of principles, that is, to small practical matters, which would come right of themselves, if but the minds of mankind were strengthened and enlarged, and which will never be made effectually right until then: while that which would strengthen and enlarge men's minds, free and daring speculation on the highest subjects, is abandoned.

Those in whose eyes this reticence on the part of heretics is no evil, should consider in the first place, that in consequence of it there is never any fair and thorough discussion of heretical opinions; and that such of them as could not stand such a discussion, though they may be prevented from spreading, do not disappear. But it is not the minds of heretics that are deteriorated most, by the ban placed on all inquiry which does not end in the orthodox conclusions. The greatest harm done is to those who are not heretics, and whose whole mental development is cramped, and their reason cowed, by the fear of heresy. Who can compute what the world loses in the multitude of promising intellects combined with timid characters, who dare not follow out any bold, vigorous, independent train of thought, lest it should land them in something which would admit of being considered irreligious or immoral? Among them we may occasionally see some man of deep conscientiousness, and subtle and refined understanding, who spends a life in sophisticating with an intellect which he cannot silence, and exhausts the resources of ingenuity in attempting to reconcile the promptings of his conscience and reason with orthodoxy, which yet he does not, perhaps, to the end succeed in doing. No one can be a great thinker who does not recognize, that as a thinker it is his first duty to follow his intellect to whatever conclusions it may lead. Truth gains more even by the errors of one who, with due study and preparation, thinks for himself, than by the true opinions of those who only hold them because they do not suffer themselves to think. Not that it is solely, or chiefly, to form great thinkers, that freedom of thinking is required. On the contrary, it is as much and even more indispensable, to enable average human beings to attain the mental stature which they are capable of. There have been, and may again be, great individual thinkers, in a general atmosphere of mental slavery. But there never has been, nor ever will be, in that atmosphere, an intellectually active peo-

ple. Where any people has made a temporary approach to such a character, it has been because the dread of heterodox speculation was for a time suspended. Where there is a tacit convention that principles are not to be disputed; where the discussion of the greatest questions which can occupy humanity is considered to be closed, we cannot hope to find that generally high scale of mental activity which has made some periods of history so remarkable. Never when controversy avoided the subjects which are large and important enough to kindle enthusiasm, was the mind of a people stirred up from its foundations, and the impulse given which raised even persons of the most ordinary intellect to something of the dignity of thinking beings. Of such we have had an example in the condition of Europe during the times immediately following the Reformation; another, though limited to the Continent and to a more cultivated class, in the speculative movement of the latter half of the eighteenth century; and a third, of still briefer duration, in the intellectual fermentation of Germany during the Goethian and Fichtean period. These periods differed widely in the particular opinions which they developed; but were alike in this, that during all three the yoke of authority was broken. In each an old mental despotism had been thrown off, and no new one had yet taken its place. The impulse given at these three periods has made Europe what it now is. Every single improvement which has taken place either in the human mind or in institutions, may be traced distinctly to one or other of them. Appearances have for some time indicated that all three impulses are well nigh spent; and we can expect no fresh start, until we again assert our mental freedom.

Let us now pass to the second division of the argument, and dismissing the supposition that any of the received opinions may be false, let us assume them to be true, and examine into the worth of the manner in which they are likely to be held, when their truth is not freely and openly canvassed. However unwillingly a person who has a strong opinion may admit the possibility that his opinion may be false, he ought to be moved by the consideration that however true it may be, if it is not fully, frequently, and fearlessly discussed, it will be held as a dead dogma, not a living truth.

There is a class of persons (happily not quite so numerous as formerly) who think it enough if a person assents undoubtingly to what they think true, though he has no knowledge whatever of the grounds of the opinion, and could

not make a tenable defence of it against the most superficial objections. Such persons, if they can once get their creed taught from authority, naturally think that no good, and some harm, comes of its being allowed to be questioned. Where their influence prevails, they make it nearly impossible for the received opinion to be rejected wisely and considerately, though it may still be rejected rashly and ignorantly; for to shut out discussion entirely is seldom possible, and when it once gets in, beliefs not grounded on conviction are apt to give way before the slightest semblance of an argument. Waving, however, this possibility—assuming that the true opinion abides in the mind, but abides as a prejudice, a belief independent of, and proof against, argument—this is not the way in which truth ought to be held by a rational being. This is not knowing the truth. Truth, thus held, is but one superstition the more, accidentally clinging to the words which enunciate a truth.

If the intellect and judgment of mankind ought to be cultivated, a thing which Protestants at least do not deny, on what can these faculties be more appropriately exercised by any one, than on the things which concern him so much that it is considered necessary for him to hold opinions on them? If the cultivation of the understanding consists in one thing more than in another, it is surely in learning the grounds of one's own opinions.

Whatever people believe, on subjects on which it is of the first importance to believe rightly, they ought to be able to defend against at least the common objections. But, some one may say, 'Let them be *taught* the grounds of their opinions. It does not follow that opinions must be merely parroted because they are never heard controverted. Persons who learn geometry do not simply commit the theorems to memory, but understand and learn likewise the demonstrations; and it would be absurd to say that they remain ignorant of the grounds of geometrical truths, because they never hear any one deny, and attempt to disprove them.' Undoubtedly: and such teaching suffices on a subject like mathematics, where there is nothing at all to be said on the wrong side of the question. The peculiarity of the evidence of mathematical truths is, that all the argument is on one side. There are no objections, and no answers to objections. But on every subject on which difference of opinion is possible, the truth depends on a balance to be struck between two sets of conflicting reasons. Even in natural philosophy, there is always some other explanation possible of the same

facts; some geocentric theory instead of heliocentric, some phlogiston instead of oxygen; and it has to be shown why that other theory cannot be the true one: and until this is shown, and until we know how it is shown, we do not understand the grounds of our opinion. But when we turn to subjects infinitely more complicated, to morals, religion, politics, social relations, and the business of life, three-fourths of the arguments for every disputed opinion consist in dispelling the appearances which favor some opinion different from it. The greatest orator, save one, of antiquity, has left it on record that he always studied his adversary's case with as great, if not still greater, intensity than even his own. What Cicero practised as the means of forensic success, requires to be imitated by all who study any subject in order to arrive at the truth. He who knows only his own side of the case, knows little of that. His reasons may be good, and no one may have been able to refute them. But if he is equally unable to refute the reasons on the opposite side; if he does not so much as know what they are, he has no ground for preferring either opinion. The rational position for him would be suspension of judgment, and unless he content himself with that, he is either led by authority, or adopts, like the generality of the world, the side to which he feels most inclination. Nor is it enough that he should hear the arguments of adversaries from his own teachers, presented as they state them, and accompanied by what they offer as refutations. That is not the way to do justice to the arguments, or bring them into real contact with his own mind. He must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. He must know them in their most plausible and persuasive form; he must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else he will never really possess himself of the portion of truth which meets and removes that difficulty. Ninety-nine in a hundred of what are called educated men are in this condition; even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the mental position of those who think differently from them, and considered what such persons may have to say; and consequently they do not in any proper sense of the word, know the doctrine which they themselves profess. They do not know those parts of it which explain and justify the remainder; the consid-

erations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred. All that part of the truth which turns the scale, and decides the judgment of a completely informed mind, they are strangers to; nor is it ever really known, but to those who have attended equally and impartially to both sides, and endeavored to see the reasons of both in the strongest light. So essential is this discipline to a real understanding of moral and human subjects, that if opponents of all important truths do not exist, it is indispensable to imagine them, and supply them with the strongest arguments which the most skilful devil's advocate can conjure up.

To abate the force of these considerations, an enemy of free discussion may be supposed to say that there is no necessity for mankind in general to know and understand all that can be said against or for their opinions by philosophers and theologians. That it is not needful for common men to be able to expose all the misstatements or fallacies of an ingenious opponent. That it is enough if there is always somebody capable of answering them, so that nothing likely to mislead uninstructed persons remains unrefuted. That simple minds, having been taught the obvious grounds of the truths inculcated on them, may trust to authority for the rest, and being aware that they have neither knowledge nor talent to resolve every difficulty which can be raised, may repose in the assurance that all those which have been raised have been or can be answered, by those who are specially trained to the task.

Conceding to this view of the subject the utmost that can be claimed for it by those most easily satisfied with the amount of understanding of truth which ought to accompany the belief of it; even so, the argument for free discussion is no way weakened. For even this doctrine acknowledges that mankind ought to have a rational assurance that all objections have been satisfactorily answered; and how are they to be answered if that which requires to be answered is not spoken? or how can the answer be known to be satisfactory, if the objectors have no opportunity of showing that it is unsatisfactory? If not the public, at least the philosophers and theologians who are to resolve the difficulties, must make themselves familiar with those difficulties in their most puzzling form; and this cannot be accomplished unless they are freely stated, and placed in the most advantageous light which they admit of. The

Catholic Church has its own way of dealing with this embarrassing problem. It makes a broad separation between those who can be permitted to receive its doctrines on conviction, and those who must accept them on trust. Neither, indeed, are allowed any choice as to what they will accept; but the clergy, such at least as can be fully confided in, may admissibly and meritoriously make themselves acquainted with the arguments of opponents, in order to answer them, and may, therefore, read heretical books; the laity, not unless by special permission, hard to be obtained. This discipline recognizes a knowledge of the enemy's case as beneficial to the teachers, but finds means, consistent with this, of denying it to the rest of the world: thus giving to the *élite* more mental culture, though not more mental freedom, than it allows to the mass. By this device it succeeds in obtaining the kind of mental superiority which its purposes require; for though culture without freedom never made a large and liberal mind, it can make a clever *nisi prius* advocate of a cause. But in countries professing Protestantism, this resource is denied; since Protestants hold, at least in theory, that the responsibility for the choice of a religion must be borne by each for himself, and cannot be thrown off upon teachers. Besides, in the present state of the world, it is practically impossible that writings which are read by the instructed can be kept from the uninstructed. If the teachers of mankind are to be cognizant of all that they ought to know, everything must be free to be written and published without restraint.

If, however, the mischievous operation of the absence of free discussion, when the received opinions are true, were confined to leaving men ignorant of the grounds of those opinions, it might be thought that this, if an intellectual, is no moral evil, and does not affect the worth of the opinions, regarded in their influence on the character. The fact, however, is, that not only the grounds of the opinion are forgotten in the absence of discussion, but too often the meaning of the opinion itself. The words which convey it, cease to suggest ideas, or suggest only a small portion of those they were originally employed to communicate. Instead of a vivid conception, and a living belief, there remain only a few phrases retained by rote; or, if any part, the shell and husk only of the meaning is retained, the finer essence being lost. The great chapter in human history which this fact occupies and fills, cannot be too earnestly studied and meditated on.

It is illustrated in the experience of almost all

ethical doctrines and religious creeds. They are all full of meaning and vitality to those who originate them, and to the direct disciples of the originators. Their meaning continues to be felt in undiminished strength, and is perhaps brought out into even fuller consciousness, so long as the struggle lasts to give the doctrine or creed an ascendancy over other creeds. At last it either prevails, and becomes the general opinion, or its progress stops; it keeps possession of the ground it has gained, but ceases to spread further. When either of these results has become apparent, controversy on the subject flags, and gradually dies away. The doctrine has taken its place, if not as a received opinion, as one of the admitted sects or divisions of opinion: those who hold it have generally inherited, not adopted it; and conversion from one of these doctrines to another, being now an exceptional fact, occupies little place in the thoughts of their professors. Instead of being, as at first, constantly on the alert either to defend themselves against the world, or to bring the world over to them, they have subsided into acquiescence, and neither listen, when they can help it, to arguments against their creed, nor trouble dissentients (if there be such) with arguments in its favor. From this time may usually be dated the decline in the living power of the doctrine. We often hear the teachers of all creeds lamenting the difficulty of keeping up in the minds of believers a lively apprehension of the truth which they nominally recognize, so that it may penetrate the feelings, and acquire a real mastery over the conduct. No such difficulty is complained of while the creed is still fighting for its existence: even the weaker combatants then know and feel what they are fighting for, and the difference between it and other doctrines; and in that period of every creed's existence, not a few persons may be found, who have realized its fundamental principles in all the forms of thought, have weighed and considered them in all their important bearings, and have experienced the full effect on the character, which belief in that creed ought to produce in a mind thoroughly imbued with it. But when it has come to be an hereditary creed, and to be received passively, not actively—when the mind is no longer compelled, in the same degree as at first, to exercise its vital powers on the questions which its belief presents to it, there is a progressive tendency to forget all of the belief except the formularies, or to give it a dull and torpid assent, as if accepting it on trust dispensed with the necessity of realizing it in consciousness, or testing it by personal experience; until it almost ceases to

connect itself at all with the inner life of the human being. Then are seen the cases, so frequent in this age of the world as almost to form the majority, in which the creed remains as it were outside the mind, incrusting and petrifying it against all other influences addressed to the higher parts of our nature; manifesting its power by not suffering any fresh and living conviction to get in, but itself doing nothing for mind or heart, except standing sentinel over them to keep them vacant.

To what an extent doctrines intrinsically fitted to make the deepest impression upon the mind may remain in it as dead beliefs, without being ever realized in the imagination, the feelings, or the understanding, is exemplified by the right in which the majority of believers hold the doctrines of Christianity. By Christianity I here mean what is accounted such by all churches and sects—the maxims and precepts contained in the New Testament. These are considered sacred, and accepted as laws, by all professing Christians. Yet it is scarcely too much to say that not one Christian in a thousand guides or tests his individual conduct by reference to those laws. The standard to which he does refer it, is the custom of his nation, his class, or his religious profession. He has thus, on the one hand, a collection of ethical maxims, which he believes to have been vouchsafed to him by infallible wisdom as rules for his government; and on the other a set of every-day judgments and practices, which go a certain length with some of those maxims, not so great a length with others, stand in direct opposition to some, and are, on the whole, a compromise between the Christian creed and the interests and suggestions of worldly life. To the first of these standard he gives his homage; to the other his real allegiance. All Christians believe that the blessed are the poor and humble, and those who are ill-used by the world; that it is easier for a camel to pass through the eye of a needle than for a rich man to enter the kingdom of heaven; that they should judge not, lest they be judged; that they should swear not at all; that they should love their neighbor as themselves; that if one take their cloak, they should give him their coat also; that they should take no thought for the morrow; that if they would be perfect they should sell all that they have and give it to the poor. They are not insincere when they say that they believe these things. They do believe them, as people believe what they have always heard lauded and never discussed. But in the sense of that living belief which regulates conduct, they believe these doctrines just up to the point to

which it is usual to act upon them. The doctrines in their integrity are serviceable to pelt adversaries with; and it is understood that they are to be put forward (when possible) as the reasons for whatever people do that they think laudable. But any one who reminded them that the maxims require an infinity of things which they never even think of doing, would gain nothing but to be classed among those very unpopular characters who affect to be better than other people. The doctrines have no hold on ordinary believers—are not a power in their minds. They have an habitual respect for the sound of them, but no feeling which spreads from the words to the things signified, and forces the mind to take *them* in, and make them conform to the formula. Whenever conduct is concerned, they look round for Mr. A and B to direct them how far to go in obeying Christ.

Now we may be well assured that the case was not thus, but far otherwise, with the early Christians. Had it been thus, Christianity never would have expanded from an obscure sect of the despised Hebrews into the religion of the Roman empire. When their enemies said, 'See how these Christians love one another' (a remark not likely to be made by anybody now), they assuredly had a much livelier feeling of the meaning of their creed than they have ever had since. And to this cause, probably, it is chiefly owing that Christianity now makes so little progress in extending its domain, and after eighteen centuries, is still nearly confined to Europeans and the descendants of Europeans. Even with the strictly religious, who are much in earnest about their doctrines, and attach a greater amount of meaning to many of them than people in general, it commonly happens that the part which is thus comparatively active in their minds is that which was made by Calvin, or Knox, or some such person much nearer in character to themselves. The sayings of Christ co-exist passively in their minds, producing hardly any effect beyond what is caused by mere listening to words so amiable and bland. There are many reasons, doubtless, why doctrines which are the badge of a sect retain more of their vitality than those common to all recognized sects, and why more pains are taken by teachers to keep their meaning alive; but one reason certainly is, that the peculiar doctrines are more questioned, and have to be oftener defended against open gainsayers. Both teachers and learners go to sleep at their post, as soon as there is no enemy in the field.

The same thing holds true, generally speaking, of all traditional doctrines—those of pru-

dence and knowledge of life, of morals or religion. All languages and literatures are full of general observations on life, both as to what it is, and how to conduct oneself in it; observations which everybody knows, which everybody repeats, or hears with acquiescence, which are received as truisms, yet of which most people first truly learn the meaning, when experience, generally of a painful kind, has made it a reality to them. How often, when smarting under some unforeseen misfortune or disappointment, does a person call to mind some proverb or common saying, familiar to him all his life, the meaning of which, if he had ever before felt it as he does now, would have saved him from the calamity. There are indeed reasons for this, other than the absence of discussion: there are many truths of which the full meaning *cannot* be realized, until personal experience has brought it home. But much more of the meaning even of these would have been understood, and what was understood would have been far more deeply impressed on the mind, if the man had been accustomed to hear it argued *pro* and *con* by people who did understand it. The tendency of mankind to leave off thinking about a thing when it is no longer doubtful, is the cause of half their errors. A cotemporary author has well spoken of 'the deep slumber of a decided opinion.'

But what! (it may be asked) Is the absence of unanimity an indispensable condition of true knowledge? Is it necessary that some part of mankind should persist in error, to enable any to realize the truth? Does a belief cease to be real and vital as soon as it is generally received—and is a proposition never thoroughly understood and felt unless some doubt of it remains? As soon as mankind have unanimously accepted a truth, does the truth perish within them? The highest aim and best result of improved intelligence, it has hitherto been thought, is to unite mankind more and more in the acknowledgment of all important truths: and does the intelligence only last as long as it has not achieved its object? Do the fruits of conquest perish by the very completeness of the victory?

I affirm no such thing. As mankind improve, the number of doctrines which are no longer disputed or doubted will be constantly on the increase: and the well-being of mankind may almost be measured by the number and gravity of the truths which have reached the point of being uncontested. The cessation, on one question after another, of serious controversy, is one of the necessary incidents of the consolidation of opinion; a consolidation as salutary in the case of true opinions,

as it is dangerous and noxious when the opinions are erroneous. But though this gradual narrowing of the bounds of diversity of opinion is necessary in both senses of the term, being at once inevitable and indispensable, we are not therefore obliged to conclude that all its consequences must be beneficial. The loss of so important an aid to the intelligent and living apprehension of a truth, as is afforded by the necessity of explaining it to, or defending it against, opponents, though not sufficient to outweigh, is no trifling drawback from, the benefit of its universal recognition. Where this advantage can no longer be had, I confess I should like to see the teachers of mankind endeavoring to provide a substitute for it; some contrivance for making the difficulties of the question as present to the learner's consciousness, as if they were pressed upon him by a dissentient champion, eager for his conversion.

But instead of seeking contrivances for this purpose, they have lost those they formerly had. The Socratic dialectics, so magnificently exemplified in the dialogues of Plato, were a contrivance of this description. They were essentially a negative discussion of the great questions of philosophy and life, directed with consummate skill to the purpose of convincing any one who had merely adopted the commonplaces of received opinion, that he did not understand the subject—that he as yet attached no definite meaning to the doctrines he professed; in order that, becoming aware of his ignorance, he might be put in the way to obtain a stable belief, resting on a clear apprehension both of the meaning of doctrines and of their evidence. The school disputations of the Middle Ages had a somewhat similar object. They were intended to make sure that the pupil understood his own opinion, and (by necessary correlation) the opinion opposed to it, and could enforce the grounds of the one and confute those of the other. These last-mentioned contests had indeed the incurable defect, that the premises appealed to were taken from authority, not from reason; and, as a discipline to the mind, they were in every respect inferior to the powerful dialectics which formed the intellects of the 'Socratici viri:' but the modern mind owes far more to both than it is generally willing to admit, and the present modes of education contain nothing which in the smallest degree supplies the place either of the one or of the other. A person who derives all his instruction from teachers or books, even if he escape the besetting temptation of contenting himself with cram, is under no compulsion to hear both sides; accordingly it is far from a

frequent accomplishment, even among thinkers, to know both sides; and the weakest part of what everybody says in defence of his opinion, is what he intends as a reply to antagonists. It is the fashion of the present time to disparage negative logic—that which points out weaknesses in theory or errors in practice, without establishing positive truths. Such negative criticism would indeed be poor enough as an ultimate result; but as a means to attaining any positive knowledge or conviction worthy the name, it cannot be valued too highly; and until people are again systematically trained to it, there will be few great thinkers, and a low general average of intellect, in any but the mathematical and physical departments of speculation. On any other subject no one's opinions deserve the name of knowledge, except so far as he has either had forced upon him by others, or gone through of himself, the same mental process which would have been required of him in carrying on an active controversy with opponents. That, therefore, which when absent, it is so indispensable, but so difficult, to create, how worse than absurd it is to forego, when spontaneously offering itself! If there are any persons who contest a received opinion, or who will do so if law or opinion will let them, let us thank them for it, open our minds to listen to them, and rejoice that there is some one to do for us what we otherwise ought, if we have any regard for either the certainty or the vitality of our convictions, to do with much greater labor for ourselves.

It still remains to speak of one of the principal causes which make diversity of opinion advantageous, and will continue to do so until mankind shall have entered a stage of intellectual advancement which at present seems at an incalculable distance. We have hitherto considered only two possibilities: that the received opinion may be false, and some other opinion, consequently, true; or that, the received opinion being true, a conflict with the opposite error is essential to a clear apprehension and deep feeling of its truth. But there is a commoner case than either of these; when the conflicting doctrines, instead of being one true and the other false, share the truth between them; and the nonconforming opinion is needed to supply the remainder of the truth, of which the received doctrine embodies only a part. Popular opinions, on subjects not palpable to sense, are often true, but seldom or never the whole truth. They are a part of the truth; sometimes a greater, sometimes a smaller part, but exaggerated, distorted, and disjoined from the truths by which they ought to be accompanied and limited. Heretical

opinions, on the other hand, are generally some of these suppressed and neglected truths, bursting the bonds which kept them down, and either seeking reconciliation with the truth contained in the common opinion, or fronting it as enemies, and setting themselves up, with similar exclusiveness, as the whole truth. The latter case is hitherto the most frequent, as, in the human mind, one-sidedness has always been the rule, and many-sidedness the exception. Hence, even in revolutions of opinion, one part of the truth usually sets while another rises. Even progress, which ought to superadd, for the most part only substitutes, one partial and incomplete truth for another; improvement consisting chiefly in this, that the new fragment of truth is more wanted, more adapted to the needs of the time, than that which it displaces.

Such being the partial character of prevailing opinions, even when resting on a true foundation, every opinion which embodies somewhat of the portion of truth which the common opinion omits, ought to be considered precious, with whatever amount of error and confusion that truth may be blended. No sober judge of human affairs will feel bound to be indignant because those who force on our notice truths which we should otherwise have overlooked, overlook some of those which we see. Rather, he will think that so long as popular truth is one-sided, it is more desirable than otherwise that unpopular truth should have one-sided assertors too; such being usually the most energetic, and the most likely to compel reluctant attention to the fragment of wisdom which they proclaim as if it were the whole.

Thus, in the eighteenth century, when nearly all the instructed, and all those of the uninstructed who were led by them, were lost in admiration of what is called civilization, and of the marvels of modern science, literature, and philosophy, and while greatly overrating the amount of unlikeness between the men of modern and those of ancient times, indulged the belief that the whole of the difference was in their own favor; with what a salutary shock did the paradoxes of Rousseau explode like bombshells in the midst, dislocating the compact mass of one-sided opinion, and forcing its elements to recombine in a better form and with additional ingredients. Not that the current opinions were on the whole farther from the truth than Rousseau's were; on the contrary, they were nearer to it; they contained more of positive truth, and very much less of error. Nevertheless there lay in Rousseau's doctrine, and has floated down the stream of opinion along with it, a considerable

amount of exactly those truths which the popular opinion wanted; and these are the deposit which was left behind when the flood subsided. The superior worth of simplicity of life, the enervating and demoralizing effect of the trammels and hypocrisies of artificial society, are ideas which have never been entirely absent from cultivated minds since Rousseau wrote; and they will in time produce their due effect, though at present needing to be asserted as much as ever, and to be asserted by deeds, for words, on this subject, have nearly exhausted their power.

In politics, again, it is almost a commonplace, that a party of order or stability, and a party of progress or reform, are both necessary elements of a healthy state of political life; until the one or the other shall have so enlarged its mental grasp as to be a party equally of order and of progress, knowing and distinguishing what is fit to be preserved from what ought to be swept away. Each of these modes of thinking derives its utility from the deficiencies of the other; but it is in a great measure the opposition of the other that keeps each within the limits of reason and sanity. Unless opinions favorable to democracy and to aristocracy, to property and to equality, to co-operation and to competition, to luxury and to abstinence, to sociality and individuality, to liberty and discipline, and all the other standing antagonisms of practical life, are expressed with equal freedom, and enforced and defended with equal talent and energy, there is no chance of both elements obtaining their due; one scale is sure to go up, and the other down. Truth, in the great practical concerns of life, is so much a question of the reconciling and combining of opposites, that very few have minds sufficiently capacious and impartial to make the adjustment with an approach to correctness, and it has to be made by the rough process of a struggle between combatants fighting under hostile banners. On any of the great open questions just enumerated, if either of the two opinions has a better claim than the other, not merely to be tolerated, but to be encouraged and countenanced, it is the one which happens at the particular time and place to be in a minority. That is the opinion which, for the time being, represents the neglected interests, the side of human well-being which is in danger of obtaining less than its share. I am aware that there is not, in this country, any intolerance of differences of opinion on most of these topics. They are adduced to show, by admitted and multiplied examples, the universality of the fact, that only through diversity of opinion is there, in the existing state of human intellect, a chance

of fair play to all sides of the truth. When there are persons to be found, who form an exception to the apparent unanimity of the world on any subject, even if the world is in the right, it is always probable that dissentients have something worth hearing to say for themselves, and that truth would lose something by their silence.

It may be objected, 'But *some* received principles, especially on the highest and most vital subjects, are more than half-truths. The Christian morality, for instance, is the whole truth on that subject, and if any one teaches a morality, which varies from it, he is wholly in error.' As this is of all cases the most important in practice, none can be fitter to test the general maxim. But before pronouncing what Christian morality is or is not, it would be desirable to decide what is meant by Christian morality. If it means the morality of the New Testament, I wonder that any one who derives his knowledge of this from the book itself, can suppose that it was announced, or intended, as a complete doctrine of morals. The Gospel always refers to a pre-existing morality, and confines its precepts to the particulars in which that morality was to be corrected, or superseded by a wider and higher; expressing itself, moreover, in terms most general, often impossible to be interpreted literally, and possessing rather the impressiveness of poetry or eloquence than the precision of legislation. To extract from it a body of ethical doctrine, has never been possible without eking it out from the Old Testament, that is, from a system elaborate indeed, but in many respects barbarous, and intended only for a barbarous people. St. Paul, a declared enemy to this Judaical mode of interpreting the doctrine and filling up the scheme of his Master, equally assumes a pre-existing morality, namely that of the Greeks and Romans; and his advice to Christians is in a great measure a system of accommodation to that; even to the extent of giving an apparent sanction to slavery. What is called Christian, but should rather be termed theological, morality, was not the work of Christ or the Apostles, but is of much later origin, having been gradually built up by the Catholic Church of the first five centuries, and though not implicitly adopted by moderns and Protestants, has been much less modified by them than might have been expected. For the most part, indeed, they have contented themselves with cutting off the additions which had been made to it in the Middle Ages each sect supplying the place by fresh additions, adapted to its own character and tendencies. That mankind owe a great debt to

this morality, and to its early teachers, I should be the last person to deny; but I do not scruple to say of it that it is, in many important points, incomplete and one-sided, and that unless ideas and feelings, not sanctioned by it, had contributed to the formation of European life and character, human affairs would have been in a worse condition than they now are.

Christian morality (so called) has all the characters of a reaction; it is, in great part, a protest against Paganism. Its ideal is negative rather than positive; passive rather than active; Innocence rather than Nobleness; Abstinence from Evil, rather than energetic Pursuit of Good; in its precepts (as has been well said) 'thou shalt not' predominates unduly over 'thou shalt.' In its horror of sensuality, it made an idol of asceticism, which has been gradually compromised away into one of legality. It holds out the hope of heaven and the threat of hell, as the appointed and appropriate motives to a virtuous life: in this falling far below the best of the ancients, and doing what lies in it to give to human morality an essentially selfish character, by disconnecting each man's feelings of duty from the interests of his fellow-creatures, except so far as a self-interested inducement is offered to him for consulting them. It is essentially a doctrine of passive obedience; it inculcates submission to all authorities found established; who indeed are not to be actively obeyed when they command what religion forbids, but who are not to be resisted, far less rebelled against, for any amount of wrong to ourselves. And while, in the morality of the best Pagan nations, duty to the State holds even a disproportionate place, infringing on the just liberty of the individual; in purely Christian ethics, that grand department of duty is scarcely noticed or acknowledged. It is in the Koran, not the New Testament, that we read the maxim—'A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins against God and against the State.' What little recognition the idea of obligation to the public obtains in modern morality, is derived from Greek and Roman sources, not from Christian; as, even in the morality of private life, whatever exists of magnanimity, highmindedness, personal dignity, even the sense of honor, is derived from the purely human, not the religious part of our education, and never could have grown out of a standard of ethics in which the only worth, professedly recognized, is that of obedience.

I am as far as any one from pretending that

these defects are necessarily inherent in the Christian ethics, in every manner in which it can be conceived, or that the many requisites of a complete moral doctrine which it does not contain, do not admit of being reconciled with it. Far less would I insinuate this of the doctrines and precepts of Christ himself. I believe that the sayings of Christ are all, that I can see any evidence of their having been intended to be; that they are irreconcilable with nothing which a comprehensive morality requires; that everything which is excellent in ethics may be brought within them, with no greater violence to their language than has been done to it by all who have attempted to deduce from them any practical system of conduct whatever. But it is quite consistent with this, to believe that they contain, and were meant to contain, only a part of the truth; that many essential elements of the highest morality are among the things which are not provided for, nor intended to be provided for, in the recorded deliverances of the Founder of Christianity, and which have been entirely thrown aside in the system of ethics erected on the basis of those deliverances by the Christian Church. And this being so, I think it a great error to persist in attempting to find in the Christian doctrine that complete rule for our guidance, which its author intended it to sanction and enforce, but only partially to provide. I believe, too, that this narrow theory is becoming a grave practical evil, detracting greatly from the moral training and instruction, which so many well-meaning persons are now at length exerting themselves to promote. I much fear that by attempting to form the mind and feelings on an exclusively religious type, and discarding those secular standards (as for want of a better name they may be called) which heretofore co-existed with and supplemented the Christian ethics, receiving some of its spirit, and infusing into it some of theirs, there will result, and is even now resulting, a low, abject, servile type of character, which, submit itself as it may to what it deems the Supreme Will, is incapable of rising to or sympathizing in the conception of Supreme Goodness. I believe that other ethics than any which can be evolved from exclusively Christian sources, must exist side by side with Christian ethics to produce the moral regeneration of mankind; and that the Christian system is no exception to the rule, that in an imperfect state of the human mind, the interests of truth require a diversity of opinions. It is not necessary that in ceasing to ignore the moral truths not contained in Christianity, men should ignore any of those which it

does contain. Such prejudice, or oversight, when it occurs, is altogether an evil; but it is one from which we cannot hope to be always exempt, and must be regarded as the price paid for an inestimable good. The exclusive pretension made by a part of the truth to be the whole, must and ought to be protested against; and if a reactionary impulse should make the protesters unjust in their turn, this one-sidedness, like the other, may be lamented, but must be tolerated. If Christians would teach infidels to be just to Christianity, they should themselves be just to infidelity. It can do truth no service to blink the fact, known to all who have the most ordinary acquaintance with literary history, that a large portion of the noblest and most valuable moral teaching has been the work, not only of men who did not know, but of men who knew and rejected, the Christian faith.

I do not pretend that the most unlimited use of the freedom of enunciating all possible opinions would put an end to the evils of religious or philosophical sectarianism. Every truth which men of narrow capacity are in earnest about, is sure to be asserted, inculcated, and in many ways even acted on, as if no other truth existed in the world, or at all events none that could limit or qualify the first. I acknowledge that the tendency of all opinions to become sectarian is not cured by the freest discussion, but is often heightened and exacerbated thereby; the truth which ought to have been, but was not, seen, being rejected all the more violently because proclaimed by persons regarded as opponents. But it is not on the impassioned partisan, it is on the calmer and more disinterested bystander, that this collision of opinions works its salutary effect. Not the violent conflict between parts of the truth, but the quiet suppression of half of it, is the formidable evil; there is always hope when people are forced to listen to both sides; it is when they attend only to one that errors harden into prejudices, and truth itself ceases to have the effect of truth, by being exaggerated into falsehood. And since there are few mental attributes more rare than that judicial faculty which can sit in intelligent judgment between two sides of a question, of which only one is represented by an advocate before it, truth has no chance but in proportion as every side of it, every opinion which embodies any fraction of the truth, not only finds advocates, but is so advocated as to be listened to.

We have now recognized the necessity to the mental well-being of mankind (on which

all their other well-being depends) of freedom of opinion, and freedom of the expression of opinion, on four distinct grounds; which we will now briefly recapitulate.

First, if any opinion is compelled to silence, that opinion may, for aught we can certainly know, be true. To deny this is to assume our own infallibility.

Secondly, though the silenced opinion be an error, it may, and very commonly does, contain a portion of truth; and since the general or prevailing opinion on any subject is rarely or never the whole truth, it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied.

Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in the manner of a prejudice, with little comprehension or feeling of its rational grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience.

Before quitting the subject of freedom of opinion, it is fit to take some notice of those who say, that the free expression of all opinions should be permitted, on condition that the manner be temperate, and do not pass the bounds of fair discussion. Much might be said on the impossibility of fixing where these supposed bounds are to be placed; for if the test be offence to those opinions are attacked, I think experience testifies that this offence is given whenever the attack is telling and powerful, and that every opponent who pushes them hard, and whom they find it difficult to answer, appears to them, if he shows any strong feeling on the subject, an intemperate opponent. But this, though an important consideration in a practical point of view, merges in a more fundamental objection. Undoubtedly the manner of asserting an opinion, even though it be a true one, may be very objectionable, and may justly incur severe censure. But the principal offences of the kind are such as it is mostly impossible, unless by accidental self-betrayal, to bring home to conviction. The gravest of them is, to argue sophistically, to suppress facts or arguments, to misstate the elements of the case, or misrepresent the opposite opinion. But all this, even to the most aggravated degree, is

so continually done in perfect good faith, by persons who are not considered, and in many other respects may not deserve to be considered, ignorant or incompetent, that it is rarely possible, on adequate grounds, conscientiously to stamp the misrepresentation as morally culpable; and still less could law presume to interfere with this kind of controversial misconduct. With regard to what is commonly meant by intemperate discussion, namely, invective, sarcasm, personality, and the like, the denunciation of these weapons would deserve more sympathy if it were ever proposed to interdict them equally to both sides; but it is only desired to restrain the employment of them against the prevailing opinion: against the unprevailing they may not only be used without general disapproval, but will be likely to obtain for him who uses them the praise of honest zeal and righteous indignation. Yet whatever mischief arises from their use, is greatest when they are employed against the comparatively defenceless; and whatever unfair advantage can be derived by any opinion from this mode of asserting it, accrues almost exclusively to received opinions. The worst offence of this kind which can be committed by a polemic, is to stigmatize those who hold the contrary opinion as bad and immoral men. To calumny of this sort, those who hold any unpopular opinion are peculiarly exposed, because they are in general few and un-influential, and nobody but themselves feels much interested in seeing justice done them; but this weapon is, from the nature of the case, denied to those who attack a prevailing opinion: they can neither use it with safety to themselves, nor, if they could, would it do anything but recoil on their own cause. In general, opinions contrary to those commonly received can only obtain a hearing by studied moderation of language, and the most cautious avoidance of unnecessary offence, from which they hardly ever deviate even in a slight degree without losing ground: while unmeasured vituperation employed on the side of the prevailing opinion, really does deter people from professing contrary opinions, and from listening to those who profess them. For the interest, therefore, of truth and justice, it is far more important to restrain this employment of vituperative language than the other; and, for example, if it were necessary to choose, there would be much more need to discourage offensive attacks on infidelity than on religion. It is, however, obvious that law and authority have no business with restraining either, while opinion ought, in every instance, to determine its verdict by the circumstances of the individual case; con-

demning every one, on whichever side of the argument he places himself, in whose mode of advocacy either want of candor, or malignity, bigotry, or intolerance of feeling manifest themselves; but not inferring these vices from the side which a person takes, though it be the contrary side of the question to our own: and giving merited honor to every one, whatever opinion he may hold, who has calmness to see and honesty to state what his opponents and their opinions really are, exaggerating nothing to their discredit, keeping nothing back which tells, or can be supposed to tell, in their favor. This is the real morality of public discussion: and if often violated, I am happy to think that there are many controversialists who to a great extent observe it, and a still greater number who conscientiously strive towards it.

CHAPTER III.

OF INDIVIDUALITY, AS ONE OF THE ELEMENTS OF WELL-BEING.

SUCH being the reasons which make it imperative that human beings should be free to form opinions, and to express their opinions without reserve; and such the baneful consequences to the intellectual, and through that to the moral nature of man, unless this liberty is either conceded, or asserted in spite of prohibition; let us next examine whether the same reasons do not require that men should be free to act upon their opinions—to carry these out in their lives, without hindrance, either physical or moral, from their fellow-men, so long as it is at their own risk and peril. This last proviso is of course indispensable. No one pretends that actions should be as free as opinions. On the contrary, even opinions lose their immunity, when the circumstances in which they are expressed are such as to constitute their expression a positive instigation to some mischievous act. An opinion that corn-dealers are starvers of the poor, or that private property is robbery, ought to be unmolested when simply circulated through the press, but may justly incur punishment when delivered orally to an excited mob assembled before the house of a corn-dealer, or when handed about among the same mob in the form of a placard. Acts, of whatever kind, which, without justifiable cause, do harm to others, may be, and in the more important cases absolutely require to be, controlled by the unfavorable sentiments, and, when needful, by the active interference of mankind.

The liberty of the individual must be thus far limited; he must not make himself a nuisance to other people. But if he refrains from molesting others in what concerns them, and merely acts according to his own inclination and judgment in things which concern himself, the same reasons which show that opinion should be free, prove also that he should be allowed, without molestation, to carry his opinions into practice at his own cost. That mankind are not infallible; that their truths, for the most part, are only half-truths; that unity of opinion, unless resulting from the fullest and freest comparison of opposite opinions, is not desirable, and diversity not an evil, but a good, until mankind are much more capable than at present of recognizing all sides of the truth, are principles applicable to men's modes of action, not less than to their opinions. As it is useful that while mankind are imperfect there should be different opinions, so it is that there should be different experiments of living; that free scope should be given to varieties of character short of injury to others; and that the worth of different modes of life should be proved practically, when any one thinks fit to try them. It is desirable, in short, that in things which do not primarily concern others, individuality should assert itself. Where, not the person's own character, but the traditions or customs of other people are the rule of conduct, there is wanting one of the principal ingredients of human happiness, and quite the chief ingredient of individual and social progress.

In maintaining this principle, the greatest difficulty to be encountered does not lie in the appreciation of means towards an acknowledged end, but in the indifference of persons in general to the end itself. If it were felt that the free development of individuality is one of the leading essentials of well-being; that it is not only a co-ordinate element with all that is designated by the terms civilization, instruction, education, culture, but is itself a necessary part and condition of all those things; there would be no danger that liberty should be under-valued, and the adjustment of the boundaries between it and social control would present no extraordinary difficulty. But the evil is, that individual spontaneity is hardly recognized by the common modes of thinking, as having any intrinsic worth, or deserving any regard on its own account. The majority, being satisfied with the ways of mankind as they now are (for it is they who make them what they are), cannot comprehend why those ways should not be good enough for everybody; and what is more,

spontaneity forms no part of the ideal of the majority of moral and social reformers, but is rather looked on with jealousy, as a troublesome and perhaps rebellious obstruction to the general acceptance of what these reformers, in their own judgment, think would be best for mankind. Few persons, out of Germany, even comprehend the meaning of the doctrine which Wilhelm von Humboldt, so eminent both as a *savant* and as a politician, made the text of a treatise—that 'the end of man, or that which is prescribed by the eternal or immutable dictates of reason, and not suggested by vague and transient desires, is the highest and most harmonious development of his powers to a complete and consistent whole;' that, therefore, the object 'towards which every human being must ceaselessly direct his efforts, and on which especially those who design to influence their fellow-men must ever keep their eyes, is the individuality of power and development,' that for this there are two requisites, 'freedom, and variety of situations;' and that from the union of these arise 'individual vigor and manifold diversity,' which combine themselves in 'originality.'*

Little, however, as people are accustomed to a doctrine like that of Von Humboldt, and surprising as it may be to them to find so high a value attached to individuality, the question one must nevertheless think, can only be one of degree. No one's idea of excellence in conduct is that people should do absolutely nothing but copy one another. No one would assert that people ought not to put into their mode of life, and into the conduct of their concerns, any impress whatever of their own judgment, or of their own individual character. On the other hand, it would be absurd to pretend that people ought to live as if nothing whatever had been known in the world before they came into it; as if experience had as yet done nothing towards showing that one mode of existence, or of conduct, is preferable to another. Nobody denies that people should be so taught and trained in youth, as to know and benefit by the ascertained results of human experience. But it is the privilege and proper condition of a human being, arrived at the maturity of his faculties, to use and interpret experience in his own way. It is for him to find out what part of recorded experience is properly applicable to his own circumstances and character. The traditions and customs of other people are, to a certain extent, evidence of what their experience has taught them; presumptive evidence, and as such,

* *The Sphere and Duties of Government*, from the German of Baron Wilhelm von Humboldt, pp. 11-15.

have a claim to his deference: but, in the first place, their experience may be too narrow; or they may not have interpreted it rightly. Secondly, their interpretation of experience may be correct, but unsuitable to him. Customs are made for customary circumstances, and customary characters; and his circumstances or his character may be uncustomary. Thirdly, though the customs be both good as customs, and suitable to him yet to conform to custom, merely as custom, does not educate or develop in him any of the qualities which are the distinctive endowment of a human being. The human faculties of perception, judgment, discriminative feeling, mental activity, and even moral preference, are exercised only in making a choice. He who does anything because it is the custom, makes no choice. He gains no practice either in discerning or in desiring what is best. The mental and moral, like the muscular powers, are improved only by being used. The faculties are called into no exercise by doing a thing merely because others do it, no more than by believing a thing only because others believe it. If the grounds of an opinion are not conclusive to the person's own reason, his reason cannot be strengthened, but is likely to be weakened, by his adopting it: and if the inducements to an act are not such as are contemporaneous to his own feelings and character (where affection, or the rights of others, are not concerned) it is so much done towards rendering his feelings and character inert and torpid, instead of active and energetic.

He who lets the world, or his own portion of it, choose his plan of life for him, has no need of any other faculty than the ape-like one of imitation. He who chooses his plan for himself, employs all his faculties. He must use observation to see, reasoning and judgment to foresee, activity to gather materials for decision, discrimination to decide, and when he has decided, firmness and self-control to hold to his deliberate decision. And these qualities he requires and exercises exactly in proportion as the part of his conduct which he determines according to his own judgment and feelings is a large one. It is possible that he might be guided in some good path, and kept out of harm's way, without any of these things. But what will be his comparative worth as a human being? It really is of importance, not only what men do, but also what manner of men they are that do it. Among the works of man, which human life is rightly employed in perfecting and beautifying, the first in importance surely is man himself. Supposing it were possible to get houses built, corn grown, battles fought, causes tried, and

even churches erected and prayers said, by machinery—by automatons in human form—it would be a considerable loss to exchange for these automatons even the men and women who at present inhabit the more civilized parts of the world, and who assuredly are but starved specimens of what nature can and will produce. Human nature is not a machine to be built after a model, and set to do exactly the work prescribed for it, but a tree, which requires to grow and develop itself on all sides, according to the tendency of the inward forces which make it a living thing.

It will probably be conceded that it is desirable people should exercise their understandings, and that an intelligent following of custom, or even occasionally an intelligent deviation from custom, is better than a blind and simply mechanical adhesion to it. To a certain extent it is admitted, that our understanding should be our own: but there is not the same willingness to admit that our desires and impulses should be our own likewise; or that to possess impulses of our own, and of any strength, is anything but a peril and a snare. Yet desires and impulses are as much a part of a perfect human being, as beliefs and restraints: and strong impulses are only perilous when not properly balanced; when one set of aims and inclinations is developed into strength, while others, which ought to co-exist with them, remain weak and inactive. It is not because men's desires are strong that they act ill; it is because their consciences are weak. There is no natural connection between strong impulses and a weak conscience. The natural connection is the other way. To say that one person's desires and feelings are stronger and more various than those of another, is merely to say that he has more of the raw material of human nature, and is therefore capable, perhaps of more evil, but certainly of more good. Strong impulses are but another name for energy. Energy may be turned to bad uses; but more good may always be made of an energetic nature, than of an indolent and impassive one. Those who have most natural feeling, are always those whose cultivated feelings may be made the strongest. The same strong susceptibilities which make the personal impulses vivid and powerful, are also the source from whence are generated the most passionate love of virtue, and the sternest self-control. It is through the cultivation of these, that society both does its duty and protects its interests: not by rejecting the stuff of which heroes are made, because it knows not how to make them. A person whose desires and impulses are his own—are the expression of his own nature, as

it has been developed and modified by his own culture—is said to have a character. One whose desires and impulses are not his own, has no character, no more than a steam-engine has a character. If, in addition to being his own, his impulses are strong, and are under the government of a strong will, he has an energetic character. Whoever thinks that individuality of desires and impulses should not be encouraged to unfold itself, must maintain that society has no need of strong natures—is not the better for containing many persons who have much character—and that a high general average of energy is not desirable.

In some early states of society, these forces might be, and were, too much ahead of the power which society then possessed of disciplining and controlling them. There has been a time when the element of spontaneity and individuality was in excess and the social principle had a hard struggle with it. The difficulty then was, to induce men of strong bodies or minds to pay obedience to any rules which required them to control their impulses. To overcome this difficulty, law and discipline, like the Popes struggling against the Emperors, asserted a power over the whole man, claiming to control all his life in order to control his character—which society had not found any other sufficient means of binding. But society has now fairly got the better of individuality; and the danger which threatens human nature is not the excess, but the deficiency, of personal impulses and preferences. Things are vastly changed, since the passions of those who were strong by station or by personal endowment were in a state of habitual rebellion against laws and ordinances, and required to be rigorously chained up to enable the persons within their reach to enjoy any particle of security. In our times, from the highest class of society down to the lowest, every one lives as under the eye of a hostile and dreaded censorship. Not only in what concerns others, but in what concerns only themselves, the individual or the family do not ask themselves—what do I prefer? or, what would suit my character and disposition? or, what would allow the best and highest in me to have fair play, and enable it to grow and thrive? They ask themselves, what is suitable to my position? what is usually done by persons of my station and pecuniary circumstances? or (worse still) what is usually done by persons of a station and circumstances superior to mine? I do not mean that they choose what is customary, in preference to what suits their own inclination. It does not occur to

them to have any inclination, except for what is customary. Thus the mind itself is bowed to the yoke: even in what people do for pleasure, conformity is the first thing thought of; they like in crowds; they exercise choice only among things commonly done: peculiarity of taste, eccentricity of conduct, are shunned equally with crimes: until by dint of not following their own nature, they have no nature to follow: their human capacities are withered and starved: they become incapable of any strong wishes or native pleasures, and are generally without either opinions or feelings of home growth, or properly their own. Now is this, or is it not, the desirable condition of human nature?

It is so, on the Calvinistic theory. According to that, the one great offence of man is self-will. All the good of which humanity is capable, is comprised in obedience. You have no choice; thus you must do, and no otherwise: 'whatever is not a duty, is a sin.' Human nature being radically corrupt, there is no redemption for any one until human nature is killed within him. To one holding this theory of life, crushing out any of the human faculties, capacities, and susceptibilities, is no evil: man needs no capacity, but that of surrendering himself to the will of God: and if he uses any of his faculties for any other purpose but to do that supposed will more effectually, he is better without them. This is the theory of Calvinism; and it is held, in a mitigated form by many who do not consider themselves Calvinists; the mitigation consisting in giving a less ascetic interpretation to the alleged will of God; asserting it to be his will that mankind should gratify some of their inclinations; of course not in the manner they themselves prefer, but in the way of obedience, that is, in a way prescribed to them by authority; and, therefore, by the necessary condition of the case, the same for all.

In some such insidious form, there is at present a strong tendency to this narrow theory of life, and to the pinched and hide-bound type of human character which it patronizes. Many persons, no doubt, sincerely think that human beings thus cramped and dwarfed, are as their Maker designed them to be; just as many have thought that trees are a much finer thing when clipped into pollards, or cut out into figures of animals, than as nature made them. But if it be any part of religion to believe that man was made by a good Being, it is more consistent with that faith to believe, that this Being gave all human faculties that they might be cultivated and unfolded, not rooted out and consumed, and

that he takes delight in every nearer approach made by his creatures to the ideal conception embodied in them, every increase in any of their capabilities of comprehension, of action, or of enjoyment. There is a different type of human excellence from the Calvinistic: a conception of humanity as having its nature bestowed on it for other purposes than merely to be abnegated. 'Pagan self-assertion' is one of the elements of human worth, as well as 'Christian self-denial.'* There is a Greek ideal of self-development, which the Platonic and Christian ideal of self-government blends with, but does not supersede. It may be better to be a John Knox than an Alcibiades, but it is better to be a Pericles than either; nor would a Pericles, if we had one in these days, be without anything good which belonged to John Knox.

It is not by wearing down into uniformity all that is individual in themselves, but by cultivating it, and calling it forth, within the limits imposed by the rights and interests of others, that human beings become a noble and beautiful object of contemplation: and as the works partake the character of those who do them, by the same process human life also becomes rich, diversified, and animating, furnishing more abundant aliment to high thoughts and elevating feelings, and strengthening the tie which binds every individual to the race, by making the race infinitely better worth belonging to. In proportion to the development of his individuality, each person becomes more valuable to himself, and is therefore capable of being more valuable to others. There is a greater fullness of life about his own existence, and when there is more life in the units there is more in the mass which is composed of them. As much compression as is necessary to prevent the stronger specimens of human nature from encroaching on the rights of others, cannot be dispensed with; but for this there is ample compensation even in the point of view of human development. The means of development which the individual loses by being prevented from gratifying his inclinations to the injury of others, are chiefly obtained at the expense of the development of other people. And even to himself there is a full equivalent in the better development of the social part of his nature, rendered possible by the restraint put upon the selfish part. To be held to rigid rules of justice for the sake of others, develops the feelings and capacities which have the good of others for their object. But to be restrained in things not affecting

their good, by their mere displeasure, develops nothing valuable, except such force of character as may unfold itself in resisting the restraint. If acquiesced in, it dulls and blunts the whole nature. To give any fair play to the nature of each, it is essential that different persons should be allowed to lead different lives. In proportion as this latitude has been exercised in any age, has that age been noteworthy to posterity. Even despotism does not produce its worst effects, so long as individuality exists under it; and whatever crushes individuality is despotism, by whatever name it may be called, and whether it professes to be enforcing the will of God or the injunctions of men.

Having said that Individuality is the same thing with development, and that it is only the cultivation of individuality which produces, or can produce, well-developed human beings, I might here close the argument: for what more or better can be said of any condition of human affairs, than that it brings human beings themselves nearer to the best thing they can be? or what worse can be said of any obstruction to good, than that it prevents this? Doubtless, however, these considerations will not suffice to convince those who most need convincing; and it is necessary further to show that these developed human-beings are of some use to the undeveloped—to point out to those who do not desire liberty, and would not avail themselves of it, that they may be in some intelligible manner rewarded for allowing other people to make use of it without hindrance.

In the first place, then, I would suggest that they might possibly learn something from them. It will not be denied by anybody, that originality is a valuable element in human affairs. There is always need of persons not only to discover new truths, and point out when what were once truths are true no longer, but also to commence new practices, and set the example of more enlightened conduct, and better taste and sense in human life. This cannot well be gainsayed by anybody who does not believe that the world has already attained perfection in all its ways and practices. It is true that this benefit is not capable of being rendered by everybody alike: there are but few persons, in comparison with the whole of mankind, whose experiments, if adopted by others, would be likely to be any improvement on established practice. But these few are the salt of the earth; without them, human life would become a stagnant pool. Not only is it they who introduce good things which did not before exist; it is they who keep the life in those which already exist. If there were nothing new to be done,

* *Sterling's Essays.*

would human intellect cease to be necessary? Would it be a reason why those who do the old things should forget why they are done, and do them like cattle, not like human beings? There is only too great a tendency in the best beliefs and practices to degenerate into the mechanical; and unless there were a succession of persons whose ever-recurring originality prevents the grounds of those beliefs and practices from becoming merely traditional, such dead matter would not resist the smallest shock from anything really alive, and there would be no reason why civilization should not die out, as in the Byzantine Empire. Persons of genius, it is true, are, and are always likely to be, a small minority; but in order to have them, it is necessary to preserve the soil in which they grow. Genius can only breathe freely in an *atmosphere* of freedom. Persons of genius are, *ex vi termini*, more individual than any other people—less capable, consequently, of fitting themselves, without hurtful compression, into any of the small number of moulds which society provides in order to save its members the trouble of forming their own character. If from timidity they consent to be forced into one of these moulds, and to let all that part of themselves which cannot expand under the pressure remain unexpanded, society will be little the better for their genius. If they are of a strong character, and break their fetters, they become a mark for the society which has not succeeded in reducing them to commonplace, to point out with solemn warning as 'wild,' 'erratic,' and the like; much as if one should complain of the Niagara River for not flowing smoothly between its banks like a Dutch canal.

I insist thus emphatically on the importance of genius, and the necessity of allowing it to unfold itself freely both in thought and in practice, being well aware that no one will deny the position in theory, but knowing also that almost every one, in reality, is totally indifferent to it. People think genius a fine thing if it enables a man to write an exciting poem, or paint a picture. But in its true sense, that of originality in thought and action, though no one says that it is not a thing to be admired, nearly all, at heart, think that they can do very well without it. Unhappily this is too natural to be wondered at. Originality is the one thing which unoriginal minds cannot feel the use of. They cannot see what it is to do for them: how should they? If they could see what it would do for them, it would not be originality. The first service which originality has to render them, is that of opening their eyes: which being once fully done, they would have a chance of being themselves original.

Meanwhile, recollecting that nothing was ever yet done which some one was not the first to do, and that all good things which exist are the fruits of originality, let them be modest enough to believe that there is something still left for it to accomplish, and assure themselves that they are more in need of originality, the less they are conscious of the want.

In sober truth, whatever homage may be professed, or even paid, to real or supposed mental superiority, the general tendency of things throughout the world is to render mediocrity the ascendant power among mankind. In ancient history, in the Middle Ages, and in a diminishing degree through the long transition from feudality to the present time, the individual was a power in himself, and if he had either great talents or a high social position, he was a considerable power. At present individuals are lost in the crowd. In politics it is almost a triviality to say that public opinion now rules the world. The only power deserving the name is that of masses, and of governments while they make themselves the organ of the tendencies and instincts of masses. This is as true in the moral and social relations of private life as in public transactions. Those whose opinions go by the name of public opinion, are not always the same sort of public: in America they are the whole white population; in England chiefly the middle class. But they are always a mass, that is to say, collective mediocrity. And what is a still greater novelty, the mass do not now take their opinions from dignitaries in Church or State, from ostensible leaders, or from books. Their thinking is done for them by men much like themselves, addressing them or speaking in their name, on the spur of the moment, through the newspapers. I am not complaining of all this. I do not assert that anything better is compatible, as a general rule, with the present low state of the human mind. But that does not hinder the government of mediocrity from being mediocre government.

No government by a democracy or a numerous aristocracy, either in its political acts or in the opinions, qualities, and tone of mind which it fosters, ever did or could rise above mediocrity, except in so far as the sovereign Many have let themselves be guided (which in their best times they always have done) by the counsels and influence of a more highly gifted and instructed One or Few. The initiation of all wise or noble things comes and must come from individuals; generally at first from some one individual. The honor and glory of the average man is that he is capable of following that initiative; that he can

respond internally to wise and noble things, and be led to them with his eyes open. I am not countenancing the sort of 'hero-worship' which applauds the strong man of genius for forcibly seizing on the government of the world and making it do his bidding in spite of itself. All he can claim is, freedom to point out the way. The power of compelling others into it is not only inconsistent with the freedom and development of all the rest, but corrupting to the strong man himself. It does seem, however, that when the opinions of masses of merely average men are everywhere become or becoming the dominant power, the counterpoise and corrective to that tendency would be, the more and more pronounced individuality of those who stand on the higher eminences of thought. It is in these circumstances most especially, that exceptional individuals, instead of being deterred, should be encouraged in acting differently from the mass. In other times there was no advantage in their doing so, unless they acted not only differently, but better. In this age, the mere example of non-conformity, the mere refusal to bend the knee to custom, is itself a service. Precisely because the tyranny of opinion is such as to make eccentricity a reproach, it is desirable, in order to break through that tyranny, that people should be eccentric. Eccentricity has always abounded when and where strength of character has abounded; and the amount of eccentricity in a society has been proportional to the amount of genius, mental vigor, and moral courage it contained. That so few now dare to be eccentric, marks the chief danger of the time.

I have said that it is important to give the freest scope possible to uncustomary things, in order that it may in time appear which of these are fit to be converted into customs. But independence of action, and disregard of custom, are not solely deserving of encouragement for the chance they afford that better modes of action, and customs more worthy of general adoption, may be struck out; nor is it only persons of decided mental superiority who have a just claim to carry on their lives in their own way. There is no reason that all human existence should be constructed on some one or some small number of patterns. If a person possesses any tolerable amount of common sense and experience, his own mode of laying out his existence is the best, not because it is the best in itself, but because it is his own mode. Human beings are not like sheep; and even sheep are not undistinguishably alike. A man cannot get a coat or a pair of boots to fit him, unless they are either made to his measure, or he has a

whole warehouseful to choose from: and is it easier to fit him with a life than with a coat, or are human beings more like one another in their whole physical and spiritual conformation than in the shape of their feet? If it were only that people have diversities of taste, that is reason enough for not attempting to shape them all after one model. But different persons also require different conditions for their spiritual development; and can no more exist healthily in the same moral, than all the variety of plants can in the same physical, atmosphere and climate. The same things which are helps to one person towards the cultivation of his higher nature are hindrances to another. The same mode of life is a healthy excitement to one, keeping all his faculties of action and enjoyment in their best order, while to another it is a distracting burden, which suspends or crushes all internal life. Such are the differences among human beings in their sources of pleasure, their susceptibilities of pain, and the operation on them of different physical and moral agencies, that unless there is a corresponding diversity in their modes of life, they neither obtain their fair share of happiness, nor grow up to the mental, moral, and æsthetic stature of which their nature is capable. Why then should tolerance, as far as the public sentiment is concerned, extend only to tastes and modes of life which extort acquiescence by the multitude of their adherents? Nowhere (except in some monastic institutions) is diversity of taste entirely unrecognized; a person may, without blame, either like or dislike rowing, or smoking, or music, or athletic exercises, or chess, or cards, or study, because both those who like each of these things, and those who dislike them, are too numerous to be put down. But the man, and still more the woman, who can be accused either of doing 'what nobody does,' or of not doing 'what everybody does,' is the subject of as much depreciatory remark as if he or she had committed some grave moral delinquency. Persons require to possess a title, or some other badge of rank, or of the consideration of people of rank, to be able to indulge somewhat in the luxury of doing as they like without detriment to their estimation. To indulge somewhat, I repeat: for whoever allow themselves much of that indulgence, incur the risk of something worse than disparaging speeches—they are in peril of a commission *de lunatico*, and of having their property taken from them and given to their relations.*

There is one characteristic of the present

* There is something both contemptible and frightful in the sort of evidence on which, of late years, any person can be

direction of public opinion, peculiarly calculated to make it intolerant of any marked demonstration of individuality. The general average of mankind are not only moderate in intellect, but also moderate in inclinations: they have no tastes or wishes strong enough to incline them to do anything unusual, and they consequently do not understand those who have, and class all such with the wild and intemperate whom they are accustomed to look down upon. Now, in addition to this fact, which is general, we have only to suppose that a strong movement has set in towards the improvement of morals, and it is evident what we have to expect. In these days such a movement has set in; much has actually been effected in the way of increased regularity of conduct, and discouragement of excesses; and there is a philanthropic spirit abroad, for the exercise of which there is no more inviting field than the moral and prudential improvement of our fellow-creatures. These tendencies of the times cause the public to be more disposed than at most former periods to prescribe general rules of conduct, and endeavor to make every one conform to the approved standard. And that standard, express or tacit, is to desire nothing strongly. Its ideal of character is to be without any marked character; to maim by compression, like a Chinese lady's foot, every part of human nature which stands out prominently, and tends to make the person markedly dissimilar in outline to commonplace humanity.

As is usually the case with ideals which exclude one-half of what is desirable, the present standard of approbation produces only an inferior imitation of the other half. Instead of great energies guided by vigorous

reason, and strong feelings strongly controlled by a conscientious will, its result is weak feelings and weak energies, which therefore can be kept in outward conformity to rule without any strength either of will or of reason. Already energetic characters on any large scale are becoming merely traditional. There is now scarcely any outlet for energy in this country except business. The energy expended in this may still be regarded as considerable. What little is left from that employment, is expended on some hobby; which may be a useful, even a philanthropic hobby, but is always some one thing, and generally a thing of small dimensions. The greatness of England is now all collective: individually small, we only appear capable of anything great by our habit of combining; and with this our moral and religious philanthropists are perfectly contented. But it was men of another stamp than this that made England what it has been; and men of another stamp will be needed to prevent its decline.

The despotism of custom is everywhere the standing hindrance to human advancement, being in unceasing antagonism to that disposition to aim at something better than customary, which is called, according to circumstances, the spirit of liberty, or that of progress or improvement. The spirit of improvement is not always a spirit of liberty, for it may aim at forcing improvements on an unwilling people; and the spirit of liberty, in so far as it resists such attempts, may ally itself locally and temporarily with the opponents of improvement; but the only unfailing and permanent source of improvement is liberty, since by it there are as many possible independent centres of improvement as there are individuals. The progressive principle, however, in either shape, whether as the love of liberty or of improvement, is antagonistic to the sway of Custom, involving at least emancipation from that yoke; and the contest between the two constitutes the chief interest of the history of mankind. The greater part of the world has, properly speaking, no history, because the despotism of Custom is complete. This is the case over the whole East. Custom is there, in all things, the final appeal; justice and right mean conformity to custom; the argument of custom no one, unless some tyrant intoxicated with power, thinks of resisting. And we see the result. Those nations must once have had originality; they did not start out of the ground populous, lettered, and versed in many of the arts of life; they made themselves all this, and were then the greatest and most powerful nations of the world. What are they now? The subjects or dependents of

judicially declared unfit for the management of his affairs; and after his death, his disposal of his property can be set aside, if there is enough of it to pay the expenses of litigation—which are charged on the property itself. All the minute details of his daily life are pried into, and whatever is found which, seen through the medium of the perceiving and describing faculties of the lowest of the low, bears an appearance unlike absolute commonplace, is laid before the jury as evidence of insanity, and often with success; the jurors being little, if at all, less vulgar and ignorant than the witnesses; while the judges, with that extraordinary want of knowledge of human nature and life which continually astonishes us in English lawyers, often help to mislead them. These trials speak volumes as to the state of feeling and opinion among the vulgar with regard to human liberty. So far from setting any value on individuality—so far from respecting the right of each individual to act, in things indifferent, as seems good to his own judgment and inclinations, judges and juries cannot even conceive that a person in a state of sanity can desire such freedom. In former days, when it was proposed to burn atheists, charitable people used to suggest putting them in a madhouse instead: it would be nothing surprising now—a-days were we to see this done, and the doers applauding themselves, because, instead of persecuting for religion, they had adopted so humane and Christian a mode of treating these unfortunates, not without a silent satisfaction at their having thereby earned their deserts.

tribes whose forefathers wandered in the forests when theirs had magnificent palaces and gorgeous temples, but over whom custom exercised only a divided rule with liberty and progress. A people, it appears, may be progressive for a certain length of time, and then stop: when does it stop? When it ceases to possess individuality. If a similar change should befall the nations of Europe, it will not be in exactly the same shape: the despotism of custom with which these nations are threatened is not precisely stationariness. It proscribes singularity, but it does not preclude change, provided all change together. We have discarded the fixed costumes of our forefathers; every one must still dress like other people, but the fashion may change once or twice a year. We thus take care that when there is a change it shall be for change's sake, and not from any idea of beauty or convenience; for the same idea of beauty or convenience would not strike all the world at the same moment, and be simultaneously thrown aside by all at another moment. But we are progressive as well as changeable: we continually make new inventions in mechanical things, and keep them until they are again superseded by better; we are eager for improvement in politics, in education, even in morals, though in this last our idea of improvement chiefly consists in persuading or forcing other people to be as good as ourselves. It is not progress that we object to; on the contrary, we flatter ourselves that we are the most progressive people who ever lived. It is individuality that we war against: we should think we had done wonders if we had made ourselves all alike; forgetting that the unlikeness of one person to another is generally the first thing which draws the attention of either to the imperfection of his own type, and the superiority of another, or the possibility, by combining the advantages of both, of producing something better than either. We have a warning example in China—a nation of much talent, and, in some respects, even wisdom, owing to the rare good fortune of having been provided at an early period with a particularly good set of customs, the work, in some measure, of men to whom even the most enlightened European must accord, under certain limitations, the title of sages and philosophers. They are remarkable, too, in the excellence of their apparatus for impressing, as far as possible, the best wisdom they possess upon every mind in the community, and securing that those who have appropriated most of it shall occupy the posts of honor and power. Surely the people who did this have discovered the secret of human progressiveness, and must have kept

themselves steadily at the head of the movement of the world. On the contrary, they have become stationary, have remained so for thousands of years; and if they are ever to be farther improved, it must be by foreigners. They have succeeded beyond all hope in what English philanthropists are so industriously working at—in making a people all alike, all governing their thoughts and conduct by the same maxims and rules; and these are the fruits. The modern *régime* of public opinion is, in an unorganized form, what the Chinese educational and political systems are in an organized; and unless individuality shall be able successfully to assert itself against this yoke, Europe, notwithstanding its noble antecedents and its professed Christianity, will tend to become another China.

What is it that has hitherto preserved Europe from this lot? What has made the European family of nations an improving, instead of a stationary portion of mankind? Not any superior excellence in them, which, when it exists, exists as the effect, not as the cause; but their remarkable diversity of character and culture. Individuals, classes, nations, have been extremely unlike one another; they have struck out a great variety of paths, each leading to something valuable; and although at every period those who travelled in different paths have been intolerant of one another, and each would have thought it an excellent thing if all the rest could have been compelled to travel his road, their attempts to thwart each other's development have rarely had any permanent success, and each has in time endured to receive the good which the others have offered. Europe is, in my judgment, wholly indebted to this plurality of paths for its progressive and many-sided development. But it already begins to possess this benefit in a considerably less degree. It is decidedly advancing toward the Chinese ideal of making all people alike. M. de Tocqueville, in his last important work, remarks how much more the Frenchmen of the present day resemble one another, than did those even of the last generation. The same remark might be made of Englishmen in a far greater degree. In a passage already quoted from Wilhelm von Humboldt, he points out two things as necessary conditions of human development, because necessary to render people unlike one another; namely, freedom, and variety of situations. The second of these two conditions is in this country every day diminishing. The circumstances which surround different classes and individuals, and shape their characters, are daily becoming more assimilated. Formerly, different ranks, different neighbor

hoods, different trades and professions, lived in what might be called different worlds; at present to a great degree in the same. Comparatively speaking, they now read the same things, listen to the same things, see the same things, go to the same places, have their hopes and fears directed to the same objects, have the same rights and liberties, and the same means of asserting them. Great as are the differences of position which remain, they are nothing to those which have ceased. And the assimilation is still proceeding. All the political changes of the age promote it, since they all tend to raise the low and to lower the high. Every extension of education promotes it, because education brings people under common influences, and gives them access to the general stock of facts and sentiments. Improvement in the means of communication promotes it, by bringing the inhabitants of distant places into personal contact, and keeping up a rapid flow of changes of residence between one place and another. The increase of commerce and manufactures promotes it, by diffusing more widely the advantages of easy circumstances, and opening all objects of ambition, even the highest, to general competition, whereby the desire of rising becomes no longer the character of a particular class, but of all classes. A more powerful agency than even all these, in bringing about a general similarity among mankind, is the complete establishment, in this and other free countries, of the ascendancy of public opinion in the State. As the various social eminences which enabled persons entrenched on them to disregard the opinion of the multitude gradually become levelled; as the very idea of resisting the will of the public, when it is positively known that they have a will, disappears more and more from the minds of practical politicians; there ceases to be any social support for non-conformity — any substantive power in society, which, itself opposed to the ascendancy of numbers, is interested in taking under its protection opinions and tendencies at variance with those of the public.

The combination of all these causes form so great a mass of influences hostile to Individuality, that it is not easy to see how it can stand its ground. It will do so with increasing difficulty, unless the intelligent part of the public can be made to feel its value — to see that it is good there should be differences, even though not for the better, even though, as it may appear to them, some should be for the worse. If the claims of Individuality are ever to be asserted, the time is now, while much is still wanting to complete the enforced assimilation. It is only in the earlier

stages that any stand can be successfully made against the encroachment. The demand that all other people shall resemble ourselves, grows by what it feeds on. If resistance waits till life is reduced *nearly* to one uniform type, all deviations from that type will come to be considered impious, immoral, even monstrous and contrary to nature. Mankind speedily become unable to conceive diversity, when they have been for some time unaccustomed to see it.

CHAPTER IV.

OF THE LIMITS TO THE AUTHORITY OF SOCIETY OVER THE INDIVIDUAL.

WHAT, then, is the rightful limit to the sovereignty of the individual over himself? Where does the authority of society begin? How much of human life should be assigned to individuality, and how much to society?

Each will receive its proper share, if each has that which more particularly concerns it. To individuality should belong the part of life in which it is chiefly the individual that is interested; to society, the part which chiefly interests society.

Though society is not founded on a contract, and though no good purpose is answered by inventing a contract in order to deduce social obligations from it, every one who receives the protection of society owes a return for the benefit, and the fact of living in society renders it indispensable that each should be bound to observe a certain line of conduct towards the rest. This conduct consists, first, in not injuring the interests of one another; or rather certain interests, which, either by express legal provision or by tacit understanding, ought to be considered as rights; and secondly, in each person's bearing his share (to be fixed on some equitable principle) of the labors and sacrifices incurred for defending the society or its members from injury and molestation. These conditions society is justified in enforcing, at all costs to those who endeavor to withhold fulfilment. Nor is this all that society may do. The acts of an individual may be hurtful to others, or wanting in due consideration for their welfare, without going to the length of violating any of their constituted rights. The offender may then be justly punished by opinion, though not by law. As soon as any part of a person's conduct affects prejudicially the interests of others, society has jurisdiction over it, and the question whether the general welfare will

or will not be promoted by interfering with it, becomes open to discussion. But there is no room for entertaining any such question when a person's conduct affects the interests of no persons besides himself, or needs not affect them unless they like (all the persons concerned being of full age, and the ordinary amount of understanding). In all such cases, there should be perfect freedom, legal and social, to do the action and stand the consequences.

It would be a great misunderstanding of this doctrine, to suppose that it is one of selfish indifference, which pretends that human beings have no business with each other's conduct in life, and that they should not concern themselves about the well-doing or well-being of one another, unless their own interest is involved. Instead of any diminution, there is need of a great increase of disinterested exertion to promote the good of others. But disinterested benevolence can find other instruments to persuade people to their good, than whips and scourges, either of the literal or the metaphorical sort. I am the last person to undervalue the self-regarding virtues; they are only second in importance, if even second, to the social. It is equally the business of education to cultivate both. But even education works by conviction and persuasion as well as by compulsion, and it is by the former only that, when the period of education is passed, the self-regarding virtues should be inculcated. Human beings owe to each other help to distinguish the better from the worse, and encouragement to choose the former and avoid the latter. They should be forever stimulating each other to increased exercise of their higher faculties, and increased direction of their feelings and aims towards wise instead of foolish, elevating instead of degrading, objects and contemplations. But neither one person, nor any number of persons, is warranted in saying to another human creature of ripe years, that he shall not do with his life for his own benefit what he chooses to do with it. He is the person most interested in his own well-being: the interest which any other person, except in cases of strong personal attachment, can have in it, is trifling, compared with that which he himself has; the interest which society has in him individually (except as to his conduct to others) is fractional, and altogether indirect: while with respect to his own feelings and circumstances, the most ordinary man or woman has means of knowledge immeasurably surpassing those that can be possessed by any one else. The interference of society to overrule his judgment and purposes in

what only regards himself, must be grounded on general presumptions; which may be altogether wrong, and even if right, are as likely as not to be misapplied to individual cases, by persons no better acquainted with the circumstances of such cases than those are who look at them merely from without. In this department, therefore, of human affairs, Individuality has its proper field of action. In the conduct of human beings towards one another, it is necessary that general rules should for the most part be observed, in order that people may know what they have to expect: but in each person's own concerns, his individual spontaneity is entitled to free exercise. Considerations to aid his judgment, exhortations to strengthen his will, may be offered to him, even obtruded on him, by others; but he himself is the final judge. All errors which he is likely to commit against advice and warning, are far outweighed by the evil of allowing others to constrain him to what they deem his good.

I do not mean that the feelings with which a person is regarded by others, ought not to be in any way affected by his self-regarding qualities or deficiencies. This is neither possible nor desirable. If he is eminent in any of the qualities which conduce to his own good, he is so far a proper object of admiration and so much the nearer to the ideal perfection of human nature. If he is grossly deficient in those qualities, a sentiment the opposite of admiration will follow. There is a degree of folly, and a degree of what may be called (though the phrase is not unobjectionable) lowness or depravation of taste, which, though it cannot justify doing harm to the person who manifests it, renders him necessarily and properly a subject of distaste, or, in extreme cases, even of contempt: a person could not have the opposite qualities in due strength without entertaining these feelings. Though doing no wrong to any one, a person may so act as to compel us to judge him, and feel to him, as a fool, or as a being of an inferior order: and since this judgment and feeling are a fact which he would prefer to avoid, it is doing him a service to warn him of it beforehand, as of any other disagreeable consequence to which he exposes himself. It would be well, indeed, if this good office were more freely rendered than the common notions of politeness at present permit, and if one person could honestly point out to another that he thinks him in fault, without being considered unmannerly or presuming. We have a right, also, in various ways, to act upon our unfavorable opinion of any one, not to the oppression of his individuality, but in the exer-

cise of ours. We are not bound, for example, to seek his society; we have a right to avoid it (though not to parade the avoidance), for we have a right to choose the society most acceptable to us. We have a right, and it may be our duty, to caution others against him, if we think his example or conversation likely to have a pernicious effect on those with whom he associates. We may give others a preference over him in optional good offices, except those which tend to his improvement. In these various modes a person may suffer very severe penalties at the hands of others, for faults which directly concern only himself; but he suffers these penalties only in so far as they are the natural, and, as it were, the spontaneous consequences of the faults themselves, not because they are purposely inflicted on him for the sake of punishment. A person who shows rashness, obstinacy, self-conceit—who cannot live within moderate means—who cannot restrain himself from hurtful indulgences—who pursues animal pleasures at the expense of those of feeling and intellect—must expect to be lowered in the opinion of others, and to have a less share of their favorable sentiments; but of this he has no right to complain, unless he has merited their favor by special excellence in his social relations, and has thus established a title to their good offices, which is not affected by his demerits towards himself.

What I contend for is, that the inconveniences which are strictly inseparable from the unfavorable judgment of others, are the only ones to which a person should ever be subjected for that portion of his conduct and character which concerns his own good, but which does not affect the interests of others in their relations with him. Acts injurious to others require a totally different treatment. Encroachment on their rights; infliction on them of any loss or damage not justified by his own rights; falsehood or duplicity in dealing with them; unfair or ungenerous use of advantages over them; even selfish abstinence from defending them against injury—these are fit objects of moral reprobation, and, in grave cases, of moral retribution and punishment. And not only these acts, but the dispositions which lead to them, are properly immoral, and fit subjects of disapprobation which may rise to abhorrence. Cruelty of disposition; malice and ill-nature; that most anti-social and odious of all passions, envy; dissimulation and insincerity; irascibility on insufficient cause, and resentment disproportioned to the provocation; the love of domineering over others; the desire to engross more than one's share of advantages (the *πλεονεξία*

of the Greeks); the pride which derives gratification from the abasement of others; the egotism which thinks self and its concerns more important than everything else, and decides all doubtful questions in its own favor;—these are moral vices, and constitute a bad and odious moral character; unlike the self-regarding faults previously mentioned, which are not properly immoralities, and to whatever pitch they may be carried, do not constitute wickedness. They may be proofs of any amount of folly, or want of personal dignity and self-respect; but they are only a subject of moral reprobation when they involve a breach of duty to others, for whose sake the individual is bound to have care for himself. What are called duties to ourselves are not socially obligatory, unless circumstances render them at the same time duties to others. The term duty, to oneself, when it means anything more than prudence, means self-respect or self-development; and for none of these is any one accountable to his fellow-creatures, because for none of them is it for the good of mankind that he be held accountable to them.

The distinction between the loss of consideration which a person may rightly incur by defect of prudence or of personal dignity, and the reprobation which is due to him for an offence against the rights of others, is not a merely nominal distinction. It makes a vast difference both in our feelings and in our conduct towards him, whether he displeases us in things in which we think we have a right to control him, or in things in which we know that we have not. If he displeases us, we may express our distaste, and we may stand aloof from a person as well as from a thing that displeases us; but we shall not therefore feel called on to make his life uncomfortable. We shall reflect that he already bears, or will bear the whole penalty of his error; if he spoils his life by mismanagement, we shall not, for that reason, desire to spoil it still further: instead of wishing to punish him, we shall rather endeavor to alleviate his punishment, by showing him how he may avoid or cure the evils his conduct tends to bring upon him. He may be to us an object of pity, perhaps of dislike, but not of anger or resentment; we shall not treat him like an enemy of society: the worst we shall think ourselves justified in doing is leaving him to himself, if we do not interfere benevolently by showing interest or concern for him. It is far otherwise if he has infringed the rules necessary for the protection of his fellow-creatures, individually or collectively. The evil consequences of his acts do not then fall on himself, but on others; and society, as the protector of all its members, must retali-

ate on him; must inflict pain on him for the express purpose of punishment, and must take care that it be sufficiently severe. In the one case, he is an offender at our bar, and we are called on not only to sit in judgment on him, but, in one shape or another, to execute our own sentence: in the other case, it is not our part to inflict any suffering on him, except what may incidentally follow from our using the same liberty in the regulation of our own affairs, which we allow to him in his.

The distinction here pointed out between the part of a person's life which concerns only himself, and that which concerns others, many persons will refuse to admit. How (it may be asked) can any part of the conduct of a member of society be a matter of indifference to the other members? No person is an entirely isolated being; it is impossible for a person to do anything seriously or permanently hurtful to himself, without mischief reaching at least to his near connections, and often far beyond them. If he injures his property, he does harm to those who directly or indirectly derived support from it, and usually diminishes, by a greater or less amount, the general resources of the community. If he deteriorates his bodily or mental faculties, he not only brings evil upon all who depended on him for any portion of their happiness, but disqualifies himself for rendering the services which he owes to his fellow creatures generally; perhaps becomes a burden on their affection or benevolence; and if such conduct were very frequent, hardly any offence that is committed would detract more from the general sum of good. Finally, if by his vices or follies a person does no direct harm to others, he is nevertheless (it may be said) injurious by his example; and ought to be compelled to control himself, for the sake of those whom the sight or knowledge of his conduct might corrupt or mislead.

And even (it will be added) if the consequences of misconduct could be confined to the vicious or thoughtless individual, ought society to abandon to their own guidance those who are manifestly unfit for it? If protection against themselves is confessedly due to children and persons under age, is not society equally bound to afford it to persons of mature years who are equally incapable of self-government? If gambling, or drunkenness, or incontinence, or idleness, or uncleanness, are as injurious to happiness, and as great a hindrance to improvement, as many or most of the acts prohibited by law, why (it may be asked) should not law, so far as is consistent with practicability and social convenience, endeavor to repress these also?

And as a supplement to the unavoidable imperfections of law, ought not opinion at least to organize a powerful police against these vices, and visit rigidly with social penalties those who are known to practise them. There is no question here (it may be said) about restricting individuality, or impeding the trial of new and original experiments in living. The only things it is sought to prevent are things which have been tried and condemned from the beginning of the world until now; things which experience has shown not to be useful or suitable to any person's individuality. There must be some length of time and amount of experience, after which a moral or prudential truth may be regarded as established: and it is merely desired to prevent generation after generation from falling over the same precipice which has been fatal to their predecessors.

I fully admit that the mischief which a person does to himself may seriously affect, both through their sympathies and their interests, those nearly connected with him, and in a minor degree, society at large. When, by conduct of this sort, a person is led to violate a distinct and assignable obligation to any other person or persons, the case is taken out of the self-regarding class, and becomes amenable to moral disapprobation in the proper sense of the term. If, for example, a man, through intemperance or extravagance, becomes unable to pay his debts, or, having undertaken the moral responsibility of a family, becomes from the same cause incapable of supporting or educating them, he is deservedly reprobated, and might be justly punished; but it is for the breach of duty to his family or creditors, not for the extravagance. If the resources which ought to have been devoted to them, had been diverted from them for the most prudent investment, the moral culpability would have been the same. George Barnwell murdered his uncle to get money for his mistress, but if he had done it to set himself up in business he would equally have been hanged. Again, in the frequent case of a man who causes grief to his family by addiction to bad habits, he deserves reproach for his unkindness or ingratitude; but so he may for cultivating habits not in themselves vicious, if they are painful to those with whom he passes his life, or who from personal ties are dependent on him for their comfort. Whoever fails in the consideration generally due to the interests and feelings of others, not being compelled by some more imperative duty, or justified by allowable self-preference, is a subject of moral disapprobation for that failure, but not for

the cause of it, nor for the errors, merely personal to himself, which may have remotely led to it. In like manner, when a person disables himself, by conduct purely self-regarding, from the performance of some definite duty incumbent on him to the public, he is guilty of a social offence. No person ought to be punished simply for being drunk; but a soldier or a policeman should be punished for being drunk on duty. Whenever, in short, there is a definite damage, or a definite risk of damage, either to an individual or to the public, the case is taken out of the province of liberty, and placed in that of morality or law.

But with regard to the merely contingent, or, as it may be called, constructive injury which a person causes to society, by conduct which neither violates any specific duty to the public, nor occasions perceptible hurt to any assignable individual except himself; the inconvenience is one which society can afford to bear, for the sake of the greater good of human freedom. If grown persons are to be punished for not taking proper care of themselves, I would rather it were for their own sake, than under pretence of preventing them from impairing their capacity of rendering to society benefits which society does not pretend it has a right to exact. But I cannot consent to argue the point as if society had no means of bringing its weaker members up to its ordinary standard of rational conduct, except waiting till they do something irrational, and then punishing them, legally or morally, for it. Society has had absolute power over them during all the early portion of their existence: it has had the whole period of childhood and nonage in which to try whether it could make them capable of rational conduct in life. The existing generation is master both of the training and the entire circumstances of the generation to come; it cannot indeed make them perfectly wise and good, because it is itself so lamentably deficient in goodness and wisdom; and its best efforts are not always, in individual cases, its most successful ones; but it is perfectly well able to make the rising generation, as a whole, as good as, and a little better than, itself. If society lets any considerable number of its members grow up mere children, incapable of being acted on by rational consideration of distant motives, society has itself to blame for the consequences. Armed not only with all the powers of education, but with the ascendancy which the authority of a received opinion always exercises over the minds who are least fitted to judge for themselves; and aided by the nat-

ural penalties which cannot be prevented from falling on those who incur the distaste or the contempt of those who know them; let not society pretend that it needs, besides all this, the power to issue commands and enforce obedience in the personal concerns of individuals, in which, on all principles of justice and policy, the decision ought to rest with those who are to abide the consequences. Nor is there anything which tends more to discredit and frustrate the better means of influencing conduct, than a resort to the worse. If there be among those whom it is attempted to coerce into prudence or temperance, any of the material of which vigorous and independent characters are made, they will infallibly rebel against the yoke. No such person will ever feel that others have a right to control him in his concerns, such as they have to prevent him from injuring them in theirs; and it easily comes to be considered a mark of spirit and courage to fly in the face of such usurped authority, and do with ostentation the exact opposite of what it enjoins; as in the fashion of grossness which succeeded, in the time of Charles II., to the fanatical moral intolerance of the Puritans. With respect to what is said of the necessity of protecting society from the bad example set to others by the vicious or the self-indulgent; it is true that bad example may have a pernicious effect, especially the example of doing wrong to others with impunity to the wrong-doer. But we are now speaking of conduct which, while it does no wrong to others, is supposed to do great harm to the agent himself: and I do not see how those who believe this, can think otherwise than that the example, on the whole, must be more salutary than hurtful, since, if it displays the misconduct, it displays also the painful or degrading consequences which, if the conduct is justly censured, must be supposed to be in all or most cases attendant on it.

But the strongest of all the arguments against the interference of the public with purely personal conduct, is that when it does interfere, the odds are that it interferes wrongly, and in the wrong place. On questions of social morality, of duty to others, the opinion of the public, that is, of an overruling majority, though often wrong, is likely to be still oftener right; because on such questions they are only required to judge of their own interests; of the manner in which some mode of conduct, if allowed to be practised, would affect themselves. But the opinion of a similar majority, imposed as a law on the minority, on questions of self-regarding conduct, is quite as likely to be wrong as right:

for in these cases public opinion means, at the best, some people's opinion of what is good or bad for other people; while very often it does not even mean that; the public, with the most perfect indifference, passing over the pleasure or convenience of those whose conduct they censure, and considering only their own preference. There are many who consider as an injury to themselves any conduct which they have a distaste for, and resent it as an outrage to their feelings; as a religious bigot, when charged with disregarding the religious feelings of others, has been known to retort that they disregard his feelings, by persisting in their abominable worship or creed. But there is no parity between the feeling of a person for his own opinion, and the feeling of another who is offended at his holding it; no more than between the desire of a thief to take a purse, and the desire of the right owner to keep it. And a person's taste is as much his own peculiar concern as his opinion or his purse. It is easy for any one to imagine an ideal public, which leaves the freedom and choice of individuals in all uncertain matters undisturbed, and only requires them to abstain from modes of conduct which universal experience has condemned. But where has there been seen a public which set any such limit to its censorship? or when does the public trouble itself about universal experience? In its interferences with personal conduct it is seldom thinking of anything but the enormity of acting or feeling differently from itself; and this standard of judgment, thinly disguised, is held up to mankind as the dictate of religion and philosophy, by nine-tenths of all moralists and speculative writers. These teach that things are right because they are right; because we feel them to be so. They tell us to search in our own minds and hearts for laws of conduct binding on ourselves and on all others. What can the poor public do but apply these instructions, and make their own personal feelings of good and evil, if they are tolerably unanimous in them, obligatory on all the world?

The evil here pointed out is not one which exists only in theory; and it may perhaps be expected that I should specify the instances in which the public of this age and country improperly invests its own preferences with the character of moral laws. I am not writing an essay on the aberrations of existing moral feeling. That is too weighty a subject to be discussed parenthetically, and by way of illustration. Yet examples are necessary, to show that the principle I maintain is of serious and practical moment, and that I am not

endeavoring to erect a barrier against imaginary evils. And it is not difficult to show, by abundant instances, that to extend the bounds of what may be called moral police, until it encroaches on the most unquestionably legitimate liberty of the individual, is one of the most universal of all human propensities.

As a first instance, consider the antipathies which men cherish on no better grounds than that persons whose religious opinions are different from theirs, do not practise their religious observances, especially their religious abstinences. To cite a rather trivial example, nothing in the creed or practice of Christians does more to envenom the hatred of Mahomedans against them, than the fact of their eating pork. There are few acts which Christians and Europeans regard with more unaffected disgust, than Mussulmans regard this particular mode of satisfying hunger. It is, in the first place, an offence against their religion; but this circumstance by no means explains either the degree or the kind of their repugnance; for wine also is forbidden by their religion, and to partake of it is by all Mussulmans accounted wrong, but not disgusting. Their aversion to the flesh of the 'unclean beast' is, on the contrary, of that peculiar character, resembling an instinctive antipathy, which the idea of uncleanness, when once it thoroughly sinks into the feelings, seems always to excite even in those whose personal habits are anything but scrupulously cleanly, and of which the sentiment of religious impurity, so intense in the Hindoos, is a remarkable example. Suppose now that in a people, of whom the majority were Mussulmans, that majority should insist upon not permitting pork to be eaten within the limits of the country. This would be nothing new in Mahomedan countries.* Would it be a legitimate exercise of the moral authority of public opinion? and if not, why not? The practice is really revolting to such a public. They also sincerely think that it is forbidden and abhorred by the Deity. Neither could the prohibition be censured as religious persecution. It might be religious in its origin,

* The case of the Bombay Parsees is a curious instance in point. When this industrious and enterprising tribe, the descendants of the Persian fire-worshippers, flying from their native country before the Caliphs, arrived in Western India, they were admitted to toleration by the Hindoo sovereigns, on condition of not eating beef. When those regions afterwards fell under the dominion of Mahomedan conquerors, the Parsees obtained from them a continuance of indulgence, on condition of refraining from pork. What was at first obedience to authority became a second nature, and the Parsees to this day abstain both from beef and pork. Though not required by their religion, the double abstinence has had time to grow into a custom of their tribe; and custom, in the East, is a religion.

but it would not be persecution for religion, since nobody's religion makes it a duty to eat pork. The only tenable ground of condemnation would be, that with the personal tastes and self-regarding concerns of individuals the public has no business to interfere.

To come somewhat nearer home: the majority of Spaniards consider it a gross impiety, offensive in the highest degree to the Supreme Being, to worship him in any other manner than the Roman Catholic; and no other public worship is lawful on Spanish soil. The people of all Southern Europe look upon a married clergy as not only irreligious, but unchaste, indecent, gross, disgusting. What do Protestants think of these perfectly sincere feelings, and of the attempt to enforce them against non-Catholics? Yet, if mankind are justified in interfering with each other's liberty in things which do not concern the interests of others, on what principle is it possible consistently to exclude these cases? or who can blame people for desiring to suppress what they regard as a scandal in the sight of God and man? No stronger case can be shown for prohibiting anything which is regarded as a personal immorality, than is made out for suppressing these practices in the eyes of those who regard them as impieties; and unless we are willing to adopt the logic of persecutors, and to say that we may persecute others because we are right, and that they must not persecute us because they are wrong, we must beware of admitting a principle of which we should resent as a gross injustice the application to ourselves.

The preceding instances may be objected to, although unreasonably, as drawn from contingencies impossible among us: opinion, in this country, not being likely to enforce abstinence from meats, or to interfere with people for worshipping, and for either marrying or not marrying, according to their creed or inclination. The next example, however, shall be taken from an interference with liberty which we have by no means passed all danger of. Wherever the Puritans have been sufficiently powerful, as in New England, and in Great Britain at the time of the Commonwealth, they have endeavored, with considerable success, to put down all public, and nearly all private, amusements: especially music, dancing, public games, or other assemblages for purposes of diversion, and the theatre. There are still in this country large bodies of persons by whose notions of morality and religion these recreations are condemned; and those persons belonging chiefly to the middle class, who are the ascendant power in the

present social and political condition of the kingdom, it is by no means impossible that persons of these sentiments may at some time or other command a majority in Parliament. How will the remaining portion of the community like to have the amusements that shall be permitted to them regulated by the religious and moral sentiments of the stricter Calvinists and Methodists? Would they not, with considerable peremptoriness, desire these intrusively pious members of society to mind their own business? This is precisely what should be said to every government and every public, who have the pretension that no person shall enjoy any pleasure which they think wrong. But if the principle of the pretension be admitted, no one can reasonably object to its being acted on in the sense of the majority, or other preponderating power in the country; and all persons must be ready to conform to the idea of a Christian commonwealth, as understood by the early settlers in New England, if a religious profession similar to theirs should ever succeed in regaining its lost ground, as religions supposed to be declining have so often been known to do.

To imagine another contingency, perhaps more likely to be realized than the one last mentioned. There is confessedly a strong tendency in the modern world towards a democratic constitution of society, accompanied or not by popular political institutions. It is affirmed that in the country where this tendency is most completely realized—where both society and the government are most democratic—the United States—the feeling of the majority, to whom any appearance of a more showy or costly style of living than they can hope to rival is disagreeable, operates as a tolerably effectual sumptuary law, and that in many parts of the Union it is really difficult for a person possessing a very large income to find any mode of spending it, which will not incur popular disapprobation. Though such statements as these are doubtless much exaggerated as a representation of existing facts, the state of things they describe is not only a conceivable and possible, but a probable result of democratic feeling, combined with the notion that the public has a right to a veto on the manner in which individuals shall spend their incomes. We have only further to suppose a considerable diffusion of Socialist opinions and it may become infamous in the eyes of the majority to possess more property than some very small amount, or any income not earned by manual labor. Opinions similar in principle to these, already prevail widely among the artizan class, and weigh oppressively on those who are amen-

able to the opinion chiefly of that class, namely, its own members. It is known that the bad workmen who form the majority of the operatives in many branches of industry, are decidedly of opinion that bad workmen ought to receive the same wages as good, and that no one ought to be allowed, through piece-work or otherwise, to earn by superior skill or industry more than others can without it. And they employ a moral police, which occasionally becomes a physical one, to deter skilful workmen from receiving, and employers from giving, a larger remuneration for a more useful service. If the public have any jurisdiction over private concerns, I cannot see that these people are in fault, or that any individual's particular public can be blamed for asserting the same authority over his individual conduct, which the general public asserts over people in general.

But, without dwelling upon supposititious cases, there are, in our own day, gross usurpations upon the liberty of private life actually practised, and still greater ones threatened with some expectation of success, and opinions propounded which assert an unlimited right in the public not only to prohibit by law everything which it thinks wrong, but in order to get at what it thinks wrong, to prohibit a number of things which it admits to be innocent.

Under the name of preventing intemperance, the people of one English colony, and of nearly half the United States, have been interdicted by law from making any use whatever of fermented drinks, except for medical purposes: for prohibition of their sale is in fact, as it is intended to be, prohibition of their use. And though the impracticability of executing the law has caused its repeal in several of the States which had adopted it, including the one from which it derives its name, an attempt has notwithstanding been commenced, and is prosecuted with considerable zeal by many of the professed philanthropists, to agitate for a similar law in this country. The association, or 'Alliance' as it terms itself, which has been formed for this purpose, has acquired some notoriety through the publicity given to a correspondence between its Secretary and one of the very few English public men who hold that a politician's opinions ought to be founded on principles. Lord Stanley's share in this correspondence is calculated to strengthen the hopes already built on him, by those who know how rare such qualities as are manifested in some of his public appearances, unhappily are among those who figure in political life. The organ of the Alliance, who would 'deeply de-

plore the recognition of any principle which could be wrested to justify bigotry and persecution,' undertakes to point out the 'broad and impassable barrier' which divides such principles from those of the association. 'All matters relating to thought, opinion, conscience, appear to me,' he says, 'to be without the sphere of legislation; all pertaining to social act, habit, relation, subject only to a discretionary power vested in the State itself, and not in the individual, to be within it.' No mention is made of a third class, different from either of these, viz. acts and habits which are not social, but individual; although it is to this class, surely, that the act of drinking fermented liquors, belongs. Selling fermented liquors, however, is trading, and trading is a social act. But the infringement complained of is not on the liberty of the seller, but on that of the buyer and consumer; since the State might just as well forbid him to drink wine, as purposely make it impossible for him to obtain it. The Secretary, however, says, 'I claim, as a citizen, a right to legislate whenever my social rights are invaded by the social act of another.' And now for the definition of these 'social rights.' 'If anything invades my social rights, certainly the traffic in strong drink does. It destroys my primary right of security, by constantly creating and stimulating social disorder. It invades my right of equality, by deriving a profit from the creation of a misery I am taxed to support. It impedes my right to free moral and intellectual development, by surrounding my path with dangers, and by weakening and demoralizing society, from which I have a right to claim mutual aid and intercourse.' A theory of 'social rights,' the like of which probably never before found its way into distinct language: being nothing short of this—that it is the absolute social right of every individual, that every other individual shall act in every respect exactly as he ought; that whosoever fails thereof in the smallest particular, violates my social right, and entitles me to demand from the legislature the removal of the grievance. So monstrous a principle is far more dangerous than any single interference with liberty; there is no violation of liberty which it would not justify; it acknowledges no right to any freedom whatever, except perhaps to that of holding opinions in secret, without ever disclosing them: for, the moment an opinion which I consider noxious passes any one's lips, it invades all the 'social rights' attributed to me by the Alliance. The doctrine ascribes to all mankind a vested interest in each other's moral, intellectual, and even

physical perfection, to be defined by each claimant according to his own standard.

Another important example of illegitimate interference with the rightful liberty of the individual, not simply threatened, but long since carried into triumphant effect, is Sabbatarian legislation. Without doubt, abstinence on one day in the week, so far as the exigencies of life permit, from the usual daily occupation, though in no respect religiously binding on any except Jews, is a highly beneficial custom. And inasmuch as this custom cannot be observed without a general consent to that effect among the industrious classes, therefore, in so far as some persons by working may impose the same necessity on others, it may be allowable and right that the law should guarantee to each the observance by others of the custom, by suspending the greater operations of industry on a particular day. But this justification, grounded on the direct interest which others have in each individual's observance of the practice, does not apply to the self-chosen occupations in which a person may think fit to employ his leisure; nor does it hold good, in the smallest degree, for legal restrictions on amusements. It is true that the amusement of some is the day's work of others; but the pleasure, not to say the useful recreation, of many, is worth the labor of a few, provided the occupation is freely chosen, and can be freely resigned. The operatives are perfectly right in thinking that if all worked on Sunday, seven days' work would have to be given for six days' wages: but so long as the great mass of employments are suspended, the small number who for the enjoyment of others must still work, obtain a proportional increase of earnings; and they are not obliged to follow those occupations, if they prefer leisure to emolument. If a further remedy is sought, it might be found in the establishment by custom of a holiday on some other day of the week for those particular classes of persons. The only ground, therefore, on which restrictions on Sunday amusements can be defended, must be that they are religiously wrong; a motive of legislation which can never be too earnestly protested against. '*Deorum injuriæ Diis curæ.*' It remains to be proved that society or any of its officers holds a commission from on high to avenge any supposed offence to Omnipotence, which is not also a wrong to our fellow-creatures. The notion that it is one man's duty that another should be religious, was the foundation of all the religious persecutions ever perpetrated, and if admitted, would fully justify them. Though the feeling which breaks out in the repeated at-

tempts to stop railway travelling on Sunday, in the resistance to the opening of Museums, and the like, has not the cruelty of the old persecutors, the state of mind indicated by it is fundamentally the same. It is a determination not to tolerate others in doing what is permitted by their religion, because it is not permitted by the persecutor's religion. It is a belief that God not only abominates the act of the misbeliever, but will not hold us guiltless if we leave him unmolested.

I cannot refrain from adding to these examples of the little account commonly made of human liberty, the language of downright persecution which breaks out from the press of this country, whenever it feels called on to notice the remarkable phenomenon of Mormonism. Much might be said on the unexpected and instructive fact, that an alleged new revelation, and a religion founded on it, the product of palpable imposture, not even supported by the *prestige* of extraordinary qualities in its founder, is believed by hundreds of thousands, and has been made the foundation of a society, in the age of newspapers, railways, and the electric telegraph. What here concerns us is, that this religion, like other and better religions, has its martyrs; that its prophet and founder was, for his teaching, put to death by a mob; that others of its adherents lost their lives by the same lawless violence; that they were forcibly expelled, in a body, from the country in which they first grew up; while, now that they have been chased into a solitary recess in the midst of a desert, many in this country openly declare that it would be right (only that it is not convenient) to send an expedition against them, and compel them by force to conform to the opinions of other people. The article of the Mormonite doctrine which is the chief provocative to the antipathy which thus breaks through the ordinary restraints of religious tolerance, is its sanction of polygamy; which, though permitted to Mahomedans, and Hindoos, and Chinese, seems to excite unquenchable animosity when practised by persons who speak English, and profess to be a kind of Christians. No one has a deeper disapprobation than I have of this Mormon institution; both for other reasons, and because, far from being in any way countenanced by the principle of liberty, it is a direct infraction of that principle, being a mere riveting of the chains of one half of the community, and an emancipation of the other from reciprocity of obligation towards them. Still, it must be remembered that, this relation is as much voluntary on the part of the women concerned in, and who may be deemed

the sufferers by it, as is the case with any other form of the marriage institution; and however surprising this fact may appear, it has its explanation in the common ideas and customs of the world, which teaching women to think marriage the one thing needful, make it intelligible that many a woman should prefer being one of several wives, to not being a wife at all. Other countries are not asked to recognize such unions, or release any portion of their inhabitants from their own laws on the score of Mormonite opinions. But when the dissentients have conceded to the hostile sentiments of others, far more than could justly be demanded; when they have left the countries to which their doctrines were unacceptable, and established themselves in a remote corner of the earth, which they have been the first to render habitable to human beings; it is difficult to see on what principles but those of tyranny they can be prevented from living there under what laws they please, provided they commit no aggression on other nations, and allow perfect freedom of departure to those who are dissatisfied with their ways. A recent writer, in some respects of considerable merit, proposes (to use his own words) not a crusade, but a *civilizade*, against this polygamous community, to put an end to what seems to him a retrograde step in civilization. It also appears so to me, but I am not aware that any community has a right to force another to be civilized. So long as the sufferers by the bad law do not invoke assistance from other communities, I cannot admit that persons entirely unconnected with them ought to step in and require that a condition of things with which all who are directly interested appear to be satisfied, should be put an end to because it is a scandal to persons some thousands of miles distant, who have no part or concern in it. Let them send missionaries, if they please, to preach against it; and let them, by any fair means (of which silencing the teachers is not one), oppose the progress of similar doctrines among their own people. If civilization has got the better of barbarism when barbarism had the world to itself, it is too much to profess to be afraid lest barbarism, after having been fairly got under, should revive and conquer civilization. A civilization that can thus succumb to its vanquished enemy, must first have become so degenerate, that neither its appointed priests and teachers, nor anybody else, has the capacity, or will take the trouble, to stand up for it. If this be so, the sooner such a civilization receives notice to quit, the better. It can only go on from bad to worse, until destroyed and regenerated (like

the Western Empire) by energetic barbarians.

CHAPTER V.

APPLICATIONS.

THE principles asserted in these pages must be more generally admitted as the basis for discussion of details, before a consistent application of them to all the various departments of government and morals can be attempted with any prospect of advantage. The few observations I propose to make on questions of detail, are designed to illustrate the principles, rather than to follow them out to their consequences. I offer, not so much applications, as specimens of application; which may serve to bring into greater clearness the meaning and limits of the two maxims which together form the entire doctrine of this Essay, and to assist the judgment in holding the balance between them, in the cases where it appears doubtful which of them is applicable to the case.

The maxims are, first, that the individual is not accountable to society for his actions, in so far as these concern the interests of no person but himself. Advice, instruction, persuasion, and avoidance by other people if thought necessary by them for their own good, are the only measures by which society can justifiably express its dislike or disapprobation of his conduct. Secondly, that for such actions as are prejudicial to the interests of others, the individual is accountable, and may be subjected either to social or to legal punishment, if society is of opinion that the one or the other is requisite for its better protection.

In the first place, it must by no means be supposed, because damage, or probability of damage, to the interests of others, can alone justify the interference of society, that therefore it always does justify such interference. In many cases, an individual, in pursuing a legitimate object, necessarily and therefore legitimately causes pain or loss to others, or intercepts a good which they had a reasonable hope of obtaining. Such oppositions of interest between individuals often arise from bad social institutions, but are unavoidable while those institutions last; and some would be unavoidable under any institutions. Whoever succeeds in an overcrowded profession, or in a competitive examination; whoever is preferred to another in any contest for an object which both desire, reaps benefit from the loss

of others, from their wasted exertion and their disappointment. But it is, by common admission, better for the general interest of mankind, that persons should pursue their objects undeterred by this sort of consequences. In other words, society admits no right, either legal or moral, in the disappointed competitors, to immunity from this kind of suffering; and feels called on to interfere, only when means of success have been employed which it is contrary to the general interest to permit—namely, fraud or treachery, and force.

Again, trade is a social act. Whoever undertakes to sell any description of goods to the public, does what affects the interest of other persons, and of society in general; and thus his conduct, in principle, comes within the jurisdiction of society: accordingly, it was once held to be the duty of governments, in all cases which were considered of importance, to fix prices, and regulate the processes of manufacture. But it is now recognized, though not till after a long struggle, that both the cheapness and the good quality of commodities are most effectually provided for by leaving the producers and sellers perfectly free, under the sole check of equal freedom to the buyers for supplying themselves elsewhere. This is the so-called doctrine of Free Trade, which rests on grounds different from, though equally solid with, the principle of individual liberty asserted in this Essay. Restrictions on trade, or on production for purposes of trade, are indeed restraints; and all restraint, *quæ* restraint, is an evil: but the restraints in question affect only that part of conduct which society is competent to restrain, and are wrong solely because they do not really produce the results which it is desired to produce by them. As the principle of individual liberty is not involved in the doctrine of Free Trade, so neither is it in most of the questions which arise respecting the limits of that doctrine; as, for example, what amount of public control is admissible for the prevention of fraud by adulteration; how far sanitary precautions, or arrangements to protect work-people employed in dangerous occupations, should be enforced on employers. Such questions involve considerations of liberty, only in so far as leaving people to themselves is always better, *cæteris paribus*, than controlling them: but that they may be legitimately controlled for these ends, is in principle undeniable. On the other hand, there are questions relating to interference with trade, which are essentially questions of liberty; such as the Maine Law, already touched upon; the prohibition of the importation of opium into

China; the restriction of the sale of poisons; all cases, in short, where the object of the interference is to make it impossible or difficult to obtain a particular commodity. These interferences are objectionable, not as infringements on the liberty of the producer or seller, but on that of the buyer.

One of these examples, that of the sale of poisons, opens a new question; the proper limits of what may be called the functions of police; how far liberty may legitimately be invaded for the prevention of crime, or of accident.

It is one of the undisputed functions of government to take precautions against crime before it has been committed, as well as to detect and punish it afterwards. The preventive function of government, however, is far more liable to be abused, to the prejudice of liberty, than the punitive function; for there is hardly any part of the legitimate freedom of action of a human being which would not admit of being represented, and fairly too, as increasing the facilities for some form or other of delinquency. Nevertheless, if a public authority, or even a private person, sees any one evidently preparing to commit a crime, they are not bound to look on inactive until the crime is committed, but may interfere to prevent it. If poisons were never bought or used for any purpose except the commission of murder, it would be right to prohibit their manufacture and sale. They may, however, be wanted not only for innocent but for useful purposes, and restrictions cannot be imposed in the one case without operating in the other. Again, it is a proper office of public authority to guard against accidents. If either a public officer or any one else saw a person attempting to cross a bridge which had been ascertained to be unsafe, and there were no time to warn him of his danger, they might seize him and turn him back, without any real infringement of his liberty; for liberty consists in doing what one desires, and he does not desire to fall into the river. Nevertheless, when there is not a certainty, but only a danger of mischief, no one but the person himself can judge of the sufficiency of the motive which may prompt him to incur the risk: in this case, therefore (unless he is a child, or delirious, or in some state of excitement or absorption incompatible with the full use of the reflecting faculty), he ought, I conceive, to be only warned of the danger; not forcibly prevented from exposing himself to it.

Similar considerations, applied to such a question as the sale of poisons, may enable us to decide which among the possible modes of

regulation are or are not contrary to principle. Such a precaution, for example, as that of labelling the drug with some word expressive of its dangerous character, may be enforced without violation of liberty: the buyer cannot wish not to know that the thing he possesses has poisonous qualities. But to require in all cases the certificate of a medical practitioner, would make it sometimes impossible, always expensive, to obtain the article for legitimate uses. The only mode apparent to me, in which difficulties may be thrown in the way of crime committed through this means, without any infringement worth taking into account, upon the liberty of those who desire the poisonous substance for other purposes, consists in providing what, in the apt language of Bentham, is called 'preappointed evidence.' This provision is familiar to every one in the case of contracts. It is usual and right that the law, when a contract is entered into, should require as the condition of its enforcing performance, that certain formalities should be observed, such as signatures, attestation of witnesses, and the like, in order that in case of subsequent dispute, there may be evidence to prove that the contract was really entered into, and that there was nothing in the circumstances to render it legally invalid: the effect being to throw great obstacles in the way of fictitious contracts, or contracts made in circumstances which, if known, would destroy their validity. Precautions of a similar nature might be enforced in the sale of articles adapted to be instruments of crime. The seller, for example, might be required to enter in a register the exact time of the transaction, the name and address of the buyer, the precise quality and quantity sold; to ask the purpose for which it was wanted, and record the answer he received. When there was no medical prescription, the presence of some third person might be required, to bring home the fact to the purchaser, in case there should afterwards be reason to believe that the article had been applied to criminal purposes. Such regulations would in general be no material impediment to obtaining the article, but a very considerable one to making an improper use of it without detection.

The right inherent in society, to ward off crimes against itself by antecedent precautions, suggests the obvious limitations to the maxim, that purely self-regarding misconduct cannot properly be meddled with in the way of prevention or punishment. Drunkenness, for example, in ordinary cases, is not a fit subject for legislative interference; but I should deem it perfectly legitimate that a

person who had once been convicted of any act of violence to others under the influence of drink, should be placed under a special legal restriction, personal to himself; that if he were afterwards found drunk, he should be liable to a penalty, and that if when in that state he committed another offence, the punishment to which he would be liable for that other offence should be increased in severity. The making himself drunk, in a person whom drunkenness excites to do harm to others, is a crime against others. So, again, idleness, except in a person receiving support from the public, or except when it constitutes a breach of contract, cannot without tyranny be made a subject of legal punishment; but if, either from idleness or from any other avoidable cause, a man fails to perform his legal duties to others, as for instance to support his children, it is no tyranny to force him to fulfil that obligation, by compulsory labor, if no other means are available.

Again, there are many acts which, being directly injurious only to the agents themselves, ought not to be legally interdicted, but which, if done publicly, are a violation of good manners, and coming thus within the category of offences against others, may rightly be prohibited. Of this kind are offences against decency; on which it is unnecessary to dwell, the rather as they are only connected indirectly with our subject, the objection to publicity being equally strong in the case of many actions not in themselves condemnable, nor supposed to be so.

There is another question to which an answer must be found, consistent with the principles which have been laid down. In cases of personal conduct supposed to be blamable, but which respect for liberty precludes society from preventing or punishing, because the evil directly resulting falls wholly on the agent; what the agent is free to do, ought other persons to be equally free to counsel or instigate? This question is not free from difficulty. The case of a person who solicits another to do an act, is not strictly a case of self-regarding conduct. To give advice or offer inducements to any one, is a social act, and may, therefore, like actions in general which affect others, be supposed amenable to social control. But a little reflection corrects the first impression, by showing that if the case is not strictly within the definition of individual liberty, yet the reasons on which the principle of individual liberty is grounded, are applicable to it. If people must be allowed, in whatever concerns only themselves, to act as seems best to themselves, at their own peril, they must equally be free to consult with one

another about what is fit to be so done; to exchange opinions, and give and receive suggestions. Whatever it is permitted to do, it must be permitted to advise to do. The question is doubtful, only when the instigator derives a personal benefit from his advice; when he makes it his occupation, for subsistence or pecuniary gain, to promote what society and the State consider to be an evil. Then, indeed, a new element of complication is introduced; namely, the existence of classes of persons with an interest opposed to what is considered as the public weal, and whose mode of living is grounded on the counteraction of it. Ought this to be interfered with, or not? Fornication, for example, must be tolerated, and so must gambling; but should a person be free to be a pimp, or to keep a gambling-house? The case is one of those which lie on the exact boundary line between two principles, and it is not at once apparent to which of the two it properly belongs. There are arguments on both sides. On the side of toleration it may be said, that the fact of following anything as an occupation, and living or profiting by the practice of it, cannot make that criminal which would otherwise be admissible; that the act should either be consistently permitted or consistently prohibited: that if the principles which we have hitherto defended are true, society has no business, as society, to decide anything to be wrong which concerns only the individual; that it cannot go beyond dissuasion, and that one person should be as free to persuade as another to dissuade. In opposition to this it may be contended, that although the public, or the State, are not warranted in authoritatively deciding, for purposes of repression or punishment, that such or such conduct affecting only the interests of the individual is good or bad, they are fully justified in assuming, if they regard it as bad, that its being so or not is at least a disputable question: that, this being supposed, they cannot be acting wrongly in endeavoring to exclude the influence of solicitations which are not disinterested, of instigators who cannot possibly be impartial—who have a direct personal interest on one side, and that side the one which the State believes to be wrong, and who promote it for personal objects only.

There can surely, it may be urged, be nothing lost, no sacrifice of good, by so ordering matters that persons shall make their election, either wisely or foolishly, on their own prompting, as free as possible from the arts of persons who stimulate their inclinations for interested purposes of their own. Thus (it may

be said) though the statutes respecting unlawful games are utterly indefensible—though all persons should be free to gamble in their own or each other's houses, or in any place of meeting established by their own subscriptions, and open only to the members and their visitors—yet public gambling-houses should not be permitted. It is true that the prohibition is never effectual, and that, whatever amount of tyrannical power may be given to the police, gambling-houses can always be maintained under other pretences; but they may be compelled to conduct their operations with a certain degree of secrecy and mystery, so that nobody knows anything about them but those who seek them; and more than this, society ought not to aim at. There is considerable force in these arguments. I will not venture to decide whether they are sufficient to justify the moral anomaly of punishing the accessory, when the principal is (and must be) allowed to go free; of fining or imprisoning the procurer, but not the fornicator—the gambling-house keeper, but not the gambler. Still less ought the common operations of buying and selling to be interfered with on analogous grounds. Almost every article which is bought and sold may be used in excess, and the sellers have a pecuniary interest in encouraging that excess; but no argument can be founded on this, in favor, for instance, of the Maine Law; because the class of dealers in strong drinks, though interested in their abuse, are indispensably required for the sake of their legitimate use. The interest, however, of these dealers in promoting intemperance is a real evil, and justifies the State in imposing restrictions and requiring guarantees which, but for that justification, would be infringements of liberty.

A further question is, whether the State, while it permits, should nevertheless indirectly discourage conduct which it deems contrary to the best interests of the agent; whether, for example, it should take measures to render the means of drunkenness more costly or add to the difficulty of procuring them by limiting the number of the places of sale. On this, as on most other practical questions, many distinctions require to be made. To tax stimulants for the sole purpose of making them more difficult to be obtained, is a measure differing only in degree from their entire prohibition; and would be justifiable only if that were justifiable. Every increase of cost is a prohibition, to those whose means do not come up to the augmented price; and to those who do, it is a penalty laid on them for gratifying a particular taste. Their choice of

pleasures, and their mode of expending their income, after satisfying their legal and moral obligations to the State and to individuals, are their own concern, and must rest with their own judgment. These considerations may seem at first sight to condemn the selection of stimulants as special subjects of taxation for purposes of revenue. But it must be remembered that taxation for fiscal purposes is absolutely inevitable; that in most countries it is necessary that a considerable part of that taxation should be indirect; that the State, therefore, cannot help imposing penalties, which to some persons may be prohibitory, on the use of some articles of consumption. It is hence the duty of the State to consider, in the imposition of taxes, what commodities the consumers can best spare; and *à fortiori*, to select in preference those of which it deems the use, beyond a very moderate quantity, to be positively injurious. Taxation, therefore, of stimulants, up to the point which produces the largest amount of revenue (supposing that the State needs all the revenue which it yields) is not only admissible, but to be approved of.

The question of making the sale of these commodities a more or less exclusive privilege, must be answered differently, according to the purposes to which the restriction is intended to be subservient. All places of public resort require the restraint of a police, and places of this kind peculiarly, because offences against society are especially apt to originate there. It is, therefore, fit to confine the power of selling these commodities (at least for consumption on the spot) to persons of known or vouched-for respectability of conduct; to make such regulations respecting hours of opening and closing as may be requisite for public surveillance, and to withdraw the license if breaches of peace repeatedly take place through the connivance or incapacity of the keeper of the house, or if it becomes a rendezvous for concocting and preparing offences against the law. And further restriction I do not conceive to be, in principle, justifiable. The limitation in number, for instance, of beer and spirit houses, for the express purpose of rendering them more difficult of access, and diminishing the occasions of temptation, not only exposes all to an inconvenience because there are some by whom the facility would be abused, but is suited only to a state of society in which the laboring classes are avowedly treated as children or savages, and placed under an education of restraint, to fit them for future admission to the privileges of freedom. This is not the principle on which the laboring classes are professedly governed in any free

country; and no person who sets due value on freedom will give his adhesion to their being so governed, unless after all efforts have been exhausted to educate them for freedom and govern them as freemen, and it has been definitively proved that they can only be governed as children. The bare statement of the alternative shows the absurdity of supposing that such efforts have been made in any case which needs be considered here. It is only because the institutions of this country are a mass of inconsistencies, that things find admittance into our practice which belong to the system of despotic, or what is called paternal, government, while the general freedom of our institutions precludes the exercise of the amount of control necessary to render the restraint of any real efficacy as a moral education.

It was pointed out in an early part of this Essay, that the liberty of the individual, in things wherein the individual is alone concerned, implies a corresponding liberty in any number of individuals to regulate by mutual agreement such things as regard them jointly, and regard no persons but themselves. This question presents no difficulty, so long as the will of all the persons implicated remains unaltered; but since that will may change, it is often necessary, even in things in which they alone are concerned, that they should enter into engagements with one another; and when they do, it is fit, as a general rule, that those engagements should be kept. Yet, in the laws probably, of every country, this general rule has some exceptions. Not only persons are not held to engagements which violate the rights of third parties, but it is sometimes considered a sufficient reason for releasing them from an engagement, that it is injurious to themselves. In this and most other civilized countries, for example, an engagement by which a person should sell himself or allow himself to be sold, as a slave, would be null and void; neither enforced by law nor by opinion. The ground for thus limiting his power of voluntarily disposing of his own lot in life, is apparent, and is very clearly seen in this extreme case. The reason for not interfering, unless for the sake of others, with a person's voluntary acts, is consideration for his liberty. His voluntary choice is evidence that what he so chooses is desirable, or at the least endurable, to him, and his good is on the whole best provided for by allowing him to take his own means of pursuing it. But by selling himself for a slave, he abdicates his liberty; he foregoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justifica-

tion of allowing him to dispose of himself. He is no longer free; but is thenceforth in a position which has no longer the presumption in its favor, that would be afforded by his voluntarily remaining in it.

The principle of freedom cannot require that he should be free not to be free. It is not freedom, to be allowed to alienate his freedom. These reasons, the force of which is so conspicuous in this peculiar case, are evidently of far wider application; yet a limit is everywhere set to them by the necessities of life, which continually require, not indeed that we should resign our freedom, but that we should consent to this and the other limitation of it. The principle, however, which demands uncontrolled freedom of action in all that concerns only the agents themselves, requires that those who have become bound to one another, in things which concern no third party, should be able to release one another from the engagement: and even without such voluntary release, there are perhaps no contracts or engagements, except those that relate to money or money's worth, of which one can venture to say that there ought to be no liberty whatever of retraction. Baron Wilhelm von Humboldt, in the excellent essay from which I have already quoted, states it as his conviction, that engagements which involve personal relations or services, should never be legally binding beyond a limited duration of time; and that the most important of these engagements, marriage, having the peculiarity that its objects are frustrated unless the feelings of both the parties are in harmony with it, should require nothing more than the declared will of either party to dissolve it. This subject is too important, and too complicated, to be discussed in a parenthesis, and I touch on it only so far as is necessary for purposes of illustration. If the conciseness and generality of Baron Humboldt's dissertation had not obliged him in this instance to content himself with enunciating his conclusion without discussing the premises, he would doubtless have recognized that the question cannot be decided on grounds so simple as those to which he confines himself.

When a person, either by express promise or by conduct, has encouraged another to rely upon his continuing to act in a certain way—to build expectations and calculations, and stake any part of his plan of life upon that supposition—a new series of moral obligations arises on his part towards that person, which may possibly be overruled, but cannot be ignored. And again, if the relation between two contracting parties has been fol-

lowed by consequences to others; if it has placed third parties in any peculiar position, or, as in the case of marriage, has even called third parties into existence, obligations arise on the part of both the contracting parties towards those third persons, the fulfilment of which, or at all events the mode of fulfilment, must be greatly affected by the continuance or disruption of the relation between the original parties to the contract. It does not follow, nor can I admit, that these obligations extend to requiring the fulfilment of the contract at all costs to the happiness of the reluctant party; but they are a necessary element in the question; and even if, as Von Humboldt maintains, they ought to make no difference in the *legal* freedom of the parties to release themselves from the engagement (and I also hold that they ought not to make *much* difference), they necessarily make a great difference in the *moral* freedom. A person is bound to take all these circumstances into account, before resolving on a step which may affect such important interests of others; and if he does not allow proper weight to those interests, he is morally responsible for the wrong. I have made these obvious remarks for the better illustration of the general principle of liberty, and not because they are at all needed on the particular question, which, on the contrary, is usually discussed as if the interest of children was everything, and that of grown persons nothing.

I have already observed that, owing to the absence of any recognized general principles, liberty is often granted where it should be withheld, as well as withheld where it should be granted; and one of the cases in which, in the modern European world, the sentiment of liberty is the strongest, is a case where, in my view, it is altogether misplaced. A person should be free to do as he likes in his own concerns; but he ought not to be free to do as he likes in acting for another, under the pretext that the affairs of the other are his own affairs. The State, while it respects the liberty of each in what specially regards himself, is bound to maintain a vigilant control over his exercise of any power which it allows him to possess over others. This obligation is almost entirely disregarded in the case of the family relations, a case, in its direct influence on human happiness, more important than all others taken together. The almost despotic power of husbands over wives needs not be enlarged upon here, because nothing more is needed for the complete removal of the evil, than that wives should have the same rights, and should receive the protection of

law in the same manner, as all other persons; and because, on this subject, the defenders of established injustice do not avail themselves of the plea of liberty, but stand forth openly as the champions of power. It is in the case of children, that misapplied notions of liberty are a real obstacle to the fulfilment by the State of its duties. One would almost think that a man's children were supposed to be literally, and not metaphorically, a part of himself, so jealous is opinion of the smallest interference of law with his absolute and exclusive control over them; more jealous than of almost any interference with his own freedom of action: so much less do the generality of mankind value liberty than power. Consider, for example, the case of education. Is it not almost a self-evident axiom, that the State should require and compel the education, up to a certain standard, of every human being who is born its citizen? Yet who is there that is not afraid to recognize and assert this truth? Hardly any one indeed will deny that it is one of the most sacred duties of the parents (or as law and usage now stand, the father), after summoning a human being into the world, to give to that being an education fitting him to perform his part well in life towards others and towards himself. But while this is unanimously declared to be the father's duty, scarcely anybody, in this country, will bear to hear of obliging him to perform it. Instead of his being required to make any exertion or sacrifice for securing education to his child, it is left to his choice to accept it or not when it is provided gratis! It still remains unrecognized, that to bring a child into existence without a fair prospect of being able, not only to provide food for its body, but instruction and training for its mind, is a moral crime, both against the unfortunate offspring and against society; and that if the parent does not fulfil this obligation, the State ought to see it fulfilled, at the charge, as far as possible, of the parent.

Were the duty of enforcing universal education once admitted, there would be an end to the difficulties about what the State should teach, and how it should teach, which now convert the subject into a mere battle field for sects and parties, causing the time and labor which should have been spent in educating, to be wasted in quarrelling about education. If the government would make up its mind to require for every child a good education, it might save itself the trouble of providing one. It might leave to parents to obtain the education where and how they pleased, and content itself with helping to pay the school fees of the poorer classes of children, and defray-

ing the entire school expenses of those who have no one else to pay for them. The objections which are urged with reason against State education, do not apply to the enforcement of education by the State, but to the State's taking upon itself to direct that education: which is a totally different thing. That the whole or any large part of the education of the people should be in State hands, I go as far as any one in deprecating. All that has been said of the importance of individuality of character, and diversity in opinions and modes of conduct, involves, as of the same unspeakable importance, diversity of education. A general State education is a mere contrivance for moulding people to be exactly like one another: and as the mould in which it casts them is that which pleases the predominant power in the government, whether this be a monarch, a priesthood, an aristocracy, or the majority of the existing generation; in proportion as it is efficient and successful, it establishes a despotism over the mind, leading by natural tendency to one over the body. An education established and controlled by the State should only exist, if it exist at all, as one among many competing experiments, carried on for the purpose of example and stimulus, to keep the others up to a certain standard of excellence. Unless, indeed, when society in general is in so backward a state that it could not or would not provide for itself any proper institutions of education, unless the government undertook the task: then, indeed, the government may, as the less of two great evils, take upon itself the business of schools and universities, as it may that of joint stock companies, when private enterprise, in a shape fitted for undertaking great works of industry, does not exist in the country. But in general, if the country contains a sufficient number of persons qualified to provide education under government auspices, the same persons would be able and willing to give an equally good education on the voluntary principle, under the assurance of remuneration afforded by a law-rendering education compulsory, combined with State aid to those unable to defray the expense.

The instrument for enforcing the law could be no other than public examinations, extending to all children, and beginning at an early age. An age might be fixed at which every child must be examined, to ascertain if he (or she) is able to read. If a child proves unable, the father, unless he has some sufficient ground of excuse, might be subjected to a moderate fine, to be worked out, if necessary, by his labor; and the child might be put to

school at his expense. Once in every year the examination should be renewed, with a gradually extending range of subjects, so as to make the universal acquisition, and what is more, retention, of a certain minimum of general knowledge, virtually compulsory. Beyond that minimum, there should be voluntary examinations on all subjects, at which all who come up to a certain standard of proficiency might claim a certificate. To prevent the State from exercising, through these arrangements, an improper influence over opinion, the knowledge required for passing an examination (beyond the merely instrumental parts of knowledge, such as languages and their use) should, even in the higher classes of examinations, be confined to facts and positive science exclusively. The examinations on religion, politics, or other disputed topics, should not turn on the truth or falsehood of opinions, but on the matter of fact that such and such an opinion is held; on such grounds, by such authors, or schools, or churches. Under this system, the rising generation would be no worse off in regard to all disputed truths, than they are at present; they would be brought up either churchmen or dissenters as they now are, the State merely taking care that they should be instructed churchmen, or instructed dissenters. There would be nothing to hinder them from being taught religion, if their parents chose, at the same schools where they were taught other things. All attempts by the State to bias the conclusions of its citizens on disputed subjects, are evil; but it may very properly offer to ascertain and certify that a person possesses the knowledge, requisite to make his conclusions, on any given subject, worth attending to. A student of philosophy would be the better for being able to stand an examination both in Locke and in Kant, whichever of the two he takes up with, or even if with neither: and there is no reasonable objection to examining an atheist in the evidences of Christianity, provided he is not required to profess a belief in them. The examinations, however, in the higher branches of knowledge should, I conceive, be entirely voluntary. It would be giving too dangerous a power to governments, were they allowed to exclude any one from professions, even from the profession of teacher, for alleged deficiency of qualifications: and I think, with Wilhelm von Humboldt, that degrees, or other public certificates of scientific or professional acquirements, should be given to all who present themselves for examination, and stand the test; but that such certificates should confer no advantage over competitors, other than

the weight which may be attached to their testimony by public opinion.

It is not in the matter of education only, that misplaced notions of liberty prevent moral obligations on the part of parents from being recognized, and legal obligations from being imposed, where there are the strongest grounds for the former always, and in many cases for the latter also. The fact itself, of causing the existence of a human being, is one of the most responsible actions in the range of human life. To undertake this responsibility—to bestow a life which may be either a curse or a blessing—unless the being on whom it is to be bestowed will have at least the ordinary chances of a desirable existence, is a crime against that being. And in a country either over-peopled, or threatened with being so, to produce children, beyond a very small number, with the effect of reducing the reward of labor by their competition, is a serious offence against all who live by the remuneration of their labor. The laws which, in many countries on the Continent, forbid marriage unless the parties can show that they have the means of supporting a family, do not exceed the legitimate powers of the State: and whether such laws be expedient or not (a question mainly dependent on local circumstances and feelings), they are not objectionable as violations of liberty. Such laws are interferences of the State to prohibit a mischievous act—an act injurious to others, which ought to be a subject of reprobation, and social stigma, even when it is not deemed expedient to superadd legal punishment. Yet the current ideas of liberty, which bend so easily to real infringements of the freedom of the individual in things which concern only himself, would repel the attempt to put any restraint upon his inclinations when the consequence of their indulgence is a life or lives of wretchedness and depravity to the offspring, with manifold evils to those sufficiently within reach to be in any way affected by their actions. When we compare the strange respect of mankind for liberty, with their strange want of respect for it, we might imagine that a man had an indispensable right to do harm to others, and no right at all to please himself without giving pain to any one.

I have reserved for the last place a large class of questions respecting the limits of government interference, which, though closely connected with the subject of this Essay, do not, in strictness, belong to it. These are cases in which the reasons against interference do not turn upon the principle of liberty: the question is not about restraining the actions of individuals, but about helping them: it is

asked whether the government should do, or cause to be done, something for their benefit, instead of leaving it to be done by themselves, individually or in voluntary combination.

The objections to government interference, when it is not such as to involve infringement of liberty, may be of three kinds.

The first is, when the thing to be done is likely to be better done by individuals than by the government. Speaking generally, there is no one so fit to conduct any business, or to determine how or by whom it shall be conducted, as those who are personally interested in it. This principle condemns the interferences, once so common, of the legislature, or the officers of government, with the ordinary processes of industry. But this part of the subject has been sufficiently enlarged upon by political economists, and is not particularly related to the principles of this Essay.

The second objection is more nearly allied to our subject. In many cases, though individuals may not do the particular thing so well, on the average, as the officers of government, it is nevertheless desirable that it should be done by them, rather than by the government, as a means to their own mental education—a mode of strengthening their active faculties, exercising their judgment, and giving them a familiar knowledge of the subjects with which they are thus left to deal. This is a principal, though not the sole, recommendation of jury trial (in cases not political); of free and popular local and municipal institutions; of the conduct of industrial and philanthropic enterprises by voluntary associations. These are not questions of liberty, and are connected with that subject only by remote tendencies; but they are questions of development. It belongs to a different occasion from the present to dwell on these things as parts of national education; as being, in truth, the peculiar training of a citizen, the practical part of the political education of a free people, taking them out of the narrow circle of personal and family selfishness, and accustoming them to the comprehension of joint interests, the management of joint concerns—habituating them to act from public or semi-public motives, and guide their conduct by aims which unite instead of isolating them from one another. Without these habits and powers, a free constitution can neither be worked nor preserved; as is exemplified by the too often transitory nature of political freedom in countries where it does not rest upon a sufficient basis of local liberties. The management of purely local business by the locali-

ties, and of the great enterprises of industry by the union of those who voluntarily supply the pecuniary means, is further recommended by all the advantages which have been set forth in this Essay as belonging to individuality of development, and diversity of modes of action. Government operations tend to be everywhere alike. With individuals and voluntary associations, on the contrary, there are varied experiments, and endless diversity of experience. What the State can usefully do is to make itself a central depository, and active circulator and diffuser, of the experience resulting from many trials. Its business is to enable each experimentalist to benefit by the experiments of others; instead of tolerating no experiments but its own.

The third, and most cogent reason for restricting the interference of government, is the great evil of adding unnecessarily to its power. Every function superadded to those already exercised by the government, causes its influence over hopes and fears to be more widely diffused, and converts, more and more, the active and ambitious part of the public into hangers-on of the government, or of some party which aims at becoming the government. If the roads, the railways, the banks, the insurance offices, the great joint-stock companies, the universities, and the public charities, were all of them branches of the government; if, in addition, the municipal corporations and local boards, with all that now devolves on them, became departments of the central administration; if the employes of all these different enterprises were appointed and paid by the government, and looked to the government for every rise in life; not all the freedom of the press and popular constitution of the legislature would make this or any other country free otherwise than in name. And the evil would be greater, the more efficiently and scientifically the administrative machinery was constructed—the more skilful the arrangements for obtaining the best qualified hands and heads with which to work it.

In England it has of late been proposed that all the members of the civil service of government should be selected by competitive examination, to obtain for those employments the most intelligent and instructed persons procurable; and much has been said and written for and against this proposal. One of the arguments most insisted on by its opponents, is that the occupation of a permanent official servant of the State does not hold out sufficient prospects of emolument and importance to attract the highest talents, which will always be able to find a more inviting career

in the professions, or in the service of companies and other public bodies. One would not have been surprised if this argument had been used by the friends of the proposition, as an answer to its principal difficulty. Coming from the opponents it is strange enough. What is urged as an objection is the safety-valve of the proposed system. If indeed all the high talent of the country *could* be drawn into the service of the government, a proposal tending to bring about that result might well inspire uneasiness. If every part of the business of society which required organized concert, or large and comprehensive views, were in the hands of the government, and if government offices were universally filled by the ablest men, all the enlarged culture and practised intelligence in the country, except the purely speculative, would be concentrated in a numerous bureaucracy, to whom alone the rest of the community would look for all things: the multitude for direction and dictation in all they had to do; the able and aspiring for personal advancement. To be admitted into the ranks of this bureaucracy, and when admitted, to rise therein, would be the sole objects of ambition. Under this régime, not only is the outside public ill-qualified, for want of practical experience, to criticise or check the mode of operation of the bureaucracy, but even if the accidents of despotic or the natural working of popular institutions occasionally raise to the summit a ruler or rulers of reforming inclinations, no reform can be effected which is contrary to the interest of the bureaucracy. Such is the melancholy condition of the Russian empire, as shown in the accounts of those who have had sufficient opportunity of observation. The Czar himself is powerless against the bureaucratic body; he can send any one of them to Siberia, but he cannot govern without them, or against their will. On every decree of his they have a tacit veto, by merely refraining from carrying it into effect. In countries of more advanced civilization and of a more insurrectionary spirit, the public, accustomed to expect everything to be done for them by the State, or at least to do nothing for themselves without asking from the State not only leave to do it, but even how it is to be done, naturally hold the State responsible for all evil which befalls them, and when the evil exceeds their amount of patience, they rise against the government, and make what is called a revolution; whereupon somebody else, with or without legitimate authority from the nation, vaults into the seat, issues his orders to the bureaucracy, and everything goes on much as it did before; the bu-

reaucracy being unchanged, and nobody else being capable of taking their place.

A very different spectacle is exhibited among a people accustomed to transact their own business. In France, a large part of the people having been engaged in military service, many of whom have held at least the rank of non-commissioned officers, there are in every popular insurrection several persons competent to take the lead, and improvise some tolerable plan of action. What the French are in military affairs, the Americans are in every kind of civil business; let them be left without a government, every body of Americans is able to improvise one, and to carry on that or any other public business with a sufficient amount of intelligence, order, and decision. This is what every free people ought to be: and a people capable of this is certain to be free; it will never let itself be enslaved by any man or body of men because these are able to seize and pull the reins of the central administration. No bureaucracy can hope to make such a people as this do or undergo anything that they do not like. But where everything is done through the bureaucracy, nothing to which the bureaucracy is really adverse can be done at all. The constitution of such countries is an organization of the experience and practical ability of the nation, into a disciplined body for the purpose of governing the rest; and the more perfect that organization is in itself, the more successful in drawing to itself and educating for itself the persons of greatest capacity from all ranks of the community, the more complete is the bondage of all, the members of the bureaucracy included. For the governors are as much the slaves of their organization and discipline, as the governed are of the governors. A Chinese mandarin is as much the tool and creature of a despotism as the humblest cultivator. An individual Jesuit is to the utmost degree of abasement the slave of his order, though the order itself exists for the collective power and importance of its members.

It is not, also, to be forgotten, that the absorption of all the principal ability of the country into the governing body is fatal, sooner or later, to the mental activity and progressiveness of the body itself. Banded together as they are—working a system which, like all systems, necessarily proceeds in a great measure by fixed rules—the official body are under the constant temptation of sinking into indolent routine, or, if they now and then desert that mill-horse round, of rushing into some half-examined crudity which has struck the fancy of some leading

member of the corps: and the sole check to these closely allied, though seemingly opposite, tendencies, the only stimulus which can keep the ability of the body itself up to a high standard, is liability to the watchful criticism of equal ability outside the body. It is indispensable, therefore, that the means should exist, independently of the government, of forming such ability, and furnishing it with the opportunities and experience necessary for a correct judgment of great practical affairs. If we would possess permanently a skilful and efficient body of functionaries—above all, a body able to originate and willing to adopt improvements; if we would not have our bureaucracy degenerate into a pedantocracy, this body must not engross all the occupations which form and cultivate the faculties required for the government of mankind.

To determine the point at which evils, so formidable to human freedom and advancement, begin, or rather at which they begin to predominate over the benefits attending the collective application of the force of society, under its recognized chiefs, for the removal of the obstacles which stand in the way of its well-being; to secure as much of the advantages of centralized power and intelligence, as can be had without turning into governmental channels too great a proportion of the general activity—is one of the most difficult and complicated questions in the art of government. It is, in a great measure, a question of detail, in which many and various considerations must be kept in view, and no absolute rule can be laid down. But I believe that the practical principle in which safety resides, the ideal to be kept in view, the standard by which to test all arrangements intended for overcoming the difficulty, may be conveyed in these words: the greatest dissemination of power consistent with efficiency; but the greatest possible centralization of information, and diffusion of it from the centre. Thus, in municipal administration, there would be, as in the New England States, a very minute division among separate officers, chosen by the localities, of all business which is not better left to the persons directly interested; but besides this, there would be, in each department of local affairs, a central superintendence, forming a branch of the general government. The organ of this superintendence would concentrate, as in a focus, the variety of information and experience derived from the conduct of that branch of public business in all the localities, from everything analogous which is done in foreign countries, and from the general princi-

ples of political science. This central organ should have a right to know all that is done, and its special duty should be that of making the knowledge acquired in one place available for others. Emancipated from the petty prejudices and narrow views of a locality by its elevated position and comprehensive sphere of observation, its advice would naturally carry much authority; but its actual power, as a permanent institution, should, I conceive, be limited to compelling the local officers to obey the laws laid down for their guidance. In all things not provided for by general rules, those officers should be left to their own judgment, under responsibility to their constituents. For the violation of rules, they should be responsible to law, and the rules themselves should be laid down by the legislature; the central administrative authority only watching over their execution, and if they were not properly carried into effect, appealing, according to the nature of the case, to the tribunals to enforce the law, or to the constituencies to dismiss the functionaries who had not executed it according to its spirit. Such, in its general conception, is the central superintendence which the Poor Law Board is intended to exercise over the administrators of the Poor Rate throughout the country. Whatever powers the Board exercises beyond this limit, were right and necessary in that peculiar case, for the cure of rooted habits of maladministration in matters deeply affecting not the localities merely, but the whole community; since no locality has a moral right to make itself by mismanagement a nest of pauperism, necessarily overflowing into other localities, and impairing the moral and physical condition of the whole laboring community. The powers of administrative coercion and subordinate legislation possessed by the Poor Law Board (but which, owing to the state of opinion on the subject, are very scantily exercised by them), though perfectly justifiable in a case of first-rate national interest, would be wholly out of place in the superintendence of interests purely local. But a central organ of information and instruction for all the localities, would be equally valuable in all departments of administration. A government cannot have too much of the kind of activity which does not impede, but aids and stimulates, individual exertion and development. The mischief begins when, instead of calling forth the activity and powers of individuals and bodies, it substitutes its own activity for theirs; when, instead of informing, advising, and, upon occasion, denouncing, it makes them work in

fetters, or bids them stand aside and does their work instead of them. The worth of a State, in the long run, is the worth of the individuals composing it; and a State which postpones the interests of *their* mental expansion and elevation, to a little more of administrative skill, or of that semblance of it which practice gives, in the details of business; a State which dwarfs its men, in order that they may be more docile instruments in its hands even for beneficial purposes—will find that with small men no great thing can really be accomplished; and that the perfection of machinery to which it has sacrificed everything, will in the end avail it nothing, for want of the vital power which, in order that the machine might work more smoothly, it has preferred to banish.

THE INTELLECTUAL LIFE.

By PHILIP GILBERT HAMERTON.

AUTHOR OF "A PAINTER'S CAMP," "THOUGHTS ABOUT ART," "THE UNKNOWN RIVER," ETC.

TO EUGÈNE H.

WE have shared together many hours of study, and you have been willing, at the cost of much patient labor, to cheer the difficult paths of intellectual toil by the unfailing sweetness of your beloved companionship. It seems to me that all those things which we have learned together are doubly my own; whilst those other studies which I have pursued in solitude have never yielded me more than a maimed and imperfect satisfaction. The dream of my life would be to associate you with all I do if that were possible; but since the ideal can never be wholly realized, let me at least rejoice that we have been so little separated, and that the subtle influence of your finer taste and more delicate perception is ever, like some penetrating perfume, in the whole atmosphere around me.

PREFACE.

I PROPOSE, in the following pages, to consider the possibilities of a satisfactory intellectual life under various conditions of ordinary human existence. It will form a part of my plan to take into account favorable and unfavorable influences of many kinds; and my chief purpose, so far as any effect upon others may be hoped for, will be to guard some who may read the book alike against the loss of time caused by unnecessary discouragement, and the waste of effort which is the consequence of misdirected energies.

I have adopted the form of letters addressed to persons of very different position in order that every reader may have a chance of finding what concerns him. The letters, it is unnecessary to observe, are in one sense as fic-

titious as those we find in novels, for they have never been sent to anybody by the post, yet the persons to whom they are addressed are not imaginary. I made it a rule, from the beginning, to think of a real person when writing, from an apprehension that by dwelling in a world too exclusively ideal I might lose sight of many impediments which beset all actual lives, even the most exceptional and fortunate.

The essence of the book may be expressed in a few sentences, the rest being little more than evidence or illustration. First, it appears that all who are born with considerable intellectual faculties are urged towards the intellectual life by irresistible instincts, as water-fowl are urged to an aquatic life; but the lower animals have this advantage over man, that as their purposes are simpler, so they attain them more completely than he does. The life of a wild duck is in perfect accordance with its instincts, but the life of an intellectual man is never on all points perfectly in accordance with *his* instincts. Many of the best intellectual lives known to us have been hampered by vexatious impediments of the most various and complicated kinds; and when we come to have accurate and intimate knowledge of the lives led by our intellectual contemporaries, we are always quite sure to find that each of them has some great thwarting difficulty to contend against. Nor is it too much to say that if a man were so placed and endowed in every way that all his work should be made as easy as the ignorant imagine it to be, that man would find in that very facility itself a condition most unfavorable to his intellectual growth. So that, however circumstances may help us or hinder us, the intellectual life is always a contest or a discipline, and the art or skill of living intellectu-

ally does not so much consist in surrounding ourselves with what is reputed to be advantageous as in compelling every circumstance and condition of our lives to yield us some tribute of intellectual benefit and force. The needs of the intellect are as various as intellects themselves are various: and if a man has got high mental culture during his passage through life it is of little consequence where he acquired it, or how. The school of the intellectual man is the place where he happens to be, and his teachers are the people, books, animals, plants, stones, and earth round about him. The feeling almost always predominant in the minds of intellectual men as they grow older, is not so much one of regret that their opportunities were not more abundant, as of regret that they so often missed opportunities which they might have turned to better account.

I have written for all classes, in the conviction that the intellectual life is really within the reach of every one who earnestly desires it. The highest culture can never be within the reach of those who cannot give the years of labor which it costs; and if we cultivate ourselves to shine in the eyes of others, to become famous in literature or science, then of course we must give many more hours of labor than can be spared from a life of practical industry. But I am fully convinced of this, convinced by the observation of living instances in all classes, that any man or woman of large natural capacity may reach the tone of thinking which may justly be called intellectual, even though that thinking may not be expressed in the most perfect language. The essence of intellectual living does not reside in extent of science or in perfection of expression, but in a constant preference for higher thoughts over lower thoughts, and this preference may be the habit of a mind which has not any very considerable amount of information. This may be very easily demonstrated by a reference to men who lived intellectually in ages when science had scarcely begun to exist, and when there was but little literature that could be of use as an aid to culture. The humblest subscriber to a mechanics' institute has easier access to sound learning than had either Solomon or Aristotle, yet both Solomon and Aristotle lived the intellectual life. Whoever reads English is richer in the aids to culture than Plato was, yet Plato *thought* intellectually. It is not erudition that makes the intellectual man, but a sort of virtue which delights in vigorous and beautiful thinking, just as moral virtue delights in vigorous and beautiful conduct. Intellectual living is not so much an

accomplishment as a state or condition of the mind in which it seeks earnestly for the highest and purest truth. It is the continual exercise of a firmly noble choice between the larger truth and the lesser, between that which is perfectly just and that which falls a little short of justice. The ideal life would be to choose thus firmly and delicately always, yet if we often blunder and fail for want of perfect wisdom and clear light, have we not the inward assurance that our aspiration has not been all in vain, that it has brought us a little nearer to the Supreme Intellect whose effulgence draws us whilst it dazzles? Here is the true secret of that fascination which belongs to intellectual pursuits, that they reveal to us a little more, and yet a little more, of the eternal order of the Universe, establishing us so firmly in what is known, that we acquire an unshakable confidence in the laws which govern what is not, and never can be, known.

PART I.

THE PHYSICAL BASIS.

LETTER I.

TO A YOUNG MAN OF LETTERS WHO WORKED EXCESSIVELY.

Mental labor believed to be innocuous to healthy persons—
Difficulty of testing this—Case of the poet Wordsworth—
Case of an eminent living author—Case of a literary clergyman—
Case of an energetic tradesman—Instances of two Londoners who wrote professionally—Scott's paralysis—
Byron's death—All intellectual labor proceeds on a physical basis.

So little is really known about the action of the nervous system, that to go into the subject from the physiological point of view would be to undertake a most difficult investigation, entirely beyond the competence of an unscientific person like your present correspondent. You will, therefore, permit me, in reference to this, to leave you to the teaching of the most advanced physiologists of the time; but I may be able to offer a few practical suggestions, based on the experience of intellectual workers, which may be of use to a man whose career is likely to be one of severe and almost uninterrupted intellectual labor.

A paper was read several years ago before the members of a society in London, in which the author maintained that mental labor was never injurious to a perfectly healthy human organization, and that the numerous cases of break-down, which are commonly attributed

to excessive brain-work, are due, in reality, to the previous operation of disease.

This is one of those assertions which cannot be answered in a sentence. Concentrated within the briefest expression it comes to this, that mental labor cannot produce disease, but may aggravate the consequences of disease which already exists.

The difficulty of testing this is obvious; for so long as health remains quite perfect, it remains perfect, of course, whether the brain is used or not; and when failure of health becomes manifest, it is not always easy to decide in what degree mental labor may have been the cause of it. Again, the accuracy of so general a statement cannot be proved by any number of instances in its favor, since it is universally admitted that brain-work is not the only cause of disease, and no one affirms that it is more than one amongst many causes which may impede the bodily functions.

When the poet Wordsworth was engaged in composing the "White Doe of Rylstone," he received a wound in his foot, and he observed that the continuation of the literary labor increased the irritation of the wound; whereas by suspending his work he could diminish it, and absolute mental rest produced a perfect cure. In connection with this incident he remarked that poetic excitement, accompanied by protracted labor in composition, always brought on more or less of bodily derangement. He preserved himself from permanently injurious consequences by his excellent habits of life.

A very eminent living author, whose name I do not feel at liberty to mention, is always prostrated by severe illness at the conclusion of each of his works; another is unwell every Sunday, because he does not write on that day, and the recoil after the mental stretch of the week is too much for him.

In the case of Wordsworth, the physical constitution is believed to have been sound. His health at seventy-two was excellent; the two other instances are more doubtful in this respect, yet both these writers enjoy very fair health, after the pressure of brain-work has been removed for any considerable time. A clergyman of robust organization, who does a good deal of literary work at intervals, told me that, whenever he had attempted to make it regular, the consequence had always been distressing nervous sensations, from which at other times he was perfectly free. A tradesman, whose business affords an excellent outlet for energetic bodily activity, told me that having attempted, in addition to his ordinary work, to acquire a foreign language which seemed likely to be useful to him, he had been

obliged to abandon it on account of alarming cerebral symptoms. This man has immense vigor and energy, but the digestive functions, in this instance, are sluggish. However, when he abandoned study, the cerebral inconveniences disappeared, and have never returned since.

Two Londoners who followed literature as a profession, and who both worked to excess, had cerebral attacks of a still more decided kind. One of them, after his recovery, resolved to regulate his work in future, so that it might never pass the limits of moderation. He is now living, and in possession of a remarkably clear and richly furnished intellect. The other, who returned to his old habits, died in two years from softening of the brain. I am not aware that in these cases there was any other disease than that produced by an immoderate use of the mental powers.

The health of Sir Walter Scott—we have this on his own testimony—was uncommonly robust, and there is every reason to believe that his paralysis was brought on by the excessive labor which resulted from his pecuniary embarrassments, and that without such excessive mental labor and anxiety he would have preserved his health much longer. The death of Byron was due, no doubt, quite as much to habits of dissipation as to poetical excitement; still it is probable that he would have borne either of these evil influences if it had not been accompanied by the other; and that to a man whose way of life was so exhausting as Byron's was, the addition of constant poetical excitement and hard work in production, may be said without exaggeration to have killed him. We know that Scott, with all his facility, had a dread of that kind of excitement, and withdrew from the poetical arena to avoid it. We know, too, that the brain of Southey proved ultimately unable to endure the burden of the tasks he laid upon it.

Difficult as it may be in some instances to ascertain quite accurately whether an overworked man had perfectly sound bodily health to begin with, obvious as it may be that in many breakdowns the final failure has been accelerated by diseases independent of mental work, the facts remain, that the excessive exercise of the mental powers is injurious to bodily health and that all intellectual labor proceeds upon a physical basis. No man can safely forget this, and act as if he were a pure spirit, superior to physical considerations. Let me then, in other letters on this subject, direct your attention to the close connection which exists between intellectual production

and the state of the body and the brain; not with the authority of a physician, but with the sympathy of a fellow-laborer, who has learned something from his own experience, and still more from the more varied experience of his friends.

LETTER II.

TO A YOUNG MAN OF LETTERS WHO WORKED EXCESSIVELY.

Mental labor rarely compatible with the best physical conditions—Wordsworth's manner of composition—Mr. W. F. A. Delane—George Sand working under pressure—Sir Walter Scott's field-sports—Physical exercise the best tranquillizer of the nervous system—Eugène Sue—Shelley's love of boating—Nervousness the affliction of brain-workers—Nature's kindly warning—Working by spurts—Beckford—Byron—Indolence of men of genius fortunate—Distressing nature of cerebral fatigue.

It is possible that many of the worst results of intellectual labor may be nothing more than indirect results. We may suffer, not from the work itself, but from sedentary confinement, from want of exercise, from insufficient variety and amusement.

Mental labor is seldom compatible with the best physical conditions; it is so sometimes, however, or may be made so by an effort of will and resolution. Wordsworth composed his poetry in the open air, as he walked, and so preserved himself from the evil of close confinement to the desk. Mr. W. F. A. Delane, who did so much for the organization of the *Times* newspaper when it was under his management, began by doing law reports for that paper, in London and on circuit. His appearance of rude health surprised other members of his profession, but he accounted for it by the care he took to compensate for the bad air and sedentary labor in the courts of law by travelling between the assize towns on horseback, and also by a more than commonly temperate way of life, since he carefully avoided the bar dinners, eating and drinking for health alone. It is possible to endure the most unhealthy labor when there are frequent intervals of invigorating exercise, accompanied by habits of strict sobriety. The plan, so commonly resorted to, of trying to get health in stock for the rest of the year by a fortnight's hurried travelling in the autumn, is not so good as Mr. Delane's way of getting the week's supply of health during the course of the week itself.

It happened once that George Sand was hurried by the proprietor of a newspaper who wanted one of her novels as a *feuilleton*.

She has always been a careful and deliberate worker, very anxious to give all necessary labor in preparation, and, like all such conscientious laborers, she can scarcely endure to be pushed. However, on this occasion she worked overtime, as they say in Lancashire, and to enable herself to bear the extra pressure she did part of the work at night in order to keep several hours of daylight clear for her walks in the country, where she lived. Many writers, in the same situation, would have temporarily abandoned exercise, but George Sand clung to it all the more at a time when it was especially necessary that she should be well. In the same way Sir Walter Scott counterbalanced the effects of sedentary occupation by his hearty enjoyment of field-sports. It has been supposed that his outdoor exercise, which to weaker persons appears excessive, may have helped to bring on the stroke of paralysis which finally disabled him; but the fact is, that when the stroke arrived Sir Walter had altered his habits of life in obedience to what he believed to be his duty, and had abandoned, or nearly so, the active amusements of his happier years. I believe rather that whilst he took so much exercise his robust constitution not only enabled him to endure it without injury, but required it to keep the nervous system healthy, in spite of his hard work in literary composition. Physical exercise, when the constitution is strong enough to endure it, is by far the best tranquillizer of the nervous system which has yet been discovered, and Sir Walter's life at Abbotsford was, in this respect at least, grounded on the true philosophy of conduct. The French romancer, Eugène Sue, wrote till ten o'clock every morning, and passed the rest of the day, when at his country house, either in horse-exercise, or field-sports, or gardening, for all of which he had a liking which amounted to passion. Shelley's delight was boating, which at once exercised his muscles and relieved his mind from the weariness of incessant invention or speculation. It will generally be found, that whenever a man of much intellectual distinction has maintained his powers in full activity, it has been by avoiding the bad effects of an entirely sedentary life.

I well believe that a person naturally robust, with a clear and powerful brain, could bear twelve or fourteen hours' work every day for years together so far as the work itself is concerned, if only so large an expenditure of time left a sufficient margin for amusement, and exercise, and sleep. But the privation of exercise, by weakening the digestive and assimilative powers, reduces the flow of

healthy and rich blood to the brain—the brain requires an enormous quantity of blood, especially when the cerebral matter is rapidly destroyed by intellectual labor—and usually brings on nervousness, the peculiar affliction of the over-driven mental laborer. This nervousness is Nature's kindly warning, preserving us, if we attend to it in time, from much more serious consequences. The best preventive of it, and often the only cure, is plenty of moderate exercise. The customs of the upper classes in England happily provide this in the best shape, that of amusement enjoyed in society, but our middle classes in large towns do not get nearly enough of it, and the most studious are always strongly tempted to neglect it altogether.

Men of great imaginative power are commonly addicted to a habit which is peculiarly dangerous. They work as race-horses work, with the utmost intensity of effort during short spaces of time, taxing all their powers whilst the brilliant effort lasts. When Beckford wrote the wonderful tale "Vathek" in his twentieth year, he did it at a single sitting, which lasted for three days and two nights, and it cost him a serious illness. Several of the best poems by Byron were written, if not quite with equal rapidity, still on the same principle of composition at white heat. In cases of this kind, Nature provides her own remedy in the indolence of the imaginative temperament, which leaves large spaces of time for the action of the recuperative processes. The same law governs the physical energies of the carnivora, which maintain, or recover, their capacity for extraordinary effort by intervals of absolute repose. In its long spaces of mental rest the imaginative temperament recruits itself by amusement, which in England usually includes physical exercise of some kind.

This fortunate indolence of men of genius would in most instances ensure their safety if they were not impelled by necessity to labor beyond the suggestions of inclination. The exhausted brain never of itself seeks the additional exhaustion of hard work. You know very well when you are tired, and at such times the natural man in you asks plainly enough for rest and recreation. The art is so to arrange our lives that the natural man may sometimes have his way, and forget, if only for a time, the labors which lead to weariness—not to that pleasant weariness of the body which promises soundest sleep, but the distressing fatigue of the exhausted spirit which is tortured by the importunity of ideas which it is unable to express, and apprehensions that it cannot dismiss, which fights

through the sleepless night the phantoms of unconquerable horror.

NOTE.—The bad effect of literary composition on the physical state which was observed by Wordsworth in his own case was also noticed by Shelley during the composition of the "Cenci," which, he said, had been a fine antidote to nervous medicines, and kept, he believed, the pain in his side "as sticks do a fire." These influences are best observed in people whose health is delicate. Although Joubert, for example, had an extremely clear intellect, he could scarcely write at all on account of the physical consequences. I have come to the conclusion that literary work acts simply as a strong stimulant. In moderate quantities it is not only innocent, but decidedly beneficial; in excess it acts like poison on the nervous system. What constitutes excess every man has to find out by his own experience. A page was excess to Joubert, a chapter was moderation to Alexandre Dumas.

LETTER III.

TO A STUDENT IN UNCERTAIN HEALTH.

Habits of Kant, the philosopher—Objection to an over-minute regularity of habit—Value of independence of character—Case of an English author—Case of an English resident in Paris—Scott an abundant eater and drinker—Goethe also—An eminent French publisher—Turgot—Importance of good cookery—Wine drinking—Ale—The aid of stimulants treacherous—The various effects of tobacco—Tea and coffee—Case of an English clergyman—Balzac—The Arab custom of coffee-drinking—Wisdom of occasionally using stimulants.

IMMANUEL KANT, who was a master in the art of taking care of himself, had by practice acquired a dexterous mode of folding himself up in the bed-clothes, by passing them over and under his shoulders, so that, when the operation was complete, he was shut up like the silkworm in his cocoon. "When I am thus snugly folded up in my bed," he would say to his friends, "I say to myself, can any man be in better health than I am?"

There is nothing in the lives of philosophers more satisfactory than this little passage. If Kant had said to himself, "Can anybody be wiser, more learned, more justly deserving of immortal fame than I am?" we should have felt, that however agreeable this opinion might have been to the philosopher who held it, his private satisfaction stood in need of confirmation from without; and even if he had really been all this, we might have reflected that wisdom and learning still leave their possessor exposed to the acutest kinds of suffering. But when a philosopher rolls himself up at night, and congratulates himself on the possession of perfect health, we only think what a happy man he was to possess that first of blessings, and what a sensible man to know the value of it! And Kant had a deeper happiness in this reflection than any which could spring from the mere consciousness of possessing one of the unearned gifts of nature. The excellence of his health was due in part to a

sufficiently good constitution, but it was due also to his own extreme carefulness about his habits. By an unceasing observation of his own bodily life, as far as possible removed from the anxiety of hypochondriacs, he managed to keep the physical machine in such regular order, that for more than thirty years he always rose precisely at the same minute. If his object had been health for health's sake, the result would still have been well worth any sacrifices of momentary inclination that it cost him; but Kant had a higher purpose. He well knew that the regularity of the intellectual life depended entirely on the regularity of the bodily functions, and, unlike the foolish men alluded to by Goethe who pass the day in complaining of headache, and the night in drinking the wine that produces it, Kant not only knew that regular health was necessary to his work as a philosopher, but did everything in his power to preserve it. Few intellectual laborers have in this respect given evidence of such persistent strength of will.

In his manner of living he did not consult custom, but the needs of his individual nature. It is not always easy for great brain-workers to follow with perfect fidelity the customs of the people about them. These usages have been gradually formed by the majority to suit the needs of the majority: but there are cases where a close adherence to them would be a serious hindrance to the highest and best activity. A good example of this is Kant's intense antipathy to beer. It did not suit him, and he was right in his non-conformity to German usage on this point, but he was mistaken in believing beer to be universally injurious. There is a very general belief in England that what is called a good breakfast is the foundation of the labor of the day. Kant's breakfast, which he took at five in the morning at all seasons of the year, consisted of a cup of tea and a pipe of tobacco. On this he worked eight hours, either in lecturing or writing—a long stretch of uninterrupted labor. He dined at one, and this was his only meal, for he had no supper. The single repast was a deviation from ordinary usage, but Kant found that it suited him, probably because he read in the evening from six till a quarter to ten, and a second meal might have interfered with this by diminishing his power of attention. There exists a strong medical objection to this habit of taking only one meal in twenty-four hours, which indeed is almost unknown in England, though not extremely rare on the Continent. I know an old gentleman who for forty years has lived as Kant did, and

enjoys excellent health and uncommon mental clearness.

A detail which illustrates Kant's attention to whatever could affect his physical life, is his rule to withdraw his mind from everything requiring effort fifteen minutes before he went to bed. His theory, which is fully confirmed by the experience of others, was, that there was a risk of missing sleep if the brain was not tranquillized before bed-time. He knew that the intellectual life of the day depended on the night's rest, and he took this precaution to secure it. The regularity of his daily walk, taken during the afternoon in all weathers, and the strict limitation of the hours of rest, also helped the soundness of his sleep.

He would not walk out in company, for the whimsical reason that if he opened his mouth a colder air would reach his lungs than that which passed through the nostrils; and he would not eat alone, but always had guests to dinner. There are good physiological reasons in favor of pleasant society at table, and, besides these, there are good intellectual reasons also.

By attention to these rules of his, Kant managed to keep both body and mind in a working order, more uninterrupted than is usual with men who go through much intellectual labor. The solitary objection to his system is the excessive regularity of habit to which it bound him by chains of his own forging. He found a quiet happiness in this regularity: indeed, happiness is said to be more commonly found in habit than in anything else, so deeply does it satisfy a great permanent instinct of our nature. But a *minute* regularity of habit is objectionable, because it can only be practicable at home, and is compatible only with an existence of the most absolute tranquillity. Kant did not travel, and never could have travelled. He was a bachelor, and could not have ceased to be a bachelor, without a disturbance that would have been intolerable to him. He enjoyed the full benefits of his system without experiencing its disadvantages, but any considerable change of situation would have made the disadvantages apparent. Few lives can be so minutely regulated without risk of future inconvenience.

Kant's example is a good one so far as this, that it proved a sort of independence of character which would be valuable to every student. All who need to keep their minds in the best possible condition ought to have resolution enough to regulate their living in a manner which experience, in their case, proves to be most favorable. Whatever may be the authority of custom, a wise man makes

himself independent of usages which are impediments to his best activity. I know an author who was always unwell about eleven o'clock in the morning—so unwell that he could do nothing but lament his miserable fate. Knowing by experience the powerful effect of regimen, I inquired whether he enjoyed his breakfast. "No, he did not." "Then why did he attempt to eat any breakfast?" It turned out that this foolish man swallowed every morning two cups of bad coffee and a quantity of greasy food, from a patriotic deference to the customs of his country. He was persuaded to abandon this unsuitable habit and to eat nothing till half-past ten, when his adviser prescribed a well-cooked little *déjeuner à la fourchette*, accompanied by half a bottle of sound Bordeaux. The effect was magical. My friend felt light and cheerful before *déjeuner*, and worked quite happily and well, whilst after *déjeuner* he felt like a horse that has eaten his corn. Nor was the good effect a transitory one; the bad symptoms never returned, and he still adheres to his new arrangement. This little reform made a wretched existence happy, and has had for its result an increase in production with a diminution of fatigue. The explanation is that the stomach did not ask for the early breakfast, and had a hard fight to overcome it, after which came exhaustion and a distaste both for food and work. There are cases where an opposite rule is the right one. An Englishman living in Paris found the French *déjeuner* unsuitable for him, and discovered that he worked best on a substantial English breakfast, with strong tea, at eight in the morning, after which he went on working all day without any further nourishment till dinner at six in the evening. A friend of Sir Walter Scott's, who had stayed with him at Abbotsford, told me that Sir Walter ate and drank like everybody else as to times and seasons, but much more abundantly than people of less vigorous organization. Goethe used to work till eleven without taking anything, then he drank a cup of chocolate and worked till one. "At two he dined. This meal was the important meal of the day. His appetite was immense. Even on the days when he complained of not being hungry he ate much more than most men. Puddings, sweets, and cakes were always welcome. He sat a long while over his wine. He was fond of wine, and drank daily his two or three bottles." An eminent French publisher, one of the most clear-headed and hard-working men of his generation, never touched food or drink till six in the evening, when he ate an excellent dinner with his guests. He found this system favorable to

his work, but a man of less robust constitution would have felt exhausted in the course of the day.

Turgot could not work well till after he had dined copiously, but many men cannot think after a substantial meal; and here, in spite of the example set by Scott and Goethe, let me observe that nothing interferes so much with brainwork as over-eating. The intellectual workman requires nourishment of the best possible quality, but the quantity ought always to be well within the capacity of his digestive powers. The truth appears to be, that whilst the intellectual life makes very large demands upon nutrition—for cerebral activity cannot go forward without constant supplies of force, which must come ultimately from what we have eaten—this kind of life, being sedentary, is unfavorable to the work of digestion. Brain-workers cannot eat like sportsmen and farmers without losing many hours in torpor, and yet they need nutrition as much as if they led active lives. The only way out of this difficulty is to take care that the food is good enough for a moderate quantity of it to maintain the physical and mental powers. The importance of scientific cookery can hardly be exaggerated. Intellectual labor is, in its origin, as dependent upon the art of cookery as the dissemination of its results is dependent upon paper-making and printing. This is one of those matters which people cannot be brought to consider seriously; but cookery in its perfection—the great science of preparing food in the way best suited to our use—is really the most important of all sciences, and the mother of the arts. The wonderful theory that the most ignorant cookery is the most favorable to health is only fit for the dark ages. It is grossly and stupidly untrue. A scientific cook will keep you in regular health, when an ignorant one will offer you the daily alternative of starving or indigestion.

The great question of drinks is scarcely less important. Sound natural wines, not strengthened by any addition of alcohol, are known to supply both stimulus and nourishment to the brain. Goethe's practice was not irrational, though he drank fifty thousand bottles in his lifetime. Still it is not necessary to imitate him to this extent. The wine-drinking populations have keener and livelier wits than those who use other beverages. It is proved by long experience that the pure juice of the grape sustains the force and activity of the brain. The poets who from age to age have sung the praise of wine were not wholly either deceivers or deceived. In the lands of the vine, where the plant is looked upon as a

nursing mother, men do not injure their health by drinking; but in the colder North, where the grape can never ripen, the deaths from intemperance are frequent. Bread and wine are almost pure gifts of nature, though both are prepared by man after the old traditional ways. These are not poisons, but gin and absinthe are poisons, madness poured out from a bottle! Kant and Goethe loved the pure Rhine wine, and their brains were clear and vigorous to the utmost span of life. It was not wine that ruined Burns and Byron, or Baudelaire, or Alfred de Musset.

Notwithstanding Kant's horror of beer, that honest northern drink deserves our friendly recognition. It has quite a peculiar effect upon the nervous system, giving a rest and calm which no other drink can procure for it so safely. It is said that beer drinkers are slow, and a little stupid; that they have an ox-like placidity not quite favorable to any brilliant intellectual display. But there are times when this placidity is what the laboring brain most needs. After the agitations of too active thinking there is safety in a tankard of ale. The wine drinkers are agile, but they are excitable; the beer drinkers are heavy, but in their heaviness there is peace. In that clear golden drink which England has brewed for more than a thousand Octobers, and will brew for a thousand more, we may find perhaps some explanation of that absence of irritability which is the safe-guard of the national character, which makes it faithful in its affections, easy to govern, not easy to excite to violence.

If I have spoken favorably of beer and wine as having certain intellectual uses, please remember that I recommend only the habitual use of them, not mad rites of Bacchus, and even the habitual use only just so far as it may suit the individual constitution. The liberal regimen of Scott and Goethe would not answer in every case, and there are organizations, often very robust, in which intoxicating drinks of all kinds, even in the most moderate quantity, impede the brain's action instead of aiding it. Two of the most able men I have ever known could not drink pure wine of any kind because it sent the blood to the head, with consequent cerebral oppression. And whilst on this subject I ought to observe, that the aid which these stimulants afford, even when the body gratefully accepts them, is often treacherous from its very acceptability. Men who are over-driven—and the number of such men is unhappily very great in these days—say that without stimulants they could not get through their labor; but the stimulants often delude

us as to the limits of our natural powers and encourage us to attempt too much. The help they give us is not altogether illusory; under certain limitations it is real, but many have gone farther than the reality of the assistance warranted. The ally brings to us an increase of forces, but he comes with appearances of power surpassing the reality, and we undertake tasks beyond our strength. In drinking, as in eating, the best rule for the intellectual is moderation in quantity with good quality, a sound wine, and not enough of it to foster self-delusion.

The use of tobacco has so much extended itself in the present generation that we are all obliged to make a decision for ourselves on the ancient controversy between its friends and enemies. We cannot form a reasonable opinion about tobacco without bearing in mind that it produces, according to circumstances, one of two entirely distinct and even opposite classes of effects. In certain states of the body it acts as a stimulant, in other states as a narcotic. People who have a dislike to smoking affirm that it stupefies; but this assertion, at least so far as the temporary consequences are concerned, is not supported by experience. Most of the really brilliant conversations that I have listened to have been accompanied by clouds of tobacco-smoke; and a great deal of the best literary composition that is produced by contemporary authors is wrought by men who are actually smoking whilst they work. My own experience is that very moderate smoking acts as a pleasant stimulus upon the brain, whilst it produces a temporary lassitude of the muscular system, not perceptible in times of rest, but an appreciable hindrance in times of muscular exertion. It is better therefore for men who feel these effects from tobacco to avoid it when they are in exercise, and to use it only when the body rests and the mind labors. Pray remember, however, that this is the experience of an exceedingly moderate smoker, who has not yet got himself into the general condition of body which is brought on by a larger indulgence in tobacco. On the other hand, it is evident that men engaged in physical labor find a muscular stimulus in occasional smoking, and not a temporary lassitude. It is probable that the effect varies with individual cases, and is never precisely what our own experience would lead us to imagine. For excessive smokers, it appears to be little more than the tranquillizing of a sort of uneasiness, the continual satisfaction of a continual craving. I have never been able to ascertain that moderate smoking diminished intellectual force; but I have observed in exces-

give smokers a decided weakening of the will, and a preference for talking about work to the effort of actual labor. The opinions of medical men on this subject are so much at variance that their science only adds to our uncertainty. One doctor tells me that the most moderate smoking is unquestionably injurious, whilst others affirm that it is innocent. Speaking simply from self-observation, I find that in my own case tea and coffee are far more perilous than tobacco.

Almost all English people are habitual tea-drinkers, and as the tea they drink is very strong, they may be said to use it in excess. The unpleasant symptoms which tea-poisoning produces in a patient not inured by habit, disappear in the seasoned tea-drinker, leaving only a certain exhilaration, which appears to be perfectly innocuous. If tea is a safe stimulant, it is certainly an agreeable one, and there seems to be no valid reason why brain-workers should refuse themselves that solace. I knew a worthy clergyman many years ago who from the most conscientious motives denied himself ale and wine, but found a fountain of consolation in the tea-pot. His usual allowance was sixteen cups, all of heroic strength, and the effect upon his brain seems to have been altogether favorable, for his sermons were both long and eloquent, and to this day he is preaching still, without any diminution of his powers. French people find in coffee the most efficacious remedy for the temporary torpor of the mind which results from the processes of digestion. Balzac drank great quantities of coffee whilst he wrote; and this, it is believed, brought on the terrible nervous disease that accelerated his end. The best proof that tea and coffee are favorable to intellectual expression is that all nations use one or the other as aids to conversation. In Mr. Palgrave's *Travels in Arabia* there is never any talk without the inevitable coffee, that fragrant Arabian berry prepared with such delicate cunning that it yields the perfect aroma.

The wisdom of occasionally using these various stimulants for intellectual purposes is proved by a single consideration. Each of us has a little cleverness and a great deal of sluggish stupidity. There are certain occasions when we absolutely need the little cleverness that we possess. The orator needs it when he speaks, the poet when he versifies, but neither cares how stupid he may become when the oration is delivered and the lyric set down on paper. The stimulant serves to bring out the talent when it is wanted, like the wind in the pipes of an organ. "What will it matter if I am even a little duller after-

wards?" says the genius; "I can afford to be dull when I have done." But the truth still remains that there are stimulants and stimulants. Not the nectar of the gods themselves were worth the dash of a wave upon the beach, and the pure cool air of the morning.

NOTE.—What is said in the above letter about the employment of stimulants is intended to apply only to cases in which there is no organic disease. The harm which diseased persons do to themselves by conforming to customs which are innocent for others is as lamentable as it is easily avoidable. Two bottles of any natural wine grown above the latitude of Lyons are a permissible daily allowance to a man whose organs are all sound; but the doctors in the wine districts unanimously forbid pure wine when there is a chronic inflammatory tendency. In these cases even the most honest Bordeaux ought to be diluted with twice its volume of water. There are many chronic diseases which tobacco irritates and accelerates. Both wine and tobacco are injurious to weak eyes.

LETTER IV.

TO A MUSCULAR CHRISTIAN.

Muscular and intellectual tendencies in two boys—Difficulty of finding time to satisfy both—Plato on the influences of music and gymnastics—Somnolence and digestion—Neglect of literature—Natural restlessness of the active temperament—Case of a Garibaldiian officer—Difficulty of taking a sufficient interest in exercise—A boar hunt.

I KNOW two little boys, sons of a near neighbor, who have from childhood exhibited opposite tendencies. One of them is incessantly active, always out of doors in any weather, busy about horses, and farming, and game, heedless of his books, and studying only under positive compulsion. The other sits at home with his lessons or a story book, and only goes out because he is incited by the fraternal example. The two lads represent two distinct varieties of human life, the active and the intellectual. The elder is happiest during physical exertion; the younger is happiest when his brain is fully occupied. Left entirely to themselves, without the equalizing influence of the outside world and the ways of living which general custom has established, they would lead the most opposite lives. The elder would inevitably become a farmer, that he might live in the country and take exercise all day long, or else he would seek adventure in wild travel, or in romantic warfare; but the younger would very quickly be taken possession of by some engrossing intellectual pursuit, and lead the life of a sedentary student. The problem which these two young lives have before them is the reconciliation of their tendencies. Since they come of cultivated parents, the intellectual lad has the better chance of following his own bent. Both will have to take their University degrees, and the younger has the advan-

tage there. Still there are powerful influences in favor of the elder. His activity will be encouraged by the admiration of his companions, and by the example of the country gentlemen who are his neighbors. He can ride, and row, and swim; he is beginning to shoot; at twenty he will be a sportsman. When once he has taken his degree, I wonder what will be the advances in his intellectual culture. Fraternal and social influences will preserve the younger from absolute physical inaction; but there are not any influences powerful enough to keep the elder safe from intellectual rust.

If you, who are a distinguished sportsman and athlete, would kindly inform us with perfect frankness of the line which your studies have followed since you quitted Eton, we should be the wiser for your experience. Have gymnastic exercises hardened you, as Plato said they did, when pursued excessively? and do you need the musical studies which he both valued and dreaded as the most powerful of softening influences? If you have energy enough to lead both lives, pray how do you find the time?

As to Plato's musical influence, you invite it, and yet you treacherously elude its power. After being out all day in the pursuit of sylvan pleasures (if shooting on treeless wastes can be called a sylvan pleasure), you come home at nightfall ravenous. Then you do ample justice to your dinner, and having satisfied your *faim de chasseur*, you go into the drawing-room, and ask your wife to play and sing to you. If Plato could witness that pretty scene, he would approve your obedience to his counsels. He would behold an athletic Englishman stretching his mighty limbs on a couch of soft repose, and letting his soul grow tender as his ears drank ravishing harmonies. If, however, the ancient sage, delighted with so sweet a picture of strength refined by song, were to dwell upon the sight as I have done, he would perceive too soon that, although your body was present indeed, your soul had become deaf in sleep's oblivion. So it happens to you night after night, and the music reaches you no more than the songs of choristers reach the dead in the graves below.

And the elevating influences of literature? You have books, of course, in abundance. There is a library, amongst other luxuries of your home. But the literature your intellect feeds upon is in the columns of the *Field*, your newspaper. Yet this neglect of the means of culture is not due to any natural feebleness of the mind. Your brain, by its nature, is as vigorous as your vigorous body.

It is sleep, and weariness, and the great necessary business of digestion, that drown your intellectual energies. The work of repairing so great a destruction of muscle is nature's chief concern. Since you became the mighty hunter that you are, the wear and tear have been enormous, and the necessary rapidity of reconstruction has absorbed your rich vitality.

I will not question the wisdom of your choice, if there has been any deliberate choice, though perhaps the life of action that you lead may have grown rather out of circumstances determining habit than from any conscious resolution. Health is so much more necessary to happiness than culture, that few who could choose between them would sacrifice it for learning, unless they were impelled by irresistible instincts. And beyond the great delight of health and strength there is a restlessness in men born to be active which must have its outlet in activity. I knew a brave Italian who had followed Garibaldi in all his romantic enterprises, who had suffered from privation and from wounds, who had not only faced death in the wildest adventures, but, what is even more terrible to the active temperament, had risked health from frequent exposure; and when I asked him whether it was affection to his famous chief, or faith in a political creed, or some more personal motive that had led him to this scorn of prudence, he answered that, after honest self-examination, he believed the most powerful motive to be the passion for an active life. The active temperament likes physical action for its own sake, and not as a means of health. Activity renews itself and claims larger and larger satisfaction, till at last the habit of it absorbs the whole energy of the man.

Although such a life as yours would be incompatible with the work I have to do, it would be an unmixed benefit to me to take a greater interest in exercise. If you could but communicate that interest, how willingly would I become your pupil! The fatal law of the studious temperament is, that in exercise itself it must find some intellectual charm, so that we quit our books in the library only to go and read the infinite book of nature. We cannot go out in the country without incessantly thinking about either botany, or geology, or landscape painting, and it is difficult for us to find a refuge from the importunate habit of investigation. Sport is the only refuge, but the difficulty is to care about it sufficiently to avoid *ennui*. When you have not the natural instinct, how are you to supply its place by any make-believe excitement?

There is no position in the world more wearisome than that of a man inwardly indifferent to the amusement in which he is trying to take part. You can watch for game with an invincible patience, for you have the natural instinct, but after the first ten minutes on the skirts of the wood I lay my gun down and begin to botanize. Last week a friendly neighbor invited me to a boar-hunt. The boar was supposed to be in the middle of a great impenetrable plantation, and all I did during the whole morning was to sit in my saddle awaiting the exit of the beast, cantering from one point of the wood's circumference to another, as the cry of the dogs guided me. Was it pleasure? A true hunter would have found interest enough in expectation, but I felt like a man on a railway-platform who is waiting for a train that is late.

LETTER V.

TO A STUDENT WHO NEGLECTED BODILY EXERCISE.

Difficulty of conciliating the animal and the intellectual lives—Bodily activity sometimes preserved by an effort of the will—Necessity of faith in exercise—Incompatibility between physical and intellectual living disappears in large spaces of time—Franklin's theory about concentration in exercise—Time an essential factor—Health of a rural postman—Pedestrian habits of Wordsworth—Pedestrian and equestrian habits of Sir Walter Scott—Goethe's wild delight in physical exercise—Alexander Humboldt combated early delicacy by exercise—Intellectual utilities of physical action.

"We have done those things which we ought not to have done; we have left undone those things which we ought to have done, and there is no health in us."

How applicable, my dear brother, are these words which the Church, in her wisdom, has seen to be adapted to all sinners—how applicable, I say, are they to students most especially! They have quite a personal applicability to you and me. We have read all day long, and written till three o'clock in the morning; we have taken no exercise for weeks, and there is no health in us. The doctor scrutinizes our wearied eyes, and knows that our brains are weary. Little do we need his warnings, for does not Nature herself remind us of our disobedience, and tell us in language not to be misinterpreted, to amend the error of our ways? Our digestion is sluggish and imperfect; we are as nervous as delicate ladies, and there is no health in us.

How easy it is to follow one of the two lives—the animal or the intellectual! how

difficult to conciliate the two! In every one of us there exists an animal which might have been as vigorous as wolves and foxes, if it had been left to develop itself in freedom. But besides the animal, there existed also a mind, and the mental activity restrained the bodily activity, till at last there is a serious danger of putting an end to it altogether.

I know two men, about fifty-five years old both of them, and both of them admirably active. They tell me that their bodily activity has been preserved by an effort of the will; that if they had not resolutely kept up the habit of using legs and arms in daily work or amusement their limbs would have stiffened into uselessness, and their constitutions would have been unable to bear the call of any sudden emergency. One of them has four residences in different parts of the same county, and yet he will not keep a carriage, but is a pedestrian terrible to his friends; the other is at the head of a great business, and gives an example of physical activity to his work-people. Both have an absolute faith in habitual exercise; and both affirm that if the habit were once broken they could never afterwards resume it.

We need this faith in exercise—this firm conviction of its necessity—the sort of conviction that makes a man go out in all weathers, and leave the most urgent intellectual labor for the mere discipline and hardening of the body. Few students possess this faith in its purity. It is hard to believe that we shall get any good from exercise proportionate to the sacrifice of time.

The incompatibility between the physical and the intellectual lives is often very marked if you look at small spaces of time only; but if you consider broader spaces, such as a lifetime, then the incompatibility is not so marked, and gives place to a manifest conciliation. The brain is clearer in vigorous health than it can be in the gloom and misery of sickness; and although health may last for a while without renewal from exercise, so that if you are working under pressure for a month the time given to exercise is so much deducted from the result, it is not so for the life's performance. Health sustained for many years is so useful to the realization of all considerable intellectual undertakings, that the sacrifice to the bodily well-being is the best of all possible investments.

Franklin's theory about concentrating his exercise for the economy of time was founded upon a mistake. Violent exertion for minutes is not equivalent to moderate exercise for hours. The desire to concentrate good of various kinds into the smallest possible space is

one of the commonest of *human* wishes, but it is not encouraged by the broader economy of nature. In the exercise of the mind every teacher is well aware that time is an essential factor. It is necessary to *live* with a study for hundreds or thousands of hours before the mind can assimilate as much of the subject as it may need; and so it is necessary to live in exercise during a thousand hours of every year to make sure of the physical benefits. Even the fresh air itself requires time to renovate our blood. The fresh air cannot be concentrated; and to breathe the prodigious quantities of it which are needed for perfect energy, we must be out in it frequently and long.

The inhabitants of great cities have recourse to gymnastics as a substitute for the sports of the country. These exercises have one advantage—they can be directed scientifically so as to strengthen the limbs that need development; but no city gymnasium can offer the invigorating breezes of the mountain. We require not only exercise but exposure—daily exposure to the health-giving inclemencies of the weather. The postman who brings my letters walks eight thousand miles a year, and enjoys the most perfect regularity of health. There are operatives in factories who go through quite as much bodily exertion, but they have not his fine condition. He is as merry as a lark, and announces himself every morning like a bearer of joyful tidings. What the postman does from necessity an old gentleman did as regularly, though more moderately, for the preservation of his health and faculties. He went out every day; and as he never consulted the weather, so he never had to consult the physicians.

Nothing in the habits of Wordsworth—that model of excellent habits—can be better as an example to men of letters than his love of pedestrian excursions. Wherever he happened to be, he explored the whole neighborhood on foot, looking into every nook and cranny of it; and not merely the immediate neighborhood, but extended tracts of country; and in this way he met with much of his best material. Scott was both a pedestrian and an equestrian traveller, having often, as he tells us, walked thirty miles or ridden a hundred in those rich and beautiful districts which afterwards proved to him such a mine of literary wealth. Goethe took a wild delight in all sorts of physical exercise—swimming in the Ilm by moonlight, skating with the merry little Weimar court on the Schwansee, riding about the country on horseback, and becoming at times quite outrageous in the rich exuberance of his energy. Alexander Humboldt

was delicate in his youth, but the longing for great enterprises made him dread the hindrances of physical insufficiency, so he accustomed his body to exercise and fatigue, and prepared himself for those wonderful explorations which opened his great career. Here are intellectual lives which were forwarded in their special aims by habits of physical exercise; and, in an earlier age, have we not also the example of the greatest intellect of a great epoch, the astonishing Leonardo da Vinci, who took such a delight in horsemanship that although, as Vasari tells us, poverty visited him often, he never could sell his horses or dismiss his grooms?

The physical and intellectual lives are not incompatible. I may go farther, and affirm that the physical activity of men eminent in literature has added abundance to their material and energy to their style; that the activity of scientific men has led them to innumerable discoveries; and that even the more sensitive and contemplative study of the fine arts has been carried to a higher perfection by artists who painted action in which they had had their part, or natural beauty, which they had travelled far to see. Even philosophy itself owes much to mere physical courage and endurance. How much that is noblest in ancient thinking may be due to the hardy health of Socrates!

LETTER VI.

TO AN AUTHOR IN MORTAL DISEASE.

Considering death as a certainty—The wisdom learned from suffering—Employment of happier intervals—The teaching of the diseased not to be rejected—Their double experience—Ignorance of Nature's spoiled children—Benefit of disinterested thought—Reasons for pursuing intellectual labors to the last—Geoffroy Saint-Hilaire.

WHEN Alexandre Bixio lay on his death-bed, his friend Labrousse visited him, and exclaimed on entering the room, "How well you are looking to-day!" To this, Bixio, who was clearly aware of his condition, answered in these words:—"Voyons, mon pauvre Labrousse; tu viens voir un homme qui n'a plus qu'un quart d'heure à vivre, et tu veux lui faire croire qu'il a bonne mine; allons, une poignée de main, cela vaut mieux pour un homme que tous ces petits mensonges-là."

I will vex you with none of these well-meant but wearisome little falsehoods. We both of us know your state; we both know that your malady, though it may be alleviated, can never be cured; and that the fatal

termination of it, though delayed by all the artifices of science, will certainly arrive at last. The cheerful courage which enables you to look this certainty in the face has also enabled you to extract from years of suffering that profoundest wisdom which (as one of the wisest of living Englishmen has told us) can be learned from suffering alone. The admirable elasticity of your intellectual and moral nature has enabled you, in the intervals of physical uneasiness or pain, to cast aside every morbid thought, to enter quite fully and heartily into the healthy life of others, and to enjoy the magnificent spectacle of the universe with contented submission to its laws—those beneficent yet relentless laws which to you bring debility and death. You have continued to write notwithstanding the progress of your malady; and yet, since it has so pitilessly held you, there is no other change in the spirit of your compositions than the deepening of a graver beauty, the addition of a sweeter seriousness. Not one sentence that you have written betrays either the injustice of the invalid, or his irritability. Your mind is not clouded by any mist from the fever marshes, but its sympathies are far more active than they were. Your pain has taught you a tender pity for all the pain that is outside of you, and a patient gentleness which was wanting to your nature in its days of barbarian health.

Surely it would be a lamentable error if mankind were to carry out the recommendation of certain ruthless philosophers, and reject the help and teaching of the diseased. Without undervaluing the robust performance of healthy natures, and without encouraging literature that is morbid, that is fevered, impatient, and perverse, we may still prize the noble teaching which is the testament of sufferers to the world. The diseased have a peculiar and mysterious experience; they have known the sensations of health, and then, in addition to this knowledge, they have gained another knowledge which enables them to think more accurately even of health itself. A life without suffering would be like a picture without shade. The pets of Nature, who do not know what suffering is, and cannot realize it, have always a certain rawness, like foolish landsmen who laugh at the terrors of the ocean, because they have neither experience enough to know what those terrors are, nor brains enough to imagine them.

You who are borne along, slowly but irresistibly, to that Niagara which plunges into the

gulf of death,—you who, with perfect self-possession and heroic cheerfulness, are counting the last miles of the voyage,—find leisure to study and think as the boat glides onwards silently to the inevitable end. It is one of the happiest privileges of the high intellectual life that it can elevate us—at least in the intervals of relief from complete prostration or acute pain—to regions of disinterested thought, where all personal anxieties are forgotten. To feel that he is still able, even in days of physical weakness and decline, to add something to the world's inheritance of knowledge, or to bequeath to it some new and noble thought in the pearl of complete expression, is a profound satisfaction to the active mind that is lodged in a perishing body. Many diseases fortunately permit this activity to the last; and I do not hesitate to affirm, that the work done in the time of physical decline has in not a few instances been the most perfect and the most permanently valuable. It is not accurately true that the mind and the body invariably fail together. Physicians who know how prevalent chronic diseases are, and how many eminent men are physically inconvenienced by them, know also that minds of great spiritual energy possess the wonderful faculty of indefinitely improving themselves whilst the body steadily deteriorates. Nor is there anything irrational in this persistent improvement of the mind, even to the extremest limit of material decay; for the mind of every intellectual human being is part and parcel of the great permanent mind of humanity; and even if its influence soon ceases to be traceable—if the spoken words are forgotten—if the written volume is not reprinted or even quoted, it has not worked in vain. The intellectual light of Europe in this century is not only due to great luminaries whom every one can name, but to millions of thoughtful persons, now utterly forgotten, who in their time loved the light, and guarded it, and increased it, and carried it into many lands, and bequeathed it as a sacred trust. He who labors only for his personal pleasure may well be discouraged by the shortness and uncertainty of life, and cease from his selfish toil on the first approaches of disease; but whoever has fully realized the grand continuity of intellectual tradition, and taken his own place in it between the future and the past, will work till he can work no more, and then gaze hopefully on the world's great future, like Geoffroy Saint-Hilaire, when his blind eyes beheld the future of zoology.

LETTER VII.

TO A YOUNG MAN OF BRILLIANT ABILITY, WHO
HAD JUST TAKEN HIS DEGREE.

A domestic picture—Thoughts suggested by it—Importance of the senses in intellectual pursuits—Importance of hearing to Madame de Staël—Importance of seeing to Mr. Ruskin—Mr. Prescott, the historian—How blindness retarded his work—Value of all the five senses—Self-government indispensable to their perfection—Great value of longevity to the intellectual life.

It is always a great pleasure to me to pass an evening at your father's house; but on the last occasion that pleasure was very much enhanced because you were once more with us. I watched your mother's eyes as she sat in her place in the drawing-room. They followed you almost without ceasing, and there was the sweetest, happiest expression on her dear face, that betrayed her tender maternal love for you and her legitimate maternal pride. Your father was equally happy in his own way; he was much more gay and talkative than I have seen him for two or three anxious years; he told amusing stories; he entered playfully into the jests of others; he had pleasant projects for the future, and spoke of them with facetious exaggeration. I sat quietly in my corner, slyly observing my old friends, and amusing myself by discovering (it did not need much perspicacity for that) the hidden sources of the happiness that was so clearly visible. They were gladdened by the first successes of your manhood; by the evidence of your strength; by the realization of hopes long cherished.

Watching this charming picture with a perfect sympathy, I began to have certain thoughts of my own which it is my present purpose to communicate to you without disguise. I thought, first, how agreeable it was to be the spectator of so pretty a picture; but then my eyes wandered to a painting that hung upon the walls, in which also there were a mother and her son, and this led me a long way. The painting was a hundred years old; but although the colors were not quite so fresh as when they left the palette of the artist, the beautiful youth who stood radiant like a young Apollo in the centre of the composition had not lost one of the great gifts with which his cunning human creator had endowed him. The fire of his eye had not been quenched by time; the bloom of his cheek still flushed with faint vermillion; his lip was full and imperious; his limbs athletic; his bearing haughty and dauntless. All life seemed spread before him like a beautiful rich estate of which every acre was his own. How easily will he conquer fame! how easily kindle passion. Who shall withstand this pink and per-

fection of aristocracy—this ideal of the age of fine gentlemen, with all the gifts of nature helped by all the inventions of art?

Then I thought farther: "That splendid young nobleman in the picture will look just as young as he does now when we shall be either superannuated or dead." And I looked at you and your mother again and thought: "It is just five minutes since I saw these two living beings, and in this little space of time they have both of them aged a little, though no human observer has enough delicacy of perception to detect so inappreciable an alteration." I went gradually on and on into the future, trying to imagine the changes which would come over yourself more especially (for it was you who were the centre of my reverie), till at last I imagined pretty accurately what you might be at sixty; but there it became necessary to stop, because it was too difficult to conceive the processes of decay.

After this, one thought grew upon me and became dominant. I thought, at present he has all the senses in their perfection, and they serve him without a hitch. He is an intelligence served by organs, and the organs are all doing their duty as faithfully as a postman who brings letters. When the postman becomes too infirm to do his work he will retire on his little pension, and another will take his place and bring the letters just as regularly; but when the human organs become infirm they cannot be taken out and replaced by new ones, so that we must content ourselves, to the end, with their service, such as it may be. Then I reflected how useful the senses are to the high intellectual life, and how wise it is, even for intellectual purposes, to preserve them as long as possible in their perfection.

To be able to see and hear well—to feel healthy sensations—even to taste and smell properly, are most important qualifications for the pursuit of literature, and art, and science. If you read attentively the work of any truly illustrious poet, you will find that the whole of the imagery which gives power and splendor to his verse is derived from nature through one or other of these ordinary channels. Some philosophers have gone much farther than this, and have affirmed that the entire intellectual life is based ultimately upon remembered physical sensations; that we have no mental conception that is really independent of sensuous experience; and that the most abstract thought is only removed from sensation by successive processes of substitution. I have not space to enter into so great and mysterious a subject as this; but I desire to draw your attention to a truth very com-

monly overlooked by intellectual people, which is the enormous importance of the organs of sense in the highest intellectual pursuits. I will couple together two names which have owed their celebrity, one chiefly to the use of her ears, the other to the use of his eyes. Madame de Stael obtained her literary material almost exclusively by means of conversation. She directed, systematically, the talk of the learned and brilliant men amongst whom she lived to the subject which for the moment happened to occupy her thoughts. Her literary process (which is known to us in detail through the revelations of her friends) was purposely invented to catch everything that she heard, as a net catches fish in a river. First, she threw down on paper a very brief rough draft of the intended literary project. This she showed to few, but from it she made a second "state" (as an engraver would say), which she exhibited to some of her trusted friends, profiting by their hints and suggestions. Her secretary copied the corrected manuscript, incorporating the new matter, on paper with a very broad margin for farther additions. During all the time that it took to carry her work through these successive states, that ingenious woman made the best possible use of her ears, which were her natural providers. She made everybody talk who was likely to be of any use to her, and then immediately added what she had caught on the wide margin reserved for that purpose. She used her eyes so little that she might almost as well have been blind. We have it on her own authority, that were it not out of respect to custom, she would not open her window to see the Bay of Naples for the first time, whereas she would travel five hundred leagues to talk with a clever man whom she had never met.

Now since Madame de Stael's genius fed itself exclusively through the faculty of hearing, what an enormous difference it would have made to her if she had been deaf! It is probable that the whole of her literary reputation was dependent on the condition of her ears. Even a very moderate degree of deafness (just enough to make listening irksome) might have kept her in perpetual obscurity.

The next instance I intend to give is that of a distinguished contemporary, Mr. Ruskin. His peculiar position in literature is due to his being able to see as cultivated artists see. Everything that is best and most original in his writings is invariably either an account of what he has seen in his own independent inimitable way, or else a criticism of the accu-

rate or defective sight of others. His method of study, by drawing and taking written memoranda of what he has seen, is entirely different from Madame de Stael's method, but refers always, as hers did, to the testimony of the predominant sense. Every one whose attention has been attracted to the subject is aware that, amongst people who are commonly supposed to see equally well, and who are not suspected of any tendency to blindness, the degrees of perfection in this sense vary to infinity. Suppose that Mr. Ruskin (to our great misfortune) had been endowed with no better eyes than many persons who see fairly well in the ordinary sense, his enjoyment and use of sight would have been so much diminished that he would have had little enthusiasm about seeing, and yet that kind of enthusiasm was quite essential to his work.

The well-known instance of Mr. Prescott, the historian, is no doubt a striking proof what *may* be accomplished by a man of remarkable intellectual ability without the help of sight, or rather helped by the sight of others. We have also heard of a blind traveller, and even of a blind entomologist; but in all cases of this kind they are executive difficulties to be overcome, such that only the most resolute natures would ever dream of encountering them. When the materials for the "Reign of Ferdinand and Isabella" arrived in Prescott's house from Europe, his remaining eye had just suffered from over-exertion to such a degree that he could not use it again for years. "I well remember," he wrote in a letter to a friend, "the blank despair which I felt when my literary treasures arrived, and I saw the mine of wealth lying around me which I was forbidden to explore." And although, by a most tedious process, which would have worn out the patience of any other author, Mr. Prescott did at last arrive at the conclusion of his work, it cost him ten years of labor—probably thrice as much time as would have been needed by an author of equal intellectual ability without any infirmity of sight.

Although, of the five senses which God has given us, sight and hearing are the most necessary to the intellectual life, it may easily be demonstrated that the lower ones are not without their intellectual uses. Perfect literature and art can only be produced by men who are perfect in all their natural faculties. The great creative intellects have never been ascetics; they have been rightly and healthily sensitive to every kind of pleasure. The taste of fruits and wines, the perfume of flowers are a part of the means by which the spirit of

Nature influences our most secret thoughts, and conveys to us suggestions, or carries us into states of feeling which have an enormous effect upon our thinking, though the manner in which the effect is produced is one of the deepest mysteries of our mysterious being. When the Caliph Vathek added five wings to the palace of Alkoremme, on the hill of Pied Horses, for the particular gratification of each of his five senses, he only did on a uselessly large scale what every properly-endowed human being does, when he can afford it, on a small one.

You will not suspect me of preaching unlimited indulgence. The very object of this letter is to recommend, for intellectual purposes, the careful preservation of the senses in the freshness of their perfection, and this is altogether incompatible with every species of excess. If you are to see clearly all your life, you must not sacrifice eyesight by overstraining it; and the same law of moderation is the condition of preserving every other faculty. I want you to know the exquisite taste of common dry bread; to enjoy the perfume of a larch wood at a distance; to feel delight when a sea-wave dashes over you. I want your eye to be so sensitive that it shall discern the faintest tones of a gray cloud, and yet so strong that it shall bear to gaze on a white one in the dazzling glory of sunshine. I would have your hearing sharp enough to detect the music of the spheres, if it were but audible, and yet your nervous system robust enough to endure the shock of the guns on an ironclad. To have and keep these powers we need a firmness of self-government that is rare.

Young men are careless of longevity; but how precious are added years to the fulness of the intellectual life! There are lives, such as that of Major Pendennis, which only diminish in value as they advance—when the man of fashion is no longer fashionable, and the sportsman can no longer stride over the ploughed fields. The old age of the Major Pendennises is assuredly not to be envied; but how rich is the age of the Humboldts! I compare the life of the intellectual to a long wedge of gold—the thin end of it begins at birth, and the depth and value of it go on indefinitely increasing till at last comes Death (a personage for whom Nathaniel Hawthorne had a peculiar dislike, for his unmannerly habit of interruption), who stops the auriferous processes. Oh, the mystery of the nameless ones who have died when the wedge was thin and looked so poor and light! Oh, the happiness of the fortunate old men whose thoughts went deeper and deeper like a wall that runs out into the sea!

NOTE—One of the most painful cases of interruption caused by death is that of Cuvier. His paralysis came upon him whilst he was still in full activity, and death prevented him from arranging a great accumulation of scientific material. He said to M. Pasquier, "I had great things still to do; all was ready in my head. After thirty years of labor and research, there remained but to write, and now the hands fail, and carry with them the head." But the most lamentable instances of this kind of interruption are, from the nature of things, unknown to us. Even the friends of the deceased cannot estimate the extent of the loss, for a man's immediate neighbors are generally the very last persons to become aware of the nature of his powers or the value of his acquisitions.

PART II.

THE MORAL BASIS.

LETTER I.

TO A MORALIST WHO HAD SAID THAT THERE WAS A WANT OF MORAL FIBRE IN THE INTELLECTUAL, ESPECIALLY IN POETS AND ARTISTS.

The love of intellectual pleasure—The seeking for a stimulus—Intoxication of poetry and oratory—Other mental intoxications—The Bishop of Exeter on drudgery—The labor of composition in poetry—Wordsworth's dread of it—Moore—His trouble with "Lalla Rookh"—His painstaking in preparation—Necessity of patient industry in other arts—John Lewis, Meissonier, Mulready—Drudgery in struggling against technical difficulties—Water-color painting, etching, oil-painting, fresco, line-engraving—Labor undergone for mere discipline—Moral strength of students—Giordano Bruno.

You told me the other day that you believed the inducement to what I called intellectual living to be merely the love of pleasure—pleasure of a higher kind, no doubt, than that which we derive from wine, yet fairly comparable to it. You went on to say that you could not, from the moral point of view, discern any appreciable difference between intoxicating oneself by means of literature or art and getting tipsy on port wine or brandy; that the reading of poetry, most especially, was clearly self-intoxication—a service of Venus and Bacchus, in which the suggestions of artfully-ordered words were used as substitutes for the harem and the wine-flask. Completing the expression of this idea, you said that the excitement produced by oratory was exactly of the same nature as the excitement produced by gin, so that Mr. Bright and M. Gambetta—nay, even a gentleman so respectable as the late Lord Derby—belonged strictly to the same profession as the publicans, being dealers in stimulants, and no more. The habitual student was, in your view, nothing better than the helpless victim of unresisted appetite, to whom intellectual intoxication having been at first a pleasure, had finally

become a necessity. You added that any rational person who found himself sinking into such a deplorable condition as this, would have recourse to some severe discipline as a preservative—a discipline requiring close attention to common things, and rigorously excluding every variety of thought which could possibly be considered intellectual.

It is strictly true that the three intellectual pursuits—literature, science, and the fine arts—are all of them strong stimulants, and that men are attracted to them by the stimulus they give. But these occupations are morally much nearer to the common level of other occupations than you suppose. There is no doubt a certain intoxication in poetry and painting; but I have seen a tradesman find a fully equivalent intoxication in an addition of figures showing a delightful balance at his banker's. I have seen a young poet intoxicated with the love of poetry; but I have also seen a young mechanical genius on whom the sight of a locomotive acted exactly like a bottle of champagne. Everything that is capable of exciting or moving man, everything that fires him with enthusiasm, everything that sustains his energies above the dead level of merely animal existence, may be compared, and not very untruly, to the action of generous wine. The two most powerful mental stimulants—since they overcome even the fear of death—are unquestionably religion and patriotism: ardent states of feeling both of them when they are genuine; yet this ardor has a great utility. It enables men to bear much, to perform much which would be beyond their natural force if it were not sustained by powerful mental stimulants. And so it is in the intellectual life. It is because its labors are so severe that its pleasures are so glorious. The Creator of intellectual man set him the most arduous tasks—tasks that required the utmost possible patience, courage, self-discipline, and which at the same time were for the most part, from their very nature, likely to receive only the most meagre and precarious pecuniary reward. Therefore, in order that so poor and weak a creature might execute its gigantic works with the energy necessary to their permanence, the labor itself was made intensely attractive and interesting to the few who were fitted for it by their constitution. Since their courage could not be maintained by any of the common motives which carry men through ordinary drudgery—since neither wealth nor worldly position was in their prospects, the drudgery they had to go through was to be rewarded by the triumphs of scientific discovery, by the felicities of artistic expression. A

divine drunkenness was given to them for their encouragement, surpassing the gift of the grape.

But now that I have acknowledged, not ungratefully, the necessity of that noble excitement which is the life of life, it is time for me to add that, in the daily labor of all intellectual workers, much has to be done which requires a robustness of the moral constitution beyond what you appear to be aware of. It is not long since the present Bishop of Exeter truly affirmed, in an address to a body of students, that if there were not weariness in work, that work was not so thorough-going as it ought to be. "Of all work," the Bishop said, "that produces results, nine-tenths must be drudgery. There is no work, from the highest to the lowest, which can be done well by any man who is unwilling to make that sacrifice. Part of the very nobility of the devotion of the true workman to his work consists in the fact that a man is not daunted by finding that drudgery must be done; and no man can really succeed in any walk of life without a good deal of what in ordinary English is called pluck. That is the condition of all work whatever, and it is the condition of all success. There is nothing which so truly repays itself as perseverance against weariness."

You understand, no doubt, that there is drudgery in the work of a lawyer or an accountant, but you imagine that there is no drudgery in that of an artist, or author, or man of science. In these cases you fancy that there is nothing but a pleasant intoxication, like the puffing of tobacco or the sipping of claret after dinner. The Bishop sees more accurately. He knows that "of all work that produces results nine-tenths must be drudgery." He makes no exceptions in favor of the arts and sciences; if he had made any such exceptions, they would have proved the absence of culture in himself. Real work of all descriptions, even including the composition of poetry (the most intoxicating of all human pursuits), contains drudgery in so large a proportion that considerable moral courage is necessary to carry it to a successful issue. Some of the most popular writers of verse have dreaded the labor of composition. Wordsworth shrank from it much more sensitively than he did from his prosaic labors as a distributor of stamps. He had that *horreur de la plume* which is a frequent malady amongst literary men. But we feel, in reading Wordsworth, that composition was a serious toil to him—the drudgery is often visible. Let me take, then, the case of a writer of verse distinguished especially for fluency and ease—the lightest, gayest, appar-

ently most thoughtless of modern minstrels—the author of “The Irish Melodies” and “Lalla Rookh.” Moore said—I quote from memory and may not give the precise words, but they were to this effect—that although the first shadowy imagining of a new poem was a delicious fool’s paradise, the labor of actual composition was something altogether different. He did not, I believe, exactly use the word “drudgery,” but his expression implied that there was painful drudgery in the work. When he began to write “Lalla Rookh” the task was anything but easy to him. He said that he was “at all times a far more slow and painstaking workman than would ever be guessed from the result.” For a long time after the conclusion of the agreement with Messrs. Longman, “though generally at work with a view to this task, he made but very little real progress in it.” After many unsatisfactory attempts, finding that his subjects were so slow in kindling his own sympathies, he began to despair of their ever touching the hearts of others. “Had this series of disheartening experiments been carried on much further, I must have thrown aside the work in despair.” He took the greatest pains in long and laboriously preparing himself by reading. “To form a storehouse, as it were, of illustrations purely Oriental, and so familiarize myself with its various treasures that, quick as Fancy required the aid of fact in her spiritings, the memory was ready to furnish materials for the spell-work; such was, for a long while, the sole object of my studies.” After quoting some opinions favorable to the truth of his Oriental coloring, he says: “Whatever of vanity there may be in citing such tributes, they show, at least, of what great value, even in poetry, is that prosaic quality, industry, since it was in a slow and laborious collection of small facts that the first foundations of this fanciful romance were laid.”

Other fine arts make equally large claims upon the industry of their professors. We see the charming result, which looks as if it were nothing but pleasure—the mere sensuous gratification of an appetite for melody or color; but no one ever eminently succeeded in music or painting without patient submission to a discipline far from attractive or entertaining. An idea was very prevalent amongst the upper classes in England, between twenty and thirty years ago, that art was not a serious pursuit, and that Frenchmen were too frivolous to apply themselves seriously to anything. When, however, the different schools of art in Europe came to be exhibited together, the truth began to dawn

upon people’s minds that the French and Belgian schools of painting had a certain superiority over the rest—a superiority of quite a peculiar sort; and when the critics applied themselves to discover the hidden causes of this generally perceived superiority, they found out that it was due in great measure to the patient drudgery submitted to by those foreign artists in their youth. English painters who have attained distinction have gone through a like drudgery, if not in the public *atelier* at least in secrecy and solitude. Mr. John Lewis, in reply to an application for a drawing to be reproduced by the autotype process, and published in the *Portfolio*, said that his sketches and studies were all in color, but “if we liked to examine them we were welcome to select anything that might be successfully photographed. Not being in London at the time, I charged an experienced friend to go and see if there were anything that would answer our purpose. Soon afterward he wrote: “I have just been to see John Lewis, and have come away *astounded*.” He had seen the vast foundations of private industry on which the artist’s public work had been erected,—innumerable studies in color, wrought with the most perfect care and finish, and all for self-education merely, not for any direct reward in fame. We have all admired the extraordinary power of representation in the little pictures of Meissonier; that power was acquired by painting studies *life-size* for self-instruction, and the artist has sustained his knowledge by persistence in that practice. Mulready, between the conception of a new picture and the execution of it, used to give himself a special training for the intended work by painting a study in color of every separate thing that was to form part of the composition. It is useless to go on multiplying these examples, since all great artists, without exception, have been distinguished for their firm faith in steady well-directed labor. This faith was so strong in Reynolds that it limited his reasoning powers, and prevented him from assigning their due importance to the inborn natural gifts.

Not only in their preparations for work, but even in the work itself, do artists undergo drudgery. It is the peculiarity of their work that, more than any other human work, it displays whatever there may be in it of pleasure and felicity, putting the drudgery as much out of sight as possible; but all who know the secrets of the studio are aware of the ceaseless struggles against technical difficulty which are the price of the charms that pleasantly deceive us. The amateur tries to paint in water-color, and finds that the gra-

dation of his sky will not come right; instead of being a sound gradation like that of the heavenly blue, it is all in spots and patches. Then he goes to some clever artist who seems to get the right thing with enviable ease. "Is my paper good? have my colors been properly ground?" The materials are sound enough, but the artist confesses one of the discouraging little secrets of his craft. "The fact is," he says, "those spots that you complain of happen to all of us, and very troublesome they are, especially in dark tints; the only way is to remove them as patiently as we can, and it sometimes takes several days. If one or two of them remain in spite of us, we turn them into birds." In etching, the most famous practitioners get into messes with the treacherous chemistry of their acids, and need an invincible patience. Even Méryon was always very anxious when the time came for confiding his work to what he called the *traitresse liqueur*; and whenever I give a commission to an etcher, I am always expecting some such despatch as the following: "Plate utterly ruined in the biting. Very sorry. Will begin another immediately." We know what a dreadful series of mishaps attended our fresco-painters at Westminster, and now even the promising water-glass process, in which Maclise trusted, shows the bloom of premature decay. The safest and best known of modern processes, simple oil-painting has its own dangers also. The colors sink and alter; they lose their relative values; they lose their pearly purity, their glowing transparency—they turn to buff and black. The fine arts bristle all over with technical difficulties, and are, I will not say the best school of patience in the world, for many other pursuits are also very good schools of patience; but I will say, without much fear of contradiction from anybody acquainted with the subject, that the fine arts offer drudgery enough, and disappointment enough, to be a training both in patience and in humility.

In the labor of the line-engraver both these qualities are developed to the pitch of perfect heroism. He sits down to a great surface of steel or copper, and day by day, week after week, month after month, ploughs slowly his marvellous lines. Sometimes the picture before him is an agreeable companion; he is in sympathy with the painter; he enjoys every touch that he has to translate. But sometimes, on the contrary, he hates the picture, and engraves it as a professional duty. I happened to call upon a distinguished English engraver—a man of the greatest taste and knowledge, a refined and cultivated critic—

and I found him seated at work before a thing which had nothing to do with fine art—a medley of ugly portraits of temperance celebrities on a platform. "Ah!" he said to me sadly, "you see the dark side of our profession; fancy sitting down to a desk all day long for two years together with that thing to occupy your thoughts!" How much moral fibre was needed to carry to a successful issue so repulsive a task as that! You may answer that a stone-breaker on the roadside surpasses my line-engraver both in patience and in humility; but whereas the sensitiveness of the stone-breaker has been deadened by his mode of life, the sensitiveness of the engraver has been continually fostered and increased. An ugly picture was torture to his cultivated eye, and he had to bear the torture all day long, like the pain of an irritating disease.

Still even the line-engraver has secret sources of entertainment to relieve the mortal tedium of his task-work. The picture may be hideous, but the engraver has hidden consolations in the exercise of his wonderful art. He can at least entertain himself with feats of interpretative skill, with the gentle treacheries of improving here and there upon the hatefulness of the intolerable original. He may congratulate himself in the evening, that one more frightful hat or coat has been got rid of; that the tiresome task has been reduced by a space measurable in eights of an inch. The heaviest work which shows progress is not without one element of cheerfulness.

There is a great deal of intellectual labor, undergone simply for discipline, which shows no present result that is appreciable, and which therefore requires, in addition to patience and humility, one of the noblest of the moral virtues, faith. Of all the toils in which men engage, none are nobler in their origin or their aim than those by which they endeavor to become more wise. Pray observe that whenever the desire for greater wisdom is earnest enough to sustain men in these high endeavors, there must be both humility and faith—the humility which acknowledges present insufficiency, the faith that relies upon the mysterious laws which govern our intellectual being. Be sure that there has been great moral strength in all who have come to intellectual greatness. During some brief moments of insight the mist has rolled away, and they have beheld, like a celestial city, the home of their highest aspirations; but the cloud has gathered round them again, and still in the gloom they have gone steadily forwards, stumbling often, yet maintaining

their unconquerable resolution. It is to this sublime persistence of the intellectual in other ages that the world owes the treasures which they won; it is by a like persistence that we may hope to hand them down, augmented, to the future. Their intellectual purposes did not weaken their moral nature, but exercised and exalted it. All that was best and highest in the imperfect moral nature of Giordano Bruno had its source in that noble passion for Philosophy, which made him declare that for her sake it was easy to endure labor and pain and exile, since he had found "*in brevi labore diuturnam requiem, in levi dolore immensum gaudium, in angusto exilio patriam amplissimam.*"

LETTER II.

TO AN UNDISCIPLINED WRITER.

Early indocility of great workers—External discipline only a substitute for inward discipline—Necessity for inward discipline—Origin of the idea of discipline—Authors peculiarly liable to overlook its uses—Good examples—Sir Arthur Helps—Sainte-Beuve—The central authority in the mind—Locke's opinion—Even the creative faculty may be commanded—Charles Baudelaire—Discipline in common trades and professions—Lawyers and surgeons—Hall—Mental refusals not to be altogether disregarded—The idea of discipline the moral basis of the intellectual life—Alexander Humboldt.

SIR ARTHUR HELPS, in that wise book of his "*Thoughts upon Government*," says that "much of the best and greatest work in the world has been done by those who were anything but docile in their youth." He believes that "this bold statement applies not only to the greatest men in Science, Literature, and Art, but also to the greatest men in official life, in diplomacy, and in the general business of the world."

Many of us who were remarkable for our indocility in boyhood, and remarkable for nothing else, have found much consolation in this passage. It is most agreeable to be told, by a writer very eminent both for wisdom and for culture, that our untowardness was a hopeful sign. Another popular modern writer has also encouraged us by giving a long list of dunces who have become illustrious.

Yet, however flattering it may be to find ourselves in such excellent company, at least so far as the earlier half of life may be concerned, we cannot quite forget the very numerous instances of distinguished persons who began by submitting to the discipline of school and college, and gained honors and reputation there, before encountering the competition of the world.

The external discipline applied by school-

masters is a substitute for that inward discipline which we all so greatly need, and which is absolutely indispensable to culture. Whether a boy happens to be a dunce at school or a youth of brilliant promise, his future intellectual career will depend very much on his moral force. The distinguished men who derived so little benefit from early discipline have invariably subjected themselves to a discipline of another kind which prepared them for the labor of their manhood. It may be a pure assumption to say this, but the assumption is confirmed by every instance that is known to me. Many eminent men have undergone the discipline of business, many like Franklin have been self-disciplined, but I have never heard of a person who had risen to intellectual eminence without voluntary submission to an intellectual discipline of some kind.

There are, no doubt, great pleasures attached to the intellectual life, and quite peculiar to it; but these pleasures are the support of discipline and not its negation. They give us the cheerfulness necessary for our work, but they do not excuse us from the work. They are like the cup of coffee served to a soldier on duty, not like the opium which incapacitates for everything but dreaming.

I have been led into these observations by a perusal of the new book which you sent me. It has many qualities which in a young writer are full of promise. It is earnest, and lively, and exuberant, but at the same time it is undisciplined.

Now I believe it may be affirmed, that although there has been much literature in former ages which was both vigorous and undisciplined, still when an age presents, as ours does, living examples of perfect intellectual discipline, whoever falls below them in this respect contents himself with the very kind of inferiority which of all inferiorities is the easiest to avoid. You cannot, by an effort of the will, hope to rival the brilliance of a genius, but you may quite reasonably expect to obtain as complete a control over your own faculties and your own work as any other highly-cultivated person.

The origin of discipline is the desire to do not merely our best with the degree of power and knowledge which at the time we do actually happen to possess, but with that which we *might* possess if we submitted to the necessary training. The powers given to us by Nature are little more than a power to become, and this becoming is always conditional on some sort of exercise—what sort we have to discover for ourselves.

No class of persons are so liable to overlook

the uses of discipline as authors are. Anybody can write a book, though few can write that which deserves the name of literature. There are great technical differences between literature and book-making, but few can clearly explain these differences, or detect, in their own case, the absence of the necessary qualities. In painting, the most perfect finish is recognized at a glance, but the mind only can perceive it in the book. It was an odd notion of the authorities to exhibit literature in the international exhibitions; but if they could have made people see the difference between sound and unsound workmanship in the literary craft, they would have rendered a great service to the higher intellectual discipline. Sir Arthur Helps might have served as an example to English writers, because he has certain qualities in which we are grievously deficient. He can say a thing in the words that are most fit and necessary, and then leave it. Sainte-Beuve would have been another admirable example of self-discipline, especially to Frenchmen, who would do well to imitate him in his horror of the *à peu près*. He never began to write about anything until he had cleared the ground well before him. He never spoke about any character or doctrine that he had not bottomed (to use Locke's word) as far as he was able. He had an extraordinary aptitude for collecting exactly the sort of material that he needed, for arranging and classifying material, for perceiving its mutual relations. Very few Frenchmen have had Sainte-Beuve's intense repugnance to insufficiency of information and inaccuracy of language. Few indeed are the French journalists of whom it might be said, as it may be truly said of Sainte-Beuve, that he never wrote even an article for a newspaper without having subjected his mind to a special training for that particular article. The preparations for one of his *Lundis* were the serious occupation of several laborious days; and before beginning the actual composition, his mind had been disciplined into a state of the most complete readiness, like the fingers of a musician who has been practising a piece before he executes it.

The object of intellectual discipline is the establishment of a strong central authority in the mind by which all its powers are regulated and directed as the military forces of a nation are directed by the strategist who arranges the operations of a war. The presence of this strong central authority is made manifest in the unity and proportion of the results; when this authority is absent (it is frequently entirely absent from the minds of undisciplined persons, especially of the female

sex), you have a chaos of complete confusion; when the authority without being absent is not strong enough to regulate the lively activity of the intellectual forces, you have too much energy in one direction, too little in another, a brigade where a regiment could have done the work, and light artillery where you want guns of the heaviest calibre.

To establish this central authority it is only necessary, in any vigorous and sound mind, to exercise it. Without such a central power there is neither liberty of action nor security of possession. "The mind," says Locke, "should always be free and ready to turn itself to the variety of objects that occur, and allow them as much consideration as shall, for that time, be thought fit. To be engrossed so by one subject as not to be prevailed on to leave it for another that we judge fitter for our contemplation, is to make it of no use to us. Did this state of mind always remain so, every one would, without scruple, give it the name of perfect madness; and whilst it does last, at whatever intervals it returns, such a rotation of thoughts about the same object no more carries us forward toward the attainment of knowledge, than getting upon a mill-horse whilst he jogs on his circular track, would carry a man on a journey."

Writers of imaginative literature have found in practice that even the creative faculty might be commanded. Charles Baude-laïre, who had the poetical organization with all its worst inconveniences, said nevertheless that "inspiration is decidedly the sister of daily labor. These two contraries do not exclude each other more than all the other contraries which constitute nature. Inspiration obeys like hunger, like digestion, like sleep. There is, no doubt, in the mind a sort of celestial mechanism, of which we need not be ashamed, but we ought to make the best use of it. If we will only live in a resolute contemplation of next day's work, the daily labor will serve inspiration." In cases where discipline is felt to be very difficult, it is generally at the same time felt to be very desirable. George Sand complains that although "to overcome the indiscipline of her brain, she had imposed upon herself a regular way of living, and a daily labor, still twenty times out of thirty she catches herself reading or dreaming, or writing something entirely apart from the work in hand." She adds that without this frequent intellectual *flânerie*, she would have acquired information which has been her perpetual but unrealized desire.

It is the triumph of discipline to overcome both small and great repugnances. We bring ourselves, by its help, to face petty details

that are wearisome, and heavy tasks that are almost appalling. Nothing shows the power of discipline more than the application of the mind in the common trades and professions to subjects which have hardly any interest in themselves. Lawyers are especially admirable for this. They acquire the faculty of resolutely applying their minds to the driest documents, with tenacity enough to end in the perfect mastery of their contents; a feat which is utterly beyond the capacity of any undisciplined intellect, however gifted by Nature. In the case of lawyers there are frequent intellectual repugnances to be overcome; but surgeons and other men of science have to vanquish a class of repugnances even less within the power of the will—the instinctive physical repugnances. These are often so strong as to seem apparently insurmountable, but they yield to persevering discipline. Although Haller surpassed his contemporaries in anatomy, and published several important anatomical works, he was troubled at the outset with a horror of dissection beyond what is usual with the inexperienced, and it was only by firm self-discipline that he became an anatomist at all.

There is, however, one reserve to be made about discipline, which is this: We ought not to disregard altogether the mind's preferences and refusals, because in most cases they are the indication of our natural powers. They are not so always; many have felt attracted to pursuits for which they had no capacity (this happens continually in literature and the fine arts), whilst others have greatly distinguished themselves in careers which were not of their own choosing, and for which they felt no vocation in their youth. Still there exists a certain relation between preference and capacity, which may often safely be relied upon when there are not extrinsic circumstances to attract men or repel them. Discipline becomes an evil, and a very serious evil, causing immense losses of special talents to the community, when it overrides the personal preferences entirely. We are less in danger of this evil, however, from the discipline which we impose upon ourselves than from that which is imposed upon us by the opinion of the society in which we live. The intellectual life has this remarkable peculiarity as to discipline, that whilst very severe discipline is indispensable to it, that which it really needs is the obedience to an inward law, an obedience which is not only compatible with revolt against other people's notions of what the intellectual man ought to think and do, but which often directly leads to such revolt as its own inevitable result.

In the attempt to subject ourselves to the inward law, we may encounter a class of mental refusals which indicate no congenital incapacity, but prove that the mind has been incapacitated by its acquired habits and its ordinary occupations. I think that it is particularly important to pay attention to this class of mental refusals, and to give them the fullest consideration. Suppose the case of a man who has a fine natural capacity for painting, but whose time has been taken up by some profession which has formed in him mental habits entirely different from the mental habits of an artist. The inborn capacity for art might whisper to this man, "What if you were to abandon your profession and turn painter?" But to this suggestion of the inborn capacity the acquired unfitness would, in a man of sense, most probably reply, "No; painting is an art bristling all over with the most alarming technical difficulties, which I am too lazy to overcome; let younger men attack them if they like." Here is a mental refusal of a kind which the severest self-disciplinarian ought to listen to. This is Nature's way of keeping us to our specialities; she protects us by means of what superficial moralists condemn as one of the minor vices—the disinclination to trouble ourselves without necessity, when the work involves the acquisition of new habits.

The moral basis of the intellectual life appears to be the idea of discipline; but the discipline is of a very peculiar kind, and varies with every individual. People of original power have to discover the original discipline that they need. They pass their lives in thoughtfully altering this private rule of conduct as their needs alter, as the legislature of a progressive State makes unceasing alterations in its laws. When we look back upon the years that are gone, this is our bitterest regret, that whilst the precious time, the irrecoverable, was passing by so rapidly, we were intellectually too undisciplined to make the best personal use of all the opportunities that it brought. Those men may be truly esteemed happy and fortunate who can say to themselves in the evening of their days—"I had so prepared myself for every successive enterprise, that when the time came for it to be carried into execution my training ensured success."

I had thought of some examples, and there are several great men who have left us noble examples of self-discipline; but, in the range and completeness of that discipline, in the foresight to discern what would be wanted, in the humility to perceive that it was wanting, in the resolution that it should *not* be wanting

when the time came that such knowledge or faculty should be called for, one colossal figure so far excels all others that I cannot write down their names with that of Alexander Humboldt. The world sees the intellectual greatness of such a man, but does not see the substantial moral basis on which the towering structure rose. When I think of his noble dissatisfaction with what he knew; his ceaseless eagerness to know more, and know it better; of the rare combination of teachableness that despised no help (for he accepted without jealousy the aid of everybody who could assist him), with self-reliance that kept him always calm and observant in the midst of personal danger, I know not which is the more magnificent spectacle, the splendor of the intellectual light, or the beauty and solidity of the moral constitution that sustained it.

LETTER III.

TO A FRIEND WHO SUGGESTED THE SPECULATION "WHICH OF THE MORAL VIRTUES WAS MOST ESSENTIAL TO THE INTELLECTUAL LIFE."

The most essential virtue is disinterestedness—The other virtues possessed by the opponents of intellectual liberty—The Ultramontane party—Difficulty of thinking disinterestedly even about the affairs of another nation—English newspapers do not write disinterestedly about foreign affairs—Difficulty of disinterestedness in recent history—Poets and their readers feel it—Fine subjects for poetry in recent events not yet available—Even history of past times rarely disinterested—Advantages of the study of the dead languages in this respect—Physicians do not trust their own judgment about their personal health—The virtue consists in endeavoring to be disinterested.

I THINK there cannot be a doubt that the most essential virtue is disinterestedness.

Let me tell you, after this decided answer, what are the considerations which have led me to it. I began by taking the other important virtues one by one—industry, perseverance, courage, discipline, humility, and the rest; and then asked myself whether any class of persons possessed and cultivated these virtues who were nevertheless opposed to intellectual liberty. The answer came immediately, that there have in every age been men deservedly respected for these virtues who did all in their power to repress the free action of the intellect. What is called the Ultramontane party in the present day includes great numbers of talented adherents who are most industrious, most persevering, who willingly submit to the severest discipline—who are learned, self-denying, and humble enough to accept the most obscure and ill-requited duties. Some of these men

possess nine-tenths of the qualifications that are necessary to the highest intellectual life—they have brilliant gifts of nature; they are well-educated; they take a delight in the exercise of noble faculties, and yet instead of employing their time and talents to help the intellectual advancement of mankind, they do all in their power to retard it. They have many most respectable virtues, but one is wanting. They have industry, perseverance, discipline, but they have *not* disinterestedness.

I do not mean disinterestedness in its ordinary sense as the absence of selfish care about money. The Church of Rome has thousands of devoted servants who are content to labor in her cause for stipends so miserable that it is clear they have no selfish aim; whilst they abandon all those possibilities of fortune which exist for every active and enterprising layman. But their thinking can never be disinterested so long as their ruling motive is devotion to the interests of their Church. Some of them are personally known to me, and we have discussed together many of the greatest questions which agitate the continental nations at the present time. They have plenty of intellectual acumen; but whenever the discussion touches, however remotely, the ecclesiastical interests that are dear to them, they cease to be observers—they become passionate advocates. It is this habit of advocacy which debars them from all elevated speculation about the future of the human race, and which so often induces them to take a side with incapable and retrograde governments, too willingly overlooking their deficiencies in the expectation of services to the cause. Their predecessors have impeded, as far as they were able, the early growth of science—not for intellectual reasons, but because they instinctively felt that there was something in the scientific spirit not favorable to those interests which they placed far above the knowledge of mere matter.

I have selected the Ultramontane party in the Church of Rome as the most prominent example of a party eminent for many intellectual virtues, and yet opposed to the intellectual life from its own want of disinterestedness. But the same defect exists, to some degree, in every partisan—exists in you and me so far as we are partisans. Let us suppose, for example, that we desired to find out the truth about a question much agitated in a neighboring country at the present time—the question whether it would be better for that country to attempt the restoration of its ancient Monarchy or to try to consolidate a Re-

publican form of government. How difficult it is to think out such a problem disinterestedly, and yet how necessary to the justice of our conclusions that we should think disinterestedly if we pretend to think at all! It is true that we have one circumstance in our favor—we are not French subjects, and this is much. Still we are not disinterested, since we know that the settlement of a great political problem such as this, even though on foreign soil, cannot fail to have a powerful influence on opinion in our own country, and consequently upon the institutions of our native land. We are spectators only, it is true; but we are far from being disinterested spectators. And if you desire to measure the exact degree to which we are interested in the result, you need only look at the newspapers. The English newspapers always treat French affairs from the standpoint of their own party. The Conservative journalist in England is a Monarchist in France, and has no hopes for the Republic; the Liberal journalist in England believes that the French dynasties are used up, and sees no chance of tranquillity outside of republican institutions. In both cases there is an impediment to the intellectual appreciation of the problem.

This difficulty is so strongly felt by those who write and read the sort of literature which aspires to permanence, and which, therefore, ought to have a substantial intellectual basis, that either our distinguished poets choose their subjects in actions long past and half-forgotten, or else, when tempted by present excitement, they produce work which is artistically far inferior to their best.

Our own generation has witnessed three remarkable events which are poetical in the highest degree. The conquest of the Two Sicilies by Garibaldi is a most perfect subject for a heroic poem; the events which led to the execution of the Emperor Maximilian and deprived his Empress of reason, would, in the hands of a great dramatist, afford the finest possible material for a tragedy; the invasion of France by the Germans, the overthrow of Napoleon III., the siege of Paris, are an epic ready to hand that only awaits its Homer; yet, with the exception of Victor Hugo, who is far gone in intellectual decadence, no great poet has sung of these things yet. The subjects are as good as can be, but too near. Neither poet nor reader is disinterested enough for the intellectual enjoyment of these subjects: the poet would not see his way clearly, the reader would not follow unservedly.

It may be added, however, in this connec-

tion, that even past history is hardly ever written disinterestedly. Historians write with one eye on the past and the other on the pre-occupations of the present. So far as they do this they fall short of the intellectual standard. An ideally perfect history would tell the pure truth, and all the truth, so far as it was ascertainable.

Artists are seldom good critics of art, because their own practice biasses them, and they are not disinterested. The few artists who have written soundly about art have succeeded in the difficult task of detaching saying from doing; they have, in fact, become two distinct persons, each oblivious of the other.

The strongest of all the reasons in favor of the study of the dead languages and the literatures preserved in them, has always appeared to me to consist in the more perfect disinterestedness with which we moderns can approach them. The men and events are separated from us by so wide an interval, not only of time and locality, but especially of modes of thought, that our passions are not often enlisted, and the intellect is sufficiently free.

It may be noted that medical men, who are a scientific class, and therefore more than commonly aware of the great importance of disinterestedness in intellectual action, never trust their own judgment when they feel the approaches of disease. They know that it is difficult for a man, however learned in medicine, to arrive at accurate conclusions about the state of a human body that concerns him so nearly as his own, even although the person who suffers has the advantage of actually experiencing the morbid sensations.

To all this you may answer that intellectual disinterestedness seems more an accident of situation than a virtue. The virtue is not to have it, but to seek it in all earnestness; to be ready to accept the truth even when it is most unfavorable to ourselves. I can illustrate my meaning by a reference to a matter of everyday experience. There are people who cannot bear to look into their own accounts from a dread that the clear revelation of figures may be less agreeable to them than the illusions which they cherish. There are others who possess a kind of virtue which enables them to see their own affairs as clearly as if they had no personal interest in them. The weakness of the first is one of the most fatal of intellectual weaknesses; the mental independence of the second is one of the most desirable of intellectual qualities. The endeavor to attain it, or to strengthen it, is a great virtue, and of all the virtues the one most indis-

pensable to the nobility of the intellectual life.

NOTE.—The reader may feel some surprise that I have not mentioned honesty as an important intellectual virtue. Honesty is of great importance, no doubt, but it appears to be (as to practical effects) included in disinterestedness, and to be less comprehensively useful. There is no reason to suspect the honesty of many political and theological partisans, yet their honesty does not preserve them from the worst intellectual habits, such as the habit of "begging the question," of misrepresenting the arguments on the opposite side, of shutting their eyes to every fact which is not perfectly agreeable to them. The truth is, that mere honesty, though a most respectable and necessary virtue, goes a very little way toward the forming of an effective intellectual character. It is valuable rather in the relations of the intellectual man to the outer world around him, and even here it is dangerous unless tempered by discretion. A perfect disinterestedness would ensure the best effects of honesty, and yet avoid some serious evils, against which honesty is not, in itself, a safeguard.

LETTER IV.

TO A MORALIST WHO SAID THAT INTELLECTUAL CULTURE WAS NOT CONDUCTIVE TO SEXUAL MORALITY.

That the Author does not write in the spirit of advocacy.—Two different kinds of immorality—Byron and Shelley—A peculiar temptation for the intellectual—A distinguished foreign writer—Reaction to coarseness from over-refinement—Danger of intellectual excesses—Moral utility of culture—The most cultivated classes at the same time the most moral—That men of high intellectual aims have an especially strong reason for morality—M. Taine's opinion.

A CRITIC in one of the quarterlies once treated me as a feeble defender of my opinions, because I gave due consideration to both sides of a question. He said that, like a wise commander, I capitulated beforehand in case my arguments did not come up for my relief; nay, more, that I gave up my arms in unconditional surrender. To this let me answer, that I have nothing to do with the polemical method, that I do not look upon an opponent as an enemy to be repelled, but as a torch-bearer to be welcomed for any light that he may bring; that I defend nothing, but try to explore everything that lies near enough.

You need not expect me, therefore, to defend very vigorously the morality of the intellectual life. An advocate could do it brilliantly; there are plenty of materials, but so clumsy an advocate as your present correspondent would damage the best of causes by unreasonable indiscretions. So I begin by admitting that your accusations are most of them well founded. Many intellectual people have led immoral lives, others have led lives which, although in strict conformity to their own theories of morality, were in opposition to the morality of their country and their age. Byron is a good instance of the first, and Shelley of the second. Byron

was really and knowingly immoral; Shelley, on the other hand, hated what he considered to be immorality, and lived a life as nearly as possible in accordance with the moral ideal in his own conscience; still he did not respect the moral rule of his country, but lived with Mary Godwin, whilst Harriet, his first wife, was still alive. There is a clear distinction between the two cases; yet both have the defect that the person takes in hand the regulation of his own morality, which it is hardly safe for any one to do, considering the prodigious force of passion.

I find even in the lives of intellectual people a peculiar temptation to immorality from which others are exempt. It is in their nature to feel an eager desire for intellectual companionship, and yet at the same time to exhaust very rapidly whatever is congenial to them in the intellect of their friends. They feel a strong intellectual attraction to persons of the opposite sex; and the idea of living with a person whose conversation is believed at the time to promise an increasing interest, is attractive in ways of which those who have no such wants can scarcely form a conception. A most distinguished foreign writer, of the female sex, has made a succession of domestic arrangements which, if generally imitated by others, would be subversive of any conceivable system of morality; and yet it is clear in this case that the temptation was chiefly, if not entirely, intellectual. The successive companions of this remarkable woman were all of them men of exceptional intellectual power, and her motive for changing them was an unbridled intellectual curiosity.

This is the sort of immorality to which cultivated people are most exposed. It is dangerous to the well-being of a community because it destroys the sense of security on which the idea of the family is founded. If we are to leave our wives when their conversation ceases to be interesting, the foundations of the home will be unsafe. If they are to abandon us when we are dull, to go away with some livelier and more talkative companion, can we ever hope to retain them permanently?

There is another danger which must be looked fairly in the face. When the lives of men are refined beyond the real needs of their organization, Nature is very apt to bring about the most extraordinary reactions. Thus the most exquisitely delicate artists in literature and painting have frequently had reactions of incredible coarseness. Within the Châteaubriand of Atala there existed an obscene Châteaubriand that would burst forth occasionally in talk that no biographer could

repeat. I have heard the same thing of the sentimental Lamartine. We know that Turner, dreamer of enchanted landscapes, took the pleasures of a sailor on the spree. A friend said to me of one of the most exquisite living geniuses: "You can have no conception of the coarseness of his tastes; he associates with the very lowest women, and enjoys their rough brutality."

These cases only prove, what I have always willingly admitted, that the intellectual life is not free from certain dangers if we lead it too exclusively. Intellectual excesses, by the excitement which they communicate to the whole system, have a direct tendency to drive men into other excesses, and a too great refinement in one direction may produce degrading reactions in another. Still the cultivation of the mind, reasonably pursued, is, on the whole, decidedly favorable to morality; and we may easily understand that it should be so, when we remember that people have recourse to sensual indulgences simply from a desire for excitement, whilst intellectual pursuits supply excitement of a more innocent kind and in the utmost variety and abundance. If, instead of taking a few individual instances, you broadly observe whole classes, you will recognize the moral utility of culture. The most cultivated classes in our own country are also the most moral, and these classes have advanced in morality at the same time that they have advanced in culture. English gentlemen of the present day are superior to their forefathers whom Fielding described; they are better educated, and they read more; they are at the same time both more sober and more chaste.

I may add that intellectual men have peculiar and most powerful reasons for avoiding the excesses of immorality, reasons which to any one who has a noble ambition are quite enough to encourage him in self-control. Those excesses are the gradual self-destruction of the intellectual forces, for they weaken the spring of the mind, not leaving it will enough to face the drudgery that is inevitable in every career. Even in cases where they do not immediately lead to visible imbecility, they make the man less efficient and less capable than he might have been; and all experienced wrestlers with fate and fortune know well that success has often, at the critical time, depended upon some very trifling advantage which the slightest diminution of power would have lost to them. No one knows the full immensity of the difference between having power enough to make a little headway against obstacles, and just falling short of the power which is necessary at

the time. In every great intellectual career there are situations like that of a steamer with a storm-wind directly against her and an iron-bound coast behind. If the engines are strong enough to gain an inch an hour she is safe, but if they lose there is no hope. Intellectual successes are so rewarding that they are worth any sacrifice of pleasure; the sense of defeat is so humiliating that fair Venus herself could not offer a consolation for it. An ambitious man will govern himself for the sake of his ambition, and withstand the seductions of the senses. Can he be ever strong enough, can his brain ever be lucid enough for the immensity of the task before him?

"Le jeune homme," says M. Taine, "ignore qu'il n'y a pas de pire déperdition de forces, que de tels commerces abaissent le cœur. qu'après dix ans d'une vie pareille il aura perdu la moitié de sa volonté, que ses pensées auront un arrière-goût habituel d'amertume et de tristesse, que son ressort intérieur sera amolli ou faussé. Il s'excuse à ses propres yeux, en se disant qu'un homme doit tout toucher pour tout connaître. De fait, il apprend la vie, mais bien souvent aussi il perd l'énergie, la chaleur d'âme, la capacité d'agir, et à trente ans il n'est plus bon qu'à faire un employé, un dilettante, ou un rentier."

PART III.

OF EDUCATION.

LETTER I.

TO A FRIEND WHO RECOMMENDED THE AUTHOR
TO LEARN THIS THING AND THAT.

Lesson learned from a cook—The ingredients of knowledge—Importance of proportion in the ingredients—Case of an English author—Two landscape painters—The unity and charm of character often dependent upon the limitations of culture—The burden of knowledge may diminish the energy of action—Difficulty of suggesting a safe rule for the selection of our knowledge—Men qualified for their work by ignorance as well as by knowledge—Men remarkable for the extent of their studies—Franz Wespke—Goethe—Hebrew proverb.

I HAPPENED one day to converse with an excellent French cook about the delicate art which he professed, and he comprised the whole of it under two heads—the knowledge of the mutual influences of ingredients, and the judicious management of heat. It struck me that there existed a very close analogy between cookery and education; and, on following out the subject in my own way, I

found that what he told me suggested several considerations of the very highest importance in the culture of the human intellect.

Amongst the dishes for which my friend had a deserved reputation was a certain *gâteau de foie* which had a very exquisite flavor. The principal ingredient, not in quantity but in power, was the liver of a fowl; but there were several other ingredients also, and amongst these a leaf or two of parsley. He told me that the influence of the parsley was a good illustration of his theory about his art. If the parsley were omitted, the flavor he aimed at was not produced at all; but, on the other hand, if the quantity of parsley was in the least excessive, then the *gâteau* instead of being a delicacy for *gourmets* became an uncatable mess. Perceiving that I was really interested in the subject, he kindly promised a practical evidence of his doctrine, and the next day intentionally spoiled his dish by a trifling addition of parsley. He had not exaggerated the consequences; the delicate flavor entirely departed, and left a nauseous bitterness in its place, like the remembrance of an ill-spent youth.

And so it is, I thought, with the different ingredients of knowledge which are so eagerly and indiscriminately recommended. We are told that we ought to learn this thing and that, as if every new ingredient did not affect the whole flavor of the mind. There is a sort of intellectual chemistry which is quite as marvellous as material chemistry, and a thousand times more difficult to observe. One general truth may, however, be relied upon as surely and permanently our own. It is true that everything we learn affects the whole character of the mind.

Consider how incalculably important becomes the question of proportion in our knowledge, and how that which we are is dependent as much upon our ignorance as our science. What we call ignorance is only a smaller proportion—what we call science only a larger. The larger quantity is recommended as an unquestionable good, but the goodness of it is entirely dependent on the mental product that we want. Aristocracies have always instinctively felt this, and have decided that a gentleman ought not to know too much of certain arts and sciences. The character which they had accepted as their ideal would have been destroyed by indiscriminate additions to those ingredients of which long experience had fixed the exact proportions. The same feeling is strong in the various professions: there is an apprehension that the disproportionate knowledge may destroy the professional nature. The less intelligent members

of the profession will tell you that they dread an unprofessional use of time; but the more thoughtful are not so apprehensive about hours and days, *they* dread that sure transformation of the whole intellect which follows every increase of knowledge.

I knew an English author who by great care and labor had succeeded in forming a style which harmonized quite perfectly with the character of his thinking, and served as an unfailing means of communication with his readers. Every one recognized its simple ease and charm, and he might have gone on writing with that enviable facility had he not determined to study Locke's philosophical compositions. Shortly afterwards my friend's style suddenly lost its grace; he began to write with difficulty, and what he wrote was unpleasantly difficult to read. Even the thinking was no longer his own thinking. Having been in too close communication with a writer who was not a literary artist, his own art had deteriorated in consequence.

I could mention an English landscape painter who diminished the pictorial excellence of his works by taking too much interest in geology. His landscapes became geological illustrations, and no longer held together pictorially. Another landscape painter, who began by taking a healthy delight in the beauty of natural scenery, became morbidly religious after an illness, and thenceforth passed by the loveliest European scenery as comparatively unworthy of his attention, to go and make ugly pictures of places that had sacred associations.

For people who produce nothing these risks appear to be less serious; and yet there have been admirable characters, not productive, whose admirableness might have been lessened by the addition of certain kinds of learning. The last generation of the English country aristocracy was particularly rich in characters whose unity and charm was dependent upon the limitations of their culture, and which would have been entirely altered, perhaps not for the better, by simply knowing a science or a literature that was closed to them.

Abundant illustrations might be collected in evidence of the well-known truth that the burden of knowledge may diminish the energy of action; but this is rather outside of what we are considering, which is the influence of knowledge upon the intellectual and not the active life.

I regret very much not to be able to suggest anything like a safe rule for the selection of our knowledge. The most rational one which

has been hit upon as yet appears to be a simple confidence in the feeling that we inwardly want to know. If I feel the inward want for a certain kind of knowledge, it may perhaps be presumed that it would be good for me; but even this feeling is not perfectly reliable, since people are often curious about things that do not closely concern them, whilst they neglect what it is most important for them to ascertain. All that I venture to insist upon is, that we cannot learn any new thing without changing our whole intellectual composition as a chemical compound is changed by another ingredient; that the mere addition of knowledge may be good for us or bad for us; and that whether it will be good or bad is usually a more obscure problem than the enthusiasm of educators will allow. That depends entirely on the work we have to do. Men are qualified for their work by knowledge, but they are also negatively qualified for it by their ignorance. Nature herself appears to take care that the workman shall not know too much—she keeps him steadily to his task; fixes him in one place mentally if not corporally, and conquers his restlessness by fatigue. As we are bound to a little planet, and hindered by impassable gulfs of space from wandering in stars where we have no business, so we are kept by the force of circumstances to the limited studies that belong to us. If we have any kind of efficiency, very much of it is owing to our narrowness, which is favorable to a powerful individuality.

Sometimes, it is true, we meet with instances of men remarkable for the extent of their studies. Franz Wœpke, who died in 1864, was an extraordinary example of this kind. In the course of a short life he became, although unknown, a prodigy of various learning. His friend M. Taine says that he was erudite in many eruditions. His favorite pursuit was the history of mathematics, but as auxiliaries he had learned Arabic, and Persian, and Sanskrit. He was classically educated, he wrote and spoke the principal modern languages easily and correctly;* his printed works are in three languages. He had lived in several nations, and known their leading men of science. And yet this astonishing list of acquirements may be reduced to the exercise of two decided and natural tastes. Franz Wœpke had the gift of the linguist and an interest in mathematics, the first serving as auxiliary to the second.

Goethe said that "a vast abundance of objects must lie before us ere we can think upon them." Wœpke felt the need of this abund-

ance, but he did not go out of his way to find it. The objectionable seeking after knowledge is the seeking after the knowledge which does not belong to us. In vain you urge me to go in quest of sciences for which I have no natural aptitude. Would you have me act like that foolish camel in the Hebrew proverb, which in going to seek horns lost his ears?

LETTER II.

TO A FRIEND WHO STUDIED MANY THINGS.

Men cannot restrict themselves in learning—Description of a Latin scholar of two generations since—What is attempted by a cultivated contemporary—Advantages of a more restricted field—Privilege of instant admission—Many pursuits cannot be kept up simultaneously—The deterioration of knowledge through neglect—What it really is—The only available knowledge that which we habitually use—Difficulty in modern education—That it is inevitably a beginning of many things and no more—The simpler education of an ancient Greek—That of Alcibiades—How the Romans were situated as to this—The privilege of limited studies belongs to the earlier ages—They learned and we attempt to learn.

It appears to be henceforth inevitable that men should be unable to restrict themselves to one or two pursuits, and you who are in most respects a very perfect specimen of what the age naturally produces in the way of culture, have studied subjects so many and so various that a mere catalogue of them would astonish your grandfather if his shade could revisit his old home. And yet your grandfather was considered a very highly cultivated gentleman according to the ideas and requirements of his time. He was an elegant scholar, but in Latin chiefly, for he said that he never read Greek easily, and indeed he abandoned that language entirely on leaving the University. But his Latin, from daily use and practice (for he let no day slip by without reading some ancient author) and from the thoroughness and accuracy of his scholarship, was always as ready for service as the saddled steeds of Branksome. I think he got more culture, more of the best effects of good literature, out of that one language than some polyglots get out of a dozen. He knew no modern tongue, he had not even the common pretension to read a little French, and in his day hardly anybody studied German. He had no scientific training of any kind except mathematics, in which I have heard him say that he had never been proficient. Of the fine arts his ignorance was complete, so complete that I doubt if he could have distinguished Rigaud from Reynolds, and he had never played upon any musical instrument. The leisure which he enjoyed during a long and

* According to M. Taine. I have elsewhere expressed a doubt about polyglots.

tranquil existence he gave entirely to Latin and English literature, but of the two he enjoyed Latin the more, not with the preference of a pedant, but because it carried him more completely out of the present, and gave him the refreshment of a more perfect change. He produced on all who knew him the impression of a cultivated gentleman, which he was.

There is only an interval of one generation between you and that good Latinist, but how wide is the difference in your intellectual regimen? You have studied—well, here is a little list of what you have studied, and probably even this is not complete:—

Greek, Latin, French, German, Italian, mathematics, chemistry; mineralogy, geology, botany, the theory of music, the practice of music on two instruments, much theory about painting, the practice of painting in oil and water-color, photography, etching on copper, etc., etc., etc.

That is to say, six literatures (including English), six sciences (counting mineralogy and geology as one), and five branches or departments of the fine arts.

Omitting English literature from our total, as that may be considered to come by nature to an Englishman, though any real proficiency in it costs the leisure of years, we have here no less than sixteen different pursuits. If you like to merge the theory of music and painting in the practice of those arts, though as a branch of study the theory is really distinct, we have still fourteen pursuits, any one of which is enough to occupy the whole of one man's time. If you gave some time daily to each of these pursuits, you could scarcely give more than half an hour, even supposing that you had no professional occupation, and that you had no favorite study, absorbing time to the detriment of the rest.

Now your grandfather, though he would be considered quite an ignorant country gentleman in these days, had in reality certain intellectual advantages over his more accomplished descendant. In the first place, he entirely escaped the sense of pressure, the feeling of not having time enough to do what he wanted to do. He accumulated his learning as quietly as a stout lady accumulates her fat, by the daily satisfaction of his appetite. And at the same time that he escaped the sense of pressure, he escaped also the miserable sense of imperfection. Of course he did not know Latin like an ancient Roman, but then he never met with any ancient Romans to humiliate him by too rapid and half-intelligible conversation. He met the best Latin-

ists of his day; and felt himself a master amongst masters. Every time he went into his study, to pass delightful hours with the noble authors that he loved, he knew that his admission into that august society would be immediate and complete. He had to wait in no antechamber of mere linguistic difficulty, but passed at once into the atmosphere of ancient thought, and breathed its delicate perfume. In this great privilege of instant admission the man of one study has always the advantage of men more variously cultivated. Their misfortune is to be perpetually waiting in antechambers, and losing time in them. Grammars and dictionaries are antechambers, bad drawing and bad coloring are antechambers, musical practice with imperfect intonation is an antechamber. And the worst is that even when a man, like yourself for instance, of very various culture, has at one time fairly penetrated beyond the antechamber, he is not sure of admittance a year hence, because in the mean time the door may have been closed against him. The rule of each separate hall or saloon of knowledge is that he alone is to be instantly admitted who calls there every day.

The man of various pursuits does not, in any case, keep them up simultaneously; he is led by inclination or compelled by necessity to give predominance to one or another. If you have fifteen different pursuits, ten of them, at any given time, will be lying by neglected. The metaphor commonly used in reference to neglected pursuits is borrowed from the oxidation of metal; it is said that they become rusty. This metaphor is too mild to be exact. Rust on metal, even on polished steel, is easily guarded against by care, and a gun or a knife does not need to be constantly used to keep it from being pitted. The gunsmith and the cutler know how to keep these things, in great quantity, without using them at all. But no one can retain knowledge without using it. The metaphor fails still more seriously in perpetuating a false conception of the deterioration of knowledge through neglect. It is not simply a loss of polish which takes place, not a loss of mere surface-beauty, but absolute disorganization, like the disorganization of a carriage when the axle-tree is taken away. A rusty thing may still be used, but a disorganized thing cannot be used until the lost organ has been replaced. There is no equivalent, amongst ordinary material losses, to the intellectual loss that we incur by ceasing from a pursuit. But we may consider neglect as an enemy who carries away the girths from our saddles, the bits from our bridles, the ears

from our boats, and one wheel from each of our carriages, leaving us indeed still nominally possessors of all these aids to locomotion, but practically in the same position as if we were entirely without them. And as an enemy counts upon the delays caused by these vexations to execute his designs whilst we are helpless, so whilst we are laboring to replace the lost parts of our knowledge the occasion slips by when we most need it. The only knowledge which is available when it is wanted is that which we habitually use. Studies which from their nature cannot be commonly used are always retained with great difficulty. The study of anatomy is perhaps the best instance of this; every one who has attempted it knows with what difficulty it is kept by the memory. Anatomists say that it has to be learned and forgotten six times before it can be counted as a possession. This is because anatomy lies so much outside of what is needed for ordinary life that very few people are ever called upon to use it except during the hours when they are actually studying it. The few who need it every day remember it as easily as a man remembers the language of the country which he inhabits. The workmen in the establishment at Saint Aubin d'Écroville, where Dr. Auzoux manufactures his wonderful anatomical models, are as familiar with anatomy as a painter is with the colors on his palette. *They* never forget it. *Their* knowledge is never made practically valueless by some yawning hiatus, causing temporary incompetence and delay.

To have one favorite study and live in it with happy familiarity, and cultivate every portion of it diligently and lovingly, as a small yeoman proprietor cultivates his own land, this, as to study, at least, is the most enviable intellectual life. But there is another side to the question which has to be considered.

The first difficulty for us is in our education. Modern education is a beginning of many things, and it is little more than a beginning. "My notion of educating my boy," said a rich Englishman, "is not to make him particularly clever at anything during his minority, but to make him overcome the rudimentary difficulties of many things, so that when he selects for himself his own line of culture in the future, it cannot be altogether strange to him, whatever line he may happen to select." A modern father usually allows his son to learn many things from a feeling of timidity about making a choice, if only one thing had to be chosen. He might so easily make a wrong choice! When the inheritance of the human race was less rich, there was no

embarrassment of that kind. Look at the education of an ancient Greek, at the education of one of the most celebrated Athenians, a man living in the most refined and intellectual society, himself mentally and bodily the perfect type of his splendid race, an eloquent and powerful speaker, a most capable commander both by sea and land—look at the education of the brilliant Alcibiades! When Socrates gave the list of the things that Alcibiades had learned, Alcibiades could add to it no other even nominal accomplishment, and what a meagre, short catalogue it was! "But indeed I also pretty accurately know what thou hast learned; thou wilt tell me if anything has escaped my notice. Thou hast learned then thy letters (*γράμματα*), to play on the cithara (*κιθάριζεν*) and to wrestle (*παλαίειν*), for thou hast not cared to learn to play upon the flute. This is all that thou hast learned, unless something has escaped me." The *γράμματα* which Alcibiades had learned with a master meant reading and writing, for he expressly says later on, that as for speaking Greek, *ἑλληνίζειν*, he learned that of no other master than the people. An English education equivalent to that of Alcibiades would therefore consist of reading and writing, wrestling and guitar-playing, the last accomplishment being limited to very simple music. Such an education was possible to an Athenian (though it is fair to add that Socrates does not seem to have thought much of it) because a man situated as Alcibiades was situated in the intellectual history of the world, had no past behind him which deserved his attention more than the present which surrounded him. Simply to speak Greek, *ἑλληνίζειν*, was really then the most precious of all accomplishments, and the fact that Alcibiades came by it easily does not lessen its value. Amongst a people like the Athenians, fond of intellectual talk, conversation was one of the best and readiest means of informing the mind, and certainly the very best means of developing it. It was not a slight advantage to speak the language of Socrates, and have him for a companion.

The cleverest and most accomplished Romans were situated rather more like ourselves, or at least as we should be situated if we had not to learn Latin and Greek, and if there were no modern language worth studying except French. They went to Greece to perfect themselves in Greek, and improve their accent, just as our young gentlemen go to Paris or Touraine. Still, the burden of the past was comparatively light upon their shoulders. An Englishman who had attempted no more than they were bound to attempt might be a scholar, but he would not be considered so.

He might be a thorough scholar in French and English,—that is, he might possess the cream of two great literatures,—but he would be spoken of as a person of defective education. It is the fashion, for example, to speak of Sir Walter Scott as a half-educated man, because he did not know much Greek, yet Sir Walter had studied German with success, and with his habit of extensive reading, and his immense memory, certainly knew incomparably more about the generations which preceded him than Horace knew of those which preceded the Augustan era.

The privilege of limiting their studies, from the beginning, to one or two branches of knowledge, belonged to earlier ages, and every successive accumulation of the world's knowledge has gradually lessened it. School-boys in our time are expected to know more, or to have attempted to learn more, than the most brilliant intellectual leaders of former times. What English parent, in easy circumstances, would be content that his son should have the education of Alcibiades, or an education accurately corresponding to that of Horace, or to that which sufficed for Shakespeare? Yet although the burdens laid upon the memory have been steadily augmented, its powers have not increased. Our brains are not better constituted than those of our forefathers, although where they learned one thing we attempt to learn six. They learned, and we attempt to learn. The only hope for us is to make a selection from the attempts of our too heavily burdened youth, and in those selected studies to emulate in after-life the thoroughness of our forefathers

LETTER III.

TO A FRIEND WHO STUDIED MANY THINGS.

An idealized portrait—The scholars of the sixteenth century—Isolated students—French students of English when isolated from Englishmen—How one of them read Tennyson—Importance of sounds—Illusions of scholarship—Difficulty of appreciating the sense—That Latin may still be made a spoken language—The early education of Montaigne—A contemporary instance—Dream of a Latin island—Rapid corruption of a language taught artificially.

In your answer to my letter about the multiplicity of modern studies you tell me that my portrait of your grandfather is considerably idealized, and that, notwithstanding all the respect which you owe to his memory, you have convincing proof in his manuscript annotations to Latin authors that his scholarship cannot have been quite so thorough as I represented it. You convey, moreover, though with perfect modesty in form, the idea that

you believe your own Latin superior to your grandfather's, notwithstanding the far greater variety of your studies. Let me confess that I *did* somewhat idealize that description of your grandfather's intellectual life. I described rather a life which might have been than a life which actually was. And even this "might have been" is problematical. It may be doubted whether any modern has ever really mastered Latin. The most that can be said is that a man situated like your grandfather, without a profession, without our present temptation to scatter effort in many pursuits, and who made Latin scholarship his unique intellectual purpose, would probably go nearer to a satisfactory degree of attainment than we whose time and strength have been divided into so many fragments. But the picture of a perfect modern Latinist is purely ideal, and the prevalent notion of high attainment in a dead language is not fixed enough to be a standard, whilst if it were fixed it would certainly be a very low standard. The scholars of this century do not write Latin except as a mere exercise; they do not write books in Latin, and they never speak it at all. They do not use the language actively; they only read it, which is not really using it, but only seeing how other men have used it. There is the same difference between reading a language and writing or speaking it that there is between looking at pictures intelligently and painting them. The scholars of the sixteenth century spoke Latin habitually, and wrote it with ease and fluency. "Nicholas Grouchy," says Montaigne, "who wrote a book *de Comitibus Romanorum*; William Guereute, who has written a commentary upon Aristotle; George Buchanan, that great Scotch poet; and Marc Anthony Muret, whom both France and Italy have acknowledged for the best orator of his time, my domestic tutors (at college), have all of them often told me that I had in my infancy that language so very fluent and ready that they were afraid to enter into discourse with me." This passage is interesting for two reasons; it shows that the scholars of that age spoke Latin; but it proves at the same time that they cannot have been really masters of the language, since they were "afraid to enter into discourse" with a clever child. Fancy an Englishman who professed to be a French scholar and yet "was afraid to enter into discourse" with a French boy, for fear he should speak too quickly! The position of these scholars relatively to Latin was in fact too isolated for it to have been possible that they should reach the point of mastery. Suppose a society of Frenchmen, in some secluded

ed little French village where no Englishman ever penetrates, and that these Frenchmen learn English from dictionaries, and set themselves to speak English with each other, without anybody to teach them the colloquial language or its pronunciation, without ever once hearing the sound of it from English lips, what sort of English would they create amongst themselves? This is a question that I happen to be able to answer very accurately, because I have known two Frenchmen who studied English literature just as the Frenchmen of the sixteenth century studied the literature of ancient Rome. One of them, especially, had attained what would certainly in the case of a dead language be considered a very high degree of scholarship indeed. Most of our great authors were known to him, even down to the close critical comparison of different readings. Aided by the most powerful memory I ever knew, he had amassed such stores that the acquisitions, even of cultivated Englishmen, would in many cases have appeared inconsiderable beside them. But he could not write or speak English in a manner tolerable to an Englishman; and although he knew nearly all the words in the language, it was dictionary knowledge, and so different from an Englishman's apprehension of the same words that it was only a sort of pseudo-English that he knew, and not our living tongue. His appreciation of our authors, especially of our poets, differed so widely from English criticism and English feeling that it was evident he did not understand them as we understand them. Two things especially proved this: he frequently mistook declamatory versification of the most mediocre quality for poetry of an elevated order; whilst, on the other hand, his ear failed to perceive the music of the musical poets, as Byron and Tennyson. How *could* he hear their music, he to whom our English sounds were all unknown? Here, for example, is the way he read "Claribel":—

"At ev ze bittle bommess
 Asvart ze seeket ion
 At none ze veeld be omness
 Aboot ze most edston
 At meedneeg ze mon commess
 An lokes down alon
 Ere songg ze lintreet avoless
 Ze clirvoic-ed mavi dvoless
 Ze fiedgling aroet lispess
 Ze slombroos vav ootvoless
 Ze babbling ronnel creespeess
 Ze ollov grot reples-ess
 Vere Claribel lovlee-ess."

This, as nearly as I have been able to render it in English spelling, was the way in which a French gentleman of really high culture was accustomed to read English

poetry to himself. Is it surprising that he should have failed to appreciate the music of our musical verse? He did not, however, seem to be aware that there existed any obstacle to the accuracy of his decisions, but gave his opinion with a good deal of authority, which might have surprised me had I not so frequently heard Latin scholars do exactly the same thing. My French friend read "Claribel" in a ridiculous manner; but English scholars all read Latin poetry in a manner not less ridiculous. You laugh to hear "Claribel" read with a foreign pronunciation, and you see at once the absurdity of affecting to judge of it as poetry before the reader has learned to pronounce the sounds; but you do not laugh to hear Latin poetry read with a foreign pronunciation, and you do not perceive that we are all of us disqualified, by our profound ignorance of the pronunciation of the ancient Romans, for any competent criticism of their verse. In all poetry, in all oratory, in much of the best and most artistic prose-writing also, sound has a great influence upon sense: a great deal is conveyed by it, especially in the way of feeling. If we do not thoroughly know and practise the right pronunciation (and by the right pronunciation I mean that which the author himself *thought in* whilst he wrote), we miss those delicate tones and cadences which are in literature like the modulations of the voice in speech. Nor can we properly appreciate the artistic choice of beautiful names for persons and places unless we know the sounds of them quite accurately, and have already in our minds the associations belonging to the sounds. Names which are selected with the greatest care by our English poets, and which hold their place like jewels on the finely-wrought texture of the verse, lose all their value when they are read with a vicious foreign pronunciation. So it must be with Latin poetry when read by an Englishman, and it is probable that we are really quite insensible to the delicate art of verbal selection as it was practised by the most consummate masters of antiquity.

I know that scholars think that they hear the Roman music still; but this is one of the illusions of scholarship. In each country Latin scholars have adopted a conventional style of reading, and the sounds which are in conformity with that style seem to them to be musical, whilst other than the accepted sounds seem ridiculous, and grate harshly on the unaccustomed ear. The music which the Englishman hears, or imagines that he hears, in the language of ancient Rome, is certainly not the music which the Roman authors in-

tended to note in words. It is as if my Frenchman, having read "Claribel" in his own way, had affirmed that he heard the music of the verse. If he heard music at all, it was not Tennyson's.

Permit me to add a few observations about sense. My French friend certainly understood English in a very remarkable manner for a student who had never visited our country; he knew the dictionary meaning of every word he encountered, and yet there ever remained between him and our English tongue a barrier or wall of separation, hard to define, but easy to perceive. In the true deep sense he never understood the language. He studied it, laid regular siege to it, mastered it to all appearance, yet remained, to the end, outside of it. His observations, and especially his unfavorable criticisms, proved this quite conclusively. Expressions often appeared to him faulty, in which no English reader would see anything to remark upon; it may be added that (by way of compensation) he was unable to appreciate the oddity of those intentionally quaint turns of expression which are invented by the craft of humorists. It may even be doubted whether his English was of any ascertainable use to him. He might probably have come as near to an understanding of our authors by the help of translations, and he could not converse in English, for the spoken language was entirely unintelligible to him. An acquisition of this kind seems scarcely an adequate reward for the labor that it costs. Compared with living Englishmen my French friend was nowhere, but if English had been a dead language, he would have been looked up to as a very eminent scholar, and would have occupied a professor's chair in the university.

A little more life might be given to the study of Latin by making it a spoken language. Boys might be taught to speak Latin in their schooldays with the modern Roman pronunciation, which, though probably a deviation from the ancient, is certainly nearer to it than our own. If colloquial Latin were made a subject of special research, it is likely that a sufficiently rich phrase-book might be constructed from the plays. If this plan were pursued throughout Europe (always adopting the Roman pronunciation) all educated men would possess a common tongue which might be enriched to suit modern requirements without any serious departure from classical construction. The want of such a system as this was painfully felt at the council of the Vatican, where the assembled prelates discovered that their Latin was of no practical use, although the Roman Catholic clergy employ

Latin more habitually than any other body of men in the world. That a modern may be taught to think in Latin, is proved by the early education of Montaigne, and I may mention a much more recent instance. My brother-in-law told me that, in the spring of 1871, a friend of his had come to stay with him accompanied by his little son, a boy seven years old. This child spoke Latin with the utmost fluency, and he spoke nothing else. What I am going to suggest is a Utopian dream, but let us suppose that a hundred fathers could be found in Europe, all of this way of thinking, all resolved to submit to some inconvenience in order that their sons might speak Latin as a living language. A small island might be rented near the coast of Italy, and in that island Latin alone might be permitted. Just as the successive governments of France maintain the establishments of Sèvres and the Gobelins to keep the manufactures of porcelain and tapestry up to a recognized high standard of excellence, so this Latin island might be maintained to give more vivacity to scholarship. If there were but one little corner of ground on the wide earth where pure Latin was constantly spoken, our knowledge of the classic writers would become far more sympathetically intimate. After living in the Latin island we should think in Latin as we read, and read without translating.

But this is dreaming. It is too certain that on returning from the Latin island into the atmosphere of modern colleges an evil change would come over our young Latinists like that which came upon the young Montaigne when his father sent him to the college of Guienne, "at that time the best and most flourishing in France." Montaigne tells us that, notwithstanding all his father's precautions, the place "was a college still." "My Latin," he adds, "*immediately grew corrupt, and by discontinuance I have since lost all manner of use of it.*" If it were the custom to speak Latin, it would be the custom to speak it badly; and a master of the language would have to conform to the evil usages around him. Our present state of ignorance has the charm of being silent, except when old-fashioned gentlemen in the House of Commons quote poetry which they cannot pronounce to hearers who cannot understand it.

NOTE.—An English orator quoted from Cicero the sentence, "Non intelligunt homines quam magnum vectigal sit parvum." He made the second vowel in *vectigal* short, and the House laughed at him; he tried again and pronounced it with the long sound of the English *i*, on which the critical body he addressed was perfectly satisfied. But if a Roman had been present it is probable that, of the two, the short

English *i* would have astonished his ears the less, for our short *i* does bear some resemblance to the southern *i* whereas our long *i* resembles no single letter in any alphabet of the Latin family of languages. We are scrupulously careful to avoid what we call false quantities, we are quite utterly and ignorantly unscrupulous about false sounds. One of the best instances is the well-known "*veni, vidi, vici*," which we pronounce very much as if it had been written *vinai, voidai, va.oi*, in Italian letters.

LETTER IV.

TO A STUDENT OF LITERATURE.

Studies, whatever they may be, always considered, by some, a waste of time—The classical languages—The higher mathematics—The accomplishments—Indirect uses of different studies—Influence of music—Studies indirectly useful to authors—What induced Mr. Roscoe to write the *lives* of Lorenzo de' Medici and Leo X.

WHATEVER you study, some one will consider that particular study a foolish waste of time.

If you were to abandon successively every subject of intellectual labor which had, in its turn, been condemned by some adviser as useless, the result would be simple intellectual nakedness. The classical languages, to begin with, have long been considered useless by the majority of practical people—and pray, what to shopkeepers, doctors, attorneys, artists, can be the use of the higher mathematics? And if these studies, which have been conventionally classed as serious studies, are considered unnecessary notwithstanding the tremendous authority of custom, how much the more are those studies exposed to a like contempt which belong to the category of accomplishments! What is the use of drawing, for it ends in a worthless sketch? Why should we study music when after wasting a thousand hours the amateur cannot satisfy the ear? *A quoi bon* modern languages when the accomplishment only enables us to call a waiter in French or German who is sure to answer us in English? And what, when it is not your trade, can be the good of dissecting animals or plants?

To all questionings of this kind there is but one reply. We work for culture. We work to enlarge the intelligence, and to make it a better and more effective instrument. This is our main purpose; but it may be added that even for our special labors it is always difficult to say beforehand exactly what will turn out in the end to be most useful. What, in appearance, can be more entirely outside the work of a landscape painter than the study of ancient history? and yet I can show you how an interest in ancient history might indirectly be of great service to a landscape painter. It

would make him profoundly feel the human associations of many localities which to an ignorant man would be devoid of interest or meaning; and this human interest in the scenes where great events have taken place, or which have been distinguished by the habitation of illustrious men in other ages, is in fact one of the great fundamental motives of landscape painting. It has been very much questioned, especially by foreign critics, whether the interest in botany which is taken by some of the more cultivated English landscape painters is not for them a false direction and wrong employment of the mind; but a landscape painter may feel his interest in vegetation infinitely increased by the accurate knowledge of its laws, and such an increase of interest would make him work more zealously, and with less danger of weariness and *ennui*, besides being a very useful help to the memory in retaining the authentic vegetable forms. It may seem more difficult to show the possible utility of a study apparently so entirely outside of other studies as music is; and yet music has an important influence on the whole of our emotional nature, and indirectly upon expression of all kinds. He who has once learned the self-control of the musician, the use of *piano* and *forte*, each in its right place, when to be lightly swift or majestically slow, and especially how to keep to the key once chosen till the right time has come for changing it; he who has once learned this knows the secret of the arts. No painter, writer, orator, who had the power and judgment of a thoroughly cultivated musician, could sin against the broad principles of taste.

More than all other men have authors reason to appreciate the indirect utilities of knowledge that is apparently irrelevant. Who can tell what knowledge will be of most use to *them*? Even the very greatest of authors are indebted to miscellaneous reading, often in several different languages, for the suggestion of their most original works, and for the light which has kindled many a shining thought of their own. And authors who seem to have less need than others of an outward help, poets whose compositions might appear to be chiefly inventive and emotional, novelists who are free from the restraints and the researches of the historian, work up what they know into what they write; so that if you could remove every line which is based on studies outside the strict limits of their art, you would blot out half their compositions. Take the antiquarian element out of Scott, and see how many of his works could never have been written. Remove from Goldsmith's brain the recollection of his wayward

studies and strange experiences, and you would remove the rich material of the "Traveller" and the Essays, and mutilate even the immortal "Vicar of Wakefield." Without a classical education and foreign travel, Byron would not have composed "Childe Harold;" without the most catholic interest in the literature of all the ages, and of many different peoples from the North Sea to the Mediterranean, our contemporary William Morris would never have conceived, and could not have executed, that strong work "The Earthly Paradise." It may not seem necessary to learn Italian, yet Mr. Roscoe's celebrity as an author was due in the first place to his private fondness for Italian literature. He did not learn Italian in order that he might write his biographies, but he wrote about Lorenzo and Leo because he had mastered Italian, and because the language led him to take an interest in the greatest house of Florence. The way in which authors are led by their favorite studies indirectly to the great performance of their lives has never been more clearly illustrated than in this instance.

When William Roscoe was a young man he had for his friend Francis Holden, nephew of Mr. Richard Holden, a schoolmaster in Liverpool. Francis Holden was a young man of uncommon culture, having at the same time really sound scholarship in several languages, and an ardent enthusiasm for literature. He urged Roscoe to study languages, and used especially, in their evening walks together, to repeat to him passages from the noblest poets of Italy. In this way Roscoe was led to attempt Italian, and, having once begun, went on till he had mastered it. "It was in the course of these studies," says his biographer, "that he first formed the idea of writing the *Life of Lorenzo de' Medici*."

LETTER V.

TO A COUNTRY GENTLEMAN WHO REGRETTED
THAT HIS SON HAD THE TENDENCIES OF A DILETTANT.

Inaccuracy of the common distinction between amateur pursuits and more serious studies—All of us are amateurs in many things—Prince Albert—The Emperor Napoleon III.—Contrast between general and professional education—The price of high accomplishment.

I AGREE with you that amateurship, as generally practised, may be a waste of time, but the common distinction between amateur pursuits and serious studies is inconsistent. A painter whose art is imperfect and who does not work for money is called an ama-

teur; a scholar who writes imperfect Latin, not for money, escapes the imputation of amateurship, and is called a learned man. Surely we have been blinded by custom in these things. Ideas of frivolity are attached to imperfect acquirement in certain directions, and ideas of gravity to equally imperfect acquirement in others. To write bad Latin poetry is not thought to be frivolous, but it is considered frivolous to compose imperfectly and unprofessionally in other fine arts.

Yet are we not all of us amateurs in those pursuits which constituted our education—amateurs at the best, if we loved them, and even inferior to amateurs if we disliked them? We have not sounder knowledge or more perfect skill in the ancient languages than Prince Albert had in music. We know something of them, yet in comparison with perfect mastery such as that of a cultivated old Greek or Roman, our scholarship is at the best on a level with the musical scholarship of a cultivated amateur like the Prince Consort.

If the essence of dilettantism is to be contented with imperfect attainment, I fear that all educated people must be considered dilettants.

It is narrated of the Emperor Napoleon III. that in answer to some one who inquired of his Majesty whether the Prince Imperial was a musician, he replied that he discouraged dilettantism, and "did not wish his son to be a Coburg." But the Emperor himself was quite as much a dilettant as Prince Albert; though their dilettantism did not lie in the same directions. The Prince was an amateur musician and artist; the Emperor was an amateur historian, an amateur scholar, and antiquary. It may be added that Napoleon III. indulged in another and more dangerous kind of amateurship. He had a taste for amateur generalship, and the consequences of his indulgence of this taste are known to every one.

The variety of modern education encourages a scattered dilettantism. It is only in professional life that the energies of young men are powerfully concentrated. There is a steadying effect in thorough professional training which school education does not supply. Our boys receive praise and prizes for doing many things most imperfectly, and it is not their fault if they remain ignorant of what perfection really is, and of the immensity of the labor which it costs. I think that you would do well, perhaps, without discouraging your son too much by chillingly accurate estimates of the value of what he has done, to make him on all proper occasions feel and see

the difference between half-knowledge and thorough mastery. It would be a good thing for a youth to be made clearly aware how enormous a price of labor Nature has set upon high accomplishment in everything that is really worthy of his pursuit. It is this persuasion, which men usually arrive at only in their maturity, that operates as the most effectual tranquillizer of frivolous activities.

LETTER VI.

TO THE PRINCIPAL OF A FRENCH COLLEGE.

The Author's dread of protection in intellectual pursuits—Example from the Fine Arts—Prize poems—Governmental encouragement of learning—The bad effects of it—Pet pursuits—Objection to the interference of Ministers—A project for separate examinations.

WHAT I am going to say will seem very strange to you, and is not unlikely to arouse as much professional animosity as you are capable of feeling against an old friend. You who are a dignitary of the University, and have earned your various titles in a fair field, as a soldier wins his epaulettes before the enemy, are not the likeliest person to hear with patience the unauthorized theories of an innovator. Take them, then, as mere speculations, if you will—not altogether unworthy of consideration, for they are suggested by a sincere anxiety for the best interests of learning, and yet not very dangerous to vested interests of any kind, since they can have little influence on the practice or opinion of the world.

I feel a great dread of what may be called *protection* in intellectual pursuits. It seems to me that when the Government of a country applies an artificial stimulus to certain branches of study for their encouragement, by the offer of rewards in honor or in money beyond the rewards inherent in the studies themselves, or coming naturally from their usefulness to mankind, there is a great danger that men may give a disproportionate attention to those favored branches of study. Let me take an example from the practice of the Fine Arts. A Government, by medals and crosses, or by money, can easily create and foster a school of painting which is entirely out of relation to the century in which it exists, and quite incapable of working harmoniously with the contemporary national life. This has actually been done to a considerable extent in various countries, especially in France and in Bavaria. A sort of classicism which had scarcely any foundation in sincerity of feeling was kept up artificially by

a system of encouragement which offered inducements outside the genuine ambition of an artist. The true enthusiasm which is the life of art impels the artist to express his own feeling for the delight of others. The offer of a medal or a pension induces him to make the sort of picture which is likely to satisfy the authorities. He first ascertains what is according to the rule, and then follows it as nearly as he is able. He works in a temper of simple conformity, remote indeed from the passionate enthusiasm of creation. It is so with prize poems. We all know the sort of poetry which is composed in order to gain prizes. The anxiety of the versifier is to be safe: he tries to compose what will escape censure; he dreads the originality that may give offence. But all powerful pictures and poems have been wrought in the energy of individual feeling, not in conformity to a pattern.

Now, suppose that, instead of encouraging poetry or painting, a Government resolves to encourage learning. It will patronize certain pursuits to the neglect of others, or it will encourage certain pursuits more liberally than others. The subjects of such a Government will not follow learning exclusively for its delightfulness or its utility; another consideration will affect their choice. They will inquire which pursuits are rewarded by prizes in honor or money, and they will be strongly tempted to select them. Therefore, unless the Government has exercised extraordinary wisdom, men will learn what they do not really care for and may never practically want, merely in order to win some academical grade. So soon as this object has been attained, they will immediately abandon the studies by which they attained it.

Can it be said that in these cases the purposes of the Government were fulfilled? Clearly not, if it desired to form a permanent taste for learning. But it may have done worse than fail in this merely negative way; it may have diverted its youth from pursuits to which Nature called them, and in which they might have effectually aided the advancement and the prosperity of the State.

Let us suppose that a Government were to have a pet study, and offer great artificial inducements for success in it. Suppose that the pet study were entomology. All the most promising youth of the country would spend ten years in emulating Messrs. Kirby and Spence, and take their degrees as entomological bachelors. But might it not easily happen that to a majority of the young gentlemen this pursuit would have acted positively as a hindrance by keeping them from other pur-

suits more likely to help them in their professions? It would not only cost a great deal of valuable time, it would absorb a quantity of youthful energy which the country can ill afford to lose. The Government would probably affirm that entomology, if not always practically useful in itself, was an invaluable intellectual training; but what if this training used up the early vigor which might be needed for other pursuits, and of which every human being has only a limited supply? We should be told, no doubt, that this powerful encouragement was necessary to the advancement of science, and it is true that under such a system the rudiments of entomology would be more generally known. But the vulgarization of rudiments is not the advancement of knowledge. Entomology has gone quite as far in discovery, though pursued simply for its own sake, as it would have gone if it had been made necessary to a bachelor's degree.

You will ask whether I would go so far as to abolish degrees of all kinds. Certainly not; that is not my project. But I believe that no Government is competent to make a selection amongst intellectual pursuits and say, "This or that pursuit shall be encouraged by university degrees, whilst other pursuits of intellectual men shall have no encouragement whatever." I may mention by name your present autocrat of Public Instruction, Jules Simon. He is a literary man of some eminence; he has written several interesting books, and on the whole he is probably more competent to deal with these questions than many of his predecessors. But however capable a man may be, he is sure to be biassed by the feeling common to all intellectual men which attributes a peculiar importance to their own pursuits. I do not like to see any Minister, or any Cabinet of Ministers, settling what all the young men of a country are to learn under penalty of exclusion from all the liberal professions.

What I should think more reasonable would be some such arrangement as the following. There might be a board of thoroughly competent examiners for each branch of study separately, authorized to confer certificates of competence. When a man believed himself to have mastered a branch of study, he would go and try to get a certificate for that. The various studies would then be followed according to the public sense of their importance, and would fall quite naturally into the rank which they ought to occupy at any given period of the national history. These separate examinations should be severe enough to ensure a serviceable degree of proficiency. Nobody should

be allowed to teach anything who had not got a certificate for the particular thing he intended to profess. In the confusion of your present system, not only do you fail to insure the thoroughness of pupils, but the teachers themselves are too frequently incompetent in some speciality which accidentally falls to their share. I think that a Greek master ought to be a complete Hellenist, but surely it is not necessary that he should be half a mathematician.

To sum up. It seems to me that a Government has no business to favor some intellectual pursuits more than others, but that it ought to recognize competent attainment in every one of them by a sort of diploma or certificate, leaving the relative rank of different pursuits to be settled by public opinion. And as to the educators themselves, I think that when a man has proved his competence in one thing, he ought to be allowed to teach that one thing in the University without being required to pass an examination in any other thing.

LETTER VII.

TO THE PRINCIPAL OF A FRENCH COLLEGE.

Loss of time to acquire an ancient language too imperfectly for it to be useful—Dr. Arnold—Mature life leaves little time for culture—Modern indifference to ancient thinking—Larger experience of the moderns—The moderns older than the ancients—The Author's regret that Latin has ceased to be a living language—The shortest way to learn to read a language—The recent interest in modern languages—A French student of Hebrew.

I WAS happy to learn your opinion of the reform so recently introduced by the Minister of Public Instruction, and the more so that I was glad to find the views of so inexperienced a person as myself confirmed by your wider knowledge. You went even farther than M. Jules Simon, for you openly expressed a desire for the complete withdrawal of Greek from the ordinary school curriculum. Not that you undervalue Greek,—no one of your scholarship would be likely to undervalue a great literature,—but you thought it a loss of time to acquire a language so imperfectly that the literature still remained practically closed whilst thousands of valuable hours had been wasted on the details of grammar. The truth is, that although the principle of beginning many things in school education with the idea that the pupil will in maturer life pursue them to fuller accomplishment may in some instances be justified by the prolonged studies of men who have a natural taste for erudition, it is idle to shut one's eyes to the fact that most men have no inclination for school-work

after they have left school, and if they had the inclination they have not the time. Our own Dr. Arnold, the model English schoolmaster, said, "It is so hard to begin anything in after-life, and so comparatively easy to continue what has been begun, that I think we are bound to break ground, as it were, into several of the mines of knowledge with our pupils; that the first difficulties may be overcome by them whilst there is yet a power from without to aid their own faltering resolution, and that so they may be enabled, if they will, to go on with the study hereafter." The principle here expressed is no doubt one of the important principles of all early education, and yet I think that it cannot be safely followed without taking account of human nature, such as it is. Everything hangs on that little parenthesis "if they will." And if they will *not*, how then? The time spent in breaking the ground has been wasted, except so far as the exercise of breaking the ground may have been useful in mental gymnastics.

Mature life brings so many professional or social duties that it leaves scant time for culture; and those who care for culture most earnestly and sincerely, are the very persons who will economize time to the utmost. Now, to read a language that has been very imperfectly mastered is felt to be a bad economy of time. Suppose the case of a man occupied in business who has studied Greek rather assiduously in youth and yet not enough to read it with facility. Suppose that this man wants to get at the mind of Plato. He can read the original, but he reads it so slowly that it would cost him more hours than he can spare, and this is why he has recourse to a translation. In this case there is no indifference to Greek culture; on the contrary, the reader desires to assimilate what he can of it, but the very earnestness of his wish to have free access to ancient thought makes him prefer it in modern language.

This is the most favorable instance that can be imagined, except, of course, those exceedingly rare cases where a man has leisure enough, and enthusiasm enough, to become a Hellenist. The great majority of our contemporaries do not care for ancient thought at all, it is so remote from them, it belongs to conditions of civilization so different from their own, it is encumbered with so many lengthy discussions of questions which have been settled by the subsequent experience of the world, that the modern mind prefers to occupy itself with its own anxieties and its own speculations. It is a great error to suppose that indifference to ancient thinking is peculiar to the spirit of Philistinism; for the

most cultivated contemporary intellects seek light from each other rather than from the ancients. One of the most distinguished of modern thinkers, a scholar of the rarest classical attainments, said to me in reference to some scheme of mine for renewing my classical studies, that they would be of no more use to me than numismatics. It is this feeling, the feeling that Greek speculation is of less consequence to the modern world than German and French speculation, which causes so many of us, rightly or wrongly, to regard it as a palæontological curiosity, interesting for those who are curious as to the past of the human mind, but not likely to be influential upon its future.

This estimate of ancient thinking is not often expressed quite so openly as I have just expressed it, and yet it is very generally prevalent even amongst the most thoughtful people, especially if modern science has had any conspicuous influence in the formation of their minds. The truth is, as Sydney Smith observed many years ago, that there is a confusion of language in the use of the word "ancient." We say "the ancients," as if they were older and more experienced men than we are, whereas the age and experience are entirely on our side. They were the clever children, "and we only are the white-bearded, silver-headed ancients, who have treasured up, and are prepared to profit by, all the experience which human life can supply." The sense of our larger experience, as it grows in us and becomes more distinctly conscious, produces a corresponding decline in our feelings of reverence for classic times. The past has bequeathed to us its results, and we have incorporated them into our own edifice, but we have used them rather as materials than as models.

In your practical desire to retain in education only what is likely to be used, you are willing to preserve Latin. M. Jules Simon says that Latin ought to be studied only to be read. On this point permit me to offer an observation. The one thing I regret about Latin is that we have ceased to speak it. The natural method, and by far the most rapid and sure method of learning a language, is to begin by acquiring words in order to use them to ask for what we want; after that we acquire other words for narration and the expression of our sentiments. By far the shortest way to learn to read a language is to begin by speaking it. The colloquial tongue is the basis of the literary tongue. This is so true that with all the pains and trouble you give to the Latin education of your pupils, you cannot teach them as much Latin, for reading only, in the course of ten years, as a

living foreigner will give them of his own language in ten months. I seriously believe that if your object is to make boys read Latin easily, you begin at the wrong end. It is deplorable that the learned should ever have allowed Latin to become a dead language, since in permitting this they have enormously increased the difficulty of acquiring it, even for the purposes of scholarship.

No foreigner who knows the French people will disapprove of the novel desire to know the modern languages, which has been one of the most unexpected consequences of the war. Their extreme ignorance of the literature of other nations has been the cause of enormous evils. Notwithstanding her central position, France has been a very isolated country intellectually, much more isolated than England, more isolated even than Transylvania, where foreign literatures are familiar to the cultivated classes. This isolation has produced very lamentable effects, not only on the national culture but most especially on the national character. No modern nation, however important, can safely remain in ignorance of its contemporaries. The Frenchman was like a gentleman shut up within his own park-wall, having no intercourse with his neighbors, and reading nothing but the history of his own ancestors—for the Romans were your ancestors, intellectually. It is only by the study of living languages, and their continual use, that we can learn our true place in the world. A Frenchman was studying Hebrew; I ventured to suggest that German might possibly be more useful. To this he answered, *that there was no literature in German.* "*Vous avez Goethe, vous avez Schiller, et vous avez Lessing, mais en dehors de ces trois noms il n'y a rien.*" This meant simply that my student of Hebrew measured German literature by his own knowledge of it. Three names had reached him, only names, and only three of them. As to the men who were unknown to him he had decided that they did not exist. Certainly if there are many Frenchmen in this condition, it is time that they learned a little German.

LETTER VIII.

TO A STUDENT OF MODERN LANGUAGES.

Standard of attainment in living languages higher than in ancient ones—Difficulty of maintaining high pretensions—Prevalent illusion about the facility of modern languages—Easy to speak them badly—Some propositions based upon experience—Expectations and disappointments.

HAD your main purpose in the education of yourself (I do not say self-education, for

you wisely accept all help from others) been the attainment of classical scholarship, I might have observed that as the received standard in that kind of learning is not a very elevated one, you might reasonably hope to reach it with a certain calculable quantity of effort. The classical student has only to contend against other students who are and have been situated very much as he is situated himself. They have learned Latin and Greek from grammars and dictionaries as he is learning them, and the only natural advantages which any of his predecessors may have possessed are superiorities of memory which may be compensated by his greater perseverance, or superiorities of sympathy to which he may "level up" by that acquired and artificial interest which comes from protracted application. But the student of modern languages has to contend against advantages of situation, as the gardeners of an inhospitable climate contend against the natural sunshine of the south. How easy it is to have a fruitful date-tree in Arabia, how difficult in England! How easy for the Florentine to speak Italian, how difficult for us! The modern linguist can never fence himself behind that stately unquestionableness which shields the classical scholar. His knowledge may at any time be put to the severest of all tests, to a test incomparably more severe than the strictest university examination. The first *native* that he meets is his examiner, the first foreign city is his Oxford. And this is probably one reason why accomplishment in modern languages has been rather a matter of utility than of dignity, for it is difficult to keep up great pretensions in the face of a multitude of critics. What would the most learned-looking gown avail, if a malicious foreigner were laughing at us?

But there is a deep satisfaction in the severity of the test. An honest and courageous student likes to be clearly aware of the exact value of his acquisitions. He takes his French to Paris and has it tested there as we take our plate to the silversmith, and after that he knows, or may know, quite accurately what it is worth. He has not the dignity of scholarship, he is not held to be a learned man, but he has acquired something which may be of daily use to him in society, or in commerce, or in literature; and there are thousands of educated natives who can accurately estimate his attainment and help him to a higher perfection. All this is deeply satisfying to a lover of intellectual realities. The modern linguist is always on firm ground, and in broad daylight. He may impede his own progress by the illusions of solitary self-con-

ceit, but the atmosphere outside is not favorable to such illusions. It is well for him that the temptations to charlatanism are so few, that the risks of exposure are so frequent.

Still there are illusions, and the commonest of them is that a modern language may be very easily mastered. There is a popular idea that French is easy, that Italian is easy, that German is more difficult, yet by no means insuperably difficult. It is believed that when an Englishman has spent all the best years of his youth in attempting to learn Latin and Greek, he may acquire one or two modern languages with little effort during a brief residence on the Continent. It is certainly true that we may learn any number of foreign languages so as to speak them badly, but it surely cannot be easy to speak them well. It may be inferred that this is not easy because the accomplishment is so rare. The inducements are common, the accomplishment is rare. Thousands of English people have very strong reasons for learning French, thousands of French people could improve their position by learning English; but rare indeed are the men and women who know both languages thoroughly.

The following propositions, based on much observation of a kind wholly unprejudiced, and tested by a not inconsiderable experience, will be found, I believe, unassailable.

1. *Whenever a foreign language is perfectly acquired there are peculiar family conditions. The person has either married a person of the other nation, or is of mixed blood.*

2. *When a foreign language has been acquired (there are instances of this) in quite absolute perfection, there is almost always some loss in the native tongue. Either the native tongue is not spoken correctly, or it is not spoken with perfect ease.*

3. *A man sometimes speaks two languages correctly, his father's and his mother's, or his own and his wife's, but never three.*

4. *Children can speak several languages exactly like natives, but in succession, never simultaneously. They forget the first in acquiring the second, and so on.*

5. *A language cannot be learned by an adult without five years' residence in the country where it is spoken, and without habits of close observation a residence of twenty years is insufficient.*

This is not encouraging, but it is the truth. Happily, a knowledge which falls far short of mastery may be of much practical use in the common affairs of life, and may even afford some initiation into foreign literatures. I do not argue that because perfection is denied of

us by the circumstances of our lives or the necessities of our organization we are therefore to abandon the study to every language but the mother tongue. It may be of use to us to know several languages imperfectly, if only we confess the hopelessness of absolute attainment. That which is truly, and deeply, and seriously an injury to our intellectual life, is the foolishness of the two common vanity which first deludes itself with childish expectations, and then tortures itself with late regret for failure which might have been easily foreseen.

LETTER IX.

TO A STUDENT OF MODERN LANGUAGES

Cases known to the Author—Opinion of an English linguist—Family conditions—An Englishman who lived forty years in France—Influence of children—An Italian in France—Displacement of one language by another—English lady married to a Frenchman—An Italian in Garibaldi's army—Corruption of languages by the uneducated when they learn more than one—Neapolitan servant of an English gentleman—A Scotch servant-woman—The author's eldest boy—Substitution of one language for another—In mature life we lose facility—The resisting power of adults—Seen in international marriages—Case of a retired English officer—Two Germans in France—Germans in London—The innocence of the ear—Imperfect attainment of little intellectual use—Too many languages attempted in education—Polyglot waiters—Indirect benefits.

My five propositions about learning modern languages appear from your answer to have rather surprised you, and you ask for some instances in illustration. I am aware that my last letter was dogmatic, so let me begin by begging your pardon for its dogmatism. The present communication may steer clear of that rock of offence, for it shall confine itself to an account of cases that I have known.

One of the most accomplished of English linguists remarked to me that after much observation of the labors of others, and a fair estimate of his own, he had come to the rather discouraging conclusion that it was not possible to learn a foreign language. He did not take account of the one exceptional class of cases where the family conditions make the use of two languages habitual. The most favorable family conditions are not in themselves sufficient to ensure the acquisition of a language, but wherever an instance of perfect acquisition is to be found, these family conditions are always found along with it. My friend W., an English artist living in Paris, speaks French with quite absolute accuracy as to grammar and choice of expression, and with accuracy of pronunciation so nearly absolute that the best French

ears can detect nothing wrong but the pronunciation of the letter "r." He has lived in France for the space of forty years, but it may be doubted whether in forty years he could have mastered the language as he has done if he had not married a native. French has been his home language for 30 years and more, and the perfect ease and naturalness of his diction are due to the powerful home influences, especially to the influence of children. A child is born that speaks the foreign tongue from the first inarticulate beginnings. It makes its own child language, and the father as he hears it is born over again in the foreign land by tender paternal sympathy. Gradually the sweet child-talk gives place to the perfect tongue and the father follows it by insensible gradations, himself the most docile of pupils, led onward rather than instructed by the winning and playful little master, incomparably the best of masters. The process here is nature's own inimitable process. Every new child that is born to a man so situated carries him through a repetition of that marvellous course of teaching. The language *grows* in his brain from the first rudiments—the real natural rudiments, not the hard rudiments of the grammarian—just as plants grow naturally from their seeds. It has not been built by human processes of piecing together, but has developed itself like a living creature. This way of learning a language possesses over the dictionary process exactly the kind of superiority which a living man, developed naturally from the fetus, possesses over the clastic anatomical man-model of the ingenious doctor Auzoux. The doctor's models are remarkably perfect in construction, they have all the organs, but they have not life.

When, however, this natural process of growth is allowed to go forward without watchful care, it is likely to displace the mother tongue. It is sometimes affirmed that the impressions of childhood are never effaced, that the mother tongue is *never* forgotten. It may be that it is never wholly forgotten, except in the case of young children, but it may become so imperfect as to be practically of little use. I knew an Italian who came to France as a young man and learned his profession there. He was afterwards naturalized, married a French lady, had several children, pursued a very successful career in Paris, and became ultimately French Ambassador at the court of Victor Emmanuel. His French was so perfect that it was quite impossible for any one to detect the usual Italian accents. I used to count him as a remarkable and almost solitary in-

stance of a man speaking two languages in their perfection, but I learned since then that his French had displaced his Italian, and so completely that he was quite unable to speak Italian correctly, and made use of French invariably when in Italy. The risk of this displacement is always greatest in cases where the native tongue is not kept up by means of literature. Byron and Shelley, or our contemporary Charles Lever, would run little risk of losing English by continental residence, but people not accustomed to reading and writing often forget the mother tongue in a few years, even when the foreign one which has displaced it is still in a state of imperfection. Madame L. is an English lady who married a Frenchman; neither her husband nor her children speak English, and as her relatives live in one of our most distant colonies, she has been separated from them for many years. Isolated thus from English society, living in a part of France rarely visited by her countrymen, never reading English, and writing it little and at long intervals, she speaks it now with much difficulty and diffidence. Her French is not grammatical, though she has lived for many years with people who speak grammatically; but then her French is fluent and alive, truly her own living language now, whilst English is, if not wholly forgotten, dead almost as our Latin is dead. She and I always speak French together when we meet, because it is easier for her than English, and a more natural expression. I have known some other cases of displacement of the native tongue, and have lately had the opportunity of watching a case of such displacement during its progress. A sergeant in the Italian army deserted to join Garibaldi in the campaign of 1870. On the conclusion of peace it was impossible for him to return to Italy, so he settled in France and married there. I found some work for him, and for some months saw him frequently. Up to the date of his marriage he spoke no language but Italian, which he could read and write correctly, but after his marriage the process of displacement of the native tongue began immediately by the corruption of it. He did not keep his Italian safely by itself, putting the French in a place of its own as he gradually acquired it, but he mixed the two inextricably together. Imagine the case of a man who, having a bottle half full of wine, gets some beer given him and pours it immediately into the wine-bottle. The beer will never be pure beer, but it will effectually spoil the wine. This process is not so much one of displacement as of corruption. it takes place readily in uncultivated minds,

with feeble separating powers. Another example of this was a Neapolitan servant of an English gentleman, who mixed his Italian twice, first with French and afterwards with English, producing a compound intelligible to nobody but himself, if indeed he himself understood it. At the time I knew him, the man had no means of communication with his species. When his master told him to do anything, he made a guess at what was likely to be for the moment his master's most probable want, and sometimes hit the mark, but more generally missed it. The man's name was Alberino, and I remember on one occasion profiting by a mistaken guess of his. After a visit to Alberino's master, my servant brought forth a magnificent basket of trout, which surprised me, as nothing had been said about them. However, we ate them, and only discovered afterwards that the present was due to an illusion of Alberino's. His master had never told him to give me the trout, but he had interpreted some other order in that sense. When you asked him for mustard, he would first touch the salt, and then the pepper, etc., looking at you inquiringly till you nodded assent. Any attempt at conversation with Alberino was sure to lead to a perfect comedy of misunderstandings. He never had the remotest idea of what his interlocutor was talking about; but he pretended to catch your meaning, and answered at haphazard. He had a habit of talking aloud to himself, "but in a tongue no man could understand."

It is a law that cultivated people can keep languages apart, and in their purity, better than persons who have not habits of intellectual analysis. When I lived in Scotland three languages were spoken in my house all day long, and a housemaid came to us from the Lowlands who spoke nothing but Lowland Scotch. She used to ask what was the French for this thing or that, and then what was the Gaelic for it. Having been answered, she invariably asked the further question which of the three words, French, Gaelic, or English, *was the right word*. She remained, to the last, entirely incapable of conceiving how all the three could be right. Had she learned another language, it must have been by substitution for her own. This is exactly the natural process which takes place in the brains of children who are transferred from one country to another. My eldest boy spoke English in childhood as well as any other English child of his age. He was taken to the south of France, and in three months he replaced his English with Provençal, which he learned from the servants about him. There were

two ladies in the house who spoke English well, and did all in their power, in compliance with my urgent entreaties, to preserve the boy's native language; but the substitution took place too rapidly, and was beyond control. He began by an unwillingness to use English words whenever he could use Provençal instead, and in a remarkably short time this unwillingness was succeeded by inability. The native language was as completely taken out of his brain as a violin is taken out of its case: nothing remained, *nothing*, not one word, not any echo of an accent. And as a violinist may put a new instrument into the case from which he has removed the old one, so the new language occupied the whole space which had been occupied by English. When I saw the child again, there was no means of communication between us.

After that, he was removed to the north of France, and the same process began again. As Provençal had pushed out English, so French began to push out Provençal. The process was wonderfully rapid. The child heard people speak French, and he began to speak French like them without any formal teaching. He spoke the language as he breathed the air. In a few weeks he did not retain the least remnant of his Provençal; it was gone after his English into the limbo of the utterly forgotten.

Novelists have occasionally made use of cases similar to this, but they speak of the forgotten language as being forgotten in the manner that Scott forgot the manuscript of "Waverley," which he found afterwards in the drawers of an old writing-desk when he was seeking for fishing-tackle. They assume (conveniently for the purposes of their art) that the first language we learn is never really lost, but may be as it were under certain circumstances *mis-laid*, to be found again at some future period. Now, although something of this kind may be possible when the first language has been spoken in rather advanced boyhood, I am convinced that in childhood a considerable number of languages might succeed each other without leaving any trace whatever. I might have remarked that in addition to English, Provençal, and French, my boy had understood Gaelic in his infancy, at least to some extent, though he did not speak it. The languages in his case succeeded each other without any cost of effort, and without any appreciable effect on health. The pronunciation of each language was quite faultless so far as foreign accent went; the child had the defects of children, but of children born in the different countries where he live.

As we grow older this facility of acquisition gradually leaves us. M. Philarète Charles says that it is quite impossible for any adult to learn German: an adult may learn German as Dr. Arnold did for purposes of erudition, for which it is enough to know a language as we know Latin, but this is not mastery. You have met with many foreign residents in England, who after staying in the country for many years can barely make themselves intelligible, and must certainly be incapable of appreciating those beauties of our literature which are dependent upon arrangements of sound. The resisting power of the adult brain is quite as remarkable as the assimilating power of the immature brain. A child hears a sound, and repeats it with perfect accuracy; a man hears a sound, and by way of imitation utters something altogether different, being nevertheless persuaded that it is at least a close and satisfactory approximation. Children imitate well, but adults badly, and the acquisition of languages depends mainly on imitation. The resisting power of adults is often seen very remarkably in international marriages. In those classes of society where there is not much culture, or leisure or disposition for culture, the one will not learn the other's language from opportunity or from affection, but only under absolute necessity. It seems as if two people living always together would gain each other's languages as a matter of course, but the fact is that they do not. French people who marry foreigners do not usually acquire the foreign language if the pair remain in France; English people under similar conditions make the attempt more frequently, but they rest contented with imperfect attainment.

If the power of resistance is so great in people who being wedded together for life have peculiarly strong inducements for learning each other's languages, it need surprise us little to find a like power of resistance in cases where motives of affection are altogether absent. Englishmen who go to France as adults, and settle there, frequently remain for many years in a state of half-knowledge which, though it may carry them through the little difficulties of life at railway stations and restaurants, is for any intellectual purpose of no conceivable utility. I knew a retired English officer, a bachelor, who for many years had lived in Paris without any intention of returning to England. His French just barely carried him through the small transactions of his daily life, but was so limited and so incorrect that he could not maintain a conversation. His vocabulary was very meagre; his genders were all wrong,

and he did not know one single verb, literally not one. His pronunciation was so foreign as to be very nearly unintelligible, and he hesitated so much that it was painful to have to listen to him. I could mention a celebrated German, who has lived in or near Paris for the last twenty years, and who can neither speak nor write the language with any approach to accuracy. Another German, who settled in France as a master of languages, wrote French tolerably, but spoke it intolerably. There are Germans in London, who have lived there long enough to have families and make fortunes, yet who continue to repeat the ordinary German faults of pronunciation, the same faults which they committed years ago, when first they landed on our shores.

The child hears and repeats the true sound, the adult misleads himself by the spelling. Seldom indeed can the adult recover the innocence of the ear. It is like the innocence of the eye, which has to be recovered before we can paint from nature, and which belongs only to infancy and to art.

Let me observe, in conclusion, that although to know a foreign language perfectly is a most valuable aid to the intellectual life, I have never known an instance of very imperfect attainment which seemed to enrich the student intellectually. Until you can really feel the refinements of a language, your mental culture can get little help or furtherance from it of any kind, nothing but an interminable series of misunderstandings. I think that in the education of our boys too many languages are attempted, and that their minds would profit more by the perfect acquisition of a single language in addition to the native tongue. This, of course, is looking at the matter simply from the intellectual point of view. There may be practical reasons for knowing several languages imperfectly. It may be of use to many men in commercial situations to know a little of several languages, even a few words and phrases are valuable to a traveller, but all intellectual labor of the higher kind requires much more than that. It is of use to society that there should be polyglot waiters who can tell us when the train starts in four or five languages; but the polyglot waiters themselves are not intellectually advanced by their accomplishment; for, after all, the facts of the railway time-table are always the same small facts, in however many languages they may be announced. True culture ought to strengthen the faculty of thinking, and to provide the material upon which that noble faculty may operate. An accomplishment

which does neither of these two things for us is useless for our culture, though it may be of considerable practical convenience in the affairs of ordinary life. It is right to add, however, that there is sometimes an *indirect* intellectual benefit from such accomplishments. To be able to order dinner in Spanish is not in itself an intellectual advantage; but if the dinner, when you have eaten it, enables you to visit a cathedral whose architecture you are qualified to appreciate, there is a clear intellectual gain, though an indirect one.

LETTER X.

TO A STUDENT WHO LAMENTED HIS DEFECTIVE MEMORY.

The author rather inclined to congratulation than to condolence—Value of a selecting memory—Studies of the young Goethe—His great faculty of assimilation—A good literary memory like a well-edited periodical—The selecting memory in art—Treacherous memories—Cures suggested for them—The mnemotechnic art contrary to the true discipline of the mind—Two instances—The memory safely aided only by right association.

So far from writing, as you seem to expect me to do, a letter of condolence on the subject of what you are pleased to call your "miserable memory," I feel disposed rather to indite a letter of congratulation. It is possible that you may be blessed with a selecting memory, which is not only useful for what it retains but for what it rejects. In the immense mass of facts which come before you in literature and in life, it is well that you should suffer from as little bewilderment as possible. The nature of your memory saves you from this by unconsciously selecting what has interested you, and letting the rest go by. What interests you is what concerns you.

In saying this I speak simply from the intellectual point of view, and suppose you to be an intellectual man by the natural organization of your brain, to begin with. In saying that what interests you is what concerns you, I mean intellectually, not materially. It may concern you, in the pecuniary sense, to take an interest in the law; yet your mind, left to itself, would take little or no interest in law, but an absorbing interest in botany. The passionate studies of the young Goethe, in many different directions, always in obedience to the predominant interests of the moment, are the best example of the way in which a great intellect, with remarkable powers of acquisition and liberty to grow in free luxuriance, sends its roots into various soils and draws from them the constituents of its sap. As a student of law, as a university student even, he was not of the type which parents and professors consider satisfactory.

He neglected jurisprudence, he neglected even his college studies, but took an interest in so many other pursuits that his mind became rich indeed. Yet the wealth which his mind acquired seems to have been due to that liberty of ranging by which it was permitted to him to seek his own everywhere, according to the maxim of French law, *chacun prend son bien où il le trouve*. Had he been a poor student, bound down to the exclusively legal studies, which did not greatly interest him, it is likely that no one would ever have suspected his immense faculty of assimilation. In this way men who are set by others to load their memories with what is not their proper intellectual food, never get the credit of having any memory at all, and end by themselves believing that they have none. These bad memories are often the best, they are often the selecting memories. They seldom win distinction in examinations, but in literature and art. They are quite incomparably superior to the miscellaneous memories that receive only as boxes and drawers receive what is put into them. A good literary or artistic memory is not like a post-office that takes in everything, but like a very well-edited periodical which prints nothing that does not harmonize with its intellectual life. A well-known author gave me this piece of advice: "Take as many notes as you like, but when you write do not look at them—what you remember is what you must write, and you ought to give things exactly the degree of relative importance that they have in your memory. If you forget much, it is well, it will only save beforehand the labor of erasure." This advice would not be suitable to every author; an author who dealt much in minute facts ought to be allowed to refer to his memoranda; but from the artistic point of view in literature the advice was wise indeed. In painting, our preferences select whilst we are in the presence of nature, and our memory selects when we are away from nature. The most beautiful compositions are produced by the selecting office of the memory, which retains some features, and even greatly exaggerates them, whilst it diminishes others and often altogether omits them. An artist who blamed himself for these exaggerations and omissions would blame himself for being an artist.

Let me add a protest against the common methods of curing what are called treacherous memories. They are generally founded upon the association of ideas, which is so far rational, but then the sort of association which they have recourse to is unnatural, and produces precisely the sort of disorder which

would be produced in dress if a man were insane enough to tie, let us say, a frying-pan to one of his coat-tails and a child's kite to the other. The true discipline of the mind is to be effected only by associating those things together which have a real relation of some kind, and the profounder the relation, the more it is based upon the natural constitution of things, and the less it concerns trifling external details, the better will be the order of the intellect. The mnemotechnic art wholly disregards this, and is therefore unsuited for intellectual persons, though it may be of some practical use in ordinary life. A little book on memory, of which many editions have been sold, suggests to men who forget their umbrellas that they ought always to associate the image of an umbrella with that of an open door, so that they could never leave any house without thinking of one. But would it not be preferable to lose two or three guineas annually rather than see a spectral umbrella in every doorway? The same writer suggests an idea which appears even more objectionable. Because we are apt to lose time, we ought, he says, to imagine a skeleton clock-face on the visage of every man we talk with; that is to say, we ought systematically to set about producing in our brains an absurd association of ideas, which is quite closely allied to one of the most common forms of insanity. It is better to forget umbrellas and lose hours than fill our minds with associations of a kind which every disciplined intellect does all it can to get rid of. The rational art of memory is that used in natural science. We remember anatomy and botany because, although the facts they teach are infinitely numerous, they are arranged according to the constructive order of nature. Unless there were a clear relation between the anatomy of one animal and that of others, the memory would refuse to burden itself with the details of their structure. So in the study of languages we learn several languages by perceiving their true structural relations, and remembering these. Association of this kind, and the maintenance of order in the mind, are the only arts of memory compatible with the right government of the intellect. Incongruous, and even superficial associations ought to be systematically discouraged, and we ought to value the negative or rejecting power of the memory. The finest intellects are as remarkable for the ease with which they resist and throw off what does not concern them as for the permanence with which their own truths engrave themselves. They are like clear glass, which fluoric acid etches indelibly, but which comes out of vitriol intact.

LETTER XL

TO A MASTER OF ARTS WHO SAID THAT A CERTAIN DISTINGUISHED PAINTER WAS HALF-EDUCATED.

Conventional idea about the completeness of education—The estimate of a schoolmaster—No one can be fully educated—Even Leonardo da Vinci fell short of the complete expression of his faculties—The word "education" used in two different senses—The acquisition of knowledge—Who are the learned?—Quotation from Sydney Smith—What a "half-educated" painter had learned—What faculties he had developed.

AN intelligent lady was lamenting to me the other day that when she heard anything she did not quite agree with, it only set her thinking, and did not suggest any immediate reply. "Three hours afterwards," she added, "I arrive at the answer which ought to have been given, but then it is exactly three hours too late."

Being afflicted with precisely the same pitiable infirmity, I said nothing in reply to a statement you made yesterday evening at dinner, but it occupied me in the hansom as it rolled between the monotonous lines of houses, and followed me even into my bedroom. I should like to answer it this morning, as one answers a letter.

You said that our friend the painter was "half-educated." This made me try to understand what it is to be three-quarters educated, and seven-eighths educated, and finally what must be that quite perfect state of the man who is whole-educated.

I fear that you must have adopted some conventional idea about completeness of education, since you believe that there is any such thing as completeness, and that education can be measured by fractions, like the divisions of a two-foot rule.

Is not such an idea just a little arbitrary? It seems to be the idea of a schoolmaster, with his little list of subjects and his professional habit of estimating the progress of his boys by the good marks they are likely to obtain from their examiners. The half-educated schoolboy would be a schoolboy half-way towards his bachelor's degree—is that it?

In the estimates of school and college this may be so, and it may be well to keep up the illusion, during boyhood, that there is such a thing attainable as the complete education that you assume. But the wider experience of manhood tends rather to convince us that no one can be fully educated, and that the more rich and various the natural talents, the greater will be the difficulty of educating the whole of them. Indeed it does not appear that in a state of society so advanced in the different specialities as ours is, men were ever intended to do more than develop by ed-

education a few of their natural gifts. The only man who came near to a complete education was Leonardo da Vinci, but such a personage would be impossible to-day. No contemporary Leonardo could be at the same time a leader in fine art, a great military and civil engineer, and a discoverer in theoretical science; the specialists have gone too far for him. Born in our day, Leonardo would have been either a specialist or an amateur. Situated even as he was, in a time and country so remarkably favorable to the general development of a variously gifted man, he still fell short of the complete expansion of all his extraordinary faculties. He was a great artist, and yet his artistic power was never developed beyond the point of elaborately careful labor; he never attained the assured manipulation of Titian and Paul Veronese, not to mention the free facility of Velasquez, or the splendid audacity of Rubens. His natural gifts were grand enough to have taken him to a pitch of mastery that he never reached, but his mechanical and scientific tendencies would have their development also, and withdrew so much time from art that every renewal of his artistic labor was accompanied by long and anxious reflection.

The word "education" is used in senses so different that confusion is not always avoided. Some people mean by it the acquisition of knowledge, others the development of faculty. If you mean the first, then the half-educated man would be a man who knew half what he ought to know, or who only half knew the different sciences, which the wholly educated know thoroughly. Who is to fix the subjects? Is it the opinion of the learned?—if so, who are the learned? "A learned man!—a scholar!—a man of erudition! Upon whom are these epithets of approbation bestowed? Are they given to men acquainted with the science of government? thoroughly masters of the geographical and commercial relations of Europe? to men who know the properties of bodies, and their action upon each other? No: this is not learning; it is chemistry, or political economy, not learning. The distinguishing abstract term, the epithet of Scholar, is reserved for him who writes on the *Æolic* reduplication, and is familiar with the *Sylburgian* method of arranging defectives in ω and μ . The picture which a young Englishman, addicted to the pursuit of knowledge, draws—his *beau idéal* of human nature—his top and consummation of man's powers—is a knowledge of the Greek language. His object is not to reason, to imagine, or to invent; but to conjugate, decline, and derive. The situations of imaginary glory which he

draws for himself, are the detection of an anapæst in the wrong place, or the restoration of a dative case which Cranzius had passed over, and the never-dying Ernesti failed to observe."

By the help of the above passage from an article written sixty-three years ago by Sydney Smith, and by the help of another passage in the same paper where he tells us that the English clergy bring up the first young men of the country as if they were all to keep grammar schools in little country towns, I begin to understand what you mean by a half-educated person. You mean a person who is only half qualified for keeping a grammar school. In this sense it is very possible that our friend the painter possesses nothing beyond a miserable fraction of education. And yet he has picked up a good deal of valuable knowledge outside the technical acquirement of a most difficult profession. He studied two years in Paris, and four years in Florence and Rome. He speaks French and Italian quite fluently, and with a fair degree of correctness. His knowledge of those two languages is incomparably more complete, in the sense of practical possession, than our fossilized knowledge of Latin, and he reads them almost as we read English, currently, and without translating. He has the heartiest enjoyment of good literature; there is evidence in his pictures of a most intelligent sympathy with the greatest inventive writers. Without having a scientific nature, he knows a good deal about anatomy. He has not read Greek poetry, but he has studied the old Greek mind in its architecture and sculpture. Nature has also endowed him with a just appreciation of music, and he knows the immortal masterpieces of the most illustrious composers. All these things would not qualify him to teach a grammar school, and yet what Greek of the age of Pericles ever knew half so much?

This for the acquisition of knowledge; now for the development of faculty. In this respect he excels us as performing athletes excel the people in the streets. Consider the marvellous accuracy of his eye, the precision of his hand, the closeness of his observation, the vigor of his memory and invention! How clumsy and rude is the most learned pedant in comparison with the refinement of this delicate organization! Try to imagine what a disciplined creature he has become, how obedient are all his faculties to the commands of the central will! The brain conceives some image of beauty or wit, and immediately that clear conception is telegraphed to the well-trained fingers. Surely, if the re-

sults of education may be estimated from the evidences of skill, here are some of the most wonderful of such results.

PART IV.

THE POWER OF TIME.

LETTER I.

TO A MAN OF LEISURE WHO COMPLAINED OF WANT OF TIME.

Necessity for time-thrift in all cases—Serious men not much in danger from mere frivolity—Greater danger of losing time in our serious pursuits themselves—Time thrown away when we do not attain proficiency—Soundness of former scholarship a good example—Browning's Grammarian—Knowledge an organic whole—Soundness the possession of essential parts—Necessity of fixed limits in our projects of study—Limitation of purpose in the fine arts—In languages—Instance of M. Louis Enault—In music—Time saved by following kindred pursuits—Order and proportion the true secrets of time-thrift—A waste of time to leave fortresses untaken in our rear.

You complain of want of time—you, with your boundless leisure!

It is true that the most absolute master of his own hours still needs thrift if he would turn them to account, and that too many never learn this thrift, whilst others learn it late. Will you permit me to offer briefly a few observations on time-thrift which have been suggested to me by my own experience and by the experience of intellectual friends?

It may be accepted for certain, to begin with, that men who like yourself seriously care for culture, and make it, next to moral duty, the principal object of their lives, are but little exposed to waste time in downright frivolity of any kind. You may be perfectly idle at your own times, and perfectly frivolous even, whenever you have a mind to be frivolous, but then you will be clearly aware how the time is passing, and you will throw it away knowingly, as the most careful of money-economists will throw away a few sovereigns in a confessedly foolish amusement, merely for the relief of a break in the habit of his life. To a man of your tastes and temper there is no danger of wasting too much time so long as the waste is intentional; but you are exposed to time-losses of a much more insidious character.

It is in our pursuits themselves that we throw away our most valuable time. Few intellectual men have the art of economizing the hours of study. The very necessity, which every one acknowledges, of giving vast portions of life to attain proficiency in any-

thing makes us prodigal where we ought to be parsimonious, and careless where we have need of unceasing vigilance. The best time-savers are the love of soundness in all we learn or do, and a cheerful acceptance of inevitable limitations. There is a certain point of proficiency at which an acquisition begins to be of use, and unless we have the time and resolution necessary to reach that point, our labor is as completely thrown away as that of a mechanic who began to make an engine but never finished it. Each of us has acquisitions which remain permanently unavailable from their unsoundness, a language or two that we can neither speak nor write, a science of which the elements have not been mastered, an art which we cannot practice with satisfaction either to others or to ourselves. Now the time spent on these unsound accomplishments has been in great measure wasted, not quite absolutely wasted, since the mere labor of trying to learn has been a discipline for the mind, but wasted so far as the accomplishments themselves are concerned. And even this mental discipline, on which so much stress is laid by those whose interest it is to encourage unsound accomplishment, might be obtained more perfectly if the subjects of study were less numerous and more thoroughly understood. Let us not therefore in the studies of our maturity repeat the error of our youth. Let us determine to have soundness, that is, accurately organized knowledge in the studies we continue to pursue, and let us resign ourselves to the necessity for abandoning those pursuits in which soundness is not to be hoped for.

The old-fashioned idea about scholarship in Latin and Greek, that it ought to be based upon thorough grammatical knowledge, is a good example, so far as it goes, of what soundness really is. That ideal of scholarship failed only because it fell short of soundness in other directions and was not conscious of its failure. But there existed, in the minds of the old scholars, a fine resolution to be accurate, and a determination to give however much labor might be necessary for the attainment of accuracy, in which there was much grandeur. Like Mr. Browning's Grammarian, they said—

"Let me know all! Prate not of most or least
Painful or easy:"

and so at least they came to know the ancient tongues grammatically, which few of us do in these days.

I should define each kind of knowledge as an organic whole and soundness as the complete possession of all the essential parts. For example, soundness in violin-playing con-

sists in being able to play the notes in all the positions, in tune, and with a pure intonation, whatever may be the degree of rapidity indicated by the musical composer. Soundness in painting consists in being able to lay a patch of color having exactly the right shape and tint. Soundness in the use of language consists in being able to put the right word in the right place. In each of the sciences, there are certain elementary notions without which sound knowledge is not possible, but these elementary notions are more easily and rapidly acquired than the elaborate knowledge or confirmed skill necessary to the artist or the linguist. A man may be a sound botanist without knowing a very great number of plants, and the elements of sound botanical knowledge may be printed in a portable volume. And so it is with all the physical sciences; the elementary notions which are necessary to soundness of knowledge may be acquired rapidly and at any age. Hence it follows that all whose leisure for culture is limited, and who value soundness of knowledge, do wisely to pursue some branch of natural history rather than languages or the fine arts.

It is well for every one who desires to attain a perfect economy of time, to make a list of the different pursuits to which he has devoted himself, and to put a note opposite to each of them indicating the degree of its unsoundness with as little self-delusion as may be. After having done this, he may easily ascertain in how many of these pursuits a sufficient degree of soundness is attainable for him, and when this has been decided he may at once effect a great saving by the total renunciation of the rest. With regard to those which remain, and which are to be carried farther, the next thing to be settled is the exact limit of their cultivation. Nothing is so favorable to sound culture as the definite fixing of limits. Suppose, for example, that the student said to himself "I desire to know the flora of the valley I live in," and then set to work systematically to make a herbarium illustrating that flora, it is probable that his labor would be more thorough, his temper more watchful and hopeful, than if he set himself to the boundless task of the illimitable flora of the world. Or in the pursuit of fine art, an amateur discouraged by the glaring unsoundness of the kind of art taught by ordinary drawing-masters, would find the basis of a more substantial superstructure on a narrower but firmer ground. Suppose that instead of the usual messes of bad color and bad form, the student produced work having some definite and not unattainable purpose, would there not be, here also, an assured econ-

omy of time? Accurate drawing is the basis of soundness in the fine arts, and an amateur, by perseverance, may reach accuracy in drawing; this, at least, has been proved by some examples—not by many, certainly, but by some. In languages we may have a limited purpose also. That charming and most intelligent traveller, Louis Énault, tells us that he regularly gave a week to the study of each new language that he needed, and found that week sufficient. The assertion is not so presumptuous as it appears. For the practical necessities of travelling M. Énault found that he required about four hundred words, and that, having a good memory, he was able to learn about seventy words a day. The secret of his success was the invaluable art of selection, and the strict limitation of effort in accordance with a preconceived design. A traveller not so well skilled in selection might have learned a thousand words with less advantage to his travels, and a traveller less decided in purpose might have wasted several months on the frontier of every new country in hopeless efforts to master the intricacies of grammatical form. It is evident that in the strictest sense M. Énault's knowledge of Norwegian cannot have been sound, since he did not master the grammar, but it was sound in its own strictly limited way, since he got possession of the four hundred words which were to serve him as current coin. On the same principle it is a good plan for students of Latin and Greek who have not time to reach true scholarship (half a lifetime is necessary for that), to propose to themselves simply the reading of the original authors with the help of a literal translation. In this way they may attain a closer acquaintance with ancient literature than would be possible by translation alone, whilst on the other hand their reading will be much more extensive on account of its greater rapidity. It is, for most of us, a waste of time to read Latin or Greek without a translation, on account of the comparative slowness of the process; it is always an advantage to know what is really said in the original, and to test the accuracy of the translator by continual reference to the *ipsissima verba* of the author. When the knowledge of the ancient languages is not sufficient even for this, it may still be of use for occasional comparison, even though the passage has to be fought through a *code de dictionnaire*. What most of us need for reference to the ancient languages is a firm resignation to a restriction of some kind. It is simply impossible for men occupied as most of us are in other pursuits to reach perfect scholarship in those languages, and if

reached it we should not have time to maintain it.

In modern languages it is not so easy to fix limits satisfactorily. You may resolve to read French or German without either writing or speaking them, and that would be an effectual limit, certainly. But in practice it is found difficult to keep within that boundary if ever you travel or have intercourse with foreigners. And when once you begin to speak, it is so humiliating to speak badly, that a lover of soundness in accomplishment will never rest perfectly satisfied until he speaks like a cultivated native, which nobody ever did except under peculiar family conditions.

In music the limits are found more easily. The amateur musician is frequently not inferior in feeling and taste to the more accomplished professional, and by selecting those compositions which require much feeling and taste for their interpretation, but not so much manual skill, he may reach a sufficient success. The art is to choose the very simplest music (provided of course that it is beautiful, which it frequently is), and to avoid all technical difficulties which are not really necessary to the expression of feeling. The amateur ought also to select the easiest instrument, an instrument in which the notes are made for him already, rather than one which compels him to fix the notes as he is playing. The violin tempts amateurs who have a deep feeling for music because it renders feeling as no other instrument can render it, but the difficulty of just intonation is almost insuperable unless the whole time is given to that one instrument. It is a fatal error to perform on several different instruments, and an amateur who has done so may find a desirable limitation in restricting himself to one.

Much time is saved by following pursuits which help each other. It is a great help to a landscape painter to know the botany of the country he works in, for botany gives the greatest possible distinctness to his memory of all kinds of vegetation. Therefore, if a landscape painter takes to the study of science at all, he would do well to study botany, which would be of use in his painting, rather than chemistry or mathematics, which would be entirely disconnected from it. The memory easily retains the studies which are auxiliary to the chief pursuit. Entomologists remember plants well, the reason being that they find insects in them, just as Leslie the painter had an excellent memory for houses where there were any good pictures to be found.

The secret of order and proportion in our

studies is the true secret of economy in time. To have one main pursuit and several auxiliaries, but none that are not auxiliary, is the true principle of arrangement. Many hard workers have followed pursuits as widely disconnected as possible, but this was for the refreshment of absolute change, not for the economy of time.

Lastly, it is a deplorable waste of time to leave fortresses untaken in our rear. Whatever has to be mastered ought to be mastered so thoroughly that we shall not have to come back to it when we ought to be carrying the war far into the enemy's country. But to study on this sound principle, we require not to be hurried. And this is why, to a sincere student, all external pressure, whether of examiners, or poverty, or business engagements, which causes him to leave work behind him which was not done as it ought to have been done, is so grievously, so intolerably vexatious.

LETTER II.

TO A YOUNG MAN OF GREAT TALENT AND ENERGY WHO HAD MAGNIFICENT PLANS FOR THE FUTURE.

Mistaken estimates about time and occasion—The Unknown Element—Procrastination often time's best preserver—Napoleon's advice to do nothing at all—Use of deliberation and of intervals of leisure—Artistic advantages of calculating time—Prevalent childishness about time—Illusions about reading—Bad economy of reading in languages we have not mastered—That we ought to be thrifty of time, but not avaricious—Time necessary in production—Men who work best under the sense of pressure—Rusini—That these cases prove nothing against time-thrift—The waste of time from miscalculation—People calculate accurately for short spaces, but do not calculate so well for long ones—Reason for this—Stupidity of the Philistines about wasted time—Töpffer and Claude Tillier—Retrospective miscalculations, and the regrets that result from them.

HAVE you ever observed that we pay much more attention to a wise passage when it is quoted, than when we read it in the original author? On the same principle, people will give a higher price to a picture-dealer than they would have given to the painter himself. The picture that has been once bought has a recommendation, and the quoted passage is both recommended and isolated from the context.

Trusting to this well-known principle, although I am aware that you have read everything that Sir Arthur Helps has published, I proceed to make the following quotation from one of his wisest books.

"Time and occasion are the two important circumstances in human life, as regards which

the most mistaken estimates are made. And the error is universal. It besets even the most studious and philosophic men. This may notably be seen in the present day, when many most distinguished men have laid down projects for literature and philosophy, to be accomplished by them in their own lifetime, which would require several men and many lifetimes to complete; and, generally speaking, if any person, who has passed the meridian of life, looks back upon his career, he will probably own that his greatest errors have arisen from his not having made sufficient allowance for the length of time which his various schemes required for their fulfilment."

There are many traditional maxims about time which insist upon its brevity, upon the necessity of using it whilst it is there, upon the impossibility of recovering what is lost; but the practical effect of these maxims upon conduct can scarcely be said to answer to their undeniable importance. The truth is, that although they tell us to economize our time, they cannot, in the nature of things, instruct us as to the methods by which it is to be economized. Human life is so extremely various and complicated, whilst it tends every day to still greater variety and complication, that all maxims of a general nature require a far higher degree of intelligence in their application to individual cases than it ever cost originally to invent them. Any person gifted with ordinary common sense can perceive that life is short, that time flies, that we ought to make good use of the present; but it needs the union of much experience, with the most consummate wisdom, to know exactly what ought to be done and what ought to be left undone—the latter being frequently by far the more important of the two.

Amongst the favorable influences of my early life was the kindness of a venerable country gentleman, who had seen a great deal of the world and passed many years, before he inherited his estates, in the practice of a laborious profession. I remember a theory of his, that experience was much less valuable than is generally supposed, because, except in matters of simple routine, the problems that present themselves to us for solution are nearly always dangerous from the presence of some unknown element. The unknown element he regarded as a hidden pitfall, and he warned me that in my progress through life I might always expect to tumble into it. This saying of his has been so often confirmed since then, that I now count upon the pitfall quite as a matter of certainty.

Very frequently I have escaped it, but more by good luck than good management. Sometimes I have tumbled into it, and when this misfortune occurred it has not unfrequently been in consequence of having acted upon the advice of some very knowing and experienced person indeed. We have all read, when we were boys, Captain Marryat's "Midshipman Easy." There is a passage in that story which may serve as an illustration of what is constantly happening in actual life. The boats of the *Harpy* were ordered to board one of the enemy's vessels; young Easy was in command of one of these boats, and as they had to wait he began to fish. After they had received the order to advance, he delayed a little to catch his fish, and this delay not only saved him from being sunk by the enemy's broadside, but enabled him to board the Frenchman. Here the pitfall was avoided by idling away a minute of time on an occasion when minutes were like hours; yet it was mere luck, not wisdom, which led to the good result. There was a sad railway accident on one of the continental lines last autumn; a notable personage would have been in the train if he had arrived in time for it, but his miscalculation saved him. In matters where there is no risk of the loss of life, but only of the waste of a portion of it in unprofitable employment, it frequently happens that procrastination, which is reputed to be the thief of time, becomes its best preserver. Suppose that you undertake an enterprise, but defer the execution of it from day to day: it is quite possible that in the interval some fact may accidentally come to your knowledge which would cause a great modification of your plan, or even its complete abandonment. Every thinking person is well aware that the enormous loss of time caused by the friction of our legislative machinery has preserved the country from a great deal of crude and ill-digested legislation. Even Napoleon the Great who had a rapidity of conception and of action so far surpassing that of other kings and commanders that it seems to us almost supernatural, said that when you did not quite know what ought to be done it was best to do nothing at all. One of the most distinguished of living painters said exactly the same thing with reference to the practice of his art, and added that very little time would be needed for the actual execution of a picture if only the artist knew beforehand how and where to lay the color. It so often happens that mere activity is a waste of time, that people who have a morbid habit of being busy are often terrible time-wasters, whilst, on the contrary, those who are judiciously de-

liberate, and allow themselves intervals of leisure, see the way before them in those intervals, and save time by the accuracy of their calculations.

A largely intelligent thrift of time is necessary to all great works—and many works are very great indeed relatively to the energies of a single individual, which pass unperceived in the tumult of the world. The advantages of calculating time are artistic as well as economical. I think that, in this respect, magnificent as are the cathedrals which the Gothic builders have left us, they committed an artistic error in the very immensity of their plans. They do not appear to have reflected that from the continual changes of fashion in architecture, incongruous work would be sure to intrude itself before their gigantic projects could be realized by the generations that were to succeed them. For a work of that kind to possess artistic unity, it ought to be completely realized within the space of forty years. How great is the charm of those perfect edifices which, like the Sainte Chapelle, are the realization of one sublime idea? And those changes in national thought which have made the old cathedrals a jumble of incongruous styles, have their parallel in the life of every individual workman. We change from year to year, and any work which occupies us for very long will be wanting in unity of manner.

Men are apt enough of themselves to fall into the most astonishing delusions about the opportunities which time affords, but they are even more deluded by the talk of the people about them. When children hear that a new carriage has been ordered of the builder, they expect to see it driven up to the door in a fortnight, with the paint quite dry on the panels. All people are children in this respect, except the workman, who knows the endless details of production; and the workman himself, notwithstanding the lessons of experience, makes light of the future task. What gigantic plans we scheme, and how little we advance in the labor of a day! Three pages of the book (to be half erased to-morrow), a bit of drapery in the picture that will probably have to be done over again, the imperceptible removal of an ounce of marble-dust from the statue that seems as if it never would be finished; so much from dawn to twilight has been the accomplishment of the golden hours. If there is one lesson which experience teaches, surely it is this, to make plans that are strictly limited, and to arrange our work in a practicable way within the limits that we must accept. Others expect so much from us that it seems as if we had

accomplished nothing. "What! have you done only that?" they say, or we know by their looks that they are thinking it.

The most illusory of all the work that we propose to ourselves is reading. It seems so easy to read, that we intend, in the indefinite future, to master the vastest literatures. We cannot bring ourselves to admit that the library we have collected is in great part closed to us simply by want of time. A dear friend of mine, who was a solicitor with a large practice, indulged in wonderful illusions about reading, and collected several thousand volumes, all fine editions, but he died without having cut their leaves. I like the university habit of making reading a business, and estimating the mastery of a few authors as a just title to consideration for scholarship. I should like very well to be shut up in a garden for a whole summer with no literature but the "Faëry Queene," and one year I very nearly realized that project, but publishers and the postman interfered with it. After all, this business of reading ought to be less illusory than most others, for printers divide books into pages, which they number, so that, with a moderate skill in arithmetic, one ought to be able to foresee the limits of his possibilities. There is another observation which may be suggested, and that is to take note of the time required for reading different languages. We read very slowly when the language is imperfectly mastered, and we need the dictionary, whereas in the native tongue we see the whole page almost at a glance, as if it were a picture. People whose time for reading is limited ought not to waste it in grammars and dictionaries, but to confine themselves resolutely to a couple of languages, or three at the very utmost, notwithstanding the contempt of polyglots, who estimate your learning by the variety of your tongues. It is a fearful throwing away of time, from the literary point of view, to begin more languages than you can master or retain, and to be always puzzling yourself about irregular verbs.

All plans for sparing time in intellectual matters ought, however, to proceed upon the principle of thrift, and not upon the principle of avarice. The object of the thrifty man in money matters is so to lay out his money as to get the best possible result from his expenditure; the object of the avaricious man is to spend no more money than he can help. An artist who taught me painting often repeated a piece of advice which is valuable in other things than art, and which I try to remember whenever patience fails. He used to say to me, "*Give it time.*" The mere length of time that we bestow upon our work is in

itself a most important element of success, and if I object to the use of languages that we only half know, it is not because it takes us a long time to get through a chapter, but because we are compelled to think about syntax and conjugations which did not in the least occupy the mind of the author, when we ought rather to be thinking about those things which *did* occupy his mind, about the events which he narrated, or the characters that he imagined or described. There are, in truth, only two ways of impressing anything on the memory, either intensity or duration. If you saw a man struck down by an assassin, you would remember the occurrence all your life; but to remember with equal vividness a picture of the assassination, you would probably be obliged to spend a month or two in copying it. The subjects of our studies rarely produce an intensity of emotion sufficient to ensure perfect recollection without the expenditure of time. And when your object is not to learn, but to produce, it is well to bear in mind that everything requires a certain definite time-outlay, which *cannot* be reduced without an inevitable injury to quality. A most experienced artist, a man of the very rarest executive ability, wrote to me the other day about a set of designs I had suggested. "If I could but get the TIME,"—the large capitals are his own,—“for, somehow or other, let a design be never so studiously simple in the masses, it *will* fill itself as it goes on, like the weasel in the fable who got into the meal-tub; and when the pleasure begins in attempting tone and mystery and intricacy, *away go the hours at a gallop.*” A well-known and very successful English dramatist wrote to me: “When I am hurried, and have undertaken more work than I can execute in the time at my disposal, I am always perfectly paralyzed.”

There is another side to this subject which deserves attention. Some men work best under the sense of pressure. Simple compression evolves heat from iron, so that there is a flash of fire when a ball hits the side of an ironclad. The same law seems to hold good in the intellectual life of man, whenever he needs the stimulus of extraordinary excitement. Rossini positively advised a young composer never to write his overture until the evening before the first performance. “Nothing,” he said, “excites inspiration like necessity; the presence of a copyist waiting for your work, and the view of a manager in despair tearing out his hair by handfuls. In Italy in my time all the managers were bald at thirty. I composed the overture to ‘Othello’ in a small room in the Barbaja Palace, where the baldest and most ferocious of man-

agers had shut me up by force with nothing but a dish of macaroni, and the threat that I should not leave the place alive until I had written the last note. I wrote the overture to the ‘Gazza Ladra’ on the day of the first performance, in the upper loft of the La Scala, where I had been confined by the manager, under the guard of four scene-shifters who had orders to throw my text out of the window bit by bit to copyists, who were waiting below to transcribe it. In default of music I was to be thrown out myself.”

I have quoted the best instance known to me of this voluntary seeking after pressure, but striking as it is, even this instance does not weaken what I said before. For observe, that although Rossini deferred the composition of his overture till the evening before the first performance, he knew very well that he could do it thoroughly in the time. He was like a clever schoolboy who knows that he can learn his lesson in the quarter of an hour before the class begins; or he was like an orator who knows that he can deliver a passage and compose at the same time the one which is to follow, so that he prefers to arrange his speech in the presence of his audience. Since Rossini always allowed himself all the time that was necessary for what he had to do, it is clear that he did not sin against the great time-necessity. The express which can travel from London to Edinburgh in a night may leave the English metropolis on Saturday evening although it is due in Scotland on Sunday, and still act with the strictest consideration about time. The blameable error lies in miscalculation, and not in rapidity of performance.

Nothing *wastes* time like miscalculation. It negatives all results. It is the parent of incompleteness, the great author of the Unfinished and the Unserviceable. Almost every intellectual man has laid out great masses of time on five or six different branches of knowledge which are not of the least use to him, simply because he has not carried them far enough, and could not carry them far enough in the time he had to give. Yet this might have been ascertained at the beginning by the simplest arithmetical calculation. The experience of students in all departments of knowledge has quite definitely ascertained the amount of time that is necessary for success in them, and the successful student can at once inform the aspirant how far he is likely to travel along the road. What is the use, to anybody, of having just enough skill to feel vexed with himself that he has no more, and yet angry at other people for not admiring the little that he possesses?

I wish to direct your attention to a cause which more than any other produces disappointment in ordinary intellectual pursuits. It is this. People can often calculate with the utmost accuracy what they can accomplish in ten minutes or even in ten hours, and yet the very same persons will make the most absurd miscalculations about what they can accomplish in ten years. There is of course a reason for this: if there were not, so many sensible people would not suffer from the delusion. The reason is, that owing to the habits of human life there is a certain elasticity in large spaces of time that include nights, and meal-times, and holidays. We fancy that we shall be able, by working harder than we have been accustomed to work, and by stealing hours from all the different kinds of rest and amusement, to accomplish far more in the ten years that are to come than we have ever actually accomplished in the same space. And to a certain extent this may be very true. No doubt a man whose mind has become seriously aware of the vast importance of economizing his time will economize it better than he did in the days before the new conviction came to him. No doubt, after skill in our work has been confirmed, we shall perform it with increased speed. But the elasticity of time is rather that of leather than that of india-rubber. There is certainly a degree of elasticity, but the degree is strictly limited. The true master of time-thrift would be no more liable to illusion about years than about hours, and would act as prudently when working for remote results as for near ones.

Not that we ought to work as if we were always under severe pressure. Little books are occasionally published in which we are told that it is a sin to lose a minute. From the intellectual point of view this doctrine is simply stupid. What the Philistines call wasted time is often rich in the most varied experience to the intelligent. If all that we have learned in idle moments could be suddenly expelled from our minds by some chemical process, it is probable that they would be worth very little afterwards. What, after such a process, would have remained to Shakespeare, Scott, Cervantes, Thackeray, Dickens, Hogarth, Goldsmith, Molière? When these great students of human nature were learning most, the sort of people who write the foolish little books just alluded to would have wanted to send them home to the dictionary or the desk. Töpffer and Claude Tillier, both men of delicate and observant genius, attached the greatest importance to hours of idleness. Töpffer said that a year of downright loitering was a desirable element in a liberal education;

whilst Claude Tillier went even farther, and boldly affirmed that "*le temps le mieux employé est celui que l'on perd.*"

Let us not think too contemptuously of the miscalculators of time, since not one of us is exempt from their folly. We have all made miscalculations, or more frequently have simply omitted calculation altogether, preferring childish illusion to a manly examination of realities; and afterwards as life advances another illusion steals over us not less vain than the early one, but bitter as that was sweet. We now begin to reproach ourselves with all the opportunities that have been neglected, and now our folly is to imagine that we might have done impossible wonders if we had only exercised a little resolution. We might have been thorough classical scholars, and spoken all the great modern languages, and written immortal books, and made a colossal fortune. Miscalculations again, and these the most imbecile of all; for the youth who forgets to reason in the glow of happiness and hope, is wiser than the man who overestimates what was once possible that he may embitter the days which remain to him.

LETTER III.

TO A MAN OF BUSINESS WHO DESIRED TO MAKE HIMSELF BETTER ACQUAINTED WITH LITERATURE, BUT WHOSE TIME FOR READING WAS LIMITED.

Victor Jacquemont on the intellectual labors of the Germans
—Business may be set off as the equivalent to one of their pursuits—Necessity for regularity in the economy of time
—What may be done in two hours a day—Evils of interruption—Florence Nightingale—Real nature of interruption—Instance from the Apology of Socrates.

In the charming and precious letters of Victor Jacquemont, a man whose life was dedicated to culture, and who not only lived for it, but died for it, there is a passage about the intellectual labors of Germans, which takes due account of the expenditure of time. "*Comme j'étais étonné,*" he says, "*de la prodigieuse variété et de l'étendue de connaissances des Allemands, je demandai un jour à l'un de mes amis, Saxon de naissance et l'un des premiers géologues de l'Europe, comment ses compatriotes s'y prenaient pour savoir tant de choses. Voici sa réponse, à peu près: 'Un Allemand (moi excepté qui suis le plus paresseux des hommes) se lève de bonne heure, été et hiver, à cinq heures environ. Il travaille quatre heures avant le déjeuner, fumant quelquefois pendant tout ce temps, sans que cela nuise à son application. Son déjeuner dure une demi-heure, et il reste, après, une*

autre demi-heure à causer avec sa femme et à faire jouer ses enfants. Il retourne au travail pour six heures; dîne sans se presser; fume une heure après le dîner, jouant encore avec ses enfants; et avant de se coucher il travaille encore quatre heures. Il recommence tous les jours, ne sortant jamais.—Voilà,' me dit mon ami, 'comment Oersted, le plus grand physicien de l'Allemagne, en est aussi le plus grand médecin; voilà comment Kant le métaphysicien était un des plus savants astronomes de l'Europe, et comment Goethe, qui en est actuellement le premier littérateur, dans presque tous les genres, et le plus fécond, est excellent botaniste, minéralogiste, physicien.' *"

Here is something to encourage, and something to discourage you at the same time. The number of hours which these men have given in order to become what they were, is so great as to be past all possibility of imitation by a man occupied in business. It is clear that, with your counting-house to occupy you during the best hours of every day, you can never labor for your intellectual culture with that unremitting application which these men have given for theirs. But, on the other hand, you will perceive that these extraordinary workers have hardly ever been wholly dedicated to one pursuit, and the reason for this in most cases is clear. Men who go through a prodigious amount of work feel the necessity for varying it. The greatest intellectual workers I have known personally have varied their studies as Kant and Goethe did, often taking up subjects of the most opposite kinds, as for instance imaginative literature and the higher mathematics, the critical and practical study of fine art and the natural sciences, music, and political economy. The class of intellects which arrogate to themselves the epithet "practical," but which we call *Philistine*,

always oppose this love of variety, and have an unaffected contempt for it, but these are matters beyond their power of judgment. They cannot know the needs of the intellectual life, because they have never lived it. The practice of all the greatest intellects has been to cultivate themselves variously, and if they have always done so, it must be because they have felt the need of it.

The encouraging inference which you may draw from this in reference to your own case is that, since all intellectual men have had more than one pursuit, you may set off your business against the most absorbing of their pursuits, and for the rest be still almost as rich in time as they have been. You may study literature as some painters have studied it, or science as some literary men have studied it.

The first step is to establish a regulated economy of your time, so that, without interfering with a due attention to business and to health, you may get two clear hours every day for reading of the best kind. It is not much, some men would tell you that it is not enough, but I purposely fix the expenditure of time at a low figure because I want it to be always practicable consistently with all the duties and necessary pleasures of your life. If I told you to read four hours every day, I know beforehand what would be the consequence. You would keep the rule for three days, by an effort, then some engagement would occur to break it, and you would have no rule at all. And please observe that the two hours are to be given quite regularly, because, when the time given is not much, regularity is quite essential. Two hours a day, regularly, make more than seven hundred hours in a year, and in seven hundred hours, wisely and uninterruptedly occupied, much may be done in anything.

Permit me to insist upon that word *uninterruptedly*. Few people realize the full evil of an interruption, few people know all that is implied by it. After warning nurses against the evils of interruption, Florence Nightingale says:—

"These things are not fancy. If we consider that, with sick as with well, every thought decomposes some nervous matter—that decomposition as well as re-composition of nervous matter is always going on, and more quickly with the sick than with the well,—that to obtrude another thought upon the brain whilst it is in the act of destroying nervous matter by thinking, is calling upon it to make a new exertion—if we consider these things, which are facts, not fancies, we shall remember that we are doing positive injury

*"Being astonished at the prodigious variety and at the extent of knowledge possessed by the Germans, I begged one of my friends, Saxon by birth, and one of the foremost geologists in Europe, to tell me how his countrymen managed to know so many things. Here is his answer, nearly in his own words:—'A German (except myself, who am the idlest of men) gets up early, summer and winter, at about five o'clock. He works four hours before breakfast, sometimes smoking all the time, which does not interfere with his application. His breakfast lasts half an hour, and he remains, afterwards, another half-hour talking with his wife and playing with his children. He returns to his work for six hours, dines without hurrying himself, smokes an hour after dinner, playing again with his children, and before he goes to bed he works four hours more. He begins again every day, and never goes out. This is how it comes to pass that Oersted, the greatest natural philosopher in Germany, is at the same time the greatest physician; this is how Kant the metaphysician was one of the most learned astronomers in Europe, and how Goethe, who is at present the first and most fertile author in Germany in almost all kinds of literature, is an excellent botanist, mineralogist, and natural philosopher.'"

by interrupting, by startling a 'fanciful' person, as it is called. Alas, it is no fancy.

"If the invalid is forced by his avocations to continue occupations requiring much thinking, the injury is doubly great. In feeding a patient suffering under delirium or stupor you may suffocate him by giving him his food suddenly, but if you rub his lips gently with a spoon and thus attract his attention, he will swallow the food unconsciously, but with perfect safety. Thus it is with the brain. If you offer it a thought, especially one requiring a decision, abruptly, you do it a real, not fanciful, injury. Never speak to a sick person suddenly; but, at the same time, do not keep his expectation on the tiptoe."

To this you will already have answered, mentally, that you are not a patient suffering under either delirium or stupor, and that nobody needs to rub your lips gently with a spoon. But Miss Nightingale does not consider interruption baneful to sick persons only.

"This rule indeed," she continues, "applies to the well quite as much as to the sick. *I have never known persons who exposed themselves for years to constant interruption who did not muddle away their intellects by it at last.* The process, with them, may be accomplished without pain. With the sick, pain gives warning of the injury."

Interruption is an evil to the reader which must be estimated very differently from ordinary business interruptions. The great question about interruption is not whether it compels you to divert your attention to other facts, but whether it compels you to tune your whole mind to another diapason. Shopkeepers are incessantly compelled to change the subject; a stationer is asked for note-paper one minute, for sealing-wax the next, and immediately afterwards for a particular sort of steel pen. The subjects of his thoughts are changed very rapidly, but the general state of his mind is not changed; he is always strictly in his shop, as much mentally as physically. When an attorney is interrupted in the study of a case by the arrival of a client who asks him questions about another case, the change is more difficult to bear; yet even here the general state of mind, the legal state of mind, is not interfered with. But now suppose a reader perfectly absorbed in his author, an author belonging very likely to another age and another civilization entirely different from ours. Suppose that you are reading the Defence of Socrates in Plato, and have the whole scene before you as in a picture: the tribunal of the Five Hundred, the pure Greek architecture, the interested

Athenian public, the odious Melitus, the envious enemies, the beloved and grieving friends whose names are dear to us, and immortal; and in the centre you see one figure draped like a poor man, in cheap and common cloth, that he wears winter and summer, with a face plain to downright ugliness, but an air of such genuine courage and self-possession that no acting could imitate it; and you hear the firm voice saying—

Τιμῶται δ' οὖν μοι ἄνθρωποι θανάτου.
Elev.*

You are just beginning the splendid paragraph where Socrates condemns himself to maintenance in the Prytaneum, and if you can only be safe from interruption till it is finished, you will have one of those minutes of noble pleasure which are the rewards of intellectual toil. But if you are reading in the daytime in a house where there are women and children, or where people can fasten upon you for pottering details of business, you may be sure that you will *not* be able to get to the end of the passage without in some way or other being rudely awakened from your dream, and suddenly brought back into the common world. The loss intellectually is greater than any one who had not suffered from it could imagine. People think that an interruption is merely the unhooking of an electric chain, and that the current will flow, when the chain is hooked on again, just as it did before. To the intellectual and imaginative student an interruption is not that; it is the destruction of a picture.

LETTER IV.

TO A STUDENT WHO FELT HURRIED AND DRIVEN.

People who like to be hurried—Sluggish temperaments gain vivacity under pressure—Routine work may be done at increased speed—The higher intellectual work cannot be done hurriedly—The art of avoiding hurry consists in Selection—How it was practised by a good landscape painter—Selection in reading and writing—Some studies allow the play of selection more than others do—Languages permit it less than natural sciences—Difficulty of using selection in the fulfilment of literary engagements.

So you have got yourself into that pleasant condition which is about as agreeable, and as favorable to fruitful study and observation, as the condition of an over-driven cab-horse!

Very indolent men, who will not work at all unless under the pressure of immediate urgency, sometimes tell us that they actually like to be hurried; but although certain kinds of practical work which have become perfectly easy from habit may be got through at

* The man, then, judges me worthy of death. Be it so.

a great pace when the workman feels that there is an immediate necessity for effort, it is certainly not true that hurry is favorable to sound study of any kind. Work which merely runs in a fixed groove may be urged on occasionally at express speed without any perceptible injury to the quality of it. A clever violinist can play a passage *prestissimo* as correctly as if he played it *adagio*; a banker's clerk can count money very rapidly with positively less risk of error than if he counted it as you and I do. A person of sluggish temperament really gains in vivacity when he is pressed for time, and becomes during those moments of excited energy a clearer-headed and more able person than he is under ordinary circumstances. It is therefore not surprising that he should find himself able to accomplish more under the great stimulus of an immediate necessity than he is able to do in the dulness of his every-day existence. Great prodigies of labor have been performed in this way to avert impending calamity, especially by military officers in critical times like those of the Sepoy rebellion; and in the obscurer lives of tradesmen, immense exertions are often made to avert the danger of bankruptcy, when without the excitement of a serious anxiety of that kind the tradesman would not feel capable of more than a moderate and reasonable degree of attention to his affairs. But notwithstanding the many instances of this kind which might be cited, and the many more which might easily be collected, the truth remains that the highest kinds of intellectual labor can hardly ever be properly performed when the degree of pressure is in the least excessive. You may, for example, if you have the kind of ability which makes a good journalist, write an effective leader with your watch lying on the table, and finish it exactly when the time is up; but if you had the kind of ability which makes a good poet, you could not write anything like highly-finished poetry against time. It is equally clear that scientific discovery, which, though it may flash suddenly upon the mind of the discoverer, is always the result of long brooding over the most patient observations, must come at its own moments, and cannot be commanded. The activity of poets and discoverers would be paralyzed by exigencies which stimulate the activity of soldiers and men of business. The truth is, that intelligence and energy are beneficially stimulated by pressure from without, whereas the working of the higher intellect is impeded by it, and that to such a degree that in times of the greatest pressure the high intellectual life is altogether suspended, to leave

free play to the lower but more immediately serviceable intelligence.

This being so, it becomes a necessary part of the art of intellectual living so to order our work as to shield ourselves if possible, at least during a certain portion of our time, from the evil consequences of hurry. The whole secret lies in a single word—Selection.

An excellent landscape painter told me that whatever he had to do, he always took the greatest pains to arrange his work so as never to have his tranquillity disturbed by haste. His system, which is quite applicable to many other things than landscape painting, was based on the principle of selection. He always took care to determine beforehand how much time he could devote to each sketch or study, and then, from the mass of natural facts before him, selected the most valuable facts which could be recorded in the time at his disposal. But however short that time might be, he was always perfectly cool and deliberate in the employment of it. Indeed this coolness and his skill in selection helped each other mutually, for he chose wisely because he was cool, and he had time to be cool by reason of the wisdom of his selection. In his little memoranda, done in five minutes, the lines were laid just as deliberately as the tints on an elaborate picture; the difference being in choice only, not in speed.

Now if we apply this art of selection to all our labors it will give us much of that landscape painter's enviable coolness, and enable us to work more satisfactorily. Suppose that instead of painting and sketching we have to do a great deal of reading and writing: the art is to select the reading which will be most useful to our purpose, and, in writing, to select the words which will express our meaning with the greatest clearness in a little space. The art of reading is to skip judiciously. Whole libraries may be skipped in these days, when we have the results of them in our modern culture without going over the ground again. And even of the books we decide to read, there are almost always large portions which do not concern us, and which we are sure to forget the day after we have read them. The art is to skip all that does not concern us, whilst missing nothing that we really need. No external guidance can teach us this; for nobody but ourselves can guess what the needs of our intellect may be. But let us select with decisive firmness, independently of other people's advice, independently of the authority of custom. In every newspaper that comes to hand there is a little bit that we ought to read; the art is to find

that little bit, and waste no time over the rest.

Some studies permit the exercise of selection better than others do. A language, once undertaken, permits very little selection indeed, since you must know the whole vocabulary, or nearly so, to be able to read and speak. On the other hand, the natural sciences permit the most prudent exercise of selection. For example, in botany you may study as few plants as you choose.

In writing, the art of selection consists in giving the utmost effect to expression in the fewest words; but of this art I say little, for who can contend against an inevitable trade-necessity? Almost every author of ordinary skill could, when pressed for time, find a briefer expression for his thoughts, but the real difficulty in fulfilling literary engagements does not lie in the expression of the thought, it lies in the sufficiently rapid production of a certain quantity of copy. For this purpose I fear that selection would be of very little use—of no more use, in fact, than in any other branch of manufacture where (if a certain standard is kept up to) quantity in sale is more important than quality of material.

LETTER V.

TO A FRIEND WHO, THOUGH HE HAD NO PROFESSION, COULD NOT FIND TIME FOR HIS VARIOUS INTELLECTUAL PURSUITS.

Compensations resulting from the necessity for time—Opportunity only exists for us so far as we have time to make use of it—This or that, not this and that—Danger of apparently unlimited opportunities—The intellectual training of our ancestors—Montaigne the Essayist—Reliance upon the compensations.

It has always seemed to me that the great and beautiful principle of compensation is more clearly seen in the distribution and effects of time than in anything else within the scope of our experience. The good use of one opportunity very frequently compensates us for the absence of another, and it does so because opportunity is itself so dependent upon time that, although the best opportunities may apparently be presented to us, we can make no use of them unless we are able to give them the time that they require. You, who have the best possible opportunities for culture, find a certain sadness and disappointment because you cannot avail yourself of all of them; but the truth is, that opportunity only exists for us just so far as we are able to make use of it, and our power to do so is

often nothing but a question of time. If our days are well employed we are sure to have done some good thing which we should have been compelled to neglect if we had been occupied about anything else. Hence every genuine worker has rich compensations which ought to console him amply for his shortcomings, and to enable him to meet comparisons without fear.

Those who aspire to the intellectual life, but have no experience of its difficulties, very frequently envy men so favorably situated as you are. It seems to them that all the world's knowledge is accessible to you, and that you have simply to cull its fruits as we gather grapes in a vineyard. They forget the power of Time, and the restrictions which Time imposes. "This or that, not this and that," is the rule to which all of us have to submit, and it strangely equalizes the destinies of men. The time given to the study of one thing is withdrawn from the study of another, and the hours of the day are limited alike for all of us. How difficult it is to reconcile the interests of our different pursuits! Indeed it seems like a sort of polygamy to have different pursuits. It is natural to think of them as jealous wives tormenting some Mormon prophet.

There is great danger in apparently unlimited opportunities, and a splendid compensation for those who are confined by circumstances to a narrow but fruitful field. The Englishman gets more civilization out of a farm and a garden than the Red Indian out of the space encircled by his horizon. Our culture gains in thoroughness what it loses in extent.

This consideration goes far to explain the fact that although our ancestors were so much less favorably situated than we are, they often got as good an intellectual training from the literature that was accessible to them, as we from our vaster stores. We live in an age of essayists, and yet what modern essayist writes better than old Montaigne? All that a thoughtful and witty writer needs for the sharpening of his intellect, Montaigne found in the ancient literature that was accessible to him, and in the life of the age he lived in. Born in our own century, he would have learned many other things, no doubt, and read many other books, but these would have absorbed the hours that he employed not less fruitfully with the authors that he loved in the little library up in the third story of his tower, as he tells us, where he could see all his books at once, set upon five rows of shelves round about him. In earlier life he bought "this sort of furniture" for "ornament and outward show,"

but afterwards quite abandoned that, and procured such volumes only "as supplied his own need."

To supply our own need, within the narrow limits of the few and transient hours that we can call our own, is enough for the wise everywhere, as it was for Montaigne in his tower. Let us resolve to do as much as that, not more, and then rely upon the golden compensations.

NOTE.—"Supposing that the executive and critical powers always exist in some correspondent degree in the same person, still they cannot be cultivated to the same extent. The attention required for the development of a theory is necessarily withdrawn from the design of a drawing, and the time devoted to the realization of a form is lost to the solution of a problem."—MR. RUSKIN, in the preface to the third volume of *"Modern Painters."*

In the case of Mr. Ruskin, in that of Mr. Dante Rossetti, and in all cases where the literary and artistic gifts are naturally pretty evenly balanced, the preponderance of an hour a day given to one or the other class of studies may have settled the question whether the student was to be chiefly artist or chiefly author. The enormous importance of the distribution of time is never more clearly manifested than in cases of this kind. Mr. Ruskin might certainly have attained rank as a painter, Rossetti might have been as prolific in poetry as he is excellent. What these gifted men are now is not so much a question of talent as of time. In like manner the question whether Ingres was to be known as a painter or as a violinist was settled by the employment of hours rather than by any preponderance of faculty.

PART V.

THE INFLUENCES OF MONEY.

LETTER I.

TO A VERY RICH STUDENT.

The author of "Vathek"—The double temptation of wealth—Rich men tempted to follow occupations in which their wealth is useful—Pressure of social duties on the rich—The Duchess of Orleans—The rich man's time not his own—The rich may help the general intellectual advancement by the exercise of patronage—Dr. Carpenter—Frans Weepke.

It has always seemed to me a very remarkable and noteworthy circumstance that although Mr. Beckford, the author of "Vathek," produced in his youth a story which bears all the signs of true inventive genius, he never produced anything in after-life which posterity cares to preserve. I read "Vathek" again quite recently, to see how far my early enthusiasm for it might have been due to that passion for orientalism which reigned amongst us many years ago, but this fresh perusal left an impression which only genius leaves. Beckford really had invention, and

an extraordinary narrative power. That such faculties, after having once revealed themselves, should contentedly have remained dormant ever afterwards, is one of the most curious facts in the history of the human mind, and it is the more curious that Beckford lived to a very advanced age.

Beckford's case appears to have been one of those in which great wealth diminishes or wholly paralyzes the highest energy of the intellect, leaving the lower energies free to exert less noble kinds of activity. A refined self-indulgence became the habit of his life, and he developed simply into a dilettant. Even his love for the fine arts did not rise above the indulgence of an elegant and cultivated taste. Although he lived at the very time most favorable to the appearance of a great critic in architecture and painting, the time of a great architectural revival and of the growth of a vigorous and independent school of contemporary art, he exercised no influence beyond that of a wealthy virtuoso. His love of the beautiful began and ended in simple personal gratification; it led to no noble labor, to no elevating severity of discipline. Englishman though he was, he filled his Oriental tower with masterpieces from Italy and Holland, only to add form and color to the luxuries of his reverie, behind his gilded lattices.

And when he raised that other tower at Fonthill, and the slaves of the lamp toiled at it by torchlight to gratify his Oriental impatience, he exercised no influence upon the confusion of his epoch more durable than that hundred yards of masonry which sank into a shapeless heap whilst as yet Azrael spared its author. He to whom Nature and Fortune had been so prodigal of their gifts, he whom Reynolds painted and Mozart instructed, who knew the poets of seven literatures, culling their jewels like flowers in seven enchanted gardens—he to whom the palaces of knowledge all opened their golden gates even in his earliest youth, to whom were also given riches and length of days, for whom a thousand craftsmen toiled in Europe and a thousand slaves beyond the sea,*—what has this gifted mortal left as the testimony of his power, as the trace of his fourscore years upon the earth? Only the reminiscence of a vague splendor, like the fast-fading recollection of a cloud that burned at sunset, and one small gem

* This sounds like a poetical exaggeration, but it is less than the bare truth. There were fifteen hundred slaves on two West Indian estates that Beckford lost in a lawsuit. It is quite certain, considering his lavish expenditure, that fully a thousand men must have worked for the maintenance of his luxury in Europe. So much for his command of labor.

of intellectual creation that lives like a tiny star.

If wealth had only pleasure to offer as a temptation from intellectual labor, its influence would be easier to resist. Men of the English race are often grandly strong in resistance to every form of voluptuousness; the race is fond of comfort and convenience, but it does not sacrifice its energy to enervating self-indulgence. There is, however, another order of temptations in great wealth, to which Englishmen not only yield, but yield with a satisfied conscience, even with a sense of obedience to duty. Wealth carries pleasure in her left hand, but in her right she bears honor and power. The rich man feels that he can do so much by the mere exercise of his command over the labor of others, and so little by any unaided labor of his own, that he is always strongly tempted to become, not only physically but intellectually, a director of work rather than a workman. Even his modesty, when he is modest, tends to foster his reliance on others rather than himself. All that he tries to do is done so much better by those who make it their profession, that he is always tempted to fall back upon his paying power as his most satisfactory and effective force.

There are cases in which this temptation is gloriously overcome, where men of great wealth compel every one to acknowledge that their money is nothing more than a help to their higher life, like the charger that bore Wellington at Waterloo, serving him indeed usefully, but not detracting from the honor which is his due. But in these cases the life is usually active or administrative rather than intellectual. The rich man does not generally feel tempted to enter upon careers in which his command over labor is not an evident advantage, and this because men naturally seek those fields in which *all* their superiorities tell. Even the well known instance of Lord Rosse can scarcely be considered an exception to this rule, for although he was eminent in a science which has been followed by poor men with great distinction, his wealth was of use in the construction of his colossal telescope, which gave him a clear advantage over merely professional contemporaries.

Besides this natural desire to pursue careers in which their money may lessen the number of competitors, the rich are often diverted from purely intellectual pursuits by the social duties of their station, duties which it is impossible to avoid and difficult to keep within limits. The Duchess of Orleans (mother of the present Count of Paris) arranged her time with the greatest care so as to reserve a little of

it for her own culture in uninterrupted solitude. By an exact system, and the exercise of the rarest firmness, she contrived to steal half an hour here and an hour there—enough, no doubt, when employed as she employed them, to maintain her character as a very distinguished lady, yet still far from sufficient for the satisfactory pursuit of any great art or science. If it be difficult for the rich man to enter into the kingdom of heaven, it is also difficult for him to secure that freedom from interruption which is necessary to fit him for his entrance into the Intellectual Kingdom. He can scarcely allow himself to be absorbed in any great study, when he reflects on all the powerful means of social influence which he is suffering to lie idle. He is sure to possess by inheritance, or to have acquired in obedience to custom, a complicated and expensive machinery for the pleasures and purposes of society. There is game to be shot; there are hunters to be exercised; great houses to be filled with guests. So much is expected of the rich man, both in business and in pleasure, that his time is not his own, and he could not quit his station if he would. And yet the Intellectual Life, in its fruitful perfection, requires, I do not say the complete abandonment of the world, but it assuredly requires free and frequent spaces of labor in tranquil solitude, "retreats" like those commanded by the Church of Rome, but with more of study and less of contemplation.

It would be useless to ask you to abdicate your power, and retreat into some hermitage with a library and a laboratory, without a thought of returning to your pleasant hall in Yorkshire and your house in Mayfair. You will not sell all and follow the Light, but there is a life which you may powerfully encourage, yet only partially share. Notwithstanding the increased facilities for earning a living which this age offers to the intellectual, the time that they are often compelled to give to the satisfaction of common material necessities is so much time withdrawn from the work which they alone can do. It is a lamentable waste of the highest and rarest kind of energy to compel minds that are capable of original investigation, of discovery, to occupy themselves in that mere vulgarization of knowledge, in popular lecturing and literature, which could be done just as efficiently by minds of a common order. It is an error of the present age to believe that the time for what is called patronage is altogether passed away.

Let me mention two instances to the contrary: one in which kindly help would have saved fifteen years of a noble life; another

in which that kindly help did actually permit a man of exceptional endowment and equally exceptional industry to pursue investigations for which no other human being was so well qualified, and which were entirely incompatible with the earning of the daily bread. Dr. Carpenter has lately told us that, finding it impossible to unite the work of a general practitioner with the scientific researches upon which his heart was set, he gave up nine-tenths of his time for twenty years to popular lecturing and writing, in order that he might exist and devote the other tenth to science. "Just as he was breaking down from the excessive strain upon mind and body which this life involved, an appointment was offered to Dr. Carpenter which gave him competence and sufficient leisure for the investigations which he has conducted to such important issues." Suppose that during those twenty years of struggle he *had* broken down like many another only a little less robust—what then? A mind lost to his country and the world. And would it not have been happier for him and for us if some of those men (of whom there are more in England than in any other land), who are so wealthy that their gold is positively a burden and an encumbrance, like too many coats in summer, had helped Dr. Carpenter at least a few years earlier, in some form that a man of high feeling might honorably accept? The other example that I shall mention is that of Franz Wœpke, the mathematician and orientalist. A modest pension, supplied by an Italian prince who was interested in the history of mathematics, gave Wœpke that peace which is incompatible with poverty, and enabled him to live grandly in his narrow lodging the noble intellectual life. Was not this rightly and well done, and probably a much more effectual employment of the power of gold than if that Italian prince had added some rare manuscripts to his own library without having time or knowledge to decipher them? I cannot but think that the rich may serve the cause of culture best by a judicious exercise of patronage—unless, indeed, they have within themselves the sense of that irresistible vocation which made Humboldt use his fortune as the servant of his high ambition. The Humboldts never are too rich; they possess their gold and are not possessed by it, and they are exempt from the duty of aiding others because they themselves have a use for all their powers.

LETTER II.

TO A GENIUS CARELESS IN MONEY MATTERS.

Danger of carelessness—Inconveniences of poverty unfavorable to the Intellectual Life—Necessity advances men in industrial occupations, but disturbs and interrupts the higher intellectual life—Instances in science, literature, and art—Careers aided by wealth—Mr. Ruskin—De Sapsure—Work spoiled by poverty in the doing—The central passion of men of ability is to do their work well—The want of money the most common hindrance to excellence of work—De Sénancour—Bossuet—Sainte-Beuve—Shelley—Wordsworth—Scott—Kepler—Tycho Brahe—Schiller—Goethe—Case of an eminent English philosopher, and of a French writer of school-primers—Loss of time in making experiments on public taste—*Surtout ne pas trop écrire*—Auguste Comte—The reaction of the intellectual against money-making—Money the protector of the intellectual life.

I HAVE been anxious for you lately, and venture to write to you about the reasons for this anxiety.

You are neither extravagant nor self-indulgent, yet it seems to me that your entire absorption in the higher intellectual pursuits has produced in you, as it frequently does, a carelessness about material interests of all kinds which is by far the most dangerous of all tempers to the pecuniary well-being of a man. Sydney Smith declared that no fortune could stand that temper long, and that we are on the high road to ruin the moment we think ourselves rich enough to be careless.

Let me observe, to begin with, that although the pursuit of wealth is not favorable to the intellectual life, the inconveniences of poverty are even less favorable to it. We are sometimes lectured on the great benefits of necessity as a stimulant to exertion, and it is implied that comfortable people would go much farther on the road to distinction if they were made uncomfortable by having to think perpetually about money. Those who say this confound together the industry of the industrial and professional classes, and the labors of the more purely intellectual. It is clear that when the labor a man does is of such a nature that he will be paid for it in strict proportion to the time and effort he bestows, the need of money will be a direct stimulus to the best exertion he may be capable of. In all simple industrial occupations the need of money *does* drive a man forwards, and is often, when he feels it in early life, the very origin and foundation of his fortune. There exists, in such occupations, a perfect harmony between the present necessity and the ultimate purpose of the life. Wealth is the object of industry, and the first steps towards the possession of it are steps on the chosen path. The future captain of industry, who will employ thousands of workpeople and accumulate millions of money, is going straight

to his splendid future when he gets up at five in the morning to work in another person's factory.

To learn to be a builder of steam-vessels, it is necessary, even when you begin with capital, to pass through the manual trades, and you will only learn them the better if the wages are necessary to your existence. Poverty in these cases only makes an intelligent man ground himself all the better in that stern practical training which is the basis of his future career. Well, therefore, may those who have reached distinguished success in fields of practical activity extol the teachings of adversity. If it is a necessary part of your education that you should hammer rivets inside a steam-boiler, it is as well that your early habits should not be over-dainty. So it is observed that horny hands, in the colonies, get gold into them sooner than white ones.

Even in the liberal professions young men get on all the better for not being too comfortably off. If you have a comfortable private income to begin with, the meagre early rewards of professional life will seem too paltry to be worth hard striving, and so you will very likely miss the more ample rewards of maturity, since the common road to success is nothing but a gradual increase. And you miss education at the same time, for practice is the best of professional educators, and many successful lawyers and artists have had scarcely any other training. The daily habit of affairs trains men for the active business of the world, and if the purpose of their lives is merely to do what they are doing or to command others to do the same things, the more closely circumstances tie them down to their work, the better.

But in the higher intellectual pursuits the necessity for immediate earning has an entirely different result. It comes, not as an educator, but as an interruption or suspension of education. All intellectual lives, however much they may differ in the variety of their purposes, have at least this purpose in common, that they are mainly devoted to self-education of one kind or another. An intellectual man who is forty years old is as much at school as an Etonian of fourteen, and if you set him to earn more money than that which comes to him without especial care about it, you interrupt his schooling, exactly as selfish parents used to do when they sent their young children to the factory and prevented them from learning to read. The idea of the intellectual life is an existence passed almost entirely in study, yet preserving the results of its investigations. A day's writing

will usually suffice to record the outcome of a month's research.

Necessity, instead of advancing your studies, stops them. Whenever her harsh voice speaks it becomes your duty to shut your books, put aside your instruments, and do something that will fetch a price in the market. The man of science has to abandon the pursuit of a discovery to go and deliver a popular lecture a hundred miles off, for which he gets five pounds and his railway fare. The student of ancient literature has to read some feeble novel, and give three days of a valuable life to write an anonymous review which will bring him two pounds ten. The artist has to leave his serious picture to manufacture "pot-boilers," which will teach him nothing, but only spoil his hands and vitiate the public taste. The poet suspends his poem (which is promised to a publisher for Christmas, and will be spoiled in consequence by hurry at the last) in order to write newspaper articles on subjects of which he has little knowledge and in which he takes no interest. And yet these are instances of those comparatively happy and fortunate needy who are only compelled to suspend their intellectual life, and who can cheer themselves in their enforced labor with the hope of shortly renewing it. What of those others who are pushed out of their path forever by the buffets of unkindly fortune? Many a fine intellect has been driven into the deep quagmire, and has struggled in it vainly till death came, which but for that grim necessity might have scaled the immortal mountains.

This metaphor of the mountains has led me, by a natural association of ideas, to think of a writer who has added to our enjoyment of their beauty, and I think of him the more readily that his career will serve as an illustration—far better than any imaginary career—of the very subject which just now occupies my mind. Mr. Ruskin is not only one of the best instances, but he is positively the very best instance except the two Humboldts, of an intellectual career which has been greatly aided by material prosperity, and which would not have been possible without it. This does not in the least detract from the merit of the author of "Modern Painters," for it needed a rare force of resolution, or a powerful instinct of genius, to lead the life of a severe student under every temptation to indolence. Still it is true that Mr. Ruskin's career would have been impossible for a poor man, however gifted. A poor man would not have had access to Mr. Ruskin's materials, and one of his chief superiorities has always been an abundant wealth of

material. And if we go so far as to suppose that the poor man might have found other materials perhaps equivalent to these, we know that he could not have turned them to that noble use. The poor critic would be immediately absorbed in the ocean of anonymous periodical literature; he could not find time for the incubation of great works. "Modern Painters," the result of seventeen years of study, is not simply a work of genius but of genius seconded by wealth. Close to it on my shelves stand four volumes which are the monument of another intellectual life devoted to the investigation of nature. De Saussure, whom Mr. Ruskin reverences as one of his ablest teachers, and whom all sincere students of nature regard as a model observer, pursued for many laborious years a kind of life which was not, and could not be, self-supporting in the pecuniary sense. Many other patient laborers, who have not the celebrity of these, work steadily in the same way, and are enabled to do so by the possession of independent fortune. I know one such who gives a whole summer to the examination of three or four acres of mountain-ground, the tangible result being comprised in a few memoranda, which, considered as literary material, might (in the hands of a skilled professional writer) just possibly be worth five pounds.

Not only do narrow pecuniary means often render high intellectual enterprises absolutely impossible, but they do what is frequently even more trying to the health and character, they permit you to undertake work that would be worthy of you if you might only have time and materials for the execution of it, and then spoil it in the doing. An intellectual laborer will bear anything except that. You may take away the very table he is writing upon, if you let him have a deal board for his books and papers; you may take away all his fine editions, if you leave him common copies that are legible; you may remove his very candlestick, if you leave him a bottle-neck to stick his candle in, and he will go on working cheerfully still. But the moment you do anything to spoil the quality of the work itself, you make him irritable and miserable. "You think," says Sir Arthur Helps, "to gain a good man to manage your affairs because he happens to have a small share in your undertaking. It is a great error. You want him to do something well which you are going to tell him to do. If he has been wisely chosen, and is an able man, his pecuniary interest in the matter will be mere dust in the balance, when compared with the desire which belongs to all such men

to do their work well." Yes, this is the central passion of all men of true ability, *to do their work well*; their happiness lies in that, and not in the amount of their profits, or even in their reputation. But then, on the other hand, they suffer indescribable mental misery when circumstances compel them to do their work less well than they know that, under more favorable circumstances, they would be capable of doing it. The want of money is, in the higher intellectual pursuits, the most common hindrance to thoroughness and excellence of work. De Sénancour, who, in consequence of a strange concatenation of misfortunes, was all his life struggling in shallows, suffered not from the privations themselves, but from the vague feeling that they stunted his intellectual growth; and any experienced student of human nature must be aware that De Sénancour was right. With larger means he would have seen more of the world, and known it better, and written of it with riper wisdom. He said that the man "who only saw in poverty the direct effect of the money-privation, and only compared, for instance, an eight-penny dinner to one that cost ten shillings, would have no conception of the true nature of misfortune, for not to spend money is the least of the evils of poverty." Bossuet said that he "had no attachment to riches, and still if he had only what is barely necessary, if he felt himself narrowed, he would lose more than half his talents." Sainte-Beuve said, "Only think a little what a difference there is in the starting point and in the employment of the faculties between a Duc de Luynes and a Sénancour." How many of the most distinguished authors have been dependent upon private means, not simply for physical sustenance, but for the opportunities which they afforded of gaining that experience of life which was absolutely essential to the full growth of their mental faculties. Shelley's writings brought him no profit whatever, and without a private income he could not have produced them, for he had not a hundred buyers. Yet his *whole time* was employed, in study or in travel, which for him was study of another kind, or else in the actual labor of composition. Wordsworth tried to become a London journalist and failed. A young man called Raisley Calvert died and left him 900*l.*; this saved the poet in Wordsworth, as it kept him till the publication of the "Lyrical Ballads," and afterwards other pieces of good luck happened to him, so that he could think and compose at leisure. Scott would not venture to devote himself to literature until he had first secured a comfortable income outside of it.

Poor Kepler struggled with constant anxieties, and told fortunes by astrology for a livelihood, saying that astrology as the daughter of astronomy ought to keep her mother; but fancy a man of science wasting precious time over horoscopes! "I supplicate you," he writes to Mœstlin, "if there is a situation vacant at Tübingen, do what you can to obtain it for me, and let me know the prices of bread and wine and other necessities of life, for my wife is not accustomed to live on beans." He had to accept all sorts of jobs; he made almanacs, and served any one who would pay him. His only tranquil time for study was when he lived in Styria, on his wife's income, a tranquillity that did not last for long, and never returned. How different is this from the princely ease of Tycho Brahe, who labored for science alone, with all the help that the ingenuity of his age could furnish! There is the same contrast, in a later generation, between Schiller and Goethe. Poor Schiller "wasting so much of his precious life in literary hack-work, translating French books for a miserable pittance;" Goethe, fortunate in his pecuniary independence as in all the other great circumstances of his life, and this at a time when the pay of authors was so miserable that they could hardly exist by the pen. Schiller got a shilling a page for his translations. Merck the publisher offered three pounds sterling for a drama of Goethe. "If Europe praised me," Goethe said, "what has Europe done for me? Nothing. *Even my works have been an expense to me.*"

The pecuniary rewards which men receive for their labor are so absurdly (yet inevitably) disproportionate to the intellectual power that is needed for the task, and also to the toil involved, that no one can safely rely upon the higher intellectual pursuits as a protection from money-anxieties. I will give you two instances of this disproportion, real instances, of men who are known to me personally. One of them is an eminent Englishman of most remarkable intellectual force, who for many years past has occupied his leisure in the composition of works that are valued by the thinking public to a degree which it would be difficult to exaggerate. But this thinking public is not numerous, and so in the year 1866 this eminent philosopher, "unable to continue losing money in endeavoring to enlighten his contemporaries, was compelled to announce the termination of his series." On the other hand, a Frenchman, also known to me personally, one day conceived the fortunate idea that a new primer might possibly be a saleable commodity. So he composed a

little primer, beginning with the alphabet, advancing to a, b, *ab*; b, a, *ba*; and even going so far in history as to affirm that Adam was the first man and Abraham the father of the faithful. He had the wisdom to keep the copyright of this little publication, which employed (in the easiest of all imaginable literary labor) the evenings of a single week. It has brought him in, ever since, a regular income of 120*l.* a year, which, so far from showing any signs of diminution, is positively improving. This success encouraged the same intelligent gentleman to compose more literature of the same order, and he is now the enviable owner of several other such copyrights, all of them very valuable; in fact as good properties as house-leases in London. Here is an author who, from the pecuniary point of view, was incomparably more successful than Milton, or Shelley, or Goethe. If every intellectual man could shield his higher life by writing primers for children which should be as good as house-leases, if the proverb *Qui peut le plus peut le moins* were a true proverb, which it is not, then of course all men of culture would be perfectly safe, since they all certainly know the contents of a primer. But you may be able to write the most learned philosophical treatise and still not be able to earn your daily bread.

Consider, too, the lamentable loss of time which people of high culture incur in making experiments on public taste, when money becomes one of their main objects. Whilst they are writing stories for children, or elementary educational books which people of far inferior attainment could probably do much better, their own self-improvement comes to a standstill. If it could only be ascertained without delay what sort of work would bring in the money they require, then there would be some chance of apportioning time so as to make reserves for self-improvement; but when they have to write a score of volumes merely to ascertain the humor of the public, there is little chance of leisure. The life of the professional author who has no reputation is much less favorable to high culture than the life of a tradesman in moderately easy circumstances who can reserve an hour or two every day for some beloved intellectual pursuit.

Sainte-Beuve tells us that during certain years of his life he had endeavored, and had been able, so to arrange his existence that it should have both sweetness and dignity, writing from time to time what was agreeable, reading what was both agreeable and serious, cultivating friendships, throwing much of his mind into the intimate relations of every day, giving more to his friends than to the public,

reserving what was most tender and delicate for the inner life, enjoying with moderation; such for him was the dream of an intellectual existence in which things truly precious were valued according to their worth. And "*above all*," he said, above all his desire was not to write too much, "*surtout ne pas trop écrire*." And then comes the regret for this wise, well-ordered life enjoyed by him only for a time. "*La nécessité depuis m'a saisi et m'a contraint de renoncer à ce que je considérais comme le seul bonheur ou la consolation exquise du mélancolique et du sage.*"

Auguste Comte lamented in like manner the evil intellectual consequences of anxieties about material needs. "There is nothing," he said, "more mortal to my mind than the necessity, pushed to a certain degree, to have to think each day about a provision for the next. Happily I think little and rarely about all that; but whenever this happens to me I pass through moments of discouragement and positive despair, which if the influence of them became habitual *would make me renounce all my labors, all my philosophical projects, to end my days like an ass.*"

There are a hundred rules for getting rich, but the instinct of accumulation is worth all such rules put together. This instinct is rarely found in combination with high intellectual gifts, and the reason is evident. To advance from a hundred pounds to a thousand is not an intellectual advance, and there is no intellectual interest in the addition of a cipher at the bankers'. Simply to accumulate money that you are never to use is, from the intellectual point of view, as stupid an operation as can be imagined. We observe, too, that the great accumulators, the men who are gifted by nature with the true instinct, are not usually such persons as we feel any ambition to become. Their faculties are concentrated on one point, and that point, as it seems to us, of infinitely little importance. We cannot see that it signifies much to the intellectual well-being of humanity that John Smith should be worth his million when he dies, since we know quite well that John Smith's mind will be just as ill-furnished then as it is now. In places where much money is made we easily acquire a positive disgust for it, and the curate seems the most distinguished gentleman in the community, with his old black coat and his seventy pounds a year. We come to hate money-matters when we find that they exclude all thoughtful and disinterested conversation, and we fly to the society of people with fixed incomes, not large enough for much saving, to escape the perpetual talk about investments. Our happiest hours have been

spent with poor scholars, and artists, and men of science, whose words remain in the memory and make us rich indeed. Then we dislike money because it rules and restrains us, and because it is unintelligent and seems hostile, so far as that which is unintelligent can be hostile. And yet the real truth is that money is the strong protector of the intellectual life. The student sits and studies, too often despising the power that shelters him from the wintry night, that gives him roof and walls, and lamp, and books, and fire. For money is simply the accumulated labor of the past, guarding our peace as fleets and armies guard the industry of England, or like some mighty fortress-wall within which men follow the most peaceful avocations. The art is to use money so that it shall be the protector and not the scatterer of our time, the body-guard of the sovereign Intellect and Will.

LETTER III.

TO A STUDENT IN GREAT POVERTY.

Poverty really a great obstacle—Difference between a thousand rich men and a thousand poor men taken from persons of average natural gifts—The Houses of Parliament—The English recognize the natural connection between wealth and culture—Connection between ignorance and parsimony in expenditure—What may be honestly said for the encouragement of a very poor student.

As it seems to me that to make light of the difficulties which lie in the path of another is not to show true sympathy for him, even though it is done sometimes out of a sort of awkward kindness and for his encouragement, I will not begin by pretending that poverty is not a great obstacle to the perfection of the intellectual life. It is a great obstacle; it is one of the very greatest of all obstacles. Only observe how riches and poverty operate upon mankind in the mass. Here and there no doubt a very poor man attains intellectual distinction when he has exceptional strength of will, and health enough to bear a great strain of extra labor that he imposes upon himself, and natural gifts as brilliant that he can learn in an hour what common men learn in a day. But consider mankind in the mass. Look, for instance, at our two Houses of Parliament. They are composed of men taken from the average run of Englishmen with very little reference to ability, but almost all of them are rich men, not one of them is poor, as you are poor, not one of them has to contend against the stern realities of poverty. Then consider the very high general level of intellectual attain-

ment which distinguishes those two assemblies, and ask yourself candidly whether a thousand men taken from the beggars in the streets, or even from the far superior class of our manufacturing operatives, would be likely to understand, as the two Houses of Parliament understand, the many complicated questions of legislation and of policy which are continually brought before them. We all know that the poor are too limited in knowledge and experience, from the want of the necessary opportunities, and too little accustomed to exercise their minds in the tranquil investigations of great questions, to be competent for the work of Parliament. It is scarcely necessary to insist upon this fact to an Englishman, because the English have always recognized the natural connection between wealth and culture, and have preferred to be governed by the rich from the belief that they are likely to be better informed, and better situated for intellectual activity of a disinterested kind, than those members of the community whose time and thoughts are almost entirely occupied in winning their daily bread by the incessant labor of their hands. And if you go out into the world, if you mix with men of very different classes, you will find that in a broad average way (I am not speaking just now of the exceptions) the richer classes are much more capable of entering into the sort of thinking which may be called intellectual than those whose money is less plentiful, and whose opportunities have therefore been less abundant. Indeed it may be asserted, roughly and generally, that the narrowness of men's ideas is in direct proportion to their parsimony in expenditure. I do not mean to affirm that all who spend largely attain large intellectual results, for of course we know that a man may spend vast sums on pursuits which do not educate him in anything worth knowing, but the advantage is that with habits of free expenditure the germs of thought are well tilled and watered, whereas parsimony denies them every external help. The most spending class in Europe is the English gentry, it is also the class most strikingly characterized by a high general average of information;* the most parsimonious class in Europe is the French peasantry; it is also the class most strikingly characterized by ignorance and intellectual apathy. The English gentleman has cultivated himself by various reading and extensive travel, but the French peasant will not go anywhere except

to the market-town, and could not pardon the extravagance of buying a book, or a candle to read it by in the evening. Between these extremes we have various grades of the middle classes in which culture usually increases very much in proportion to the expenditure. The rule is not without its exceptions; there are rich vulgar people who spend a great deal without improving themselves at all—who only, by unlimited self-indulgence, succeed in making themselves so uncomfortably sensitive to every bodily inconvenience that they have no leisure, even in the midst of an unoccupied life, to think of anything but their own bellies and their own skins—people whose power of attention is so feeble that the smallest external incident distracts it, and who remember nothing of their travels but a catalogue of trivial annoyances. But people of this kind do not generally belong to families on whom wealth has had time to produce its best effects. What I mean is, that a family which has been for generations in the habit of spending four thousand a year will usually be found to have a more cultivated tone than one that has only spent four hundred.

I have come to the recognition of this truth very reluctantly indeed, not because I dislike rich people, but merely because they are necessarily a very small minority, and I should like every human being to have the best benefits of culture if it were only possible. The plain living and high thinking that Wordsworth so much valued is a cheering ideal, for most men have to live plainly, and if they could only think with a certain elevation we might hope to solve the great problem of human life, the reconciliation of poverty and the soul. There certainly is a slow movement in that direction, and the shortening of the hours of labor may afford some margin of leisure; but we who work for culture every day and all day long, and still feel that we know very little, and have hardly skill enough to make any effective use of the little that we know, can scarcely indulge in very enthusiastic anticipations of the future culture of the poor.

Still, there are some things that may be rationally and truly said to a poor man who desires culture, and which are not without a sort of Spartan encouragement. You are restricted by your poverty, but it is not always a bad thing to be restricted, even from the intellectual point of view. The intellectual powers of well-to-do people are very commonly made ineffective by the enormous multiplicity of objects that are presented to their attention, and which claim from them a sort

*The reader will please to bear in mind that I am speaking of broad effects on great numbers. I do not think that democracy, in its spirit, is quite favorable to the exceptionally highest intellectual life.

of polite notice like the greeting of a great lady to each of her thousand guests. It requires the very rarest strength of mind, in a rich man, to concentrate his attention on anything—there are so many things that he is expected to make a pretence of knowing; but nobody expects *you* to know anything, and this is an incalculable advantage. I think that all poor men who have risen to subsequent distinction have been greatly indebted to this independence of public opinion as to what they ought to know. In trying to satisfy that public opinion by getting up a pretence of various sorts of knowledge, which is only a sham, we sacrifice not only much precious time, but we blunt our natural interest in things. That interest you preserve in all its virgin force, and this force carries a man far. Then, again, although the opportunities of rich people are very superior to yours, they are not altogether so superior as they seem. There exists a great equalizing power, the limitation of human energy. A rich man may sit down to an enormous banquet, but he can only make a good use of the little that he is able to digest. So it is with the splendid intellectual banquet that is spread before the rich man's eyes. He can only possess what he has energy to master, and too frequently the manifest impossibility of mastering everything produces a feeling of discouragement that ends in his mastering nothing. A poor student, especially if he lives in an out-of-the-way place where there are no big libraries to bewilder him, may apply his energy with effect in the study of a few authors.

I used to believe a great deal more in opportunities and less in application than I do now. Time and health are needed, but with these there are always opportunities. Rich people have a fancy for spending money very uselessly on their culture because it seems to them more valuable when it has been costly; but the truth is, that by the blessing of good and cheap literature, intellectual light has become almost as accessible as daylight. I have a rich friend who travels more, and buys more costly things, than I do, but he does not really learn more or advance farther in the twelvemonth. If my days are fully occupied, what has he to set against them? only other well-occupied days, no more. If he is getting benefit at St. Petersburg he is missing the benefit I am getting round my house, and in it. The sum of the year's benefit seems to be surprisingly alike in both cases. So if you are reading a piece of thoroughly good literature, Baron Rothschild may possibly be as well occupied as you—he is

certainly not better occupied. When I open a noble volume I say to myself, "Now the only Croesus that I envy is he who is reading a better book than this."

PART VI.

CUSTOM AND TRADITION.

LETTER I.

TO A YOUNG GENTLEMAN WHO HAD FIRMLY
RESOLVED NEVER TO WEAR ANYTHING BUT
A GRAY COAT.*

Secret enjoyment of rebellion against custom, and of the disabilities resulting from it—Penalties imposed by Society and by Nature out of proportion to the offence—Instances—What we consider penalties not really penalties, but only consequences—Society likes harmony, and is offended by dissonance—Utility of rebels against custom—That they ought to reserve their power of rebellion for great occasions—Uses of custom—Duty of the intellectual class—Best way to procure the abolition of a custom we disapprove—Bad customs—Eccentricity sometimes a duty.

WHEN I had the pleasure of staying at your father's house, you told me, rather to my surprise, that it was impossible for you to go to balls and dinner-parties because you did not possess such a thing as a dress-coat. The reason struck me as being scarcely a valid one, considering the rather high scale of expenditure adopted in the paternal mansion. It seemed clear that the eldest son of a family which lived after the liberal fashion of Yorkshire country gentlemen could afford himself a dress-coat if he liked. Then I wondered whether you disliked dress-coats from a belief that they were unbecoming to your person; but a very little observation of your character convinced me that, whatever might be your weaknesses (for everybody has some weaknesses), anxiety about personal appearance was not one of them.

The truth is, that you secretly enjoy this little piece of disobedience to custom, and all the disabilities which result from it. This little rebellion is connected with a larger rebellion, and it is agreeable to you to demonstrate the unreasonableness of society by incurring a very severe penalty for a very trifling offence. You are always dressed decently, you offend against no moral rule, you have cultivated your mind by study and reflection, an

* The title of this letter seems so odd, that it may be necessary to inform the reader that it was addressed to a real person.

it rather pleases you to think that a young gentleman so well qualified for society in everything of real importance should be excluded from it because he has not purchased a permission from his tailor.

The penalties imposed by society for the infraction of very trifling details of custom are often, as it seems, out of all proportion to the offence; but so are the penalties of nature. Only three days before the date of this letter, an intimate friend of mine was coming home from a day's shooting. His nephew, a fine young man in the full enjoyment of existence, was walking ten paces in advance. A covey of partridges suddenly crosses the road: my friend in shouldering his gun touches the trigger just a second too soon, and kills his nephew. Now, think of the long years of mental misery that will be the punishment of that very trifling piece of carelessness! My poor friend has passed, in the space of a single instant, from a joyous life to a life that is permanently and irremediably saddened. It is as if he had left the summer sunshine to enter a gloomy dungeon and begin a perpetual imprisonment. And for what? For having touched a trigger, without evil intention, a little too precipitately. It seems harder still for the victim, who is sent out of the world in the bloom of perfect manhood because his uncle was not quite so cool as he ought to have been. Again, not far from where I live, thirty-five men were killed last week in a coal-pit from an explosion of fire-damp. One of their number had struck a lucifer to light his pipe: for doing this in a place where he ought not to have done it, the man suffers the penalty of death, and thirty-four others with him. The fact is simply that Nature *will* be obeyed, and makes no attempt to proportion punishments to offences: indeed, what in our human way we call punishments are not punishments, but simple consequences. So it is with the great social penalties. Society *will be obeyed*: if you refuse obedience, you must take the consequences. Society has only one law, and that is custom. Even religion itself is socially powerful only just so far as it has custom on its side.

Nature does not desire that thirty-five men should be destroyed because one could not resist the temptation of a pipe; but fire-damp is highly inflammable, and the explosion is a simple consequence. Society does not desire to exclude you because you will not wear evening dress; but the dress is customary, and your exclusion is merely a consequence of your nonconformity. The view of society goes no further in this than the artistic conception (not very delicately artistic, perhaps) that it is

prettier to see men in black coats regularly placed between ladies round a dinner-table than men in gray coats or brown coats. The uniformity of costume appears to represent uniformity of sentiment and to ensure a sort of harmony amongst the *convives*. What society really cares for is harmony; what it dislikes is dissent and nonconformity. It wants peace in the dining-room, peace in the drawing-room, peace everywhere in its realm of tranquil pleasure. You come in your shooting-coat, which was in tune upon the moors, but is a dissonance amongst ladies in full dress. Do you not perceive that fustian and velveteen, which were natural amongst game-keepers, are not so natural on gilded chairs covered with silk, with lace and diamonds at a distance of three feet? You don't perceive it? Very well: society does not argue the point with you, but only excludes you.

It has been said that in the life of every intellectual man there comes a time when he questions custom at all points. This seems to be a provision of nature for the reform and progress of custom itself, which without such questioning would remain absolutely stationary and irresistibly despotic. You rebels against the established custom have your place in the great work of progressive civilization. Without you, Western Europe would have been a second China. It is to the continual rebellion of such persons as yourself that we owe whatever progress has been accomplished since the times of our remotest forefathers. There have been rebels always, and the rebels have not been, generally speaking, the most stupid part of the nation.

But what is the use of wasting this beneficial power of rebellion on matters too trivial to be worth attention? Does it hurt your conscience to appear in a dress-coat? Certainly not, and you would be as good-looking in it as you are in your velveteen shooting-jacket with the pointers on the bronze buttons. Let us conform in these trivial matters, which nobody except a tailor ought to consider worth a moment's attention, in order to reserve our strength for the protection of intellectual liberty. Let society arrange your dress for you (it will save you infinite trouble), but never permit it to stifle the expression of your thought. You find it convenient, because you are timid, to exclude yourself from the world by refusing to wear its costume; but a bolder man would let the tailor do his worst, and then go into the world and courageously defend there the persons and causes that are misunderstood and slanderously misrepresented. The fables of Spenser are fables only in form, and a noble knight may at any time

go forth, armed in the panoply of a tail-coat, a dress waistcoat, and a manly moral courage, to do battle across the dinner-table and in the drawing-room for those who have none to defend them.

It is unphilosophical to set ourselves obstinately against custom in the mass, for it multiplies the power of men by settling useless discussion and clearing the ground for our best and most prolific activity. The business of the world could not be carried forward one day without a most complex code of customs; and law itself is little more than custom slightly improved upon by men reflecting together at their leisure, and reduced to codes and systems. We ought to think of custom as a most precious legacy of the past, saving us infinite perplexity, yet not as an infallible rule. The most intelligent community would be conservative in its habits, yet not obstinately conservative, but willing to hear and adopt the suggestions of advancing reason. The great duty of the intellectual class, and its especial function, is to confirm what is reasonable in the customs that have been handed down to us, and so maintain their authority, yet at the same time to show that custom is not final, but merely a form suited to the world's convenience. And whenever you are convinced that a custom is no longer serviceable, the way to procure the abolition of it is to lead men very gradually away from it, by offering a substitute at first very slightly different from what they have been long used to. If the English had been in the habit of tattooing, the best way to procure its abolition would have been to admit that it was quite necessary to cover the face with elaborate patterns, yet gently to suggest that these patterns would be still more elegant if delicately painted in water-colors. Then you might have gone on arguing—still admitting, of course, the absolute necessity for ornament of some kind—that good taste demanded only a moderate amount of it; and so you would have brought people gradually to a little flourish on the nose or forehead, when the most advanced reformers might have set the example of dispensing with ornament altogether. Many of our contemporaries have abandoned shaving in this gradual way, allowing the whiskers to encroach imperceptibly, till at last the razor lay in the dressing-case unused. The abominable black cylinders that covered our heads a few years ago were vainly resisted by radicals in custom, but the moderate reformers gradually reduced their elevation, and now they are things of the past.

Though I think we ought to submit to custom in matters of indifference, and to reform it

gradually, whilst affecting submission; matters altogether indifferent, still there are other matters on which the only attitude worthy of a man is the most bold and open resistance to its dictates. Custom may have a right to authority over your wardrobe, but it cannot have any right to ruin your self-respect. Not only the virtues most advantageous to well-being, but also the most contemptible and degrading vices, have at various periods of the world's history been sustained by the full authority of custom. There are places where forty years ago drunkenness was conformity to custom, and sobriety an eccentricity. There are societies, even at the present day, where licentiousness is the rule of custom, and chastity the sign of weakness or want of spirit. There are communities (it cannot be necessary to name them) in which successful fraud, especially on a large scale, is respected as the proof of smartness, whilst a man who remains poor because he is honest is despised for slowness and incapacity. There are whole nations in which religious hypocrisy is strongly approved by custom, and honesty severely condemned. The Wahabee Arabs may be mentioned as an instance of this, but the Wahabee Arabs are not the only people, nor is Nejed the only place, where it is held to be more virtuous to lie on the side of custom than to be an honorable man in independence of it. In all communities where vice and hypocrisy are sustained by the authority of custom, eccentricity is a moral duty. In all communities where a low standard of thinking is received as infallible common sense, eccentricity becomes an intellectual duty. There are hundreds of places in the provinces where it is impossible for any man to lead the intellectual life without being condemned as an eccentric. It is the duty of intellectual men who are thus isolated to set the example of that which their neighbors call eccentricity, but which may be more accurately described as superiority.

LETTER II.

TO A CONSERVATIVE WHO HAD ACCUSED THE AUTHOR OF A WANT OF RESPECT FOR TRADITION.

Transition from the ages of tradition to that of experiment—Attraction of the future—Joubert—Saint-Marc Girardin—Solved and unsolved problems—The introduction of a new element—Inapplicability of past experience—An argument against Republics—The lessons of history—Mistaken predictions that have been based on them—Morality and ecclesiastical authority—Compatibility of hopes for the future with gratitude to the past—That we are more respectful to the past than previous ages have been—Our feelings towards tradition—An incident at Warsaw—The reconstruction of the navy.

THE astonishing revolution in thought and practice which is taking place amongst the intelligent Japanese, the throwing away of a traditional system of living in order to establish in its stead a system which, for an Asiatic people, is nothing more than a vast experiment, has its counterpart in many an individual life in Europe. We are like travellers crossing an isthmus between two seas, who have left one ship behind them, who have not yet seen the vessel that waits on the distant shore, and who experience to the full all the discomforts and inconveniences of the passage from one sea to the other. There is a break between the existence of our forefathers and that of our posterity, and it is we who have the misfortune to be situated exactly where the break occurs. We are leaving behind us the security, I do not say the safety, but the feeling of tranquillity which belonged to the ages of tradition; we are entering upon ages whose spirit we foresee but dimly, whose institutions are the subject of guesses and conjectures. And yet this future, of which we know so little, attracts us more by the very vastness of its enigma than the rich history of the past, so full of various incident, of powerful personages, of grandeur, and suffering, and sorrow. Joubert already noticed this forward-looking of the modern mind. "The ancients," he observed, "said, 'Our ancestors;' we say, 'Posterity.' We do not love as they did *la patrie*, the country and laws of our forefathers; we love rather the laws and the country of our children. It is the magic of the future, and not that of the past, which seduces us." Commenting on this thought of Joubert's, Saint-Marc Girardin said that we loved the future because we loved ourselves, and fashioned the future in our own image; and he added, with partial but not complete injustice, that our ignorance of the past was a cause of this tendency in our minds, since it is shorter to despise the past than to study it. These critics and accusers of the modern spirit are not, however, altogether fair to it. If the modern spirit looks so much to the future, it is because the problems of the past are solved problems, whilst those of the future have the interest of a game that is only just begun. We know what became of feudalism, we know the work that it accomplished and the services that it rendered, but we do not yet know what will be the effects of modern democracy and of the scientific and industrial spirit. It is the novelty of this element, the scientific spirit and the industrial development which is a part (but only a part) of its results, that makes the past so much less reliable as a

guide than it would have been if no new element had intervened, and therefore so much less interesting for us. As an example of the inapplicability of past experience, I may mention an argument against Republics which has been much used of late by the partisans of monarchy in France. They have frequently told us that Republics had only succeeded in very small States, and this is true of ancient democracies; but it is not less true that railways, and telegraphs, and the newspaper press have made great countries like France and the United States just as capable of feeling and acting simultaneously as the smallest Republics of antiquity. The parties which rely on what are called the lessons of history are continually exposed to great deceptions. In France, what may be called the historical party would not believe in the possibility of a united Germany, because fifty years ago, with the imperfect means of communication which then existed, Germany was not and could not be united. The same historical party refused to believe that the Italian kingdom could ever hold together. In England, the historical party predicted the dismemberment of the United States, and in some other countries it has been a favorite article of faith that England could not keep her possessions. But theories of this kind are always of very doubtful applicability to the present, and their applicability to the future is even more doubtful still. Steam and electricity have made great modern States practically like so many great cities, so that Manchester is like a suburb of London, and Havre the Piræus of Paris, whilst the most trifling occasions bring the Sovereign of Italy to any of the Italian capitals.

In the intellectual sphere the experience of the past is at least equally unreliable. If the power of the Catholic Church had been suddenly removed from the Europe of the fourteenth century, the consequence would have been a moral anarchy difficult to conceive; but in our own day the real regulator of morality is not the Church, but public opinion, in the formation of which the Church has a share, but only a share. It would therefore be unsafe to conclude that the weakening of ecclesiastical authority must of necessity, in the future, be followed by moral anarchy, since it is possible, and even probable, that the other great influences upon public opinion may gain strength as this declines. And in point of fact we have already lived long enough to witness a remarkable decline of ecclesiastical authority, which is proved by the avowed independence of scientific writers and thinkers, and by the open opposition of al-

most all the European Governments. The secular power resists the ecclesiastical in Germany and Spain. In France it establishes a form of government which the Church detests. In Ireland it disestablishes and disendows a hierarchy. In Switzerland it resists the whole power of the Papacy. In Italy it seizes the sacred territory and plants itself within the very walls of Rome. And yet the time which has witnessed this unprecedented self-assertion of the laity has witnessed a positive increase in the morality of public sentiment, especially in the love of justice and the willingness to hear truth, even when truth is not altogether agreeable to the listener, and in the respect paid by opponents to able and sincere men, merely for their ability and sincerity. This love of justice, this patient and tolerant hearing of new truth, in which our age immeasurably exceeds all the ages that have preceded it, are the direct results of the scientific spirit, and are not only in themselves eminently moral, but conducive to moral health generally. And this advancement may be observed in countries which were least supposed to be capable of it. Even the French, of whose immorality we have heard so much, have a public opinion which is gradually gaining a salutary strength, an increasing dislike for barbarity and injustice, and a more earnest desire that no citizen, except by his own fault, should be excluded from the benefits of civilization. The throne which has lately fallen was undermined by the currents of this public opinion before it sank in military disaster. "Aussi me contenterai-je," says Littré, "d'appeler l'attention sur la guerre, dont l'opinion publique ne tolère plus les antiques barbaries; sur la magistrature, qui répudie avec horreur les tortures et la question; sur la tolérance, qui a banni les persécutions religieuses; sur l'équité, qui soumet tout le monde aux charges communes; sur le sentiment de solidarité qui du sort des classes pauvres fait le plus pressant et le plus noble problème du temps présent. Pour moi, je ne sais caractériser ce spectacle si hautement moral qu'en disant que l'humanité, améliorée, accepte de plus en plus le devoir et la tâche d'étendre le domaine de la justice et de la bonté."

Yet this partial and comparative satisfaction that we find in the present, and our larger hopes for the future, are quite compatible with gratitude to all who in the past have rendered such improvement possible for us, and the higher improvement that we hope for possible to those who will come after us. I cannot think that the present age may be accused with justice of exceptional ignorance

or scorn of its predecessors. We have been told that we scorn our forefathers because old buildings are removed to suit modern conveniences, because the walls of old York have been pierced for the railway, and a tower of Conway Castle has been undermined that the Holyhead mail may pass. But the truth is, that whilst we care a little for our predecessors, they cared still less for theirs. The mediæval builders not only used as quarries any Roman remains that happened to come in their way, but they spoiled the work of their own fathers and grandfathers by intruding their new fashions on buildings originally designed in a different style of art. When an architect in the present day has to restore some venerable church, he endeavors to do so in harmony with the design of the first builder; but such humility as this was utterly foreign to the mediæval mind, which often destroyed the most lovely and necessary details to replace them with erections in the fashion of the day, but artistically unsuitable.

The same disdain for the labors of other ages has prevailed until within the memory of living men, and our age is really the first that has made any attempt to conform itself, in these things, to the intentions of the dead. I may also observe, that although history is less relied upon as a guide to the future than it was formerly, it is more carefully and thoroughly investigated from an intellectual interest in itself.

To conclude. It seems to me that tradition has much less influence of an authoritative kind than it had formerly, and that the authority which it still possesses is everywhere steadily declining; that as a guide to the future of the world it is more likely to mislead than to enlighten us, and still that all intellectual and educated people must always take a great interest in tradition, and have a certain sentiment of respect for it. Consider what our feelings are towards the Church of Rome, the living embodiment of tradition. No well-informed person can forget the immense services that in former ages she has rendered to European civilization, and yet at the same time such a person would scarcely wish to place modern thought under her direction, nor would he consult the Pope about the tendencies of the modern world. When in 1829 the city of Warsaw erected a monument to Copernicus, a scientific society there waited in the Church of the Holy Cross for a service that was to have added solemnity to their commemoration. They waited vainly. Not a single priest appeared. The clergy did not feel authorized to countenance a scientific dis-

covery which, in a former age, had been condemned by the authority of the Church. This incident is delicately and accurately typical of the relation between the modern and the traditional spirit. The modern spirit is not hostile to tradition, and would not object to receive any consecration which tradition might be able to confer, but there are difficulties in bringing the two elements together.

We need not, however, go so far as Warsaw, or back to the year 1829, for examples of an unwillingness on the part of the modern mind to break entirely with the traditional spirit. Our own country is remarkable both for the steadiness of its advance towards a future widely different from the past, and for an affectionate respect for the ideas and institutions that it gradually abandons, as it is forced out of them by new conditions of existence, I may mention, as one example out of very many, our feeling about the reconstruction of the navy. Here is a matter in which science has compelled us to break with tradition absolutely and irrevocably; we have done so, but we have done so with the greatest regret.

The ships of the line that our hearts and imaginations love are the ships of Nelson and Collingwood and Cochrane. We think of the British fleets that bore down upon the enemy with the breeze in their white sails; we think of the fine qualities of seamanship that were fostered in our *Agamemmons*, and *Victories*, and *Téméraires*. Will the navies of the future ever so clothe their dreadful powers with beauty, as did the ordered columns of Nelson, when they came with a fair wind and all sails set, at eleven o'clock in the morning into Trafalgar Bay? We see the smoke of their broadsides rising up to their sails like mists to the snowy Alps, and high above, against heaven's blue, the unconquered flag of England! Nor do we perceive now for the first time that there was poetry in those fleets of old; our forefathers felt it then, and expressed it in a thousand songs.*

*I had desired to say something about the uses of tradition in the industrial arts and in the fine arts, but the subject is a very large one, and I have not time or space to treat it properly here. I may observe, however, briefly, that the genuine spirit of tradition has almost entirely disappeared from English industry and art, where it has been replaced by a spirit of scientific investigation and experiment. The true traditional spirit was still in full vigor in Japan a few years ago, and it kept the industry and art of that country up to a remarkably high standard. The traditional spirit is most favorable to professional skill, because, under its influence, the apprentice learns thoroughly, whereas under other influences he often learns very imperfectly. The inferiority of English painting to French (considered technically) has been due to the prevalence of a traditional spirit in the French school which was almost entirely absent from our own.

LETTER III.

TO A LADY WHO LAMENTED THAT HER SON HAD INTELLECTUAL DOUBTS CONCERNING THE DOGMAS OF THE CHURCH.

The situation of mother and son a very common one—Painful only when the parties are in earnest—The knowledge of the difference evidence of a deeper unity—Value of honesty—Evil of a splendid official religion not believed by men of culture—Diversity of belief an evidence of religious vitality—Criticism not to be ignored—Desire for the highest attainable truth—Letter from Lady Westmorland about her son, Julian Fane.

THE difference which you describe as having arisen between your son and you on the most grave and important subject which can occupy the thoughts of men, gives the outline of a situation painful to both the parties concerned, and which lays on each of them new and delicate obligations. You do not know how common this situation is, and how sadly it interferes with the happiness of the very best and most pure-minded souls alive. For such a situation produces pain only where both parties are earnest and sincere; and the more earnest both are, the more painful does the situation become. If you and your son thought of religion merely from the conventional point of view, as the world does only too easily, you would meet on a common ground, and might pass through life without ever becoming aware of any gulf of separation, even though the hollowness of your several professions were of widely different kinds. But as it happens, unfortunately for your peace (yet would you have it otherwise?), that you are both in earnest, both anxious to believe what is true and do what you believe to be right, you are likely to cause each other much suffering of a kind altogether unknown to less honorable and devoted natures. There are certain forms of suffering which affect only the tenderest and truest hearts; they have so many privileges, that this pain has been imposed upon them as the shadow of their sunshine.

Let me suggest, as some ground of consolation and of hope, that your very knowledge of the difference which pains you is in itself the evidence of a deeper unity. If your son has told you the full truth about the changes in his belief, it is probably because you yourself have educated him in the habit of truthfulness, which is as much a law of religion as it is of honor. Do you wish this part of his education to be enfeebled or obliterated? Could the Church herself reasonably or consistently blame him for practising the one virtue which, in a peaceful and luxurious society, demands a certain exercise of courage? Our beliefs are independent of our will, but

our honesty is not; and he who keeps his honesty keeps one of the most precious possessions of all true Christians and gentlemen.

What state of society can be more repugnant to high religious feeling than a state of smooth external unanimity combined with the indifference of the heart, a state in which some splendid official religion performs its daily ceremonies as the costliest functionary of the Government, whilst the men of culture take a share in them out of conformity to the customs of society, without either the assent of the intellect or the emotion of the soul? All periods of great religious vitality have been marked by great and open diversity of belief; and to this day those countries where religion is most alive are the farthest removed from unanimity in the details of religious doctrine. If your son thinks these things of such importance to his conscience that he feels compelled to inflict upon you the slightest pain on their account, you may rest assured that his religious fibre is still full of vitality. If it were deadened, he would argue very much as follows. He would say: "These old doctrines or the Church are not of sufficient consequence for me to disturb my mother about them. What is the use of alluding to them ever?" And then you would have no anxiety; and he himself would have the feeling of settled peace which comes over a battle-field when the dead are buried out of sight.

It is the peculiarity—some would say the evil, but I cannot think it an evil—of an age of great intellectual activity to produce an amount of critical inquiry into religious doctrine which is entirely unknown to times of simple tradition. And in these days the critical tendency has received a novel stimulus from the successive suggestions of scientific discovery. No one who, like your son, fully shares in the intellectual life of the times in which he lives, can live as if this criticism did not exist. If he affected to ignore it, as an objection already answered, there would be disingenuousness in the affectation. Fifty years ago, even twenty or thirty years ago, a highly intellectual young man might have hardened into the fixed convictions of middle age without any external disturbance, except such as might have been easily avoided. The criticism existed then, in certain circles; but it was not in the air, as it is now. The life of mankind resembles that of a brook which has its times of tranquillity, but farther on its times of trouble and unrest. Our immediate forefathers had the peaceful time for their

lot; those who went before them had passed over very rough ground at the Reformation. For us, in our turn, comes the recurrent restlessness, though not in the same place. What we are going to, who can tell? What we suffer just now, you and many others know too accurately. There are gulfs of separation in homes of the most perfect love. Our only hope of preserving what is best in that purest of earthly felicities lies in the practice of an immense charity, a wide tolerance, a sincere respect for opinions that are not ours, and a deep trust that the loyal pursuit of truth cannot but be in perfect accordance with the intentions of the Creator, who endowed the noblest races of mankind with the indefatigable curiosity of science. Not to inquire was possible for our fore-fathers, but it is not possible for us. With our intellectual growth has come an irrepressible anxiety to possess the highest truth attainable by us. This desire is not sinful, not presumptuous, but really one of the best and purest of our instincts, being nothing else than the sterling honesty of the intellect, seeking the harmony of concordant truth, and utterly disinterested.

I may quote, as an illustration of the tendencies prevalent amongst the noblest and most cultivated young men, a letter from Lady Westmorland to Mr. Robert Lytton about her accomplished son, the now celebrated Julian Fane. "We had," she said, "several conversations, during his last illness, upon religious subjects, about which he had his own peculiar views. The disputes and animosities between High and Low Church, and all the feuds of religious sectarianism, caused him the deepest disgust. I think, indeed, that he carried this feeling too far. He had a horror of *cant*, which I also think was exaggerated; for it gave him a repulsion for all outward show of religious observances. He often told me that he never missed the practice of prayer, at morning and evening, and at other times. But his prayers were his own: his own thoughts in his own words. He said that he could not pray in the set words of another; nor unless he was *alone*. As to joining in family prayers, or praying at church, he found it impossible. He constantly read the New Testament. He deprecated the indiscriminate reading of the Bible. He firmly believed in the efficacy of sincere prayer; and was always pleased when I told him I had prayed for him."

To this it may be added, that many recent conversions to the Church of Rome, though apparently of an exactly opposite character, have in reality also been brought about by

the scientific inquiries of the age. The religious sentiment, alarmed at the prospect of a possible taking away of that which it feeds upon, has sought in many instances to preserve it permanently under the guardianship of the strongest ecclesiastical authority. In an age of less intellectual disturbance this anxiety would scarcely have been felt; and the degree of authority claimed by one of the reformed Churches would have been accepted as sufficient. Here again the agitations of the modern intellect have caused division in families; and as you are lamenting the heterodoxy of your son, so other parents regret the Roman orthodoxy of theirs.

LETTER IV.

TO THE SON OF THE LADY TO WHOM THE PRECEDING LETTER WAS ADDRESSED.

Difficulty of detaching intellectual from religious questions—The sacerdotal system—Necessary to ascertain what religion is—Intellectual religion really nothing but philosophy—The popular instinct—The test of belief—Public worship—The intellect moral, but not religious—Intellectual activity sometimes in contradiction to dogma—Differences between the intellectual and religious lives.

YOUR request is not so simple as it appears. You ask me for a frank opinion as to the course your mind is taking in reference to very important subjects; but you desire only intellectual, and not religious guidance. The difficulty is to effect any clear demarcation between the two. Certainly I should never take upon myself to offer religious advice to any one; it is difficult for those who have not qualified themselves for the priestly office to do that with force and effect. The manner in which a priest leads and manages a mind that has from the first been moulded in the beliefs and observances of his Church, cannot be imitated by a layman. A priest starts always from authority; his method, which has been in use from the earliest ages, consists first in claiming your unquestioning assent to certain doctrines, from which he immediately proceeds to deduce the inferences that may affect your conduct or regulate your thoughts. It is a method perfectly adapted to its own ends. It can deal with all humanity, and produce the most immediate practical results. So long as the assent to the doctrines is sincere, the sacerdotal system may contend successfully against some of the strongest forms of evil; but when the assent to the doctrines has ceased to be complete, when some of them are half-believed and others not believed at all, the system loses much of its primitive efficiency. It seems likely that your difficulty, the diffi-

culty of so many intellectual men in these days, is to know where the intellectual questions end and the purely religious ones can be considered to begin. If you could once ascertain that, in a manner definitely satisfactory, you would take your religious questions to a clergyman and your intellectual ones to a man of science, and so get each solved independently.

Without presuming to offer a solution of so complex a difficulty as this, I may suggest to you that it is of some importance to your intellectual life to ascertain what religion is. A book was published many years ago by a very learned author, in which he endeavored to show that what is vulgarly called scepticism may be intellectual religion. Now, although nothing can be more distasteful to persons of culture than the bigotry which refuses the name of religion to other people's opinions, merely because they are other people's opinions, I suspect that the popular instinct is right in denying the name of religion to the inferences of the intellect. The description which the author just alluded to gave of what he called intellectual religion was in fact simply a description of philosophy, and of that discipline which the best philosophy imposes upon the heart and the passions. On the other hand, Dr. Arnold, when he says that by religion he always understands Christianity, narrows the word as much as he would have narrowed the word "patriotism" had he defined it to mean a devotion to the interests of England. I think the popular instinct, though of course quite unable to construct a definition of religion, is in its vague way very well aware of the peculiar nature of religious thought and feeling. The popular instinct would certainly never confound religion with philosophy on the one hand, nor, on the other, unless excited to opposition, would it be likely to refuse the name of religion to another worship, such as Mahometanism, for instance.

According to the popular instinct, then, which on a subject of this kind appears the safest of all guides, a religion involves first a belief and next a public practice. The nature of the belief is in these days wholly peculiar to religion; in other times it was not so, because then people believed other things much in the same way. But in these days the test of religious belief is that it should make men accept as certain truth what they would disbelieve on any other authority. For example, a true Roman Catholic believes that the consecrated host is the body of Christ, and so long as he lives in the purely religious spirit he continues to believe this; but so soon as

the power of his religious sentiment declines he ceases to believe it, and the wafer appears to him a wafer, and no more. And so amongst Protestants the truly religious believe many things which no person not being under the authority of religion could by any effort bring himself to believe. It is easy, for example, to believe that Joshua arrested the sun's apparent motion, so long as the religious authority of the Bible remains perfectly intact; but no sooner does the reader become critical than the miracle is disbelieved. In all ages, and in all countries, religions have narrated marvellous things, and the people have always affirmed that not to believe these narratives constituted the absence of religion, or what they called atheism. They have equally, in all ages and countries, held the public act of participation in religious worship to be an essential part of what they called religion. They do not admit the sufficiency of secret prayer.

Can these popular instincts help us to a definition? They may help us at least to mark the dividing line between religion and morality, between religion and philosophy. No one has ever desired, more earnestly and eagerly than I, to discover the foundations of the intellectual religion; no one has ever felt more chilling disappointment in the perception of the plain bare fact that the intellect gives morality, philosophy, precious things indeed, but not religion. It is like seeking art by science. Thousands of artists, whole schools from generation to generation, have sought fine art through anatomy and perspective; and although these sciences did not hinder the born artists from coming to art at last; they did not ensure their safe arrival in the art-paradise; in many instances they even led men away from art. So it is with the great modern search for the intellectual religion; the idea of it is scientific in its source, and the result of it, the last definite attainment, is simply intellectual morality, not religion in the sense which all humanity has attached to religion during all the ages that have preceded ours.

We may say that philosophy is the religion of the intellectual; and if we go scrupulously to Latin derivations, it is so. But taking frankly the received meaning of the word as it is used by mankind everywhere, we must admit that, although high intellect would lead us inevitably to high and pure morality, and to most scrupulously beautiful conduct in everything, towards men, towards women, towards even the lower and lowest animals, still it does not lead us to that belief in the otherwise unbelievable, or to that de-

tailed *cultus* which is meant by religion in the universally accepted sense. It is disingenuous to take a word popularly respected and attribute to it another sense. Such a course is not strictly honest, and therefore not purely intellectual; for the foundation of the intellectual life is honesty.

The difficulty of the intellectual life is, that whilst it can never assume a position of hostility to religion, which it must always recognize as the greatest natural force for the amelioration of mankind, it is nevertheless compelled to enunciate truths which may happen to be in contradiction with dogmas received at this or that particular time. That you may not suspect me of a disposition to dwell continually on safe generalities and to avoid details out of timidity, let me mention two cases on which the intellectual and scientific find themselves at variance with the clergy. The clergy tell us that mankind descend from a single pair, and that in the earlier ages the human race attained a longevity counted not by decades but by centuries. Alexander Humboldt disbelieves the first of these propositions, Professor Owen disbelieves the second. Men of science generally are of the same opinion. Few men of science accept Adam and Eve, few accept Methuselah. Professor Owen argues that, since the oldest skeletons known have the same system of teething that we have, man can never have lived long enough to require nine sets of teeth. In regard to these, and a hundred other points on which science advances new views, the question which concerns us is how we are to maintain the integrity of the intellectual life. The danger is the loss of inward ingenuousness, the attempt to persuade ourselves that we believe opposite statements. If once we admit disingenuousness into the mind, the intellectual life is no longer serene and pure. The plain course for the preservation of our honesty, which is the basis of truly intellectual thinking, is to receive the truth, whether agreeable or the contrary, with all its train of consequences, however repulsive or discouraging. In attempting to reconcile scientific truth with the oldest traditions of humanity, there is but one serious danger, the loss of intellectual integrity. Of that possession modern society has little left to lose.

But let us understand that the intellectual life and the religious life are as distinct as the scientific and the artistic lives. They may be led by the same person, but by the same person in different moods. They coincide on some points, accidentally. Certainly, the basis of high thinking is perfect honesty, and

honesty is a recognized religious virtue. Where the two minds differ is on the importance of authority. The religious life is based upon authority, the intellectual life is based upon personal investigation. From the intellectual point of view I cannot advise you to restrain the spirit of investigation, which is the scientific spirit. It may lead you very far, yet always to truth, ultimately, —you, or those after you, whose path you may be destined to prepare. Science requires a certain inward heat and heroism in her votaries, notwithstanding the apparent coldness of her statements. Especially does she require that intellectual fearlessness which accepts a proved fact without reference to its personal or its social consequences.

LETTER V.

TO A FRIEND WHO SEEMED TO TAKE CREDIT TO HIMSELF, INTELLECTUALLY, FROM THE NATURE OF HIS RELIGIOUS BELIEF.

Anecdote of a Swiss gentleman—Religious belief protects traditions, but does not weaken the critical faculty itself—Illustration from the art of etching—Sydney Smith—Dr. Arnold—Earnest religious belief of Ampère—Comte and Sainte-Beuve—Faraday—Belief or unbelief proves nothing for or against intellectual capacity.

I HAPPENED once to be travelling in Switzerland with an eminent citizen of that country, and I remember how in speaking of some place we passed through he associated together the ideas of Protestantism and intellectual superiority in some such phrase as this: "The people here are very superior; they are Protestants." There seemed to exist, in my companion's mind, an assumption that Protestants would be superior people intellectually, or that superior people would be Protestants; and this set me thinking whether, in the course of such experience as had fallen in my way, I had found that religious creed had made much difference in the matter of intellectual acumen or culture.

The exact truth appears to be this. A religious belief protects this or that subject against intellectual action, but it does not affect the energy of the intellectual action upon subjects which are not so protected. Let me illustrate this by a reference to one of the fine arts, the art of etching. The etcher protects a copper-plate by means of a waxy covering called etching-ground, and wherever this ground is removed the acid bites the copper. The waxy ground does not in the least affect the strength of the acid, it only intervenes between it and the metal plate. So it is in the

mind of man with regard to his intellectual acumen and his religious creed. The creed may protect a tradition from the operation of the critical faculty, but it does not weaken the critical faculty itself. In the English Church, for example, the Bible is protected against criticism; but this does not weaken the critical faculty of English clergymen with reference to other literature, and many of them give evidence of a strong critical faculty in all matters not protected by their creed. Think of the vigorous common sense of Sydney Smith, exposing so many abuses at a time when it needed not only much courage but great originality to expose them! Remember the intellectual force of Arnold, a great natural force if ever there was one—so direct in action, so independent of contemporary opinion! Intellectual forces of this kind act freely not only in the Church of England, but in other Churches, even in the Church of Rome. Who amongst the scientific men of this century has been more profoundly scientific, more capable of original scientific discovery than Ampère? Yet Ampère was a Roman Catholic, and not a Roman Catholic in the conventional sense merely, like the majority of educated Frenchmen, but a hearty and enthusiastic believer in the doctrines of the Church of Rome. The belief in transubstantiation did not prevent Ampère from becoming one of the best chemists of his time, just as the belief in the plenary inspiration of the New Testament does not prevent a good Protestant from becoming an acute critic of Greek literature generally. A man may have the finest scientific faculty, the most advanced scientific culture, and still believe the consecrated wafer to be the body of Jesus Christ. For since he still believes it to be the body of Christ under the apparent form of a wafer, it is evident that the wafer under chemical analysis would resolve itself into the same elements as before consecration; therefore why consult chemistry?

What has chemistry to say to a mystery of this kind, the essence of which is the *complete* disguise of a human body under a form in *all* respects answering the material semblance of a wafer? Ampère must have foreseen the certain results of analysis as clearly as the best chemist educated in the principles of Protestantism, but this did not prevent him from adoring the consecrated host in all the sincerity of his heart.

I say that it does not follow, because M. or N. happens to be a Protestant, that he is intellectually superior to Ampère, or because M. or N. happens to be a Unitarian, or a Deist,

or a Positivist, that he is intellectually superior to Dr. Arnold or Sydney Smith. And on the other side of this question it is equally unfair to conclude that because a man does not share whatever may be our theological beliefs on the positive side, he must be less capable intellectually than we are. Two of the finest and most disciplined modern intellects, Comte and Sainte-Beuve, were neither Catholics, nor Protestants, nor Deists, but convinced atheists; yet Comte until the period of his decline, and Sainte-Beuve up to the very hour of his death, were quite in the highest rank of modern scientific and literary intellect.

The inference from these facts which concerns every one of us is, that we are not to build up any edifice of intellectual self-satisfaction on the ground that in theological matters we believe or disbelieve this thing or that. If Ampère believed the doctrines of the Church of Rome, which to us seem so incredible, if Faraday remained throughout his brilliant intellectual career (certainly one of the most brilliant ever lived through by a human being) a sincere member of the obscure sect of the Sandemanians, we are not warranted in the conclusion that we are intellectually their betters because our theology is more novel, or more fashionable, or more in harmony with reason. Nor, on the other hand, does our orthodoxy prove anything in favor of our mental force and culture. Who, amongst the most orthodox writers, has a more forcible and cultivated intellect than Sainte-Beuve?—who can better give us the tone of perfect culture, with its love of justice, its thoroughness in preparation, its superiority to all crudeness and violence? Anglican or Romanist, dissenter or heretic, may be our master in the intellectual sphere, from which no sincere and capable laborer is excluded, either by his belief or by his unbelief.

LETTER VI.

TO A ROMAN CATHOLIC FRIEND WHO ACCUSED
THE INTELLECTUAL CLASS OF A WANT OF
REVERENCE FOR AUTHORITY.

Necessity for treating affirmations as if they were doubtful—The Papal Infallibility—The Infallibility of the Sacred Scriptures—Opposition of method between Intellect and Faith—The perfection of the Intellectual life requires intellectual methods—Inevitable action of the intellectual forces.

It is very much the custom, in modern writing about liberty of thought, to pass

lightly over the central difficulty, which sooner or later will have to be considered. The difficulty is this, that the freedom of the intellectual life can never be secured except by treating as if they were doubtful several affirmations which large masses of mankind hold to be certainties as indisputable as the facts of science. One of the most recently conspicuous of these affirmations is the infallibility of the Pope of Rome. Nothing can be more certain in the opinion of immense numbers of Roman Catholics than the infallible authority of the Supreme Pontiff on all matters affecting doctrine. But then the matters affecting doctrine include many subjects which come within the circle of the sciences. History is one of those subjects which modern intellectual criticism takes leave to study after its own methods, and yet certain prevalent views of history are offensive to the Pope and explicitly condemned by him. The consequence is, that in order to study history with mental liberty, we have to act practically as if there existed a doubt of the Papal infallibility. The same difficulty occurs with reference to the great Protestant doctrine which attributes a similar infallibility to the various authors who composed what are now known to us as the Holy Scriptures.

Our men of science act, and the laws of scientific investigation compel them to act, as if it were not quite certain that the views of scientific subjects held by those early writers were so final as to render modern investigation superfluous. It is useless to disguise the fact that there is a real opposition of method between intellect and faith, and that the independence of the intellectual life can never be fully secured unless all affirmations based upon authority are treated as if they were doubtful. This implies no change of manner in the intellectual classes towards those classes whose mental habits are founded upon obedience. I mean that the man of science does not treat the affirmations of any priesthood with less respect than the affirmations of his own scientific brethren; he applies with perfect impartiality the same criticism to all affirmations, from whatever source they emanate. The intellect does not recognize authority in any one, and intellectual men do not treat the Pope, or the author of Genesis, with less consideration than those famous persons who in their day have been the brightest luminaries of science. The difficulty, however, remains, that whilst the intellectual class has no wish to offend either those who believe in the infallibility of the Pope, or those who believe in the infallibility

of the author of Genesis, it is compelled to conduct its own investigations as if those infallibilities were matters of doubt and not of certainty.

Why this is so, may be shown by a reference to the operation of Nature in other ways. The rewards of physical strength and health are not given to the most moral, to the most humane, to the most gentle, but to those who have acted, and whose forefathers have acted, in the most perfect accord with the laws of their physical constitution. So the perfection of the intellectual life is not given to the most humble, the most believing, the most obedient, but to those who use their minds according to the most purely intellectual methods. One of the most important truths that human beings can know is the perfectly independent working of the natural laws: one of the best practical conclusions to be drawn from the observation of Nature is that in the conduct of our own understandings we should use a like independence.

It would be wrong, in writing to you on subjects so important as these, to shrink from handling the real difficulties. Every one now is aware that science must and will pursue her own methods and work according to her own laws, without concerning herself with the most authoritative affirmations from without. But if science said one thing and authoritative tradition said another, no perfectly ingenuous person could rest contented until he had either reconciled the two or decidedly rejected one of them. It is impossible for a mind which is honest towards itself to admit that a proposition is true and false at the same time, true in science and false in theology. Therefore, although the intellectual methods are entirely independent of tradition, it may easily happen that the indirect results of our following those methods may be the overthrow of some dogma which has for many generations been considered indispensable to man's spiritual welfare. With regard to this contingency it need only be observed that the intellectual forces of humanity must act, like floods and winds, according to their own laws; and that if they cast down any edifice too weak to resist them, it must be because the original constructors had not built it substantially, or because those placed in charge of it had neglected to keep it in repair. This is their business, not ours. Our work is simply to ascertain truth by our own independent methods, alike without hostility to any persons claiming authority, and without deference to them.

PART VII

WOMEN AND MARRIAGE.

LETTER I.

TO A YOUNG GENTLEMAN OF INTELLECTUAL TASTES, WHO, WITHOUT HAVING AS YET ANY PARTICULAR LADY IN VIEW, HAD EXPRESSED, IN A GENERAL WAY, HIS DETERMINATION TO GET MARRIED.

How ignorant we all are about marriage—People wrong in their estimates of the marriages of others—Effects of marriage on the intellectual life—Two courses open—A wife who would not interfere with elevated pursuits—A wife capable of understanding them—Madame Ingres—Difference in the education of the sexes—Difficulty of educating a wife.

THE subject of marriage is one concerning which neither I nor anybody else can have more than an infinitesimally small atom of knowledge. Each of us knows how his or her own marriage has turned out; but that, in comparison with a knowledge of marriage generally, is like a single plant in comparison with the flora of the globe. The utmost experience on this subject to be found in this country extends to about three trials or experiments. A man may become twice a widower, and then marry a third time, but it may be easily shown that the variety of his experience is more than counterbalanced by its incompleteness in each instance. For the experiment to be conclusive even as to the wisdom of one decision, it must extend over half a lifetime. A true marriage is not a mere temporary arrangement, and although a young couple are said to be married as soon as the lady has changed her name, the truth is that the real marriage is a long slow intergrowth, like that of two trees planted quite close together in the forest.

The subject of marriage generally is one of which men know less than they know of any other subject of universal interest. People are almost always wrong in their estimates of the marriages of others, and the best proof how little we know the real tastes and needs of those with whom we have been most intimate, is our unfailing surprise at the marriages they make. Very old and experienced people fancy they know a great deal about younger couples, but their guesses, there is good reason to believe, never *exactly* hit the mark.

Ever since this idea, that marriage is a subject we are all very ignorant about, had taken root in my own mind, many little incidents

were perpetually occurring to confirm it; they proved to me, on the one hand, how often I had been mistaken about other people, and, on the other hand, how mistaken other people were concerning the only marriage I profess to know anything about, namely, my own.

Our ignorance is all the darker that few men tell us the little that they know, that little being too closely bound up with that innermost privacy of life which every man of right feeling respects in his own case, as in the case of another. The only instances which are laid bare to the public view are the unhappy marriages, which are really not marriages at all. An unhappy alliance bears exactly the same relation to a true marriage that disease does to health, and the quarrels and misery of it are the crises by which Nature tries to bring about either the recovery of happiness, or the endurable peace of a settled separation.

All that we really know about marriage is that it is based upon the most powerful of all our instincts, and that it shows its own justification in its fruits, especially in the prolonged and watchful care of children. But marriage is very complex in its effects, and there is one set of effects, resulting from it, to which remarkably little attention has been paid hitherto,—I mean its effects upon the intellectual life. Surely they deserve consideration by all who value culture.

I believe that for an intellectual man, only two courses are open; either he ought to marry some simple dutiful woman who will bear him children, and see to the household matters, and love him in a trustful spirit without jealousy of his occupations; or else, on the other hand, he ought to marry some highly intelligent lady, able to carry her education far beyond school experiences, and willing to become his companion in the arduous paths of intellectual labor. The danger in the first of the two cases is that pointed out by Wordsworth in some verses addressed to lake-tourists who might feel inclined to buy a peasant's cottage in Westmoreland. The tourist would spoil the little romantic spot if he bought it; the charm of it is subtly dependent upon the poetry of a simple life, and would be brushed away by the influence of the things that are necessary to people in the middle class. I remember dining in a country inn with an English officer whose ideas were singularly unconventional. We were waited upon by our host's daughter, a beautiful girl, whose manners were remarkable for their natural elegance and distinction. It seemed to us both that no lady of rank could be more dis-

tinguished than she was; and my companion said that he thought a gentleman might do worse than ask that girl to marry him, and settle down quietly in that quiet mountain village, far from the cares and vanities of the world. That is a sort of dream which has occurred no doubt to many an honorable man. Some men have gone so far as to try to make the dream a reality, and have married the beautiful peasant. But the difficulty is that she does not remain what she was; she becomes a sort of make-belief lady, and then her ignorance, which in her natural condition was a charming *naïveté*, becomes an irritating defect. If, however, it were possible for an intellectual man to marry some simple-hearted peasant girl, and keep her carefully in her original condition, I seriously believe that the venture would be less perilous to his culture than an alliance with some woman of our Philistine classes, equally incapable of comprehending his pursuits, but much more likely to interfere with them. I once had a conversation on this subject with a distinguished artist, who is now a widower, and who is certainly not likely to be prejudiced against marriage by his own experience, which had been an unusually happy one. His view was that a man devoted to art might marry either a plain-minded woman, who would occupy herself exclusively with household matters and shield his peace by taking these cares upon herself, or else a woman quite capable of entering into his artistic life; but he was convinced that a marriage which exposed him to unintelligent criticism and interference would be dangerous in the highest degree. And of the two kinds of marriage which he considered possible he preferred the former, that with the entirely ignorant and simple person from whom no interference was to be apprehended. He considered the first Madame Ingres the true model of an artist's wife, because she did all in her power to guard her husband's peace against the daily cares of life and never herself disturbed it, acting the part of a breakwater which protects a space of calm, and never destroys the peace that it has made. This may be true for artists whose occupation is rather æsthetic than intellectual, and does not get much help or benefit from talk; but the ideal marriage for a man of great literary culture would be one permitting some equality of companionship, or, if not equality, at least interest. That this ideal is not a mere dream, but may consolidate into a happy reality several examples prove; yet these examples are not so numerous as to relieve me from anxiety about your chances of finding such companionship. The different

education of the two sexes separates them widely at the beginning, and to meet on any common ground of culture a second education has to be gone through. It rarely happens that there is resolution enough for this.

The want of thoroughness and reality in the education of both sexes, but especially in that of women, may be attributed to a sort of policy which is not very favorable to companionship in married life. It appears to be thought wise to teach boys things which women do not learn, in order to give women a degree of respect for men's attainments, which they would not be so likely to feel if they were prepared to estimate them critically; whilst girls are taught arts and languages which until recently were all but excluded from our public schools, and won no rank at our universities. Men and women had consequently scarcely any common ground to meet upon, and the absence of serious mental discipline in the training of women made them indisposed to submit to the irksomeness of that earnest intellectual labor which might have remedied the deficiency. The total lack of accuracy in their mental habits was then, and is still for the immense majority of women, the least easily surmountable impediment to culture. The history of many marriages which have failed to realize intellectual companionship is comprised in a sentence which was actually uttered by one of the most accomplished of my friends: "She knew nothing when I married her. I tried to teach her something; it made her angry, and I gave it up."

LETTER II.

TO A YOUNG GENTLEMAN WHO CONTEMPLATED MARRIAGE.

The foundations of the intellectual marriage—Marriage not a snare or pitfall for the intellectual—Men of culture, who marry badly, often have themselves to blame—For every grade of the masculine intellect there exists a corresponding grade of the feminine intellect—Difficulty of finding the true mate—French University Professors—An extreme case of intellectual separation—Regrets of a widow—Women help us less by adding to our knowledge than by understanding us.

In several letters which have preceded this I have indicated some of the differences between the female sex and ours, and it is time to examine the true foundations of the intellectual marriage. Let me affirm, to begin with, my profound faith in the natural arrangement. There is in nature so much evident care for the development of the intellectual life, so much protection of it in the social order, there are such admirable contri-

vances for continuing it from century to century, that we may fairly count upon some provision for its necessities in marriage. Intellectual men are not less alive to the charms of women than other men are; indeed the greatest of them have always delighted in the society of women. If marriage were really dangerous to the intellectual life, it would be a moral snare or pitfall, from which the best and noblest would be least likely to escape. It is hard to believe that the strong passions which so often accompany high intellectual gifts were intended either to drive their possessors into immorality or else to the misery of ill-assorted unions.

No, there is such a thing as the intellectual marriage, in which the intellect itself is married. If such marriages are not frequent, it is that they are not often made the deliberate purpose of a wise alliance. Men choose their wives because they are pretty, or because they are rich, or because they are well-connected, but rarely for the permanent interest of their society. Yet who that had ever been condemned to the dreadful embarrassments of a *tête-à-tête* with an uncompanionable person, could reflect without apprehension on a lifetime of such *tête-à-têtes*?

When intellectual men suffer from this misery they have themselves to blame. What is the use of having any mental superiority, if, in a matter so enormously important as the choice of a companion for life, it fails to give us a warning when the choice is absurdly unsuitable? When men complain, as they do not unfrequently, that their wives have no ideas, the question inevitably suggests itself, why the superiority of the masculine intellect did not, in these cases, permit it to discover the defect in time? If we are so clever as to be bored by ordinary women, why cannot our cleverness find out the feminine cleverness which would respond to it?

What I am going to say now is in its very nature incapable of proof, and yet the longer I live the more the truth of it is "borne in upon me." I feel convinced that for every grade of the masculine intellect there exists a corresponding grade of the feminine intellect, so that a precisely suitable intellectual marriage is always possible for every one. But since the higher intellects are rare, and rare in proportion to their elevation, it follows that the difficulty of finding the true mate increases with the mental strength and culture of the man. If the "mental princes," as Blake called himself, are to marry the mental princesses, they will not always discover them quite so easily as kings' sons find kings' daughters.

This difficulty of finding the true mate is the real reason why so many clever men marry silly or stupid women. The women about them seem to be all very much alike, mentally; it seems hopeless to expect any real companionship, and the clever men are decided by the color of a girl's eyes, or a thousand pounds more in her dowry, or her relationship to a peer of the realm.

It was remarked to me by a French university professor, that although men in his position had on the whole much more culture than the middle class, they had an extraordinary talent for winning the most vulgar and ignorant wives. The explanation is, that their marriages are not intellectual marriages at all. The class of French professors is not advantageously situated; it has not great facilities for choice. Their incomes are so small that, unless helped by private means, the first thing they can prudently look to in a wife is her utility as a domestic servant, which, in fact, it is her destiny to become. The intellectual disparity is from the beginning likely to be very great, because the professor is confined to the country-town where his *Lycée* happens to be situated, and in that town he does not always see the most cultivated society. He may be an intellectual prince, but where is he to find his princess? The marriage begins without the idea of intellectual companionship, and it continues as it began. The girl was uneducated: it seems hopeless to try to educate the woman; and then there is the supreme difficulty, only to be overcome by two wills at once most resolute and most persistent, namely, how to find the time. Years pass; the husband is occupied all day; the wife needs to cheer herself with a little society, and goes to sit with neighbors who are not likely to add anything valuable to her knowledge or to give any elevation to her thoughts. Then comes the final fixing and crystallization of her intellect, after which, however much pains and labor might be taken by the pair, she is past the possibility of change.

These women are often so good and devoted that their husbands enjoy great happiness; but it is a kind of happiness curiously independent of the lady's presence. The professor may love his wife, and fully appreciate her qualities as a housekeeper, but he passes a more interesting evening with some male friend whose reading is equal to his own. Sometimes the lady perceives this, and it is an element of sadness in her life.

"I never see my husband," she tells you, not in anger. "His work occupies him all day, and in the evening he sees his friends."

The pair walk out together twice a week. I sometimes wonder what they say to each other during those conjugal promenades. They talk about their children, probably, and the little recurring difficulties about money. He cannot talk about his studies, or the intellectual speculations which his studies continually suggest.

The most extreme cases of intellectual separation between husband and wife that ever came under my observation was, however, not that of a French professor, but a highly-cultivated Scotch lawyer. He was one of the most intellectual men I ever knew—a little cynical, but full of original power, and uncommonly well-informed. His theory was, that women ought not to be admitted into the region of masculine thought—that it was not good for them; and he acted so consistently up to this theory, that although he would open his mind with the utmost frankness to a male acquaintance over the evening whisky-toddy, there was not whisky enough in all Scotland to make him frank in the presence of his wife. She really knew nothing whatever about his intellectual existence; and yet there was nothing in his ways of thinking which an honorable man need conceal from an intelligent woman. His theory worked well enough in practice, and his reserve was so perfect that it may be doubted whether even feminine subtlety ever suspected it. The explanation of his system may perhaps have been this. He was an exceedingly busy man; he felt that he had not time to teach his wife to know him as he was, and so preferred to leave her with her own conception of him, rather than disturb that conception when he believed it impossible to replace it by a completely true one. We all act in that way with those whom we consider *quite* excluded from our private range of thought.

All this may be very prudent and wise: there may be degrees of conjugal felicity, satisfactory in their way, without intellectual intercourse, and yet I cannot think that any man of high culture could regard his marriage as altogether a successful one so long as his wife remained shut out from his mental life. Nor is the exclusion always quite agreeable to the lady herself. A widow said to me that her husband had never thought it necessary to try to raise her to his own level, yet she believed that with his kindly help she might have attained it.

You with your masculine habits, may observe, as to this, that if the lady had seriously cared to attain a higher level she might have achieved it by her own private independent effort. But this is exactly what the feminine

nature never does. A clever woman is the best of pupils, when she loves her teacher, but the worst of solitary learners.

It is not by adding to our knowledge, but by understanding us, that women are our helpers. They understand us far better than men do, when once they have the degree of preliminary information which enables them to enter into our pursuits. Men are occupied with their personal works and thoughts, and have wonderfully little sympathy left to enable them to comprehend us; but a woman, by her divine sympathy—divine indeed, since it was given by God for this—can enter into our inmost thought, and make allowances for all our difficulties. Talk about your work and its anxieties to a club of masculine friends, they will give very little heed to you; they are all thinking about themselves, and they will dislike your egotism because they have so much egotism of their own, which yours invades and inconveniences. But talk in the same way to any woman who has education enough to enable her to follow you, and she will listen so kindly, and so very intelligently, that you will be betrayed into interminable confidences.

Now, although an intellectual man may not care to make himself understood by all the people in the street, it is not a good thing for him to feel that he is understood by nobody. The intellectual life is sometimes a fearfully solitary one. Unless he lives in a great capital the man devoted to that life is more than all other men liable to suffer from isolation, to feel utterly alone beneath the deafness of space and the silence of the stars. Give him one friend who can understand him, who will not leave him, who will always be accessible by day and night—one friend, one kindly listener, just one, and the whole universe is changed. It is deaf and indifferent no longer, and whilst she listens, it seems as if all men and angels listened also, so perfectly his thought is mirrored in the light of her answering eyes.

LETTER III.

TO A YOUNG GENTLEMAN WHO CONTEMPLATED MARRIAGE.

The intellectual ideal of marriage—The danger of dulness—To be counteracted only by the renewal of both minds—Example of Lady Baker—Separation of the sexes by an old prejudice about education—This prejudice on the decline—Influence of the late Prince Consort.

How far may you hope to realize the intellectual ideal of marriage? Have I ever observed in actual life any approximate realization of that ideal?

These are the two questions which conclude and epitomize the last of your recent letters. Let me endeavor to answer them as satisfactorily as the obscurity of the subject will permit.

The intellectual ideal seems to be that of a conversation on all the subjects you most care about, which should never lose its interest. Is it possible that two people should live together and talk to each other every day for twenty years without knowing each other's views too well for them to seem worth expressing or worth listening to? There are friends whom we know too well, so that our talk with them has less of refreshment and entertainment than a conversation with the first intelligent stranger on the quarter-deck of the steamboat. It is evident that from the intellectual point of view this is the great danger of marriage. It may become dull, not because the mental force of either of the parties has declined, but because each has come to know so accurately beforehand what the other will say on any given topic, that inquiry is felt to be useless. This too perfect intimacy, which has ended many a friendship outside of marriage, may also terminate the intellectual life in matrimony itself.

Let us not pass too lightly over this danger, for it is not to be denied. Unless carefully provided against, it will gradually extinguish the light that plays between the wedded intelligences as the electric light burns between two carbon points.

I venture to suggest, however, that this evil may be counteracted by persons of some energy and originality. This is one of those very numerous cases in which an evil is sure to arrive if nothing is done to prevent it, yet in which the evil need not arrive when those whom it menaces are forewarned. To take an illustration intelligible in these days of steam-engines. We know that if the water is allowed to get very low in the boiler a destructive explosion will be the consequence; yet, since every stoker is aware of this, such explosions are not of frequent occurrence. That evil is continually approaching and yet continually averted by the exercise of human foresight.

Let us suppose that a married couple are clearly aware that in the course of years their society is sure to become mutually uninteresting unless something is done to preserve the earlier zest of it. What is that something?

That which an author does for the unknown multitude of his readers.

Every author who succeeds takes the trouble to renew his mind either by fresh

knowledge or new thoughts. Is it not at least equally worth while to do as much to preserve the interest of marriage? Without undervaluing the friendly adhesion of many readers, without affecting any contempt for fame, which is dearer to the human heart than wealth itself whenever it appears to be not wholly unattainable, may not I safely affirm that the interest of married life, from its very nearness, has a still stronger influence upon the mind of any thinking person, of either sex, than the approbation of unnumbered readers in distinct countries or continents? You never see the effect of your thinking on your readers; they live and die far away from you, a few write letters of praise or criticism, the thousands give no sign. But the wife is with you always, she is almost as near to you as your own body; the world, to you, is a figure-picture in which there is one figure, the rest is merely background. And if an author takes pains to renew his mind for the people in the background, is it not at least equally worth your while to bring fresh thought for the renewal of your life with her?

This, then, is my theory of the intellectual marriage, that the two wedded intellects ought to renew themselves continually for each other. And I argue that if this were done in earnest, the otherwise inevitable dullness would be perpetually kept at bay.

To the other question, whether in actual life I have ever seen this realized, I answer yes, in several instances.

Not in very many instances, yet in more than one. Women, when they have conceived the idea that this renewal is necessary, have resolution enough for the realization of it. There is hardly any task too hard for them, if they believe it essential to the conjugal life. I could give you the name and address of one who mastered Greek in order not to be excluded from her husband's favorite pursuit; others have mastered other languages for the same object, and even some branch of science for which the feminine mind has less natural affinity than it has for imaginative literature. Their remarkable incapacity for independent mental labor is accompanied by an equally remarkable capacity for labor under an accepted masculine guidance. In this connection I may without impropriety mention one Englishwoman, for she is already celebrated, the wife of Sir Samuel Baker, the discoverer of the Albert Nyanza. She stood with him on the shore of that unknown sea, when first it was beheld by English eyes; she had passed with him through all the hard preliminary toils and trials. She had learned Arabic with him in a year of necessary but

wearisome delay; her mind had travelled with his mind as her feet had followed his footsteps. Scarcely less beautiful, if less heroic, is the picture of the geologist's wife, Mrs. Buckland, who taught herself to reconstruct broken fossils, and did it with a surprising delicacy, and patience, and skill, full of science, yet more than science, the perfection of feminine art.

The privacy of married life often prevents us from knowing the extent to which intelligent women have renewed their minds by fresh and varied culture for the purpose of retaining their ascendancy over their husbands, or to keep up the interest of their lives. It is done much more frequently by women than by men. They have so much less egotism, so much more adaptability, that they fit themselves to us oftener than we adapt ourselves to them. But in a quiet perfect marriage these efforts would be mutual. The husband would endeavor to make life interesting to his companion by taking a share in some pursuit which was really her own. It is easier for us than it was for our ancestors to do this—at least for our immediate ancestors. There existed, fifty years ago, a most irrational prejudice, very strongly rooted in the social conventions of the time, about masculine and feminine accomplishments. The educations of the two sexes were so trenchantly separated that neither had access to the knowledge of the other. The men had learned Latin and Greek, of which the women were ignorant; the women had learned French or Italian, which the men could neither read nor speak. The ladies studied fine art, not seriously, but it occupied a good deal of their time and thoughts; the gentlemen had a manly contempt for it, which kept them, as contempt always does, in a state of absolute ignorance. The intellectual separation of the sexes was made as complete as possible by the conventionally received idea that a man could not learn what girls learned without effeminacy, and that if women aspired to men's knowledge they would forfeit the delicacy of their sex. This illogical prejudice was based on a bad syllogism of this kind:—Girls speak French, and learn music and drawing.

Benjamin speaks French, and learns music and drawing.

Benjamin is a girl.

And the prejudice, powerful as it was, had not even the claim of any considerable antiquity. Think how strange and unreasonable it would have seemed to Lady Jane Grey and Sir Philip Sidney! In their time, ladies and gentlemen studied the same things, the world of culture was the same for both, and they could meet in it as in a garden.

Happily we are coming back to the old rational notion of culture as independent of the question of sex. Latin and Greek are not unfeminine; they were spoken by women in Athens and Rome; the modern languages are fit for a man to learn, since men use them continually on the battle-fields and in the parliaments and exchanges of the world. Art is a manly business, if ever any human occupation could be called manly, for the utmost efforts of the strongest men are needed for success in it.

The increasing interest in the fine arts, the more important position given to modern languages in the universities, the irresistible attractions and growing authority of science, all tend to bring men and women together on subjects understood by both, and therefore operate directly in favor of intellectual interests in marriage. You will not suspect me of a snobbish desire to pay compliments to royalty if I trace some of these changes in public opinion to the example and influence of the Prince Consort, operating with some effect during his life, yet with far greater force since he was taken away from us. The truth is, that the most modern English ideal of gentlemanly culture is that which Prince Albert, to a great extent, realized in his own person. Perhaps his various accomplishments may be a little embellished or exaggerated in the popular belief, but it is unquestionable that his notion of culture was very large and liberal, and quite beyond the narrow pedantry of the preceding age. There was nothing in it to exclude a woman, and we know that she who loved him entered largely into the works and recreations of his life.

LETTER IV.

TO A YOUNG GENTLEMAN WHO CONTEMPLATED MARRIAGE.

Women do not or themselves undertake intellectual labor—Their resignation to ignorance—Absence of scientific curiosity in women—They do not accumulate accurate knowledge—Archimedes in his bath—Rarity of inventions due to women—Exceptions.

BEFORE saying much about the influence of marriage on the intellectual life, it is necessary to make some inquiry into the intellectual nature of women.

The first thing to be noted is that, with exceptions so rare as to be practically of no importance to an argument, women do not of themselves undertake intellectual labor. Even in the situations most favorable for labor of that kind, women do not undertake it un-

less they are urged to it, and directed in it, by some powerful masculine influence. In the absence of that influence, although their minds are active, that activity neither tends to discipline nor to the accumulation of knowledge. Women who are not impelled by some masculine influence are not superior, either in knowledge or discipline of the mind, at the age of fifty to what they were at the age of twenty-five. In other words, they have not in themselves the motive powers which can cause an intellectual advance.

The best illustration of this is a sisterhood of three or four rich old maids, with all the advantages of leisure. You will observe that they invariably remain, as to their education, where they were left by their teachers many years before. They will often lament, perhaps, that in their day education was very inferior to what it is now; but it never occurs to them that the large leisure of subsequent years might, had it been well employed, have supplied those deficiencies of which they are sensible. Nothing is more curiously remote from masculine habits than the resignation to particular degrees of ignorance, as to the inevitable, which a woman will express in a manner which says: "You know I am so; you know that I cannot make myself better informed." They are like perfect billiard-balls on a perfect table, which stop when no longer impelled, wherever they may happen to be.

It is this absence of intellectual initiative which causes the great ignorance of women. What they have been well taught, that they know, but they do not increase their stores of knowledge. Even in what most interests them, theology, they repeat, but do not extend, their information. All the effort of their minds appears (so far as an outside observer may presume to judge) to act like water on a picture, which brings out the colors that already exist upon the canvas but does not add anything to the design. There is a great and perpetual freshness and vividness in their conceptions, which is often lacking in our own. Our conceptions fade, and are replaced; theirs are not replaced, but refreshed.

What many women do for their theological conceptions or opinions, others do with reference to the innumerable series of questions of all kinds which present themselves in the course of life. They attempt to solve them by the help of knowledge acquired in girlhood; and if that cannot be done, they either give them up as beyond the domain of women, or else trust to hearsay for a solution. What they will not do is to hunt the matter out unaided, and get an accurate answer by dint of independent investigation.

There is another characteristic of women not peculiar to them, for many men have it in an astonishing degree, and yet more general in the female sex than in the male: I allude to the absence of scientific curiosity. Ladies see things of the greatest wonder and interest working in their presence and for their service without feeling impelled to make any inquiries into the manner of their working. I could mention many very curious instances of this, but I select one which seems typical. Many years ago I happened to be in a room filled with English ladies, most of whom were highly intelligent, and the conversation happened to turn upon a sailing-boat which belonged to me. One of the ladies observed that sails were not of much use, since they could only be available to push the boat in the direction of the wind; a statement which all the other ladies received with approbation. Now, all these ladies had seen ships working under canvas against head-winds, and they might have reflected that without that portion of the art of seamanship every vessel unprovided with steam would assuredly drift upon a lee-shore; but it was not in the feminine nature to make a scientific observation of that kind. You will answer, perhaps, that I could scarcely expect ladies to investigate men's business, and that seamanship is essentially the business of our own sex. But the truth is, that all English people, no matter of what sex, have so direct an interest in the maritime activity of England, that they might reasonably be expected to know the one primary conquest on which for many centuries that activity has depended, the conquest of the opposing wind, the sublimest of the early victories of science. And this absence of curiosity in women extends to things they use every day. They never seem to want to know the insides of things as we do. All ladies know that steam makes a locomotive go; but they rest satisfied with that, and do not inquire further *how* the steam sets the wheels in motion. They know that it is necessary to wind up their watches, but they do not care to inquire into the real effects of that little exercise of force.

Now this absence of the investigating spirit has very wide and important consequences. The first consequence of it is that women do not naturally accumulate accurate knowledge. Left to themselves, they accept various kinds of teaching, but they do not by any analysis of their own either put that teaching to any serious intellectual test, or qualify themselves for any extension of it by independent and original discovery. We of the male sex are seldom clearly aware how much

of our practical force, of the force which discovers and originates, is due to our common habit of analytical observation; yet it is scarcely too much to say that most of our inventions have been suggested by actually or intellectually pulling something else in pieces. And such of our discoveries as cannot be traced directly to analysis are almost always due to habits of general observation which lead us to take note of some fact apparently quite remote from what it helps us to arrive at. One of the best instances of this indirect utility of habitual observation, as it is one of the earliest, is what occurred to Archimedes in his bath. When the water displaced by his body overflowed, he noticed the fact of displacement, and at once perceived its applicability to the cubic measurement of complicated bodies. It is possible that if his mind had not been exercised at the time about the adulteration of the royal crown, it would not have been led to anything by the overflowing of his bath; but the capacity to receive a suggestion of that kind is, I believe, a capacity exclusively masculine. A woman would have noticed the overflowing, but she would have noticed it only as a cause of disorder or inconvenience.

This absence of the investigating and discovering tendencies in women is confirmed by the extreme rarity of inventions due to women, even in the things which most interest and concern them. The stocking-loom and the sewing-machine are the two inventions which would most naturally have been hit upon by women, for people are naturally inventive about things which relieve *themselves* of labor, or which increase their own possibilities of production; and yet the stocking-loom and the sewing-machine are both of them masculine ideas, carried out to practical efficiency by masculine energy and perseverance. So I believe that all the improvements in pianos are due to men, though women have used pianos much more than men have used them.

This, then, is in my view the most important negative characteristic of women, that they do not push forwards intellectually by their own force. There have been a few instances in which they have written with power and originality, have become learned, and greatly superior, no doubt, to the majority of men. There are three or four women in England, and as many on the Continent, who have lived intellectually in harness for many years, and who unaffectedly delight in strenuous intellectual labor, giving evidence both of fine natural powers and the most persevering culture; but these women have usu-

ally been encouraged in their work by some near masculine influence. And even if it were possible, which it is not, to point to some female Archimedes or Leonardo da Vinci, it is not the rare exceptions which concern us, but the prevalent rule of Nature. Without desiring to compare our most learned ladies with anything so disagreeable to the eye as a bearded woman, I may observe that Nature generally has a few exceptions to all her rules, and that as women having beards are a physical exception, so women who naturally study and investigate are intellectual exceptions. Once more let me repudiate any malicious intention in establishing so unfortunate and *maladroite* an association of ideas, for nothing is less agreeable than a woman with a beard, whilst, on the contrary, the most intellectual of women may at the same time be the most permanently charming.

LETTER V.

TO A YOUNG GENTLEMAN WHO CONTEMPLATED MARRIAGE.

The danger of deviation—Danger from increased expenditure—Nowhere so great as in England—Complete absorption in business—Case of a tradesman—Case of a solicitor—The pursuit of comfort dangerous to the Intellectual Life—The meanness of its results—Fireside purposes—Danger of deviation in rich marriages—George Sand's study of this in her story of "Valvèdre."

AMONGST the dangers of marriage, one of those most to be dreaded by a man given to intellectual pursuits is the deviation which, in one way or other, marriage inevitably produces. It acts like the pointsman on a railway, who, by pulling a lever, sends the train in another direction. The married man never goes, or hardly ever goes, exactly on the same intellectual lines which he would have followed if he had remained a bachelor. This deviation may or may not be a gain; it is always a most serious danger.

Sometimes the deviation is produced by the necessity for a stricter attention to money, causing a more unremitting application to work that pays well, and a proportionate neglect of that which can only give extension to our knowledge and clearness to our views.

In no country is this danger so great as it is in England, where the generally expensive manner of living, and the prevalent desire to keep families in an ideally perfect state of physical comfort, produce an absorption in business which in all but the rarest instances leaves no margin for intellectual labor. There are, no doubt, some remarkable ex-

amples of men earning a large income by a laborious profession, who have gained reputation in one of the sciences or in some branch of literature, but these are very exceptional cases. A man who works at his profession as most Englishmen with large families have to work, can seldom enjoy that surplus of nervous energy which would be necessary to carry him far in literature or science. I remember meeting an English tradesman in the railway between Paris and the coast, who told me that he was obliged to visit France very frequently, yet could not speak French, which was a great deficiency and inconvenience to him. "Why not learn?" I then asked, and received the following answer:

"I have to work at my business all day long, and often far into the night. When the day's work is over I generally feel very tired, and want rest; but if I don't happen to feel quite so tired, then it is not work that I need, but recreation, of which I get very little. I never feel the courage to set to work at the French grammar, though it would be both pleasant and useful to me to know French; indeed, I constantly feel the want of it. It might, perhaps, be possible to learn from a phrase-book in the railway train, but to save time I always travel at night. Being a married man, I have to give my whole attention to my business."

A solicitor with a large practice in London held nearly the same language. He worked at his office all day, and often brought home the most difficult work for the quiet of his own private study after the household had gone to bed. The little reading that he could indulge in was light reading. In reality the profession intruded even on his few hours of leisure, for he read many of the columns in the *Times* which relate to law or legislation, and these make at the end of a few years an amount of reading sufficient for the mastery of a foreign literature. This gentleman answered very accurately to M. Taine's description of the typical Englishman, absorbed in business and the *Times*.

In these cases it is likely that the effect of marriage was not inwardly felt as a deviation; but when culture has been fairly begun, and marriage hinders the pursuit of it, or makes it deviate from the chosen path, then there is often an inward consciousness of the fact, not without its bitterness.

A remarkable article on "Luxury," in the second volume of the *Cornhill Magazine*, deals with this subject in a manner evidently suggested by serious reflection and experience. The writer considers the effects of the

pursuit of comfort (never carried so far as it is now) on the higher moral and intellectual life. The comforts of a bachelor were not what the writer meant; these are easily procured, and seldom require the devotion of all the energies. The "comfort" which is really dangerous to intellectual growth is that of a family establishment, because it so easily becomes the one absorbing object of existence. Men who began life with the feeling that they would willingly devote their powers to great purposes, like the noble examples of past times who labored and suffered for the intellectual advancement of their race, and had starvation for their reward, or in some cases even the prison and the stake—men who in their youth felt themselves to be heirs of a nobility of spirit like that of Bruno, of Swammerdam, of Spinoza, have too often found themselves in the noon of life concentrating all the energies of body and soul on the acquisition of ugly millinery and uglier upholstery, and on spreading extravagant tables to feed uncultivated guests.

"It is impossible," says the writer of the article just alluded to, "it is impossible to say why men were made, but assuming that they were made for some purpose, of which the faculties which they possess afford evidence, it follows that they were intended to do many other things besides providing for their families and enjoying their society. They were meant to know, to act, and to feel—to know everything which the mind is able to contemplate, to name, and to classify; to do everything which the will, prompted by the passions and guided by the conscience, can undertake; and, subject to the same guidance, to feel in its utmost vigor every emotion which the contemplation of the various persons and objects which surround us can excite. This view of the objects of life affords an almost infinite scope for human activity in different directions; but it also shows that it is in the highest degree dangerous to its beauty and its worth to allow any one side of life to become the object of idolatry; and there are many reasons for thinking that domestic happiness is rapidly assuming that position in the minds of the more comfortable classes of Englishmen. . . . It is a singular and affecting thing, to see how every manifestation of human energy bears witness to the shrewdness of the current maxim that a large income is a necessary of life. Whatever is done for money is done admirably well. Give a man a specific thing to make or to write, and pay him well for it, and you may with a little trouble secure an excellent article; but the ability which does these things

so well, might have been and ought to have been trained to far higher things, which for the most part are left undone, because the clever workman thinks himself bound to earn what will keep himself, his wife, and his six or seven children, up to the established standard of comfort. What was at first a necessity, perhaps an unwelcome one, becomes by degrees a habit and a pleasure, and men who might have done memorable and noble things, if they had learnt in time to consider the doing of such things an object worth living for, lose the power and the wish to live for other than fireside purposes."

But this kind of intellectual deviation, you may answer, is not strictly the consequence of marriage, *quod* marriage; it is one of the consequences of a degree of relative poverty, produced by the larger expenditure of married life, but which might be just as easily produced by a certain degree of money-pressure in the condition of a bachelor. Let me therefore point out a kind of deviation which may be as frequently observed in rich marriages as in poor ones. Suppose the case of a bachelor with a small but perfectly independent income amounting to some hundreds a year, who is devoted to intellectual pursuits, and spends his time in study or with cultivated friends of his own, choosing friends whose society is an encouragement and a help. Suppose that this man makes an exceedingly prudent marriage, with a rich woman, you may safely predict, in this instance, intellectual deviations of a kind perilous to the highest culture. He will have new calls upon his time, his society will no longer be entirely of his own choosing, he will no longer be able to devote himself with absolute singleness of purpose to studies from which his wife must necessarily be excluded. If he were to continue faithful to his old habits, and shut himself up every day in his library or laboratory, or set out on frequent scientific expeditions, his wife would either be a lady of quite extraordinary perfection of temper, or else entirely indifferent in her feelings towards him, if she did not regard his pursuits with quickly-increasing jealousy. She would think, and justifiably think, that he ought to give more of his time to the enjoyment of her society, that he ought to be more by her side in the carriage and in the drawing-room, and if he loved her he would yield to these kindly and reasonable wishes. He would spend many hours of every day in a manner not profitable to his great pursuits, and many weeks of every year in visits to her friends. His position would be even less favorable to study in some respects than that

of a professional man. It would be difficult for him, if an amateur artist, to give that unremitting attention to painting which the professional painter gives. He could not say, "I do this for you and for our children;" he could only say, "I do it for my own pleasure," which is not so graceful an excuse. As a bachelor, he might work as professional people work, but his marriage would strongly accentuate the amateur character of his position. It is possible that if his labors had won great fame the lady might bear the separation more easily, for ladies always take a noble pride in the celebrity of their husbands; but the best and worthiest intellectual labor often brings no fame whatever, and notoriety is a mere accident of some departments of the intellectual life, and not its ultimate object.

George Sand, in her admirable novel "*Valvèdre*," has depicted a situation of this kind with the most careful delicacy of touch. Valvèdre was a man of science, who attempted to continue the labors of his intellectual life after marriage had united him to a lady incapable of sharing them. The reader pities both, and sympathizes with both. It is hard, on the one hand, that a man endowed by nature with great talents for scientific work should not go on with a career already gloriously begun; and yet, on the other hand, a woman who is so frequently abandoned for science may blamelessly feel some jealousy of science.

Valvèdre, in narrating the story of his unhappy wedded life, said that Alida wished to have at her orders a perfect gentleman to accompany her, but that he felt in himself a more serious ambition. He had not aimed at fame, but he had thought it possible to become a useful servant, bringing his share of patient and courageous seekings to the edifice of the sciences. He had hoped that Alida would understand this. "'There is time enough for everything,' she said, still retaining him in the useless wandering life that she had chosen. 'Perhaps,' he answered, 'but on condition that I lose no more of it; and it is not in this wandering life, cut to pieces by a thousand unforeseen interruptions, that I can make the hours yield their profit.'

"'Ah! now we come to the point!' exclaimed Alida impetuously. 'You wish to leave me, and to travel alone in impossible regions.'

"'No, I will work near you and abandon certain observations which it would be necessary to make at too great a distance, but you also will sacrifice something: we will not see so many idle people, we will settle somewhere

for a fixed time. It shall be where you will, and if the place does not suit you, we will try another; but from time to time you will permit me a phase of sedentary work.'

"'Yes, yes, you want to live for yourself alone; you have lived enough for me. I understand; your love is satiated and at an end.'

"'Nothing could conquer her conviction that study was her rival, and that love was only possible in idleness.

"'To love is everything,' she said; 'and he who loves has not time to concern himself with anything else. Whilst the husband is intoxicating himself with the marvels of science, the wife languishes and dies. It is the destiny which awaits me; and since I am a burden to you, I should do better to die at once.'

"A little later Valvèdre ventured to hint something about work, hoping to conquer his wife's *ennui*, on which she proclaimed the hatred of work as a sacred right of her nature and position.

"'Nobody ever taught me to work,' she said, 'and I did not marry under a promise to begin again at the *a, b, c* of things. Whatever I know I have learned by intuition, by reading without aim or method. I am a woman; my destiny is to love my husband and bring up children. It is very strange that my husband should be the person who counsels me to think of something better.'

I am far from suggesting that Madame Valvèdre is an exact representative of her sex, but the sentiments which in her are exaggerated, and expressed with passionate plainness, are in much milder form very prevalent sentiments indeed; and Valvèdre's great difficulty, how to get leave to prosecute his studies with the degree of devotion necessary to make them fruitful, is not at all an uncommon difficulty with intellectual men after marriage. The character of Madame Valvèdre, being passionate and excessive, led her to an open expression of her feelings; but feelings of a like kind, though milder in degree, exist frequently below the surface, and may be detected by any vigilant observer of human nature. That such feelings are very natural it is impossible even for a *savant* to deny; but whilst admitting the clear right of a woman to be preferred by a man to science when once he has married her, let me observe that the man might perhaps do wisely, before the knot is tied, to ascertain whether her intellectual dowry is rich enough to compensate him for the sacrifices she is likely to exact,

LETTER VI.

TO A SOLITARY STUDENT.

Need of a near intellectual friendship in solitude—Persons who live independently of custom run a peculiar risk in marriage—Women by nature more subservient to custom than men are—Difficulty of conciliating solitude and marriage—De Sénancour—The marriages of eccentrics—Their wives either protect them or attempt to reform them.

ISOLATED as you are, by the very superiority of your culture, from the ignorant provincial world around you, I cannot but believe that marriage is essential to your intellectual health and welfare. If you married some cultivated woman, bred in the cultivated society of a great capital, that companionship would give you an independence of surrounding influences which nothing else can give. You fancy that by shutting yourself up in a country house you are uninfluenced by the world around you. It is a great error. You know that you are isolated, that you are looked upon and probably ridiculed as an eccentric, and this knowledge, which it is impossible to banish from your mind, deprives your thinking of elasticity and grace. You urgently need the support of an intellectual friendship quite near to you, under your own roof. Bachelors in great cities feel this necessity less.

Still remember, that whoever has arranged his life independently of custom runs a peculiar risk in marriage. Women are by nature far more subservient to custom than we are, more than we can easily conceive. The danger of marriage, for a person of your tastes, is that a woman entering your house might enter it as the representative of that minutely-interfering authority which you continually ignore. And let us never forget that a perfect obedience to custom requires great sacrifices of time and money that you might not be disposed to make, and which certainly would interfere with study. You value and enjoy your solitude, well knowing how great a thing it is to be master of all your hours. It is difficult to conciliate solitude, or even a wise and suitable selection of acquaintances, with the semi-publicity of marriage. Heads of families receive many persons in their houses whom they would never have invited, and from whose society they derive little pleasure and no profit. De Sénancour had plans of studious retirement, and hoped that the "*douce intimité*" of marriage might be compatible with these cherished projects. But marriage, he found, drew him into the circle of ordinary provincial life, and he always suffered from its influences.

You are necessarily an eccentric. In the

neighborhood where you live it is an eccentricity to study, for nobody but you studies anything. A man so situated is fortunate when this feeling of eccentricity is alleviated, and unfortunate when it is increased. A wife would certainly do one or the other. Married to a very superior woman, able to understand the devotion to intellectual aims, you would be much relieved of the painful consciousness of eccentricity; but a woman of less capacity would intensify it.

So far as we can observe the married life of others, it seems to me that I have met with instances of men, constituted and occupied very much as you are, who have found in marriage a strong protection against the ignorant judgments of their neighbors, and an assurance of intellectual peace; whilst in other cases it has appeared rather as if their solitude were made more a cause of conscious suffering, as if the walls of their cabinets were pulled down for the boobies outside to stare at them and laugh at them. A woman will either take your side against the customs of the little world around, or she will take the side of custom against you. If she loves you deeply, and if there is some visible result of your labors in fame and money, she may possibly do the first, and then she will protect your tranquillity better than a force of policemen, and give you a delightful sense of reconciliation with all humanity; but many of her most powerful instincts tend the other way. She has a natural sympathy with all the observances of custom, and you neglect them; she is fitted for social life, which you are not. Unless you win her wholly to your side, she may undertake the enterprise of curing your eccentricities and adapting you to the ideal of her caste. This may be highly satisfactory to the operator, but it is full of inconveniences to the patient.

LETTER VII.

TO A LADY OF HIGH CULTURE WHO FOUND IT DIFFICULT TO ASSOCIATE WITH PERSONS OF HER OWN SEX.

Men are not very good judges of feminine conversation—The interest of it would be increased if women could be more freely initiated into great subjects—Small subjects interesting when seen in relation to central ideas—That ladies of superior faculty ought rather to elevate female society than withdraw from it—Women when displaced do not appear happy.

WHAT you confided to me in our last interesting conversation has given me material for reflection, and afforded a glimpse of a state of things which I have sometimes sus-

pected without having data for any positive conclusion. The society of women is usually sought by men during hours of mental relaxation, and we naturally find such a charm in their mere presence, especially when they are graceful or beautiful, that we are not very severe or even accurate judges of the abstract intellectual quality of their talk. But a woman cannot feel the indescribable charm which wins us so easily, and I have sometimes thought that a superior person of your sex might be aware of certain deficiencies in her sisters which men very readily overlook. You tell me that you feel embarrassed in the society of ladies, because they know so little about the subjects which interest you, and are astonished when you speak about anything really worth attention. On the other hand, you feel perfectly at ease with men of ability and culture, and most at your ease with men of the best ability and the most eminent attainments. What you complain of chiefly in women seems to be their impatience of varieties of thought which are unfamiliar to them, and their constant preference for small topics.

It has long been felt by men that if women could be more freely initiated into great subjects the interest of general conversation would be much increased. The difficulty appears to lie in their instinctive habit of making all questions personal questions. The etiquette of society makes it quite impossible for men to speak to ladies in the manner which would be intellectually most profitable to them. We may not teach because it is pedantic, and we may not contradict, because it is rude. Most of the great subjects are conventionally held to be closed, so that it is a sin against good taste to discuss them. In every house the ladies have a set of fixed convictions of some kind, which it is not polite in any man to appear to doubt. The consequence of these conventional rules is that women live in an atmosphere of acquiescence which makes them intolerant of anything like bold and original thinking on important subjects. But as the mind always requires free play of some kind, when all the great subjects are forbidden it will use its activity in playing about little ones.

For my part I hardly think it desirable for any of us to be incessantly coping with great subjects, and the ladies are right in taking a lively interest in the small events around them. But even the small events would have a deeper interest if they were seen in their true relations to the great currents of European thought and action. It is probably the ignorance of these relations which, more than

the smallness of the topics themselves, makes feminine talk fatiguing to you. Very small things indeed have an interest when exhibited in relation to larger, as men of science are continually demonstrating. I have been taking note lately of the talk that goes on around me, and I find that when it is shallow and wearisome it is always because the facts mentioned bear no reference to any central or governing idea, and do not illustrate anything. Conversation is interesting in proportion to the originality of the central ideas which serve as pivots, and the fitness of the little facts and observations which are contributed by the talkers. For instance, if people happened to be talking about rats, and some one informed you that he had seen a rat last week, that would be quite uninteresting: but you would listen with greater attention if he said; "The other night, as I was going up stairs very late, I followed a very fine rat who was going up stairs too, and he was not in the least hurried, but stopped after every two or three steps to have a look at me and my candle. He was very prettily marked about the face and tail, so I concluded that he was not a common rat, but probably a lemming. Two nights afterwards I met him again, and this time he seemed almost to know me, for he quietly made room for me as I passed. Very likely he might be easily tamed." This is interesting, because, though the fact narrated is still trifling, it illustrates animal character.

If you will kindly pardon an "improvement" of this subject, as a preacher would call it, I might add that an intellectual lady like yourself might, perhaps, do better to raise the tone of the feminine talk around her than to withdraw from it in weariness. There are always, in every circle, a few superior persons who, either from natural diffidence, or because they are not very rich, or because they are too young, suffer themselves to be entirely overwhelmed by the established mediocrity around them. What they need is a leader, a deliverer. Is it not in your power to render services of this kind? Could you not select from the younger ladies whom you habitually meet, a few who, like yourself, feel bored by the dulness or triviality of what you describe as the current feminine conversation? There is often a painful shyness which prevents people of real ability from using it for the advantage of others, and this shyness is nowhere so common as in England, especially provincial England. It feels the want of a hardy example. A lady who talked really well would no doubt run some risk of being rather unpleasantly isolated at first, but surely, if she tried, she might ulti-

mately find accomplices. You could do much, to begin with, by recommending high-toned literature, and gradually awakening an interest in what is truly worth attention. It seems lamentable that every cultivated woman should be forced out of the society of her own sex, and made to depend upon ours for conversation of that kind which is an absolute necessity to the intellectual. The truth is, that women so displaced never appear altogether happy. And culture costs so much downright hard work, that it ought not to be paid for by any suffering beyond those toils which are its fair and natural price.

LETTER VIII.

TO A LADY OF HIGH CULTURE.

Greatest misfortune in the intellectual life of women—They do not hear truth—Men disguise their thoughts for women—Cream and curaçoa—Probable permanence of the desire to please women—Most truth in cultivated society—Hopes from the increase of culture.

I THINK that the greatest misfortune in the intellectual life of women is that they do not hear the truth from men.

All men in cultivated society say to women as much as possible that which they may be supposed to wish to hear, and women are so much accustomed to this that they can scarcely hear without resentment an expression of opinion which takes no account of their personal and private feeling. The consideration for the feelings of women gives an agreeable tone to society, but it is fatal to the severity of truth. Observe a man of the world whose opinions are well known to you,—notice the little pause before he speaks to a lady. During that little pause he is turning over what he has to say, so as to present it in the manner that will please her best; and you may be sure that the integrity of truth will suffer in the process. If we compare what we know of the man with that which the lady hears from him, we perceive the immense disadvantages of her position. He ascertains what will please her, and that is what he administers. He professes to take a deep interest in things which he does not care for in the least, and he passes lightly over subjects and events which he knows to be of the most momentous importance to the world. The lady spends an hour more agreeably than if she heard opinions which would irritate, and prognostics which would alarm her, but she has missed an opportunity for culture, she has been confirmed in feminine illusions. If this happened only from time to time, the effect would not tell so much on the mental consti-

tution; but it is incessant, it is continual. Men disguise their thoughts for women as if to venture into the feminine world were as dangerous as travelling in Arabia, or as if the thoughts themselves were criminal.

There appeared two or three years ago in *Punch* a clever drawing which might have served as an illustration to this subject. A fashionable doctor was visiting a lady in Belgravia who complained that she suffered from debility. Cod-liver oil being repugnant to her taste, the agreeable doctor, wise in his generation, blandly suggested as an effective substitute a mixture of cream and curaçoa. What that intelligent man did for his patient's physical constitution, all men of politeness do for the intellectual constitution of ladies. Instead of administering the truth which would strengthen, though unpalatable, they administer intellectual cream and curaçoa.

The primary cause of this tendency to say what is most pleasing to women is likely to be as permanent as the distinction of sex itself. It springs directly from sexual feelings, it is hereditary and instinctive. Men will never talk to women with that rough frankness which they use between themselves. Conversation between the sexes will always be partially insincere. Still I think that the more women are respected, the more men will desire to be approved by them for what they are in reality, and the less they will care for approval which is obtained by dissimulation. It may be observed already that, in the most intellectual society of great capitals, men are considerably more outspoken before women than they are in the provincial middle-classes. Where women have most culture, men are most open and sincere. Indeed, the highest culture has a direct tendency to command sincerity in others, both because it is tolerant of variety in opinion, and because it is so penetrating that dissimulation is felt to be of no use. By the side of an uncultivated woman, a man feels that if he says anything different from what she has been accustomed to she will take offence, whilst if he says anything beyond the narrow range of her information he will make her cold and uncomfortable. The most honest of men, in such a position, finds it necessary to be very cautious, and can scarcely avoid a little insincerity. But with a woman of culture equal to his own, these causes for apprehension have no existence, and he can safely be more himself.

These considerations lead me to hope that as culture becomes more general women will hear truth more frequently. Whenever this comes to pass, it will be, to them, an immense intellectual gain.

LETTER IX.

TO A YOUNG MAN OF THE MIDDLE CLASS, WELL EDUCATED, WHO COMPLAINED THAT IT WAS DIFFICULT FOR HIM TO LIVE AGREEABLY WITH HIS MOTHER, A PERSON OF SOMEWHAT AUTHORITATIVE DISPOSITION, BUT UNEDUCATED.

A sort of misunderstanding common in modern households—Intolerance of inaccuracy—A false position—A lady not easily intimidated—Difficulty of arguing when you have to teach—Instance about the American War—The best course in discussion with ladies—Women spoiled by non-contradiction—They make all questions personal—The strength of their feelings—Their indifference to matters of fact.

I HAVE been thinking a good deal, and seriously, since we last met, about the subject of our conversation, which though a painful one is not to be timidly avoided. The degree of unhappiness in your little household, which ought to be one of the pleasantest of households, yet which, as you confided to me, is overshadowed by a continual misunderstanding, is, I fear, very common indeed at the present day. It is only by great forbearance, and great skill, that any household in which persons of very different degrees of culture have to live together on terms of equality, can be maintained in perfect peace; and neither the art nor the forbearance is naturally an attribute of youth. A man whose scholarly attainments were equal to your own, and whose experience of men and women was wider, could no doubt offer you counsel both wise and practical, yet I can hardly say that I should like you better if you followed it. I cannot blame you for having the natural characteristics of your years, an honest love of the best truth that you have attained to, an intolerance of inaccuracy on all subjects, a simple faith in the possibility of teaching others, even elderly ladies, when they happen to know less than yourself. All these characteristics are in themselves blameless; and yet in your case, and in thousands of other similar cases, they often bring clouds of storm and trial upon houses which, in a less rapidly progressive century than our own, might have been blessed with uninterrupted peace. The truth is, that you are in a false position relatively to your mother, and your mother is in a false position relatively to you. She expects deference, and deference is scarcely compatible with contradiction; certainly, if there be contradiction at all, it must be very rare, very careful, and very delicate. You, on the other hand, although no doubt full of respect and affection for your mother in your heart, cannot hear her authoritatively enunciating anything that you know to be erroneous, without feeling irresistibly urged to set her right. She is rather a talkative

lady; she does not like to hear a conversation going forward without taking a part in it, and rather an important part, so that whatever subject is talked about in her presence, that subject she will talk about also. Even before specialists your mother has an independence of opinion, and a degree of faith in her own conclusions, which would be admirable if they were founded upon right reason and a careful study of the subject. Medical men, and even lawyers, do not intimidate her; she is convinced that she knows more about disease than the physician, and more about legal business than an old attorney. In theology no parson can approach her; but here a woman may consider herself on her own ground, as theology is the speciality of women.

All this puts you out of patience, and it is intelligible that, for a young gentleman of intellectual habits and somewhat ardent temperament like yourself, it must be at times rather trying to have an **AUTHORITY** at hand ever ready to settle all questions in a decisive manner. To you I have no counsel to offer but that of unconditional submission. You have the weakness to enter into arguments when to sustain them you must assume the part of a teacher. In arguing with a person already well-informed upon the subject in dispute, you may politely refer to knowledge which he already possesses, but when he does not possess the knowledge you cannot argue with him; you must first teach him, you must become didactic, and therefore odious. I remember a great scene which took place between you and your mother concerning the American War. It was brought on by a too precise answer of yours relatively to your friend B., who had emigrated to America. Your mother asked to what part of America B. had emigrated, and you answered, "The Argentine Republic." A shade of displeasure clouded your mother's countenance, because she did not know where the Argentine Republic might be, and betrayed it by her manner. You imprudently added that it was in South America. "Yes, yes, I know very well," she answered; "there was a great battle there during the American War. It is well your friend was not there under Jefferson Davis." Now, permit me to observe, my estimable young friend, that this was what the French call a fine opportunity for holding your tongue, but you missed it. Fired with an enthusiasm for truth (always dangerous to the peace of families), you began to explain to the good lady that the Argentine Republic, though in South America, was not one of the Southern States of the Union. This led to a scene of which I was the embarrassed

and unwilling witness. Your mother vehemently affirmed that all the Southern States had been under Jefferson Davis, that she knew the fact perfectly, that it had always been known to every one during the war, and that, consequently, as the Argentine Republic was in South America, the Argentine Republic had been under Jefferson Davis. Rapidly warming with this discussion, your mother "supposed that you would deny next that there had ever been such a thing as a war between the North and the South." Then you, in your turn, lost temper, and you fetched an atlas for the purpose of explaining that the southern division of the continent of America was not the southern half of the United States. You were landed, as people always are landed when they prosecute an argument with the ignorant, in the thankless office of the schoolmaster. You were actually trying to give your mother a lesson in geography! She was not grateful to you for your didactic attentions. She glanced at the book as people glance at an offered dish which they dislike. She does not understand maps; the representation of places in geographical topography has never been quite clear to her. Your little geographical lecture irritated, but did not inform; it clouded the countenance, but did not illuminate the understanding. The distinction between South America and the Southern States is not easy to the non-analytic mind under any circumstances, but when *amour propre* is involved it becomes impossible.

I believe that the best course in discussions of this kind with ladies is simply to say once what is true, for the acquittal of your own conscience, but after that to remain silent on that topic, leaving the last word to the lady, who will probably simply re-affirm what she has already said. For example, in the discussion about the Argentine Republic, your proper course would have been to say first, firmly, that the territory in question was not a part of the seceded States and had never been in the Union, with a brief and decided geographical explanation. Your mother would not have been convinced by this, and would probably have had the last word, but the matter would have ended there. Another friend of mine, who is in a position very like your own, goes a step farther, and is determined to agree with his mother-in-law in everything. He always assents to her propositions. She is a Frenchwoman, and has been accustomed to use *Algérie* and *Afrique* as convertible terms. Somebody spoke of the

Cape of Good Hope as being in Africa. "Then it belongs to France, as Africa belongs to France." "Oui, chère mère," he answered, in his usual formula; "vous avez raison."

He alluded to this afterwards when we were alone together. "I was foolish enough some years since," he said, "to argue with my *belle mère* and try to teach her little things from time to time, but it kept her in a state of chronic ill-humor and led to no good; it spoiled her temper, and it did not improve her mind. But since I have adopted the plan of perpetual assent we get on charmingly. Whatever she affirms I assent to at once, and all is well. My friends are in the secret, and so no contradictory truth disturbs our amiable tranquillity."

A system of this kind spoils women completely, and makes the least contradiction intolerable to them. It is better that they should at least have the opportunity of hearing truth, though no attempt need be made to force it upon them. The position of ladies of the generation which preceded ours is in many respects a very trying one, and we do not always adequately realize it. A lady like your mother, who never really went through any intellectual discipline, who has no notion of intellectual accuracy in anything, is compelled by the irresistible feminine instinct to engage her strongest feelings in every discussion that arises. A woman can rarely detach her mind from questions of persons to apply it to questions of fact. She does not think simply, "Is that true of such a thing?" but she thinks, "Does he love me or respect me?" The facts about the Argentine Republic and the American War were probably quite indifferent to your mother; but your opposition to what she had asserted seemed to her a failure in affection, and your attempt to teach her a failure in respect. This feeling in women is far from being wholly egoistic. They refer everything to persons, but not necessarily to their own persons. Whatever you affirm as a fact, they find means of interpreting as loyalty or disloyalty to some person whom they either venerate or love, to the head of religion, or of the State, or of the family. Hence it is always dangerous to enter upon intellectual discussion of any kind with women, for you are almost certain to offend them by setting aside the sentiments of veneration, affection, love, which they have in great strength, in order to reach accuracy in matters of fact, which they neither have nor care for.

PART VIII.

ARISTOCRACY AND DEMOCRACY.

LETTER I.

TO A YOUNG ENGLISH NOBLEMAN.

A contrast—A poor student—His sad fate—Class-sentiment—Tycho Brahe—Robert Burns—Shelley's opinion of Byron—Charles Dickens—Shopkeepers in English literature—Pride of aristocratic ignorance—Pursuits tabooed by the spirit of caste—Affected preferences in intellectual pursuits—Studies that add to gentility—Sincerity of interest needed for genuine culture—The exclusiveness of scholarly caste—Its bad influence on outsiders—Feeling of Burns toward scholars—Sureness of class-instinct—Unforeseen effect of railways—Return to nomadic life and the chase—Advantages and possibilities to life in the higher classes.

It is one of the privileges of authorship to have correspondents in the most widely different positions, and by means of their frank and friendly letters (usually much more frank than any oral communication) to gain a singularly accurate insight into the working of circumstances on the human intellect and character. The same post that brought me your last letter brought news about another of my friends whose lot has been a striking contrast to your own.*

Let me dwell upon this contrast for a few minutes. All the sunshine appears to have been on your side, and all the shadow on his. Born of highly cultivated parents, in the highest rank in England under royalty, you have lived from the beginning amongst the most efficient aids to culture, and Nature has so endowed you that, instead of becoming indifferent to these things from familiarity, you have learned to value them more and more in every successive year. The plainest statement of your advantages would sound like an extract from one of Disraeli's novels. Your father's principal castle is situated amongst the finest scenery in Britain, and his palace in London is filled with masterpieces of art. Wherever you have lived you have been surrounded by good literature and cultivated friends. Your health is steadily robust, you can travel wherever you choose, and all the benefits of all the capitals of Europe belong to you as much as to their own citizens. In all these gifts and opportunities there is but one evil—the bewilderment of their multiplicity.

My other correspondent has been less fortunately situated. "I began school," he says, "when six years old, was taken from it at eleven and sent to the mines to earn a little towards my own support. I continued there

till fourteen, when through an unlucky incident I was made a hopeless cripple. At that day I was earning the noble sum of eightpence per day, quite as much as any boy of that age got in the lead mines. I suffered much for two years; after that, became much easier, but my legs were quite useless, and have continued so up to the present time. The right thigh-bone is decayed, has not got worse these nine years; therefore I conclude that I may live—say another thirty years. I should like, at all events, for life is sweet even at this cost; not but what I could die quietly enough, I dare say. I have not been idle these years. . . ."

(Here permit me to introduce a parenthesis. He certainly had *not* been idle. He had educated himself up to such a point that he could really appreciate both literature and art, and had attained some genuine skill in both. His letters to me were the letters of a cultivated gentleman, and he used invariably to insert little pen-sketches, which were done with a light and refined hand.)

"I can do anything almost in bed—except getting up. I am now twenty-two years old. My father was a miner, but is now unable to work. I have only one brother working, and we are about a dozen of us; consequently we are not in the most flourishing circumstances, but a friend has put it in my power to learn to etch. I have got the tools and your handbook on the subject."

These extracts are from his first letter. Afterwards he wrote me others which made me feel awed and humbled by the manly cheerfulness with which he bore a lot so dreary, and by the firmness of resolution he showed in his pursuits. He could not quit his bed, but that was not the worst; he could not even sit up in bed, and yet he contrived, I know not how, both to write and draw and etch on copper, managing the plaguy chemicals, and even printing his own proofs. His bed was on wheels, on a sort of light iron carriage, and he saw nature out-of-doors. All the gladness of physical activity was completely blotted out of his existence, and in that respect his prospects were without hope. And still he said that "life was sweet." O marvel of all marvels, how *could* that life be sweet!

Aided by a beautiful patience and resignation the lamp of the mind burned with a steady brightness, fed by his daily studies. In the winters, however, the diseased limb gave him prolonged agony, and in the autumn of 1872, to avoid the months of torture that lay before him, he had himself put in the railway and sent off, in his bed, to Edinburgh, sleeping in a waiting-room on the

* I think it right to inform the reader that there is no fiction in this letter.

way. There was no one to attend him, but he trusted, not vainly, to the humanity of strangers. Just about the same time your lordship went northwards also, with many friends, to enjoy the noble scenery, and the excitement of noble sport. My poor cripple got to Edinburgh, got a glimpse of Scott's monument and the Athenian pillars, and submitted himself to the surgeons. They rendered him the best of services, for they ended his pains forever.

So I am to get no more of those wonderfully brave and cheerful letters that were written from the little bed on wheels. I miss them for the lessons they quite unconsciously conveyed. He fancied that he was the learner, poor lad! and I the teacher, whereas it was altogether the other way. He made me feel what a blessing it is, even from the purely intellectual point of view, to be able to get out of bed after the night's rest, and go from one room to another. He made me understand the value of every liberty and every power whilst at the same time he taught me to bear more patiently every limit, and inconvenience, and restriction.

In comparing his letters with yours I have been struck by one reflection predominantly, which is, the entire absence of class-sentiment in both of you. Nobody, not in the secret, could guess that one set of letters came from a palace and the other set from a poor miner's cottage; and even to me, who do not see the habitations except by an effort of the memory or imagination, there is nothing to recall the immensity of the social distance that separated my two friendly and welcome correspondents. It is clear, of course, that one of them had enjoyed greater advantages than the other, but neither wrote from the point of view which marks his caste or class. It was my habit to write to you, and to him, exactly in the same tone, yet this was not felt to be unsuitable by either.

Is it not that the love and pursuit of culture lead each of us out of his class, and that class-views of any kind, whether of the aristocracy, or of the middle class, or of the people, inevitably narrow the mind and hinder it from receiving pure truth? Have you ever known any person who lived habitually in the notions of a caste, high or low, without incapacitating himself in a greater or less degree for breadth and delicacy of perception? It seems to me that the largest and best minds, although they have been born and nurtured in this caste or that, and may continue to conform externally to its customs, always emancipate themselves from it intellectually, and arrive at a sort of neutral re-

gion, where the light is colorless, and clear, and equal, like plain daylight out of doors. So soon as we attain the forgetfulness of self, and become absorbed in our pursuits for their own sakes, the feeling of caste drops off from us. It was not a mark of culture in Tycho Brahe, but rather of the imperfections of his culture, that he felt so strongly the difficulty of conciliating scientific pursuits with the obligations of noble birth, and began his public discourses on astronomy by telling his audience that the work was ill-suited to his social position—hesitating, too, even about authorship from a dread of social degradation. And to take an instance from the opposite extreme of human society, Robert Burns betrayed the same imperfection of culture in his dedication to the members of the Caledonian Hunt, when he spoke of his "honest rusticity," and told the gentlefolks that he was "bred to the plough, and independent." Both of these men had been unfavorably situated for the highest culture, the one by the ignorance of his epoch the other by the ignorance of his class; hence this uneasiness about themselves and their social position. Shelley said of Byron, "The canker of aristocracy wants to be cut out;" and he did not say this from the point of view of a democrat, for Shelley was not precisely a democrat, but from the broadly human point of view, on which the finest intellects like to take their stand. Shelley perceived that Byron's aristocracy narrowed him, and made his sympathies less catholic than they might have been, nor can there be any doubt of the accuracy of this estimate of Shelley's; if a doubt existed it would be removed by Byron's alternative for a poet, "solitude, or high life." Another man of genius, whose loss we have recently deplored, was narrowed by his antipathy to the aristocratic spirit, though it is necessary to add, in justice, that it did not prevent him from valuing the friendship of noblemen whom he esteemed. The works of Charles Dickens would have been more accurate as pictures of English life, certainly more comprehensively accurate, if he could have felt for the aristocracy that hearty and loving sympathy which he felt for the middle classes and the people. But the narrowness of Dickens is more excusable than that of Byron, because a kindly heart more easily enters into the feelings of those whom it can often pity than of those who appear to be lifted above pity (though this is nothing but an appearance) and also because it is the habit of aristocracies to repel such sympathy by their manners, which the poor do not.

I have often thought that a sign of aristocratic narrowness in many English authors, including some of the most popular authors of the day, is the way they speak of shopkeepers. This may be due to simple ignorance; but if so, it is ignorance that might be easily avoided. Happily for our convenience there are a great many shopkeepers in England, so that there is no lack of the materials for study; but our novelists appear to consider this important class of Englishmen as unworthy of any patient and serious portraiture. You may remember Mr. Anthony Trollope's "Struggles of Brown, Jones, and Robinson," which appeared in the *Cornhill Magazine*, under Thackeray's editorship. That was an extreme instance of the way the class is treated in our literature: and then in poetry we have some disdainful verses of Mr. Tennyson's. It may be presumed that there is material for grave and respectful treatment of this extensive class, but our poets and novelists do not seem to have discovered, or sought to discover, the secret of that treatment. The intensity of the prejudices of caste prevents them from seeing any possibility of true gentlemanhood in a draper or a grocer, and blinds them to the æsthetic beauty or grandeur which may be as perfectly compatible with what is disdainfully called "counter-jumping" as it is admitted to be with the jumping of five-barred gates.

The same caste prejudices have often kept the mass of the upper classes in ignorance of most valuable and important branches of knowledge. The poor have been ignorant, yet never proud of their ignorance; the ignorance that men are proud of belongs to caste always, not always to what we should call an aristocratic caste, but to the caste-feeling in one class or another. The pride of the feudal baron in being totally illiterate amounted to self-exclusion from all intellectual culture, and we may still find living instances of partial self-exclusion from culture, of which pride is the only motive. There are people who pass their time in what are considered amusements (that do not amuse), because it seems to them a more gentlemanly sort of life than the devotion to some great and worthy pursuit which would have given the keenest zest and relish to their whole existence (besides making them useful members of society, which they are not), but which happens to be tabooed for them by the prejudices of their caste. There are many studies, in themselves noble and useful, that a man of good family cannot follow with the earnestness and the sacrifice of time necessary to

success in them, without incurring the disapprobation of his friends. If this disapprobation were visited on the breaker of caste-regulations because he neglected some other culture, there would still be something reasonable in it; but this is not the case. The caste-regulation forbids the most honorable and instructive labor when it does not forbid the most unprofitable idleness, the most utter throwing away of valuable time and faculty. Tycho Brahe feared to lose caste in becoming the most illustrious astronomer of his time; but he would have had no such apprehension, nor any ground for such apprehension, if instead of being impelled to noble work by a high intellectual instinct, he had been impelled by meaner passions to unlimited self-indulgence. Even, in our own day these prejudices are still strong enough, or have been until very lately, to keep our upper classes in great darkness about natural knowledge of all kinds, and about its application to the arts of life. How few gentlemen have been taught to draw accurately, and how few are accurately acquainted with the great practical inventions of the age! The caste-sentiment does not, in these days, keep them ignorant of literature, but it keeps them ignorant of *things*. A friend who had a strong constructive and experimental turn, told me that, as a rule, he found gentlemen less capable of entering into his ideas than common joiners and blacksmiths, because these humble workmen, from their habit of dealing with matter, had acquired some experience of its nature. For my own part, I have often been amazed by the difficulty of making something clear to a classically educated gentleman which any intelligent mechanic would have seen to the bottom, and all round, after five or six minutes of explanation. There is a certain French nobleman whose ignorance I have frequent opportunities of fathoming, always with fresh astonishment at the depths of it, and I declare that he knows no more about the properties of stone, and timber, and metal, than if he were a cherub in the clouds of heaven!

But there is something in caste-sentiment even more prejudicial to culture than ignorance itself, and that is the affectation of strong preferences for certain branches of knowledge in which people are not seriously interested. There is nothing which people will not pretend to like, if a liking for it is supposed to be one of the marks and indications of gentility. There has been an immense amount of this kind of affectation in regard to classical scholarship, and we know for a certainty that it is affectation whenever

people are loud in their praise of classical authors whom they never take the trouble to read. It may have happened to you, as it has happened to me from time to time, to hear men affirm the absolute necessity of classical reading to distinction of thought and manner, and yet to be aware at the same time, from close observation of their habits, that those very men entirely neglected the sources of that culture in which they professed such earnest faith. The explanation is, that as classical accomplishments are considered to be one of the evidences of gentility, whoever speaks loudly in their favor affirms that he has the tastes and preferences of a gentleman. It is like professing the fashionable religion, or belonging to an aristocratic shade of opinion in politics. I have not a doubt that all affectations of this kind are injurious to genuine culture, for genuine culture requires sincerity of interest before everything, and the fashionable affectations, so far from attracting sincere men to the departments of learning which happen to be *à la mode*, positively drive them away, just as many have become Nonconformists because the established religion was considered necessary to gentility, who might have remained contented with its ordinances as a simple discipline for their souls.

I dislike the interference of genteel notions in our studies for another reason. They deprive such culture as we may get from them, of one of the most precious results of culture, the enlargement of our sympathy for others. If we encourage ourselves in the pride of scholarly caste, so far as to imagine that we who have made Latin verses are above comparison with all who have never exercised their ingenuity in that particular way, we are not likely to give due and serious attention to the ideas of people whom we are pleased to consider uneducated; and yet it may happen that these people are sometimes our intellectual superiors, and that their ideas concern us very closely. But this is only half the evil. The consciousness of our contempt embitters the feelings of men in other castes, and prevents them from accepting our guidance when it might be of the greatest practical utility to them. I may mention Robert Burns as an instance of a man of genius who would have been happier and more fortunate if he had felt no barrier of separation between himself and the culture of his time. His poetry is as good rustic poetry as the best that has come down to us from antiquity, and instead of feeling towards the poets of times past the kind of soreness which a parvenu feels towards families of ancient descent, he

ought rather to have rejoiced in the consciousness that he was their true and legitimate successor, as the clergy of an authentic Church feel themselves to be successors and representatives of saints and apostles who are gathered to their everlasting rest. But poor Burns knew that in an age when what is called scholarship gave all who had acquired it a right to look down upon poets who had only genius as the illegitimate offspring of nature, his position had not that solidity which belonged to the scholarly caste, and the result was a perpetual uneasiness which broke out in frequent defiance.

"There'sither poets, much your betters,
Far seen in Greek, deep men o' letters,
Hae thought they had ensur'd their debtors
A' future ages;
Now moths deform in shapeless tatters,
Their unknown pages."

And again, in another poem—

"A set o' dull, conceited haashes
Confuse their brains in college classes!
They gang in stirks, and come out asses,
Plain truth to speak;
An' syne they think to climb Parnassus
By dint o' Greek!"

It was the influence of caste that made Burns write in this way, and how unjust it was every modern reader knows. The great majority of poets have been well-educated men, and instead of ganging into college like stirks and coming out like asses, they have, as a rule, improved their poetic faculty by an acquaintance with the masterpieces of their art. Yet Burns is not to be blamed for this injustice; he sneered at Greek because Greek was the mark of a disdainful and exclusive caste, but he never sneered at French or Italian. He had no soreness against culture for its own sake; it was the pride of caste that galled him.

How surely the wonderful class-instinct guided the aristocracy to the kind of learning likely to be the most effectual barrier against fellowship with the mercantile classes and the people! The uselessness of Greek in industry and commerce was a guarantee that those who had to earn their bread would never find time to master it, and even the strange difficult look of the alphabet (though in reality the alphabet was a gate of gossamer), ensured a degree of awful veneration for those initiated into its mysteries. Then the habit our forefathers had of quoting Latin and Greek to keep the ignorant in their places, was a strong defensive weapon of their caste, and they used it without scruple. Every year removes this passion for exclusiveness farther and farther into the past; every year makes

learning of every kind less available as the armor of a class, and less to be relied upon as a means of social advancement and consideration. Indeed, we have already reached a condition which is drawing back many members of the aristocracy to a state of feeling about intellectual culture resembling that of their forefathers in the middle ages. The old barbarian feeling has revived of late, a feeling which (if it were self-conscious enough) might find expression in some such words as these:

"It is not by learning and genius that we can hold the highest place, but by the dazzling exhibition of external splendor in those costly pleasures which are the plainest evidence of our power. Let us have beautiful equipages on the land, beautiful yachts upon the sea; let our recreations be public and expensive, that the people may not easily lose sight of us, and may know that there is a gulf of difference between our life and theirs. Why should we toil at books that the poorest students read, we who have lordly pastimes for every month in the year? To be able to revel immensely in pleasures which those below us taste rarely or not at all, this is the best evidence of our superiority. So let us take them magnificently, like English princes and lords."

Even the invention of railways has produced the unforeseen result of a return in the direction of barbarism. If there is one thing which distinguishes civilization it is fixity of residence; and it is essential to the tranquil following of serious intellectual purposes that the student should remain for many months of the year in his own library or laboratory, surrounded by all his implements of culture. But there are people of the highest rank in the England of to-day whose existence is as much nomadic as that of Red Indians in the reserved territories of North America. You cannot ascertain their whereabouts without consulting the most recent newspaper. Their life may be quite accurately described as a return, on a scale of unprecedented splendor and comfort, to the life of tribes in that stage of human development which is known as the period of the chase. They migrate from one hunting-ground to another as the diminution of the game impels them. Their residences, vast and substantial as they are, serve only as tents and wigwags. The existence of a monk in the cloister, of a prisoner in a fortress, is more favorable to the intellect than theirs.

And yet notwithstanding these reappearances of the savage nature at the very summit of modern civilization, the life of a great English nobleman of to-day commands so

much of what the intellectual know to be truly desirable, that it seems as if only a little firmness of resolution were needed to make all advantages his own. Surrounded by every aid, and having all gates open, he sees the paths of knowledge converging towards him like railways to some rich central city. He has but to choose his route, and travel along it with the least possible hindrance from every kind of friction, in the society of the best companions, and served by the most perfectly trained attendants. Might not our lords be like those brilliant peers who shone like intellectual stars around the throne of Elizabeth, and our ladies like that great lady of whom said a learned Italian, "*che non vi aveva altra dama al mondo che la pareggiasse nella cognizione delle arti e nella notizia delle scienze e delle lingue*," wherefore he called her boldly, in the enthusiasm of his admiration, "*grande anfitrite, Diana nume della terra!*"

LETTER II.

TO AN ENGLISH DEMOCRAT.

The liberal and illiberal spirit of aristocracy—The desire to draw a line—Substitution of external limitations for realities—The high life of nature—Value of gentlemen in a State—Odiousness of the narrow class-spirit—Julian Fane—Perfect knighthood—Democracies intolerant of dignity—Tendency of democracies to fix one uniform type of manners—That type not a high one—A descriptive anecdote—Knowledge and taste reveal themselves in manners—Dr. Arnold on the absence of gentlemen in France and Italy—Absence of a class with traditional good manners—Language defiled by the vulgarity of popular taste—Influence of aristocratic opinion limited, that of democratic opinion universal—Want of elevation in the French *bourgeoisie*—Spirit of the provincial democracy—Spirit of the Parisian democracy—Sentiments and acts of the Communards—Romantic feeling towards the past—Elopes for liberal culture in the democratic idea—Aristocracies think too much of persons and positions—That we ought to forget persons and apply our minds to things, and phenomena, and ideas.

ALL you say against the narrowness of the aristocratic spirit is true and to the point; but I think that you and your party are apt to confound together two states of feeling which are essentially distinct from each other. There is an illiberal spirit of aristocracy, and there is also a liberal one. The illiberal spirit does not desire to improve itself, having a full and firm belief in its own absolute perfection; its sole anxiety is to exclude others, to draw a circular line, the smaller the better, provided always that it gets inside and can keep the millions out. We see this spirit, not only in reference to birth, but in even fuller activity with regard to education and employment—in the preference for certain schools and colleges, for class reasons, without regard to

the quality of the teaching—in the contempt for all professions but two or three, without regard to the inherent baseness or nobility of the work that has to be done in them: so that the question asked by persons of this temper is not whether a man has been well trained in his youth, but if he has been to Eton and Oxford; not whether he is honorably laborious in his manhood, but whether he belongs to the Bar, or the Army, or the Church. This spirit is evil in its influence, because it substitutes external limitations for the realities of the intellect and the soul, and makes those realities themselves of no account wherever its traditions prevail. This spirit cares nothing for culture, nothing for excellence, nothing for the superiorities that make men truly great; all it cares for is to have reserved seats in the great assemblage of the world. Whatever you do, in fairness and honesty, against this evil and inhuman spirit of aristocracy, the best minds of this age approve; but there is another spirit of aristocracy which does not always receive the fairest treatment at your hands, and which ought to be resolutely defended against you.

There is really, in nature, such a thing as high life. There is really, in nature, a difference between the life of a gentleman who has culture, and fine bodily health, and independence, and the life of a Sheffield dry-grinder who cannot have any one of these three things. It is a good and not a bad sign of the state of popular intelligence when the people does not wilfully shut its eyes to the differences of condition amongst men, and when those who have the opportunity of leading what is truly the high life accept its discipline joyfully and have a just pride in keeping themselves up to their ideal. A life of health, of sound morality, of disinterested intellectual activity, of freedom from petty cares, is higher than a life of disease, and vice, and stupidity, and sordid anxiety. I maintain that it is right and wise in a nation to set before itself the highest attainable ideal of human life as the existence of the complete gentleman, and that an envious democracy, instead of rendering a service to itself, does exactly the contrary when it cannot endure and will not tolerate the presence of high-spirited gentlemen in the State. There are things in this world that it is right to hate, that we are the better for hating with all our hearts; and one of the things that I hate most, and with most reason, is the narrow class-spirit when it sets itself against the great interests of mankind. It is odious in the narrow-minded, pompous, selfish, pitiless aristocrat who thinks that the sons of the people

were made by Almighty God to be his lackeys and their daughters to be his mistresses; it is odious also, to the full as odious, in the narrow-minded, envious democrat who cannot bear to see any elegance of living, or grace of manner, or culture of mind above the range of his own capacity or his own purse.

Let me recommend to your consideration the following words, written by one young nobleman about another young nobleman, and reminding us, as we much need to be reminded, that life may be not only honest and vigorous, but also noble and beautiful. Robert Lytton says of Julian Fane—

"He was, I think, the most graceful and accomplished gentleman of the generation he adorned, and by this generation, at least, appropriate place should be reserved for the memory of a man in whose character the most universal sympathy with all the intellectual culture of his age was united to a refinement of social form, and a perfection of personal grace, which, in spite of all its intellectual culture, the age is sadly in want of. There is an artistry of life as well as of literature, and the perfect knighthood of Sidney is no less precious to the world than the genius of Spenser."

It is just this "perfect knighthood" that an envious democracy sneers at and puts down. I do not say that all democracies are necessarily envious, but they often are so, especially when they first assert themselves, and whilst in that temper they are very willing to ostracize gentlemen, or compel them to adopt bad manners. I have some hopes that the democracies of the future may be taught by authors and artists to appreciate natural gentlemanhood; but so far as we know them hitherto they seem intolerant of dignity, and disposed to attribute it (very unjustly) to individual self-conceit. The personages most popular in democratic countries are often remarkably deficient in dignity, and liked the better for the want of it, whilst if on the positive side they can display occasional coarseness they become more popular still. Then I should say, that although democratic feeling raises the lower classes and increases their self-respect, which is indeed one of the greatest imaginable benefits to a nation, it has a tendency to fix one uniform type of behavior and of thought as the sole type in conformity with what is accepted for "common sense," and that type can scarcely, in the nature of things, be a very elevated one. I have been much struck, in France, by the prevalence of what may be not inaccurately defined as the commercial traveller type, even in classes where you would scarcely expect to meet with it. One little descriptive anecdote will illustrate

what I mean. Having been invited to a stag-hunt in the Côte d'Or, I sat down to *déjeuner* with the sportsmen in a good country-house or château (it was an old place with four towers), and in the midst of the meal in came a man smoking a cigar. After a bow to the ladies he declined to eat anything, and took a chair a little apart, but just opposite me. He resumed his hat and went on smoking with a *sans-gêne* that rather surprised me under the circumstances. He put one arm on the side-board: the hand hung down, and I perceived that it was dirty (so was the shirt), and that the nails had edges of ebony. On his chin there was a black stubble of two days' growth. He talked very loudly, and his dress and manners were exactly those of a bagman just arrived at his inn. Who and what could the man be? I learned afterwards that he had begun life as a distinguished pupil of the *École Polytechnique*, that since then he had distinguished himself as an officer of artillery and had won the Legion of Honor on the field of battle, that he belonged to one of the principal families in the neighborhood, and had nearly 2000*l.* a year from landed property.

Now, it may be a good thing for the roughs at the bottom of the social scale to level up to the bagman-ideal, but it does seem rather a pity (does it not?) that a born gentleman of more than common bravery and ability should level down to it. And it is here that lies the principle objection to democracy from the point of view of culture, that its notion of life and manners is a uniform notion, not admitting much variety of classes, and not allowing the high development of graceful and accomplished humanity in any class which an aristocracy does at least encourage in one class, though it may be numerically a small class. I have not forgotten what Saint-Simon and La Bruyère have testified about the ignorance of the old noblesse. Saint-Simon said that they were fit for nothing but fighting, and only qualified for promotion even in the army by seniority; that the rest of their time was passed in "the most deadly uselessness, the consequence of their indolence and distaste for all instruction." I am sure that my modern artillery captain, notwithstanding his bad manners, *knew* more than any of his forefathers; but where was his "perfect knighthood?" And we easily forget "how much talent runs into manners," as Emerson says. From the artistic and poetical point of view, behavior is an expression of knowledge and taste and feeling in combination, as clear and legible as literature or painting, so that when the behavior is coarse and unbecoming we know that the perceptions cannot be deli-

cate, whatever may have been learned at school. When Dr. Arnold travelled on the Continent, nothing struck him more than the absence of gentlemen. "We see no gentlemen anywhere," he writes from Italy. From France he writes: "Again I have been struck with the total absence of all gentlemen, and of all persons of the education and feelings of gentlemen." Now, although Dr. Arnold spoke merely from the experience of a tourist, and was perhaps not quite competent to judge of Frenchmen and Italians otherwise than from externals, still there was much truth in his observation. It was not quite absolutely true. I have known two or three Italian officers, and one Savoyard nobleman, and a Frenchman here and there, who were as perfect gentlemen as any to be found in England, but they were isolated like poets, and were in fact poets in behavior and self-discipline. The plain truth is, that there is no distinct class in France maintaining good manners as a tradition common to all its members; and this seems to be the inevitable defect of a democracy. It may be observed, further, that language itself is defiled by the vulgarity of the popular taste; that expressions are used continually, even by the upper middle class, which it is impossible to print, and which are too grossly indecent to find a place even in the dictionaries; that respectable men, having become insensible to the meaning of these expressions from hearing them used without intention, employ them constantly from habit, as they decorate their speech with oaths, whilst only purists refrain from them altogether.

An aristocracy may be very narrow and intolerant, but it can only exclude from its own pale, whereas when a democracy is intolerant it excludes from all human intercourse. Our own aristocracy, as a class, rejects Dissenters, and artists, and men of science, but they flourish quite happily outside of it. Now try to picture to yourself a great democracy having the same prejudices, who could get out of the democracy? All aristocracies are intolerant with reference, I will not say to religion, but, more accurately, with reference to the outward forms of religion, and yet this aristocratic intolerance has not prevented the development of religious liberty, because the lower classes were not strictly bound by the customs of the nobility and gentry. The unwritten law appears to be that members of an aristocracy shall conform either to what is actually the State Church or to what has been the State Church at some former period of the national history. Although England is a Protestant country,

an English gentleman does not lose caste when he joins the Roman Catholic communion; but he loses caste when he becomes a Dissenter. The influence of this caste-law in keeping the upper classes within the Churches of England and of Rome has no doubt been very considerable, but its influence on the nation generally has been incomparably less considerable than that of some equally decided social rule in the entire mind of a democracy. Had this rule of conformity to the religion of the State been that of the English democracy, religious liberty would have been extinguished throughout the length and breadth of England. I say that the customs and convictions of a democracy are more dangerous to intellectual liberty than those of an aristocracy, because, in matters of custom, the gentry rule only within their own park-palings, whereas the people, when power resides with them, rule wherever the breezes blow. A democracy that dislikes refinement and good manners can drive men of culture into solitude, and make morbid hermits of the very persons who ought to be the lights and leaders of humanity. It can cut short the traditions of good-breeding, the traditions of polite learning, the traditions of thoughtful leisure, and reduce the various national types of character to one type, that of the *commis-voyageur*. All men of refined sentiment in modern France lament the want of elevation in the *bourgeoisie*. They read nothing, they learn nothing, they think of nothing but money and the satisfaction of their appetites. There are exceptions, of course, but the tone of the class is mean and low, and devoid of natural dignity or noble aspiration. Their ignorance passes belief, and is accompanied by an absolute self-satisfaction. "La fin de la bourgeoisie," says an eminent French author, "commence parcequ'elle a les sentiments de la populace. Je ne vois pas qu'elle lise d'autres journaux, qu'elle se régale d'une musique différente, qu'elle ait des plaisirs plus élevés. Chez l'une comme chez l'autre, c'est le même amour de l'argent, le même respect du fait accompli, le même besoin d'idoles pour les détruire, la même haine de toute supériorité, le même esprit de dénigrement, la même crasse ignorance!" M. Renan also complains that during the Second Empire the country sank deeper and deeper into vulgarity, forgetting its past history and its noble enthusiasms. "Talk to the peasant, to the socialist of the International, of France, of her past history, of her genius, he will not understand you. Military honor seems madness to him; the taste for great things, the glory of the mind, are vain dreams; money

spent for art and science is money thrown away foolishly. Such is the provincial spirit." And if this is the provincial spirit, what is the spirit of the metropolitan democracy? Is it not clearly known to us by its acts? It had the opportunity, under the Commune, of showing the world how tenderly it cared for the monuments of national history, how anxious it was for the preservation of noble architecture, of great libraries, of pictures that can never be replaced. Whatever may have been our illusions about the character of the Parisian democracy, we know it very accurately now. To say that it is brutal would be an inadequate use of language, for the brutes are only indifferent to history and civilization, not hostile to them. So far as it is possible for us to understand the temper of that democracy, it appears to cherish an active and intense hatred for every conceivable kind of superiority, and an instinctive eagerness to abolish the past; or, as that is not possible, since the past will always *have been* in spite of it, then at least to efface all visible memorials and destroy the bequests of all preceding generations. If any one had affirmed, before the fall of Louis Napoleon, that the democratic spirit was capable of setting fire to the Louvre and the national archives and libraries, of deliberately planning the destruction of all those magnificent edifices, ecclesiastical and civil, which were the glory of France and the delight of Europe, we should have attributed such an assertion to the exaggerations of reactionary fears. But since the year 1870 we do not speculate about the democratic temper in its intensest expression; we have seen it at work, and we know it. We know that every beautiful building, every precious manuscript and picture, has to be protected against the noxious swarm of Communards as a sea-jetty against the Pholias and the Teredo.

Compare this temper with that of a Marquis of Hertford, a Duke of Devonshire, a Duc de Luynes! True guardians of the means of culture, these men have given splendid hospitality to the great authors and artists of past times, by keeping their works for the future with tender and reverent care. Nor has this function of high stewardship ever been more nobly exercised than it is to-day by that true knight and gentleman, Sir Richard Wallace. Think of the difference between this great-hearted guardian of priceless treasures, keeping them for the people, for civilization, and a base-spirited Communard setting fire to the library of the Louvre.

The ultra-democratic spirit is hostile to culture, from its hatred of all delicate and ro-

mantic sentiment, from its scorn of the tenderer and finer feelings of our nature, and especially from its brutish incapacity to comprehend the needs of the higher life. If it had its way we should be compelled by public opinion to cast all the records of our ancestors, and the shields they wore in battle, into the foul waters of an eternal Lethe. The intolerance of the sentiment of birth, that noble sentiment which has animated so many hearts with heroism, and urged them to deeds of honor, associated as it is with a cynical disbelief in the existence of female virtue,* is one of the commonest signs of this evil spirit of detraction. It is closely connected with an ungrateful indifference towards all that our forefathers have done to make civilization possible for us. Now, although the intellectual spirit studies the past critically, and does not accept history as a legend is accepted by the credulous, still the intellectual spirit has a deep respect for all that is noble in the past, and would preserve the record of it forever. Can you not imagine, have you not actually seen, the heir of some ancient house who shares to the full the culture and aspirations of the age in which we live, and who nevertheless preserves, with pious reverence, the towers his forefathers built on the ancestral earth, and the oaks they planted, and the shields that were carved on the tombs where the knights and their ladies rest? Be sure that a right understanding of the present is compatible with a right and reverent understanding of the past, and that, although we may closely question history and tradition, no longer with childlike faith, still the spirit of true culture would never efface their vestiges. It was not Michelet, not Renan, not Hugo, who set fire to the Palace of Justice and imperilled the Sainte-Chapelle.

And yet, notwithstanding all these vices and excesses of the democratic spirit, notwithstanding the meanness of the middle classes and the violence of the mob, there is one all-powerful reason why our best hopes for the liberal culture of the intellect are centred in the democratic idea. The reason is, that aristocracies think too much of persons and positions to weigh facts and opinions justly. In an aristocratic society it is thought unbecoming to state your views in their full force in the presence of any social superior. If you state them at all you must soften them to suit the occasion, or you will be a sinner against good-breeding. Observe how timid and acquiescent the ordinary Englishman be-

comes in the presence of a lord. No right-minded person likes to be thought impudent, and where the tone of society refers everything to position, you are considered impudent when you forget your station. But what has my station to do with the truths the intellect perceives, that lie entirely outside of me? From the intellectual point of view, it is a necessary virtue to forget your station, to forget yourself entirely, and to think of the subject only, in a manner perfectly disinterested. Anonymous journalism was a device to escape from that continual reference to the rank and fortune of the speaker which is an inveterate habit in all aristocratic communities. A young man without title or estate knows that he would not be listened to in the presence of his social superiors, so he holds his tongue in society and relieves himself by an article in the *Times*. The anonymous newspapers and reviews are a necessity in an aristocratic community, for they are the only means of attracting attention to facts and opinions without attracting it to yourself, the only way of escaping the personal question, "Who and what are you, that you venture to speak so plainly, and where is your stake in the country?"

The democratic idea, by its theoretic equality amongst men, affords an almost complete relief from this impediment to intellectual conversation. The theory of equality is good, because it negatives the interference of rank and wealth in matters that appertain to the intellect or to the moral sense. It may even go one step farther with advantage, and ignore intellectual authority also. The perfection of the intellectual spirit is the entire forgetfulness of persons, in the application of the whole power of the mind to things, and phenomena, and ideas. Not to mind whether the speaker is of noble or humble birth, rich or poor; this indeed is much, but we ought to attain a like indifference to the authority of the most splendid reputation. "Every great advance in natural knowledge," says Professor Huxley, "has involved the absolute rejection of authority, the cherishing of the keenest scepticism, the annihilation of the spirit of blind faith; and the most ardent votary of science holds his firmest convictions, not because the men he most venerates hold them, not because their verity is testified by portents and wonders, but because his experience teaches him that whenever he chooses to bring these convictions into contact with their primary source, Nature—whenever he thinks fit to test them by appealing to experiment and to observation—Nature will confirm them."

*The association between the two is this. If you believe that you are descended from a distinguished ancestor, you are simple enough to believe in his wife's fidelity.

PART IX.

SOCIETY AND SOLITUDE.

LETTER I.

TO A LADY WHO DOUBTED THE REALITY OF INTELLECTUAL FRIENDSHIPS.

That intellectual friendships are in their nature temporary, when there is no basis of feeling to support them—Their freshness soon disappears—Danger of satiety—Temporary acquaintances—Succession in friendships—Free communication of intellectual results—Friendships between ripe and immature men—Rembrandt and Hoogstraten—Tradition transmitted through these friendships.

I HEARTILY agree with you so far as this, that intellectual relations will not sustain friendship for very long, unless there is also some basis of feeling to sustain it. And still there is a certain reality in the friendships of the intellect whilst they last, and they are remembered gratefully for their profit when in the course of nature they have ceased. We may wisely contract them, and blamelessly dissolve them when the occasion that created them has gone by. They are like business partnerships, contracted from motives of interest, and requiring integrity above all things, with mutual respect and consideration, yet not necessarily either affection or the semblance of it. Since the motive of the intellectual existence is the desire to ascertain and communicate truth, a sort of positive and negative electricity immediately establishes itself between those who want to know and those who desire to communicate their knowledge; and the connection is mutually agreeable until these two desires are satisfied. When this happens, the connection naturally ceases; but the memory of it usually leaves a permanent feeling of good-will, and a permanent disposition to render services of the same order. This, in brief, is the whole philosophy of the subject; but it may be observed farther, that the purely intellectual intercourse which often goes by the name of friendship affords excellent opportunities for the formation of real friendship, since it cannot be long continued without revealing much of the whole nature of the associates.

We do not easily exhaust the mind of another, but we easily exhaust what is accessible to us in his mind; and when we have done this, the first benefit of intercourse is at an end. Then comes a feeling of dulness and disappointment, which is full of the bitterest discouragement to the inexperienced. In maturer life we are so well prepared for this that it discourages us no longer. We know before-

hand that the freshness of the mind that was new to us will rapidly wear away, that we shall soon assimilate the fragment of it which is all that ever can be made our own, so we enjoy the freshness whilst it lasts, and are even careful of it as a fruiterer is of the bloom upon his grapes and plums. It may seem a hard and worldly thing to say, but it appears to me that a wise man might limit his intercourse with others before there was any danger of satiety, as it is wisdom in eating to rise from table with an appetite. Certainly, if the friends of our intellect live near enough for us to anticipate no permanent separation by mere distance, if we may expect to meet them frequently, to have many opportunities for a more thorough and searching exploration of their minds, it is a wise policy not to exhaust them all at once. With the chance acquaintances we make in travelling, the case is altogether different; and this is, no doubt, the reason why men are so astonishingly communicative when they never expect to see each other any more. You feel an intense curiosity about some temporary companion; you make many guesses about him; and to induce him to tell you as much as possible in the short time you are likely to be together, you win his confidence by a frankness that would perhaps considerably surprise your nearest neighbors and relations. This is due to the shortness of the opportunity; but with people who live in the same place, you will proceed much more deliberately.

Whoever would remain regularly provided with intellectual friends, ought to arrange a succession of friendships, as gardeners do with peas and strawberries, so that, whilst some are fully ripe, others should be ripening to replace them. This doctrine sounds like blasphemy against friendship; but it is not intended to apply to the sacred friendship of the heart, which ought to be permanent like marriage, only to the friendship of the head, which is of the utmost utility to culture, yet in its nature temporary. I know a distinguished Englishman who is quite remarkable for the talent with which he arranges his intellectual friendships, so as never to be dependent on any one, but always sure of the intercourse he needs, both now and in the future. He will never be isolated, never without some fresh and living interest in humanity. It may seem to you that there is a lamentable want of faith in this; and I grant at once that a system of this kind does presuppose the extinction of the boyish belief in the permanence of human relations; still, it indicates a large-minded confidence in the value of human intercourse, an enjoyment of

the present, a hope for the future, and a right appreciation of the past.

Nothing is more beautiful in the intellectual life than the willingness of all cultivated people—unless they happen to be accidentally soured by circumstances that have made them wretched—to communicate to others the results of all their toil. It is true that they apparently lose nothing by the process, and that a rich man who gives some portion of his material wealth exercises a greater self-denial; still, when you consider that men of culture, in teaching others, abandon something of their relative superiority, and often voluntarily incur the sacrifice of what is most precious to them, namely, their time, I think you will admit that their readiness in this kind of generosity is one of the finest characteristics of highly-developed humanity. Of all intellectual friendships, none are so beautiful as those which subsist between old and ripe men and their younger brethren in science, or literature, or art. It is by these private friendships, even more than by public performance, that the tradition of sound thinking and great doing is perpetuated from age to age. Hoogstraten, who was a pupil of Rembrandt, asked him many questions, which the great master answered thus:—"Try to put well in practice what you already know; in so doing you will, in good time, discover the hidden things which you now inquire about." That answer of Rembrandt's is typical of the maturest teaching. How truly friendly it is; how full of encouragement; how kind in its admission that the younger artist *did* already know something worth putting into practice; and yet, at the same time, how judicious in its reserve! Few of us have been so exceptionally unfortunate as not to find, in our own age, some experienced friend who has helped us by precious counsel, never to be forgotten. We cannot render it in kind; but perhaps in the fulness of time it may become our noblest duty to aid another as we have ourselves been aided, and to transmit to him an invaluable treasure, the tradition of the intellectual life.

LETTER II.

TO A YOUNG GENTLEMAN WHO LIVED MUCH IN FASHIONABLE SOCIETY.

Certain dangers to the intellectual life—Difficult to resist the influences of society—Gilding—Fashionable education—Affectations of knowledge—Not easy to ascertain what people really know—Value of real knowledge diminished—Some good effects of affectations—Their bad effect on workers—Skill in amusements.

THE kind of life which you have been leading for the last three or four years will always

be valuable to you as a past experience, but if the intellectual ambition you confess to me is quite serious, I would venture to suggest that there are certain dangers in the continuation of your present existence if altogether uninterrupted. Pray do not suspect me of any narrow prejudice against human intercourse, or of any wish to make a hermit of you before your time, but believe that the few observations I have to make are grounded simply on the desire that your career should be entirely satisfactory to your own maturer judgment, when you will look back upon it after many years.

An intellectual man may go into general society quite safely if only he can resist its influence upon his serious work; but such resistance is difficult in maturity and impossible in youth.

The sort of influence most to be dreaded is this. Society is, and must be, based upon appearances, and not upon the deepest realities. It requires some degree of reality to produce the appearance, but not a substantial reality. Gilding is the perfect type of what Society requires. A certain quantity of gold is necessary for the work of the gilder, but a very small quantity, and skill in applying the metal so as to cover a large surface, is of greater consequence than the weight of the metal itself. The mind of a fashionable person is a carefully gilded mind.

Consider fashionable education. Society imperatively requires an outside knowledge of many things; not permitting the frank confession of ignorance, whilst it is yet satisfied with a degree of knowledge differing only from avowed ignorance in permitting you to be less sincere. All young ladies, whether gifted by nature with any musical talent or not, are compelled to say that they have learned to play upon the piano; all young gentlemen are compelled to affect to know Latin. In the same way the public opinion of Society compels its members to pretend to know and appreciate the masterpieces of literature and art. There is, in truth, so much compulsion of this kind that it is not easy to ascertain what people do really know and care about until they admit you into their confidence.

The inevitable effect of these affectations is to diminish the value, in Society, of genuine knowledge and accomplishment of all kinds. I know a man who is a Latin scholar; he is one of the few moderns who have really learned Latin; but in fashionable society this brings him no distinction, because we are all supposed to know Latin, and the true scholar, when he appears, cannot be distinguished

from the multitude of fashionable pretenders. I know another man who can draw; there are not many men, even amongst artists, who can draw soundly; yet in fashionable society he does not get the serious sort of respect which he deserves, because fashionable people believe that drawing is an accomplishment generally attainable by young ladies and communicable by governesses. I have no wish to insinuate that Society is wrong, in requiring a certain pretence to education in various subjects, and a certain affectation of interest in masterpieces, for these pretences and affectations do serve to deliver it from the darkness of a quite absolute ignorance. A society of fashionable people who think it necessary to be able to talk superficially about the labors of men really belonging to the intellectual class, is always sure to be much better informed than a Society such as that of the French peasantry, for example, where nobody is expected to know anything. It is well for Society itself that it should profess a deep respect for classical learning, for the great modern poets and painters, for scientific discoverers, even though the majority of its members do not seriously care about them. The pretension itself requires a certain degree of knowledge, as gilding requires a certain quantity of gold.

The evil effects of these affectations may be summed up in a sentence. They diminish the apparent value of the realities which they imitate, and they tend to weaken our enthusiasm for those great realities, and our ardor in the pursuit of them. The impression which fashionable society produces upon a student who has strength enough to resist it, is a painful sense of isolation in his earnest work. If he goes back to the work with courage undiminished, he still clearly realizes—what it would be better for him not to realize quite so clearly—the uselessness of going beyond fashionable standards, if he aims at social success. And there is still another thing to be said which concerns you just now very particularly. Whoever leads the intellectual life in earnest is sure on some points to fail in strict obedience to the exigencies of fashionable life, so that, if fashionable successes are still dear to him, he will be constantly tempted to make some such reflections as the following:—"Here am I, giving years and years of labor to a pursuit which brings no external reward, when half as much work would keep me abreast of the society I live with, in everything it really cares about. I know quite well all that my learning is costing me. Other men outshine me easily in social pleasures and accomplishments. My skill at bill-

iards and on the moors is evidently declining, and I cannot ride or drive so well as fellows who do very little else. In fact I am becoming an old muff, and all I have to show on the other side is a degree of scholarship which only six men in Europe can appreciate, and a speciality in natural science in which my little discoveries are sure to be either anticipated or left behind."

The truth is, that to succeed well in fashionable society the higher intellectual attainments are not so useful as distinguished skill in those amusements which are the real business of the fashionable world. The three things which tell best in your favor amongst young gentlemen are to be an excellent shot, to ride well to hounds, and to play billiards with great skill. I wish to say nothing against any of these accomplishments, having an especially hearty admiration and respect for all good horsemen, and considering the game of billiards the most perfectly beautiful of games; still, the fact remains that to do these things as well as some young gentlemen do them, we must devote the time which they devote, and if we regularly give nine hours a day to graver occupations, pray, how and where are we to find it?

LETTER III.

TO A YOUNG GENTLEMAN WHO LIVED MUCH IN FASHIONABLE SOCIETY.

Some exceptional men may live alternately in different worlds—Instances—Differences between the fashionable and the intellectual spirit—Men sometimes made unfashionable by special natural gifts—Sometimes by trifling external circumstances—Anecdote of Ampère—He did not shine in society—His wife's anxieties about his material wants—Apparent contrast between Ampère and Oliver Goldsmith.

You ask me why there should be any fundamental incompatibility between the fashionable and the intellectual lives. It seems to you that the two might possibly be reconciled, and you mention instances of men who attained intellectual distinction without deserting the fashionable world.

Yes, there have been a few examples of men endowed with that overflow of energy which permits the most opposite pursuits, and enables its possessors to live, apparently, in two worlds between which there is not any natural affinity. A famous French novelist once took the trouble to elaborate the portrait of a lady who passed one half of her time in virtue and churches, whilst she employed the other half in the wildest adventures. In real life I may allude to a distinguished English engraver, who spent a fortnight over his plate

and a fortnight in some fashionable watering-place, alternately, and who found this distribution of his time not unfavorable to the elasticity of his mind. Many hard-working Londoners, who fairly deserve to be considered intellectual men, pass their days in professional labor and their evenings in fashionable society. But in all instances of this kind the professional work is serious enough, and regular enough, to give a very substantial basis to the life, so that the times of recreation are kept daily subordinate by the very necessity of circumstances. If you had a profession, and were obliged to follow it in earnest six or eight hours a day, the more Society amused you, the better. The danger in your case is that your whole existence may take a fashionable tone.

The *esprit* or tone of fashion differs from the intellectual tone in ways which I will attempt to define. Fashion is nothing more than the temporary custom of rich and idle people who make it their principal business to study the external elegance of life. This custom incessantly changes. If your habits of mind and life change with it you are a fashionable person, but if your habits of mind and life either remain permanently fixed or follow some law of your own individual nature, then you are outside of fashion. The intellectual spirit is remarkable for its independence of custom, and therefore on many occasions it will clash with the fashionable spirit. It does so most frequently in the choice of pursuits, and in the proportionate importance which the individual student will (in his own case) assign to his pursuits. The regulations of fashionable life have fixed, at the least temporarily, the degree of time and attention which a fashionable person may devote to this thing or that. The intellectual spirit ignores these regulations, and devotes its possessor, or more accurately its possessor, to the intellectual speciality for which he has most aptitude, often leaving him ignorant of what fashion has decided to be essential. After living the intellectual life for several years he will know too much of one thing and too little of some other things to be in conformity with the fashionable ideal. For example, the fashionable ideal of a gentleman requires classical scholarship, but it is so difficult for artists and men of science to be classical scholars also that in this respect they are likely to fall short. I knew a man who became unfashionable because he had a genius for mechanics. He was always about steam-engines, and, though a gentleman by birth, associated from choice with men who understood the science that chiefly interested him, of which all fashionable people

were so profoundly ignorant that he habitually kept out of their way. He, on his part, neglected scholarship and literature and all that "artistry of life," as Mr. Robert Lytton calls it, in which fashionable society excels. Men are frequently driven into unfashionable existence by the very force and vigor of their own intellectual gifts, and sometimes by external circumstances, apparently most trifling, yet of infinite influence on human destiny. There is a good instance of this in a letter from Ampère to his young wife, that "Julie" who was lost to him so soon. "I went to dine yesterday at Madame Beauregard's with hands blackened by a harmless drug which stains the skin for three or four days. She declared that it looked like manure, and left the table, saying that she would dine when I was at a distance. I promised not to return there before my hands were white. Of course I shall never enter the house again."

Here we have an instance of a man of science who has temporarily disqualified himself for polite society by an experiment in the pursuit of knowledge. What do you think of the vulgarity of Madame Beauregard? To me it appears the perfect type of that pre-occupation about appearances which blinds the genteel vulgar to the true nobility of life. Were not Ampère's stained hands nobler than many white ones? It is not necessary for every intellectual worker to blacken his fingers with chemicals, but a kind of rust very frequently comes over him which ought to be as readily forgiven, yet rarely is forgiven. "In his relations with the world," writes the biographer of Ampère, "the authority of superiority disappeared. To this the course of years brought no alternative. Ampère became celebrated, laden with honorable distinctions, the great Ampère! outside the speculations of the intellect, was hesitating and timid again, disquieted and troubled, and more disposed to accord his confidence to others than to himself."

Intellectual pursuits did not qualify Ampère, they do not qualify any one, for success in fashionable society. To succeed in the world you ought to be of the world, so as to share the things which interest it without too wide a deviation from the prevalent current of your thoughts. Its passing interests, its temporary customs, its transient phases of sentiment and opinion, ought to be for the moment your own interests, your own feelings and opinions. A mind absorbed as Ampère's was in the contemplation and elucidation of the unchangeable laws of nature, is too much fixed upon the permanent to adapt itself naturally to these ever-varying estimates.

He did not easily speak the world's lighter language, he could not move with its mobility. Such men forget even what they eat and what they put on; Ampère's young wife was in constant anxiety, whilst the pair were separated by the severity of their fate, as to the sufficiency of his diet and the decency of his appearance. One day she writes to him to mind not to go out in his shabby old coat, and in the same letter she entreats him to purchase a bottle of wine, so that when he took no milk or broth he would find it, and when it was all drunk she tells him to buy another bottle. Afterwards she asks him whether he makes a good fire, and if he has any chairs in his room. In another letter she inquires if his bed is comfortable, and in another she tells him to mind about his acids, for he has burnt holes in his blue stockings. Again, she begs him to try to have a passably decent appearance, because that will give pleasure to his poor wife. He answers, to tranquillize her, that he does not burn his things now, and that he makes chemical experiments only in his old breeches with his gray coat and his waistcoat of greenish velvet. But one day he is forced to confess that she must send him new trousers if he is to appear before MM. Delambre and Villars. He "does not know what to do," his best breeches still smell of turpentine, and, having wished to put on trousers to go to the Society of Emulation, he saw the hole which Barrat fancied he had mended become bigger than ever, so that it showed the piece of different cloth which he had sown under it. He adds that his wife will be afraid that he will spoil his "*beau pantalon*," but he promises to send it back to her as clean as when he received it. How different is all this from that watchful care about externals which marks the man of fashion! Ampère was quite a young man then, still almost a bridegroom, yet he is already so absorbed in the intellectual life as to forget appearances utterly, except when Julie, with feminine watchfulness, writes to recall them to his mind. I am not defending or advocating this carelessness. It is better to be neat and tidy than to go in holes and patches; but I desire to insist upon the radical difference between the fashionable spirit and the intellectual spirit. And this difference, which shows itself in these external things, is not less evident in the clothing or preparation of the mind. Ampère's intellect, great and noble as it was, could scarcely be considered more suitable for *le grand monde* than the breeches that smelt of turpentine, or the trousers made ragged by aquafortis.

A splendid contrast, as to tailoring, was our own dear Oliver Goldsmith, who displayed himself in those wonderful velvet coats and satin small-clothes from Mr. Filby's, which are more famous than the finest garments ever worn by prince or peer. Who does not remember that bloom-colored coat which the ablest painters have studiously immortalized, made by John Filby, at the Harrow, in Water Lane (best advertised of tailors!), and that charming blue velvet suit, which Mr. Filby was never paid for? Surely a poet so splendid was fit for the career of fashion! No, Oliver Goldsmith's velvet and lace were the expression of a deep and painful sense of personal unfitness. They were the fine frame which is intended to pass off an awkward and imperfect picture. There was a quieter dignity in Johnson's threadbare sleeves. Johnson, the most influential though not the most elegant intellect of his time, is grander in his neglect of fashion than Goldsmith in his ruinous subservience. And if it were permitted to me to speak of two or three great geniuses who adorn the age in which we ourselves are living, I might add that they seem to follow the example of the author of "*Rasselas*" rather than that of Mr. Filby's illustrious customer. They remind me of a good old squire who, from a fine sentiment of duty, permitted the village artist to do his worst upon him, and incurred thereby this withering observation from his metropolitan tailor: "You are *covered*, sir, but you are *not dressed*!"

LETTER IV.

TO A YOUNG GENTLEMAN WHO LIVED MUCH IN FASHIONABLE SOCIETY.

Test of professions—Mobility of fashionable taste—Practical service of an external deference to culture—Incompatibility between fashionable and intellectual lives—What each has to offer.

YOUR polite, almost diplomatic answer to my letter about fashionable society may be not unfairly concentrated into some such paragraph as the following:—

"What grounds have I for concluding that the professed tastes and opinions of Society are in any degree insincere? May not society be quite sincere in the preferences which it professes, and are not the preferences themselves almost always creditable to the good taste and really advanced culture of the Society which I suspect of a certain degree of affectation?"

This is the sense of your letter, and in reply

to it I give you a simple but sure test. Is the professed opinion carried out in practice, when there are fair opportunities for practice?

Let us go so far as to examine a particular instance. Your friends profess to appreciate classical literature. Do they read it? Or, on the other hand, do they confine themselves to believing that it is a good thing for other people to read it?

When I was a schoolboy, people told me that the classical authors of antiquity were eminently useful, and indeed absolutely necessary to the culture of the human mind, but I perceived that they did not read them. So I have heard many people express great respect for art and science, only they did not go so far as to master any department of art or science.

If you will apply this test to the professions of what is especially called fashionable society it is probable that you will arrive at the conclusions of the minority, which I have endeavored to express. You will find that the fashionable world remains very contentedly outside the true working intellectual life, and does not really share either its labors or its aspirations.

Another kind of evidence, which tells in the same direction, is the mobility of fashionable taste. At one time some studies are fashionable, at another time these are neglected and others have taken their place. You will not find this fickleness in the true intellectual world, which steadily pursues all its various studies, and keeps them well abreast, century after century.

If I insist upon this distinction with reference to you, do not accuse me of hostility even to fashion itself. Fashion is one of the great Divine institutions of human society, and the best philosophy rebels against none of the authorities that be, but studies and endeavors to explain them. The external deference which Society yields to culture is practically of great service, although (I repeat the epithet) it is *external*. The sort of good effect is in the intellectual sphere what the good effect of a general religious profession is in the moral sphere. All fashionable society goes to church. Fashionable religion differs from the religion of Peter and Paul as fashionable science differs from that of Humboldt and Arago, yet, notwithstanding this difference, the profession of religion is useful to Society as some restraint, at least during one day out of seven, upon its inveterate tendency to live exclusively for its amusement. And if any soul happens to come into existence in the fashionable world which has the genuine religious nature, that nature has a chance of developing itself, and

of finding ready to hand certain customs which are favorable to its well-being. So it is, though in quite a different direction, with the esteem which Society professes for intellectual pursuits. It is an esteem in great part merely nominal, as fashionable Christianity is nominal, and still it helps and favors the early development of the genuine faculty where it exists. It is certainly a great help to us that fashionable society, which has such a tremendous, such an almost irresistible power for good or evil, does not openly discourage our pursuits, but on the contrary regards them with great external deference and respect. The recognition which Society has given to artists has been wanting in frankness and in promptitude, though even in this case much may be said to excuse a sort of hesitation rather than refusal which was attributable to the strangeness and novelty of the artistic caste in England; but Society has far more than a generation professed a respect for literature and erudition which has helped those two branches of culture more effectually than great subsidies of money. The exact truth seems to be that Society is sincere in approving our devotion to these pursuits, but is not yet sufficiently interested in them to appreciate them otherwise than from the outside, just as a father and mother applaud their boys for reading Thucydides, yet do not read him themselves, either in the original or in a translation.

All that I care to insist upon is that there is a degree of incompatibility between the fashionable and the intellectual lives which makes it necessary, at a certain time, to choose one or the other as our own. There is no hostility, there need not be any uncharitable feeling on one side or the other, but there must be a resolute choice between the two. If you decide for the intellectual life, you will incur a definite loss to set against your gain. Your existence may have calmer and profounder satisfactions, but it will be less amusing, and even in an appreciable degree less *human*; less in harmony, I mean, with the common instincts and feelings of humanity. For the fashionable world, although decorated by habits of expense, has enjoyment for its object, and arrives at enjoyment by those methods which the experience of generations has proved to be most efficacious. Variety of amusement, frequent change of scenery and society, healthy exercise, pleasant occupation of the mind without fatigue—these things do indeed make existence agreeable to human nature, and the science of living agreeably is better understood in the fashionable society of England than by laborious students

and savans. The life led by that society is the true heaven of the natural man, who likes to have frequent feasts and a hearty appetite, who enjoys the varying spectacle of wealth, and splendor, and pleasure, who loves to watch, from the Olympus of his personal ease, the curious results of labor in which he takes no part, the interesting ingenuity of the toiling world below. In exchange for these varied pleasures of the spectator the intellectual life can offer you but one satisfaction, for all its promises are reducible simply to this, that you shall come at last, after infinite labor, into contact with some great *reality*—that you shall know, and do, in such sort that you will feel yourself on firm ground and be recognized—probably not much applauded, but yet recognized—as a fellow-laborer by other knowers and doers. Before you come to this, most of your present accomplishments will be abandoned by yourself as unsatisfactory and insufficient, but one or two of them will be turned to better account, and will give you after many years a tranquil self-respect, and, what is still rarer and better, a very deep and earnest reverence for the greatness which is above you. Severed from the vanities of the Illusory, you will live with the realities of knowledge, as one who has quitted the painted scenery of the theatre to listen by the eternal ocean or gaze at the granite hills.

LETTER V.

TO A YOUNG GENTLEMAN WHO KEPT ENTIRELY OUT OF COMPANY.

That Society which is frivolous in the mass contains individuals who are not frivolous—A piece of the author's early experience—Those who keep out of Society miss opportunities—People talk about what they have in common—That we ought to be tolerant of dulness—The loss to Society if superior men all held aloof—Utility of the gifted in general society—They ought not to submit to expulsion.

I WILLINGLY concede all that you say against fashionable society as a whole. It is, as you say, frivolous, bent on amusement, incapable of attention sufficiently prolonged to grasp any serious subject, and liable both to confusion and inaccuracy in the ideas which it hastily forms or easily receives. You do right, assuredly, not to let it waste your most valuable hours, but I believe also that you do wrong in keeping out of it altogether.

The society which seems so frivolous in masses contains individual members who, if you knew them better, would be able and

willing to render you the most efficient intellectual help, and you miss this help by restricting yourself exclusively to books. Nothing can replace the conversation of living men and women; not even the richest literature can replace it.

Many years ago I was thrown by accident amongst a certain society of Englishmen who, when they were all together, never talked about anything worth talking about. Their general conversations were absolutely empty and null, and I concluded, as young men so easily conclude, that those twenty or thirty gentlemen had not half a dozen ideas amongst them. A little reflection might have reminded me that my own talk was no better than theirs, and consequently that there might be others in the company who also knew more and thought more than they expressed. I found out, by accident, after awhile, that some of these men had more than common culture in various directions; one or two had travelled far, and brought home the results of much observation; one or two had read largely, and with profit; more than one had studied a science; five or six had seen a great deal of the world. It was a youthful mistake to conclude that, because their general conversation was very dull, the men were dull individually. The general conversations of English society are dull; it is a national characteristic. But the men themselves are individually often very well informed, and quite capable of imparting their information to a single interested listener. The art is to be that listener. Englishmen have the greatest dread of producing themselves in the semi-publicity of a general conversation, because they fear that their special topics may not be cared for by some of the persons present; but if you can get one of them into a quiet corner by himself, and humor his shyness with sufficient delicacy and tact, he will disburden his mind at last, and experience a relief in so doing.

By keeping out of society altogether you miss these precious opportunities. The wise course is to mix as much with the world as may be possible without withdrawing too much time from your serious studies, but not to expect anything valuable from the general talk, which is nothing but a neutral medium in which intelligences float and move as yachts do in sea-water, and for which they ought not to be held individually responsible. The talk of Society answers its purpose if it simply permits many different people to come together without clashing, and the purpose of its conventions is the avoidance of collision. In England the small talk

is heavy, like water; in France it is light as air; in both countries it is a medium and no more.

Society talks, by preference, about amusements; it does so because when people meet for recreation they wish to relieve their minds from serious cares, and also for the practical reason that Society must talk about what its members have in common, and their amusements are more in common than their work. As M. Thiers recommended the republican form of government in France on the ground that it was the form which divided his countrymen least, so a polite and highly civilized society chooses for the subject of general conversation the topic which is least likely to separate the different people who are present. It almost always happens that the best topic having this recommendation is some species of amusement; since amusements are easily learnt outside the business of life, and we are all initiated into them in youth.

For these reasons I think that we ought to be extremely tolerant of the dulness or frivolity which may seem to prevail in any numerous company, and not to conclude too hastily that the members of it are in any degree more dull or frivolous than ourselves. It is unfortunate, certainly, that the art of general conversation is not so successfully cultivated as it might be, and there are reasons for believing that our posterity will surpass us in this respect, because as culture increases the spirit of toleration increases with it, so that the great questions of politics and religion, in which all are interested, may be discussed more safely than they could be at the present day, by persons of different ways of thinking. But even the sort of general conversation we have now, poor as it may seem, still sufficiently serves as a medium for human intercourse, and permits us to meet on a common ground where we may select at leisure the agreeable or instructive friends that our higher intellect needs, and without whom the intellectual life is one of the ghastliest of solitudes.

And now permit me to add a few observations on another aspect of this subject, which is not without its importance.

Let us suppose that every one of rather more than ordinary capacity and culture were to act as you yourself are acting, and withdraw entirely from general society. Let us leave out of consideration for the present the loss to their private culture which would be the consequence of missing every opportunity

for forming new intellectual friendships. Let us consider, this time, what would be the consequence to Society itself.

If all the cultivated men were withdrawn from it, the general tone of Society would inevitably descend much lower even than it is at present; it would sink so low that the whole national intellect would undergo a sure and inevitable deterioration. It is plainly the duty of men situated as you are, who have been endowed by nature with superior faculties, and who have enlarged them by the acquisition of knowledge, to preserve Society by their presence from an evil so surely prolific of bad consequences. If Society is less narrow, and selfish, and intolerant, and apathetic than it used to be, it is because they who are the salt of the earth have not disdained to mix with its grosser and earthier elements. All the improvement in public sentiment, and the advancement in general knowledge which have marked the course of recent generations, are to be attributed to the wholesome influence of men who could think and feel, and who steadily exercised, often quite obscurely, yet not the less usefully in their time and place, the subtle but powerful attraction of the greater mind over the less. Instead of complaining that people are ignorant and frivolous, we ought to go amongst them and lead them to the higher life. "I know not how it is," said one in a dull circle to a more gifted friend who entered it occasionally, "when we are left to ourselves we are all lamentably stupid, but whenever you are kind enough to come amongst us we all talk very much better, and of things that are well worth talking about." The gifted man is always welcome, if only he will stoop to conquer, and forget himself to give light and heat to others. The low Philistinism of many a provincial town is due mainly to the shy reserve of the one or two superior men who fancy that they cannot amalgamate with the common intellect of the place.

Not only would I advocate a little patient condescension, but even something of the sturdier temper which will not be driven out. Are the Philistines to have all the talk to themselves forever; are they to rehearse their stupid old platitudes without the least fear of contradiction? How long, O Lord! how long? Let us resolve that even in general society they shall not eternally have things their own way. Somebody ought to have the courage to enlighten them even at their own tables, and in the protecting presence of their admiring wives and daughters.

LETTER VI.

TO A FRIEND WHO KINDLY WARNED THE AUTHOR OF THE BAD EFFECTS OF SOLITUDE.

Væ solis—Society and solitude alike necessary—The use of each—In solitude we know ourselves—Montaigne as a book-buyer—Compensations of solitude—Description of one who loved and sought it—How men are driven into solitude—Cultivated people in the provinces—Use of solitude as a protection for rare and delicate natures—Shelley's dislike to general society—Wordsworth and Turner—Sir Isaac Newton's repugnance to society—Auguste Comte—His systematic isolation and unshakable firmness of purpose—Milton and Bunyan—The solitude which is really injurious—Painters and authors—An ideal division of life.

You cry to me *Væ solis*! and the cry seems not the less loud and stirring that it comes in the folds of a letter. Just at first it quite startled and alarmed me, and made me strangely dissatisfied with my life and work; but farther reflection has been gradually reconciling me ever since, and now I feel cheerful again, and in a humor to answer you.

Woe unto him that is alone! This has been often said, but the studious recluse may answer, *Woe unto him that is never alone and cannot bear to be alone!*

We need society, and we need solitude also, as we need summer and winter, day and night, exercise and rest. I thank heaven for a thousand pleasant and profitable conversations with acquaintances and friends; I thank heaven also, and not less gratefully, for thousands of sweet hours that have passed in solitary thought or labor, under the silent stars.

Society is necessary to give us our share and place in the collective life of humanity, but solitude is necessary to the maintenance of the individual life. Society is to the individual what travel and commerce are to a nation; whilst solitude represents the home life of the nation, during which it develops its especial originality and genius.

The life of the perfect hermit, and that of those persons who feel themselves nothing individually, and have no existence but what they receive from others, are alike imperfect lives. The perfect life is like that of a ship of war which has its own place in the fleet and can share in its strength and discipline, but can also go forth alone in the solitude of the infinite sea. We ought to belong to Society, to have our place in it, and yet to be capable of a complete individual existence outside of it.

Which of the two is the grander, the ship in the disciplined fleet, arranged in order of battle, or the ship alone in the tempest, a thousand miles from land? The truest grandeur of the ship is neither in one nor the other,

but in the capacity for both. What would that captain merit who either had not seamanship enough to work under the eye of the admiral, or else had not sufficient knowledge of navigation to be trusted out of the range of signals?

I value society for the abundance of ideas that it brings before us, like carriages in a frequented street; but I value solitude for sincerity and peace, and for the better understanding of the thoughts that are truly ours. Only in solitude do we learn our inmost nature and its needs. He who has lived for some great space of existence apart from the tumult of the world, has discovered the vanity of the things for which he has no natural aptitude or gift—their *relative* vanity, I mean, their uselessness to himself, personally; and at the same time he has learned what is truly precious and good for him. Surely this is knowledge of inestimable value to a man: surely it is a great thing for any one in the bewildering confusion of distracting toils and pleasures to have found out the labor that he is most fit for and the pleasures that satisfy him best. Society so encourages us in affectations that it scarcely leaves us a chance of knowing our own minds; but in solitude this knowledge comes of itself, and delivers us from innumerable vanities.

Montaigne tells us that at one time he bought books from ostentation, but that afterwards he bought only such books as he wanted for his private reading. In the first of these conditions of mind we may observe the influence of society; in the second the effect of solitude. The man of the world does not consult his own intellectual needs, but considers the eyes of his visitors; the solitary student takes his literature as a lonely traveller takes food when he is hungry, without reference to the ordered courses of public hospitality.

It is a traditional habit of mankind to see only the disadvantages of solitude, without considering its compensations; but there are great compensations, some of the greatest being negative. The lonely man is lord of his own hours and of his own purse; his days are long and unbroken, he escapes from every form of ostentation, and may live quite simply and sincerely in great calm breadths of leisure. I knew one who passed his summers in the heart of a vast forest, in a common thatched cottage with furniture of common deal, and for this retreat he quitted very gladly a rich fine house in the city. He wore nothing but old clothes, read only a few old books, without the least regard to the opinions of the learned, and did not take in a newspaper. On the wall of his habitation he inscribed with

a piece of charcoal a quotation from De Sénancour to this effect: "In the world a man lives in his own age; in solitude, in all the ages." I observed in him the effects of a lonely life, and he greatly aided my observations by frankly communicating his experiences. That solitude had become inexpressibly dear to him, but he admitted one evil consequence of it, which was an increasing unfitness for ordinary society, though he cherished a few tried friendships, and was grateful to those who loved him and could enter into his humor. He had acquired a horror of towns and crowds, not from nervousness, but because he felt imprisoned and impeded in his thinking, which needed the depths of the forest, the venerable trees, the communication with primeval nature, from which he drew a mysterious yet necessary nourishment for the peculiar activity of his mind. I found that his case answered very exactly to the sentence he quoted from De Sénancour; he lived less in his own age than others do, but he had a fine compensation in a strangely vivid understanding of other ages. Like De Sénancour, he had a strong sense of the transitoriness of what is transitory, and a passionate preference for all that the human mind conceives to be relatively or absolutely permanent. This trait was very observable in his talk about the peoples of antiquity, and in the delight he took in dwelling rather upon everything which they had in common with ourselves than on those differences which are more obvious to the modern spirit. His temper was grave and earnest, but unfailingly cheerful, and entirely free from any tendency to bitterness. The habits of his life would have been most unfavorable to the development of a man of business, of a statesman, of a leader in practical enterprise, but they were certainly not unfavorable to the growth of a tranquil and comprehensive intellect, capable of "just judgment and high-hearted patriotism." He had not the spirit of the newspapers, he did not live intensely in the present, but he had the spirit which has animated great poets, saints, and sages, and far-seeing teachers of humanity. Not in vain had he lived alone in Nature, not in vain had he watched in sun twilights and witnessed many a dawn. Here is, there is a strength that comes to us in solitude from that shadowy, awful Presence that frivolous crowds repel!

Solitude may be and is sometimes deliberately accepted or chosen, but far more frequently men are driven into it by Nature and Fate. They go into solitude to escape the sense of isolation which is always most intolerable when there are many voices round us

in loud dissonance with our sincerest thought. It is a great error to encourage in young people the love of noble culture in the hope that it may lead them more into what is called good society. High culture always isolates, always drives men out of their class and makes it more difficult for them to share naturally and easily the common class-life around them. They seek the few companions who can understand them, and when these are not to be had within any traversable distance, they sit and work alone. Very possibly too, in some instances, a superior culture may compel the possessor of it to hold opinions too far in advance of the opinions prevalent around him to be patiently listened to or tolerated, and then he must either disguise them, which is always highly distasteful to a man of honor, or else submit to be treated as an enemy to human welfare. Cultivated people who live in London (their true home) need never condemn themselves to solitude from this cause, but in the provinces there are many places where it is not easy for them to live sociably without a degree of reserve that is more wearisome than solitude itself. And however much pains you take to keep your culture well in the background, it always makes you rather an object of suspicion to people who have no culture. They perceive that you are reserved, they know that very much of what passes in your mind is a mystery to them, and this feeling makes them uneasy in your presence, even afraid of you, and not indisposed to find a compensation for this uncomfortable feeling in sarcasms behind your back. Unless you are gifted with a truly extraordinary power of conciliating goodwill, you are not likely to get on happily, for long together, with people who feel themselves your inferiors. The very utmost skill and caution will hardly avail to hide all your modes of thought. Something of your higher philosophy will escape in an unguarded moment, and give offence because it will seem foolish or incomprehensible to your audience. There is no safety for you but in a timely withdrawal, either to a society that is prepared to understand you, or else to a solitude where your intellectual superiorities will neither be a cause of irritation to others nor of vexation to yourself.

Like all our instincts, the instinct of solitude has its especial purpose, which appears to be the protection of rare and delicate natures from the commonplace world around them. Though recluses are considered by men of the world to be doomed to inevitable incompetence, the fact is that many of them have reached the highest distinction in intel-

lectual pursuits. If Shelley had not disliked general society as he did, the originality of his own living and thinking would have been less complete; the influences of mediocre people, who, of course, are always in the majority, would have silently but surely operated to the destruction of that unequalled and personal delicacy of imagination to which we owe what is inimitable in his poetry. In the last year of his life, he said to Trelawny of Mary, his second wife, "She can't bear solitude, nor I society—the quick coupled with the dead." Here is a piteous prayer of his to be delivered from a party that he dreaded: "Mary says she will have a party! There are English singers here, the Sinclairs, and she will ask them, and every one she or you know. Oh the horror! For pity go to Mary and intercede for me! I will submit to any other species of torture than that of being bored to death by idle ladies and gentlemen." Again, he writes to Mary: "My greatest delight would be utterly to desert all human society. I would retire with you and our child to a solitary island in the sea; would build a boat, and shut upon my retreat the flood-gates of the world. I would read no reviews and talk with no authors. If I dared trust my imagination it would tell me that there are one or two chosen companions beside yourself whom I should desire. But to this I would not listen; where two or three are gathered together, the devil is among them." At Marlow he knew little of his neighbors. "I am not wretch enough," he said, "to tolerate an acquaintance." Wordsworth and Turner, if less systematic in their isolation, were still solitary workers, and much of the peculiar force and originality of their performance is due to their independence of the people about them. Painters are especial sufferers from the visits of talkative people who know little or nothing of the art they talk about, and yet who have quite influence enough to disturb the painter's mind by proving to him that his noblest thoughts are surest to be misunderstood. Men of science, too, find solitude favorable to their peculiar work, because it permits the concentration of their powers during long periods of time. Newton had a great repugnance to society, and even to notoriety—a feeling which is different, and in men of genius more rare. No one can doubt, however, that Newton's great intellectual achievements were due in some measure to this peculiarity of his temper, which permitted him to ripen them in the sustained tranquillity necessary to difficult investigations. Auguste Comte isolated himself not only from preference but on system, and

whatever may have been the defects of his remarkable mind, and the weakness of its ultimate decay, it is certain that his amazing command over vast masses of heterogeneous material would have been incompatible with any participation in the passing interests of the world. Nothing in intellectual history has ever exceeded the unshakable firmness of purpose with which he dedicated his whole being to the elaboration of the Positive philosophy. He sacrificed everything to it—position, time, health, and all the amusements and opportunities of society. He found that commonplace acquaintances disturbed his work and interfered with his mastery of it, so he resolutely renounced them. Others have done great things in isolation that was not of their own choosing, yet not the less fruitful for them and for mankind. It was not when Milton saw most of the world, but in the forced retirement of a man who had lost health and eyesight, and whose party was hopelessly defeated, that he composed the "Paradise Lost." It was during tedious years of imprisonment that Bunyan wrote his immortal allegory. Many a genius has owed his best opportunities to poverty, because poverty had happily excluded him from society, and so preserved him from time-devouring exigencies and frivolities.

The solitude which is really injurious is severance from all who are capable of understanding us. Painters say that they cannot work effectively for very long together when separated from the society of artists, and that they must return to London, or Paris, or Rome, to avoid an oppressive feeling of discouragement which paralyzes their productive energy. Authors are more fortunate, because all cultivated people are sociable for them; yet even authors lose strength and agility of thought when too long deprived of a genial intellectual atmosphere. In the country you meet with cultivated individuals; but we need more than this, we need those general conversations in which every speaker is worth listening to. The most favorable to culture would have times of open and equal intercourse with the best minds, and also its periods of retirement. My ideal would be a house in London, not from one or two houses that are so full of light and warmth that it is a liberal education to have entered them, and a solitude on some island of the Hebrides, with no companions but the sea-gulls and the thundering surges of the Atlantic. On one island I know well, and it is before my mind's eye, clear as a picture, whilst I am writing. It stands in the very entrance of a fine

water loch, rising above two hundred feet out of the water and setting its granite front steep against the western ocean. When the evenings are clear you can see Staffa and Iona like blue clouds between you and the sunset; and on your left, close at hand, the granite hills of Mull, with Ulva to the right across the narrow strait. It was the dream of my youth to build a tower there, with three or four little rooms in it, and walls as strong as a lighthouse. There have been more foolish dreams, and there have been less competent teachers than the tempests that would have roused me and the calms that would have brought me peace. If any serious thought, if any noble inspiration might have been hoped for, surely it would have been there, where only the clouds and waves were transient, but the ocean before me, and the stars above, and the mountains on either hand, were emblems and evidences of eternity.

NOTE.—There is a passage in Scott's novel, "The Pirate," which illustrates what has been said in this letter about the necessity for concealing superior culture in the presence of less intellectual companions, and I quote it the more willingly that Scott was so remarkably free from any morbid aversion to society, and so capable of taking a sincere interest in every human being.

Cleveland is speaking to Minna:—

"I thought over my former story, and saw that seeming more brave, skilful, and enterprising than others had gained me command and respect, and that seeming more gently nurtured and more civilized than they had made them envy and hate me as a being of another species. *I bargained with myself then, that since I could not lay aside my superiority of intellect and education, I would do my best to disguise, and to sink, in the rude seaman, all appearance of better feeling and better accomplishments.*"

A similar policy is often quite as necessary in the society of ladies.

PART X.

INTELLECTUAL HYGIENICS.

LETTER I.

TO A YOUNG AUTHOR WHILST HE WAS WRITING HIS FIRST BOOK.

Mr. Galton's advice to young travellers—That we ought to interest ourselves in the progress of a journey—The same rule applicable in intellectual things—Women in the cabin of a canal boat—Working hastily for temporary purposes—Fevered eagerness to get work done—Beginners have rarely acquired firm intellectual habits—Knowing the range of our own powers—The coolness of accomplished artists—Advice given by Ingres—Balsac's method of work—Scott, Horace Vernet, John Phillip—Decided workers are deliberate workers.

I READ the other day, in Galton's "Art of Travel," a little bit which concerns you and all of us, but I made the extract in my com-

monplace-book for your benefit rather than my own, because the truth it contains has been "borne in upon me" by my own experience, so that what Mr. Galton says did not give me a new conviction, but only confirmed me in an old one. He is speaking to explorers who have not done so much in that way as he has himself, and though the subject of his advice is the conduct of an exploring party (in the wilds of Australia, for example) the advice itself is equally useful if taken metaphorically, and applied to the conduct of intellectual labors and explorations of all kinds.

"Interest yourself," says Mr. Galton, "chiefly in the progress of your journey, and do not look forward to its end with eagerness. It is better to think of a return to civilization, not as an end to hardship and a haven from ill, but as a thing to be regretted, and as a close to an adventurous and pleasant life. In this way, risking less, you will insensibly creep on, making connections, and learning the capabilities of the country as you advance, which will be found invaluable in the case of a hurried or a disastrous return. And thus, when some months have passed by, you will look back with surprise on the great distance travelled over; for if you average only three miles a day, at the end of the year you will have advanced 1000, which is a very considerable exploration. The fable of the hare and the tortoise seems expressly intended for travellers over wide and unknown tracts."

Yes, we ought to interest ourselves chiefly in the progress of our work, and not to look forward to its end with eagerness. That eagerness of which Mr. Galton speaks has spoiled many a piece of work besides a geographical exploration, and it not only spoils work, but it does worse, it spoils life also. How am I to enjoy this year as I ought, if I am continually wishing it were over? A truly intellectual philosophy must begin by recognizing the fact that the intellectual paths are infinitely long, that there will always be new horizons behind the horizon that is before us, and that we must accept a gradual advance as the law of our intellectual life. It is our business to move forwards, but we ought to do so without any greater feeling of hurry than that which affects the most stationary of minds. Not a bad example for us is a bargeman's wife in a canal-boat. She moves; movement is the law of her life; yet she is as tranquil in her little cabin as any goodwife on shore, brewing her tea and preparing her buttered toast without ever thinking about getting to the end of her journey. For if that voyage were ended, another would always succeed to

it, and another! In striking contrast to the unhurried bargeman's wife in her cabin is an irritable Frenchman in the corner of a diligence, looking at his watch every half-hour, and wishing that the dust and rattle were over, and he were in his own easy-chair at home. Those who really lead the intellectual life, and have embraced it for better and for worse, are like the bargeman's wife; but those who live the life from time to time only, for some special purpose, wishing to be rid of it as soon as that purpose is accomplished, are like the sufferer in the purgatory of the diligence. Is there indeed really any true intellectual life at all when every hour of labor is spoiled by a feverish eagerness to be at the end of the projected task? You cannot take a bit out of another man's life and live it, without having lived the previous years that led up to it, without having also the assured hopes for the years that lie beyond. The attempt is constantly made by amateurs of all kinds, and by men of temporary purposes, and it always fails. The amateur says when he awakes on some fine summer morning, and draws up his blind, and looks out on the dewy fields: "Ah, the world of nature is beautiful to-day: what if I were to lead the life of an artist?" And after breakfast he seeks up his old box of watercolor and his blockbook, and stool, and white umbrella, and what not, and sallies forth, and fixes himself on the edge of the forest or the banks of the amber stream. The day that he passes there looks like an artist's day, yet it is not. It has not been preceded by the three or four thousand days which ought to have led up to it; it is not strong in the assured sense of present skill, in the calm knowledge that the hours will bear good fruit. So the chances are that there will be some hurry, and fretfulness, and impatience, under the shadow of that white parasol, and also that when the day is over there will be a disappointment. You cannot put an artist's day into the life of any one but an artist.

Our impatiences come mainly, I think, from an amateurish doubt about our own capacity, which is accompanied by a fevered eagerness to see the work done, because we are tormented both by hopes and fears so long as it is in progress. We have fears that it may not turn out as it ought to do, and we have at the same time hopes for its success. Both these causes produce eagerness, and deprive us of the tranquillity which distinguishes the thorough workman, and which is necessary to thoroughness in the work itself. Now please observe that I am not advising you to set aside these hopes and fears by an

effort of the will; when you have them they are the inevitable result of your state of culture, and the will can no more get rid of them than it can get rid of an organic disease. When you have a limited amount of power and of culture, and are not quite clear in your own mind as to where the limits lie, it is natural on the one hand that you should fear the insufficiency of what you possess, and on the other that in more sanguine moments you should indulge in hopes which are only extravagant because your powers have not yet been accurately measured. You will alternate between fear and hope, according to the temporary predominance of saddening or cheerful ideas, but both these feelings will urge you to complete the work in hand, that you may see your own powers reflected in it, and measure them more exactly. This is the main cause of the eagerness of young authors, and the reason why they often launch work upon the sea of publicity which is sure to go immediately to the bottom, from the unworkmanlike haste with which it has been put together. But beyond this there is another cause, which is, that beginners in literature have rarely acquired firm intellectual habits, that they do not yet lead the tranquil intellectual life, so that such a piece of work as the composition of a book keeps them in an unwholesome state of excitement. When you feel this coming upon you, pray remember Mr. Galton's wise traveller in unknown tracts, or the bargeman's wife in the canal-boat.

Amongst the many advantages of experience, one of the most valuable is that we come to know the range of our own powers, and if we are wise we keep contentedly within them. This relieves us from the malady of eagerness; we know pretty accurately beforehand what our work will be when it is done, and therefore we are not in a hurry to see it accomplished. The coolness of old hands in all departments of labor is due in part to the cooling of the temperament by age, but it is due even more to the fulness of acquired experience, for we do not find middle-aged men so cool in situations where they feel themselves incompetent. The conduct of the most experienced painters in the management of their work is a good example of this masterly coolness, because we can see them painting in their studios whereas we cannot so easily see or so justly estimate the coolness of scientific or literary workmen. A painter of great experience will have, usually, several pictures at a time upon his easels, and pass an hour upon one, or an hour upon the other, simple as the state of the pigment

invites him without ever being tempted to risk anything by hurrying a process. The ugly preparatory daubing which irritates the impatience of the beginner does not disturb his equanimity; he has laid it with a view to the long-foreseen result, and it satisfies him temporarily as the right thing for the time being. If you know what is the right thing for the time being, and always do it, you are sure of the calm of the thorough workman. All his touches, except the very last touch on each work, are touches of preparation, leading gradually up to his result. Ingres used to counsel his pupils to sketch always, to sketch upon and within the first sketch till the picture came right in the end; and this was strictly Balzac's method in literature. The literary and artistic labors of these two men did not proceed so much upon the principle of travelling as upon that of cultivation. They took an idea in the rough, as a settler takes a tract from wild nature, and then they went over it repeatedly, each time pushing the cultivation of it a little farther. Scott, Horace Vernet, John Phillip, and many others, have worked rather on the principle of travelling, passing over the ground once, and leaving it, never coming back again to correct the mistakes of yesterday. Both methods of work require deliberation, but the latter needs it in the supreme degree. All very decided workers, men who did not correct, have been at the same time very deliberate workers—rapid, in the sense of accomplishing much in the course of the year, or the life, but cautious and slow and observant whilst they actually labored, thinking out very carefully every sentence before they wrote it, every touch of paint before they laid it.

LETTER II.

TO A STUDENT IN THE FIRST ARDOR OF INTELLECTUAL AMBITION.

The first freshness—Why should it not be preserved?—The dulness of the intellectual—Fictions and false promises—Eau-de-vie in work itself—Dürer's engraving of Melancholy—Scott about Dryden—Byron, Shelley, Wordsworth—Humboldt, Cuvier, Goethe—Tennyson's "Maud"—Preventives of ennui—Hard study for limited times—The ennui of faded faculties.

I HAVE been thinking about you frequently of late, and the burden or refrain of my thoughts has been "What a blessing he has in that first freshness, if only he could keep it!" But now I am beginning more hopefully to ask myself, "Why should he not keep it?"

It would be an experiment worth trying, so to order your intellectual life, that however stony and thorny your path might be; however difficult and arduous, it should at all events never be dull; or, to express what I mean more accurately, that you yourself should never feel the depressing influences of dulness during the years when they are most to be dreaded. I want you to live steadily and happily in your intellectual labors, even to the natural close of existence, and my best wish for you is that you may escape a long and miserable malady which brain-workers very commonly suffer from when the first dreams of youth have been disappointed—a malady in which the intellectual desires are feeble, the intellectual hopes are few; whose victim, if he has still resolution enough to learn anything, acquires without satisfaction; and, if he has courage to create, has neither pride nor pleasure in his creations.

If I were to sing the praises of knowledge as they have been so often sung by louder harps than mine, I might avoid so dreary a theme. It is easy to pretend to believe that the intellectual life is always sure to be interesting and delightful, but the truth is that, either from an unwise arrangement of their work, or from mental or physical causes which we will investigate to some extent before we have done with the subject, many men whose occupations are reputed to be amongst the most interesting have suffered terribly from *ennui*, and that not during a week or two at a time, but for consecutive years and years.

There is a class of books written with the praiseworthy intention of stimulating young men to intellectual labor, in which this danger of the intellectual life is systematically ignored. It is assumed in these books that the satisfactions of intellectual labor are certain; that although it may not always, or often, result in outward and material prosperity, its inward joys will never fail. Promises of this kind cannot safely be made to any one. The satisfactions of intellectual riches are not more sure than the satisfactions of material riches; the feeling of dull indifference which often so mysteriously clouds the life of the rich man in the midst of the most elaborate contrivances for his pleasure and amusement, has its exact counterpart in the lives of men who are rich in the best treasures of the mind; and who have infinite intellectual resources. However brilliant your ability, however brave and persistent your industry, however vast your knowledge, there is always this dreadful possibility of *ennui*. People tell you that work is a specific

against it, but many a man has worked steadily and earnestly, and suffered terribly from *ennui* all the time that he was working, although the labor was of his own choice, the labor that he loved best, and for which Nature evidently intended him. The poets, from Solomon downwards, have all of them, so far as I know, given utterance in one page or another of their writings to this feeling of dreary dissatisfaction, and Albert Dürer, in his "Melencolia," illustrated it. It is plain that the robust female figure which has exercised the ingenuity of so many commentators is not melancholy either from weakness of the body or vacancy of the mind. She is strong and she is learned; yet, though the plumes of her wings are mighty, she sits heavily and listlessly, brooding amidst the implements of suspended labor, on the shore of a waveless sea. The truth is that Dürer engraved the melancholy that he himself only too intimately knew. * This is not the dullness of the ignorant and incapable, whose minds are a blank because they have no ideas, whose hands are listless for want of an occupation; it is the sadness of the most learned, the most intelligent, the most industrious; the weary misery of those who are rich in the attainments of culture, who have the keys of the chambers of knowledge, and wings to bear them to the heaven of the ideal. If you counsel this "Melencolia" to work that she may be merry, she will answer that she knows the uses of labor and its vanity, and the precise amount of profit that a man hath of all his labor which he taketh under the sun. All things are full of labor, she will tell you; and in much wisdom is much grief, and he that increaseth knowledge increaseth sorrow.

Can we escape this brooding melancholy of the great workers—has any truly intellectual person escaped it ever? The question can never be answered with perfect certainty, because we can never quite accurately know the whole truth about the life of another. I have known several men of action, almost entirely devoid of intellectual culture, who enjoyed an unbroken flow of animal energy, and were clearly free from the melancholy of Dürer; but I never intimately knew a really cultivated person who had not suffered from it more or less, and the greatest sufferers were the most conscientious thinkers and students. Amongst the illustrious dead, it may be very safely answered that any poet who has described it has written from his own experience—a transient experience it may be, yet his own. When Walter Scott, *à-propos* of Dryden, spoke of "the apparently causeless fluctuation of spirits incident

to one doomed to labor incessantly in the feverish exercise of the imagination," and of that "sinking of spirit which follows violent mental exertion," is it not evident that his kindly understanding of Dryden's case came from the sympathy of a fellow-laborer who knew by his own experience the gloomier and more depressing passages of the imaginative life? It would be prudent perhaps to omit the mention of Byron, because some may attribute his sadness to his immorality; and if I spoke of Shelley, they might answer that he was "sad because he was impious;" but the truth is, that quite independently of conduct, and even of belief, it was scarcely possible for natures so highly imaginative as these two, and so ethereally intellectual as one of the two, to escape those clouds of gloom which darken the intellectual life. Wordsworth was not immoral, Wordsworth was not unorthodox, yet he could be as sad in his own sober way as Byron in the bitterness of his desolation, or Shelley in his tenderest wailing. The three men who seem to have been the least subject to the sadness of intellectual workers were Alexander Humboldt, Cuvier, and Goethe. Alexander Humboldt, so far as is known to us, lived always in a clear and cheerful daylight; his appetite for learning was both strong and regular; he embraced the intellectual life in his earliest manhood, and lived in it with an unhesitating singleness of purpose, to the limits of extreme old age. Cuvier was to the last a model student, of a temper at once most unflinching and most kind, happy in all his studies, happier still in his unequalled facility of mental self-direction. Goethe, as all know, lived a life of unflagging interest in each of the three great branches of intellectual labor. During the whole of his long life he was interested in literature, in which he was a master; he was interested in science, in which he was a discoverer, and in art, of which he was an ardent though not practically successful student. His intellectual activity ceased only on rare occasions of painful illness or overwhelming affliction; he does not seem to have asked himself ever whether knowledge was worth its cost; he was always ready to pay the appointed price of toil. He had no infirmity of intellectual doubt; the powerful impulses from within assured him that knowledge was good for him, and he went to it urged by an unerring instinct, as a young salmon bred in the slime of a river seeks strength in the infinite sea. And yet, being a poet and a man of strong passions, Goethe did not altogether escape the green-sickness which afflicts the imaginative temperament,

or he could never have written "Werther;" but he cured himself very soon, and the author of "Werther" had no indulgence for Wertherism—indeed we are told that he grew ashamed of having written the book which inoculated the younger minds of Europe with that miserable disease. In our own time an illustrious poet has given in "Maud" a very perfect study of a young mind in a morbid condition, a mind having indeed the student-temper, but of a bad kind, that which comes not from the genuine love of study, but from sulky rage against the world.

"Thanks, for the fiend best knows whether woman or man be the worse.

I will bury myself in my books, and the Devil may pipe to his own."

This kind of self-burial in one's library does not come from the love of literature. The recluse will not speak to his neighbor, yet needs human intercourse of some kind, and seeks it in reading, urged by an inward necessity. He feels no gratitude towards the winners of knowledge; his morbid ill-nature depreciates the intellectual laborers:—

"The man of science himself is fonder of glory and vain;
An eye well-practised in nature, a spirit bounded and poor."

What is the life such a spirit will choose for itself? Despising alike the ignorant and the learned, the acuteness of the cultivated and the simplicity of the poor, in what form of activity or inaction will he seek what all men need, the harmony of a life well tuned?

"Be mine a philosopher's life in the quiet woodland ways;
Where, if I cannot be gay, let a passionless peace be my lot."

There are many different morbid states of the mind, and this of the hero of "Maud" is only one of them, but it is the commonest amongst intellectual or semi-intellectual young men. See how he has a little fit of momentary enthusiasm (all he is capable of) about a shell that suddenly and accidentally attracts his attention. How true to the morbid nature is that incident! Unable to pursue any large and systematic observation, the diseased mind is attracted to things suddenly and accidentally, sees them out of all proportion, and then falls into the inevitable fit of scornful peevishness.

"What is it? A learned man
Could give it a clumsy name;
Let him name it who can."

The question which concerns the world is, how this condition of the mind may be avoided. The cure Mr. Tennyson suggested was war; but wars, though more frequent than is desirable, are not to be had always. And in your case, my friend, it is happily not a cure but a preventive that is needed.

Let me recommend certain precautions which taken together are likely to keep you safe. Care for the physical health in the first place, for if there is a morbid mind the bodily organs are not doing their work as they ought to do. Next, for the mind itself, I would heartily recommend hard study, really hard study, taken very regularly but in very moderate quantity. The effect of it on the mind is as bracing as that of cold water on the body, but as you ought not to remain too long in the cold bath, so it is dangerous to study *hard* more than a short time every day. Do some work that is very difficult (such as reading some language that you have to puzzle out à *coups de dictionnaire*) two hours a day regularly, to brace the fighting power of the intellect, but let the rest of the day's work be easier. Acquire especially, if you possibly can, the enviable faculty of getting entirely rid of your work in the intervals of it, and of taking a hearty interest in common things, in a garden, or stable, or dog-kennel, or farm. If the work pursues you—if what is called unconscious cerebration, which ought to go forward without your knowing it, becomes conscious cerebration, and bothers you, then you have been working beyond your cerebral strength, and you are not safe.

An organization which was intended by Nature for the intellectual life cannot be healthy and happy without a certain degree of intellectual activity. Natures like those of Humboldt and Goethe need immense labors for their own felicity, smaller powers need less extensive labor. To all of us who have intellectual needs there is a certain supply of work necessary to perfect health. If we do less, we are in danger of that *ennui* which comes from want of intellectual exercise; if we do more, we may suffer from that other *ennui* which is due to the weariness of the jaded faculties, and this is the more terrible of the two.

LETTER III.

TO AN INTELLECTUAL MAN WHO DESIRED AN OUTLET FOR HIS ENERGIES.

Dissatisfaction of the intellectual when they have not an extensive influence—A consideration suggested to the author by Mr. Matthew Arnold—Each individual mind a portion of the national mind, which must rise or decline with the minds of which it is composed—Influence of a townsman in his town—Household influence—Charities and condescendences of the highly cultivated—A suggestion of M. Taine—Conversation with inferiors—How to make it interesting—That we ought to be satisfied with humble results and small successes.

There is a very marked tendency amongst persons of culture to feel dissatisfied with

themselves and their success in life when they do not exercise some direct and visible influence over a considerable portion of the public. To put the case in a more concrete form, it may be affirmed that if an intellectual young man does not exercise influence by literature, or by oratory, or by one of the most elevated forms of art, he is apt to think that his culture and intelligence are lost upon the world, and either to blame himself for being what he considers a failure, or else (and this is more common) to find fault with the world in general for not giving him a proper chance of making his abilities tell. The facilities for obtaining culture are now so many and great, and within the reach of so many well-to-do people, that hundreds of persons become really very clever in various ways who would have remained utterly uncultivated had they lived in any previous century. A few of these distinguish themselves in literature and other pursuits which bring notoriety to the successful, but by far the greater number have to remain in positions of obscurity, often being clearly conscious that they have abilities and knowledge not much, if at all, inferior to the abilities and knowledge of some who have achieved distinction. The position of a clever man who remains obscure is, if he has ambition, rather trying to the moral fibre, but there are certain considerations which might help to give a direction to his energy and so procure him a sure relief, which reputation too frequently fails to provide.

The first consideration is one which was offered to me many years ago by Mr. Matthew Arnold, and which I can give, though from memory, very nearly in his own words. The multiplicity of things which make claim to the attention of the public is in these days such that it requires either uncommon strength of will or else the force of peculiar circumstances to make men follow any serious study to good result, and the great majority content themselves with the general enlightenment of the epoch, which they get from newspapers and reviews. Hence the efforts of the intellectual produce little effect, and it requires either extraordinary talent or extraordinary fanaticism to awaken the serious interest of any considerable number of readers. Yet, in spite of these discouragements, we ought to remember that our labors, if not applauded by others, may be of infinite value to ourselves, and also that beyond this gain to the individual, his culture is a gain to the nation, whether the nation formally recognizes it or not. For the intellectual life of a nation is the sum of the lives of all intellectual people belonging to it, and in this sense

your culture is a gain to England, whether England counts you amongst her eminent sons, or leaves you forever obscure. Is it not a noble spectacle, a spectacle well worthy of a highly civilized country, when a private citizen, with an admirable combination of patriotism and self-respect, says to himself as he labors, "I know that in a country so great as England, where there are so many able men, all that I do can count for very little in public estimation, yet I will endeavor to store my mind with knowledge and make my judgment sure, in order that the national mind of England, of which my mind is a minute fraction, may be enlightened by so much, be it never so little"? I think the same noble feeling might animate a citizen with reference to his native town; I think a good townsman might say to himself, "Our folks are not much given to the cultivation of their minds, and they need a few to set them an example. I will be one of those few. I will work and think, in order that our town may not get into a state of perfect intellectual stagnation." But if the nation or the city were too vast to call forth any noble feeling of this kind, surely the family is little enough and near enough. Might not a man say, "I will go through a good deal of intellectual drudgery in order that my wife and children may unconsciously get the benefit of it; I will learn facts for them that they may be accurate, and get ideas for them that they may share with me a more elevated mental state; I will do something towards raising the tone of the whole household"?

The practical difficulty in all projects of this kind is that the household does not care to be intellectually elevated, and opposes the resistance of gravitation. The household has its natural intellectual level, and finds it as inevitably as water that is free. Cultivated men are surrounded in their homes by a group of persons, wife, children, servants, who, in their intercourse with one another, create the household tone. What is a single individual with his books against these combined and active influences? Is he to go and preach the gospel of the intellect in the kitchen? Will he venture to present intellectual conclusions in the drawing-room? The kitchen has a tone of its own which all our efforts cannot elevate, and the drawing-room has its own atmosphere, an atmosphere unfavorable to severe and manly thinking. You cannot make cooks intellectual, and you must not be didactic with ladies. Intellectual men always feel this difficulty, and most commonly keep their intellect very much to themselves, when they are at home. If they have not an outlet else-

where, either in society or in literature, they grow morbid.

Yet, although it is useless to attempt to elevate any human being above his own intellectual level unless he gradually climbs himself as a man ascends a mountain, there are nevertheless certain charities or condescendences of the highly cultivated which may be good for the lower intelligences that surround them, as the streams from the Alpine snows are good for the irrigation of the valleys, though the meadows which they water must forever remain eight or ten thousand feet below them. And I believe that it would greatly add to the happiness of the intellectual portion of mankind if they could more systematically exercise these charities. It is quite clear that we can never effect by chance conversation that total change in the mental state which is gradually brought about by the slow processes of education; we cannot give to an intellect that has never been developed, and which has fixed itself in the undeveloped state, that power and activity which come only after years of labor; but we may be able on many occasions to offer the sort of help which a gentleman offers to an old woman when he invites her to get up into the rumble behind his carriage. I knew an intellectual lady who lived habitually in the country, and I may say without fanciful exaggeration that the farmers' wives round about her were considerably superior to what in all probability they would have been without the advantage of her kindly and instructive conversation. She possessed the happy art of conveying the sort of knowledge which could be readily received by her hearers, and in a manner which made it agreeable to them, so that they drew ideas from her quite naturally, and her mind irrigated their minds, which would have remained permanently barren without that help and refreshment. It would be foolish to exaggerate the benefits of such intellectual charity as this, but it is well, on the other hand, not to undervalue it. Such an influence can never convey much solid instruction, but it may convey some of its results. It may produce a more thoughtful and reasonable condition of mind, it may preserve the ignorant from some of those preposterous theories and beliefs which so easily gain currency amongst them. Indirectly, it may have rather an important political influence, by disposing people to vote for the better sort of candidate. And the influence of such intellectual charity on the material well-being of the humbler classes, on their health and wealth, may be quite as considerable as that of the other and more common

sort of charity which passes silver from hand to hand.

Shortly after the termination of the great Franco-German conflict, M. Taine suggested in the *Temps* that subscribers to the better sort of journals might do a good deal for the enlightenment of the humbler classes by merely lending their newspapers in their neighborhood. This was a good suggestion: the best newspapers are an important intellectual propaganda; they awaken an interest in the most various subjects, and supply not only information but a stimulus. The danger to persons of higher culture that the newspaper may absorb time which would else be devoted to more systematic study, does not exist in the classes for whose benefit M. Taine made his recommendation. The newspaper is their only secular reading, and without it they have no modern literature of any kind. In addition to the praiseworthy habit of lending good newspapers, an intellectual man who lives in the country might adopt the practice of conversing with his neighbors about everything in which they could be induced to take an interest, giving them some notion of what goes on in the classes which are intellectually active, some idea of such discoveries and projects as an untutored mind may partially understand. For example, there is the great tunnel under the Mont Cenis, and there is the projected tunnel beneath the Channel, and there is the cutting of the Isthmus of Suez. A peasant can comprehend the greatness of these remarkable conceptions when they are properly explained to him, and he will often feel a lively gratitude for information of that kind. We ought to remember what a slow and painful operation reading is to the uneducated. Merely to read the native tongue is to them a labor so irksome that they are apt to lose the sense of a paragraph in seeking for that of a sentence or an expression. As they would rather speak than have to write, so they prefer hearing to reading, and they get much more good from it, because they can ask a question when the matter has not been made clear to them.

One of the best ways of interesting and instructing your intellectual inferiors is to give them an account of your travels. All people like to hear a traveller tell his own tale, and whilst he is telling it he may slip in a good deal of information about many things, and much sound doctrine. Accounts of foreign countries, even when you have not seen them personally, nearly always awaken a lively interest, especially if you are able to give your hearers detailed descriptions of the life led by foreigners who occupy positions

corresponding to their own. Peasants can be made to take an interest in astronomy even, though you cannot tell them anything about the peasants in Jupiter and Mars, and there is always, at starting, the great difficulty of persuading them to trust science about the motion and rotundity of the earth.

A very direct form of intellectual charity is that of gratuitous teaching, both in classes and by public lectures, open to all comers. A great deal of light has in this way been spread abroad in cities, but in country villages there is little encouragement to enterprises of this kind, the intelligence of farm laborers being less awakened than that of the corresponding urban population. Let us remember, however, that one of the very highest and last achievements of the cultivated intellect is the art of conveying to the uncultivated, the untaught, the unprepared, the best and noblest knowledge which they are capable of assimilating. No one who, like the writer of these pages, has lived much in the country, and much amongst a densely ignorant peasantry, will be likely in any plans of enlightenment to err far on the side of enthusiastic hopefulness. The mind of a farm laborer, or that of a small farmer, is almost always sure to be a remarkably stiff soil, in which few intellectual conceptions can take root; yet these few may make the difference between an existence worthy of a man, and one that differs from the existence of a brute in little beyond the possession of articulate language. We to whom the rich inheritance of intellectual humanity is so familiar as to have lost much of its freshness, are liable to underrate the value of thoughts and discoveries which to us have for years seemed commonplace. It is with our intellectual as with our material wealth; we do not realize how precious some fragments of it might be to our poorer neighbors. The old clothes that we wear no longer may give comfort and confidence to a man in naked destitution; the truths which are so familiar to us that we never think about them, may raise the utterly ignorant to a sense of their human brotherhood.

Above all, in the exercise of our intellectual charities, let us accustom ourselves to feel satisfied with humble results and small successes; and here let me make a confession which may be of some possible use to others. When a young man, I taught a drawing-class gratuitously, beginning with thirty-six pupils, who dwindled gradually to eleven. Soon afterwards I gave up the work from dissatisfaction, on account of the meagre attendance. This was very wrong—the eleven were worth

the thirty-six; and so long as one of the eleven remained I ought to have contentedly taught him. The success of a teacher is not to be measured by the numbers whom he immediately influences. It is enough, it has been proved to be enough in more than one remarkable instance, that a single living soul should be in unison with the soul of a master, and receive his thought by sympathy. The one disciple teaches in his turn, and the idea is propagated.

LETTER IV.

TO THE FRIEND OF A MAN OF HIGH CULTURE WHO PRODUCED NOTHING.

Joubert—"Not yet time," or else "The time is past"—His weakness for production—Three classes of minds—A more perfect intellectual life attainable by the silent student than by authors—He may follow his own genius—Saving of time effected by abstinence from writing—The unproductive may be more influential than the prolific.

WHEN I met B. at your house last week, you whispered to me in the drawing-room that he was a man of the most remarkable attainments, who, to the great regret of all his friends, had never employed his abilities to any visible purpose. We had not time for a conversation on this subject, because B. himself immediately joined us. His talk reminded me very much of Joubert—not that I ever knew Joubert personally, though I have lived very near to Villeneuve-sur-Yonne, where Joubert lived; but he is one of those characters whom it is possible to know without having seen them in the flesh. His friends used to urge him to write something, and then he said, "*Pas encore.*" "Not yet; I need a long peace." Tranquillity came, and then he said that God had only given force to his mind for a limited time, and that the time was past. Therefore, as Sainte-Beuve observed, for Joubert there was no medium; either it was not yet time, or else the time was past.

Nothing is more common than for other people to say this of us. They often say "He is too young," as Napoleon said of Ingres, or else "He is too old," as Napoleon said of Greuze. It is more rare for a man himself to shrink from every enterprise, first under the persuasion that he is unprepared, and afterwards because the time is no longer opportune. Yet there does exist a certain very peculiar class of highly-gifted, diffident, delicate, unproductive minds, which impress those around them with an almost superstitious belief in their possibilities, yet never do anything to justify that belief.

But may it not be doubted whether these

minds have productive power of any kind? I believe that the full extent of Joubert's productive power is displayed in those sentences of his which have been preserved, and which reveal a genius of the rarest delicacy, but at the same time singularly incapable of sustained intellectual effort. He said that he could only compose slowly, and with an extreme fatigue. He believed, however, that the weakness lay in the instrument alone, in the composing faculties, and not in the faculties of thought, for he said that behind his weakness there was strength, as behind the strength of some others there was weakness.

In saying this, it is probable that Joubert did not overestimate himself. He had strength of a certain kind, or rather he had quality; he had distinction, which is a sort of strength in society and in literature. But he had no productive force, and I do not believe that his unproductiveness was a productiveness checked by a fastidious taste; I believe that it was real, that he was not organized for production.

Sainte-Beuve said that a modern philosopher was accustomed to distinguish three classes of minds—

1. Those who are at once powerful and delicate, who excel as they propose, execute what they conceive, and reach the great and true beautiful—a rare *élite* amongst mortals.

2. A class of minds especially characterized by their delicacy, who feel that their idea is superior to their execution, their intelligence greater than their talent, even when the talent is very real; they are easily dissatisfied with themselves, disdain easily won praises, and would rather judge, taste, and abstain from producing, than remain below their conception and themselves. Or if they write it is by fragments, for themselves only, at long intervals and at rare moments. Their fecundity is internal, and known to few.

3. Lastly, there is a third class of minds more powerful and less delicate or difficult to please, who go on producing and publishing themselves without being too much dissatisfied with their work.

The majority of our active painters and writers, who fill modern exhibitions, and produce the current literature of the day, belong to the last class, to which we are all greatly indebted for the daily bread of literature and art.

But Sainte-Beuve believed that Joubert belonged to the second class, and I suspect that both Sainte-Beuve and many others have credited that class with a potential productiveness beyond its real endowments. Minds of the Joubert class are admirable and valua-

ble in their way, but they are really, and not apparently, sterile.

And why would we have it otherwise? When we lament that a man of culture has "done nothing," as we say, we mean that he has not written books. Is it necessary, is it desirable, that every cultivated person should write books?

On the contrary, it seems that a more perfect intellectual life may be attained by the silent student than by authors. The writer for the public is often so far its slave that he is compelled by necessity or induced by the desire for success (since it is humiliating to write unsaleable books as well as unprofitable) to deviate from his true path, to leave the subjects that most interest him for other subjects which interest him less, and therefore to acquire knowledge rather as a matter of business than as a labor of love. But the student who never publishes, and does not intend to publish, may follow his own genius and take the knowledge which belongs to him by natural affinity. Add to this the immense saving of time effected by abstinence from writing. Whilst the writer is polishing his periods, and giving hours to the artistic exigencies of mere form, the reader is adding to his knowledge. Thackeray said that writers were not great readers, because they had not the time.

The most studious Frenchman I ever met with used to say that he so hated the pen as scarcely to resolve to write a letter. He reminded me of Joubert in this; he often said, "J'ai horreur de la plume." Since he had no profession his leisure was unlimited, and he employed it in educating himself without any other purpose than this, the highest purpose of all, to become a cultivated man. The very prevalent idea that lives of this kind are failures unless they leave some visible achievement as a testimony and justification of their labors, is based upon a narrow conception both of duty and of utility. Men of this unproductive class are sure to influence their immediate neighborhood by the example of their life. Isolated as they are too frequently in the provinces, in the midst of populations destitute of the higher culture, they often establish the notion of it notwithstanding the contemptuous estimates of the practical people around them. A single intellectual life, thus modestly lived through in the obscurity of a country-town, may leave a tradition and become an enduring influence. In this, as in all things, let us trust the arrangements of Nature. If men are at the same time constitutionally studious and constitutionally unproductive, it must be that production is not the only use of study. Jou-

bert was right in keeping silence when he felt no impulses to speak, right also in saying the little that he did say without a superfluous word. His mind is more fully known, and more influential, than many which are abundantly productive.

LETTER V.

TO A STUDENT WHO FELT HURRIED AND DRIVEN.

Some intellectual products possible only in excitement—Byron's authority on the subject—Can inventive minds work regularly?—Sir Walter Scott's opinion—Napoleon on the winning of victories—The prosaic business of men of genius—"Waiting for Inspiration"—Rembrandt's advice to a young painter—Culture necessary to inspiration itself—Byron, Keats, Morris—Men of genius may be regular as students.

In my last letter to you on quiet regularity of work, I did not give much consideration to another matter which, in certain kinds of work, has to be taken into account, for I preferred to make that the subject of a separate letter. There are certain intellectual products which are only possible in hours or minutes of great cerebral excitement. Byron said that when people were surprised to find poets very much like others in the ordinary intercourse of life, their surprise was due to ignorance of this. If people knew, Byron said, that poetical production came from an excitement which from its intensity could only be temporary, they would not expect poets to be very different from other people when not under the influence of this excitement. Now, we may take the word "poet," in this connection, in the very largest sense. All men who have the gift of invention are poets. The inventive ideas come to them at unforeseen moments, and have to be seized when they come, so that the true inventor works sometimes with vertiginous rapidity, and afterwards remains for days or weeks without exercising the inventive faculty at all. The question is, can you make an inventive mind work on the principle of measured and regular advance. Is such counsel as that in my former letter applicable to inventors?

Scott said, that although he had known many men of ordinary abilities who were capable of perfect regularity in their habits, he had never known a man of genius who was so. The popular impression concerning men of genius is very strong in the same sense, but it is well not to attach too much importance to popular impressions concerning men of genius, for the obvious reason that such men come very little under popular observation. When they work it is usually in the

most perfect solitude, and even people who live in the same house know very little, really, of their intellectual habits.

The truth seems to be, first, that the moments of high excitement, of noblest invention, are rare, and not to be commanded by the will; but, on the other hand, that in order to make the gift of invention produce its full effect in any department of human effort, vast labors of preparation are necessary, and these labors may be pursued as steadily as you like. Napoleon I. used to say that battles were won by the sudden flashing of an idea through the brain of the commander at a certain critical instant. The capacity for generating this sudden electric spark was military genius. The spark flashed independently of the will; the General could not win that vivid illumination by labor or by prayer; it came only in the brain of genius from the intense anxiety and excitement of the actual conflict. Napoleon seems always to have counted upon it, always to have believed that when the critical instant arrived the wild confusion of the battle-field would be illuminated for him by that burst of sudden flame. But if Napoleon had been ignorant of the prosaic business of his profession, to which he attended more closely than any other commander, what would these moments of supreme clearness have availed him, or would they ever have come to him at all? If they had come to him, they would have revealed only the extent of his own negligence. Instead of showing him *what to do*, they would have made painfully evident what *ought to have been done*. But it is more probable that these clear moments would never have occurred to a mind unprepared by study. Clear military inspirations never occur to shopkeepers and farmers, as bright ideas about checkmates occur only to persons who have studied chess. The prosaic business, then, of the man of genius is to accumulate that preparatory knowledge without which his genius can never be available, and he can do work of this kind as regularly as he likes.

The one fatal mistake which is committed habitually by people who have the scarcely desirable gift of half-genius is "waiting for inspiration." They pass week after week in a state of indolence, unprofitable alike to the mind and the purse, under pretext of waiting for intellectual flashes like those which came to Napoleon on his battle-fields. They ought to remember the advice given by one of the greatest artists of the seventeenth century to a young painter of his acquaintance. "Practise assiduously what you already know, and in course of time other things will become

clear to you." The inspirations come only to the disciplined; the indolent wait for them in vain.

If you have genius, therefore, or believe you have, it is admitted that you cannot be perpetually in a state of intense excitement. If you were in that state without ceasing, you would go mad. You cannot be expected to write poetry in the plodding ox-pace manner advocated for intellectual work generally in my last letter. As for that good old comparison between the hare and the tortoise, it may be answered for you, simply, that you are not a tortoise, and that what is a most wise procedure for tortoises may be impracticable for you. The actual composition of poetry, especially poetry of a fiery kind, like—

"The isles of Greece, the isles of Greece,"

of Byron, is to be done not when the poet will, but when he can, or rather, when he must.

But if you are a wise genius you will feel how necessary is culture even for work of that kind. Byron would not have felt any enthusiasm for the isles of Greece if he had not known something of their history. The verses are an inspiration, but they could never have occurred to a quite uncultivated person, however bright his inspirations. Even more obviously was the genius of Keats dependent upon his culture. He did not read Greek, but from translations of Greek literature and from the direct study of Greek art he got the sort of material that he needed. And in our own day Morris has been evidently a very diligent student of many literatures. What I insist upon is, that we could not have had the real Keats, the real Morris, unless they had prepared themselves by culture. We see immediately that the work they have done is *their* work, specially, that they were specially adapted for it—inspired for it, if you will. But how evident it is that the inspiration could never have produced the work, or anything like it, without labor in the accumulation of material!

Now, although men of genius cannot be regularly progressive in actual production, cannot write so many verses a day, regularly, as you may spin yarn, they can be very regular as students, and some of the best of them have been quite remarkable for unflinching steadiness of application in that way. The great principle recommended by Mr. Galton, of not looking forward eagerly to the end of your journey, but interesting yourself chiefly in the progress of it, is as applicable to the studies of men of genius as to those of more ordinary persons.

LETTER VI.

TO AN ARDENT FRIEND WHO TOOK NO REST.

On some verses of Goethe—Man not constituted like a planet—Matthew Arnold's poem, "Self-dependence"—Poetry and prose—The wind more imitable than the stars—The stone in Glen Croe—Rest and be thankful.

"RAMBLING over the wild moors, with thoughts oftentimes as wild and dreary as those moors, the young Carlyle, who had been cheered through his struggling sadness, and strengthened for the part he was to play in life, by the beauty and the wisdom which Goethe had revealed to him, suddenly conceived the idea that it would be a pleasant and a fitting thing if some of the few admirers in England forwarded to Weimar a trifling token of their admiration. On reaching home Mr. Carlyle at once sketched the design of a seal to be engraved, the serpent of eternity encircling a star, with the words *ohne Hast, ohne Rast* (unhasting, unresting), in allusion to the well-known verses—

'Wie das Gestirn,
Ohne Hast
Aber ohne Rast
Drehe sich jeder
Um die eigne Last.'

(Like a star, unhasting, unresting, be each one fulfilling his God-given 'best.')

This is said so beautifully, and seems so wise, that it may easily settle down into the mind as a maxim and rule of life. 'Had we been told in plain prose to take no rest, without the beautiful simile of the star, and without the wise restriction about haste, our common sense would have rebelled at once; but as both beauty and wisdom exist together in the gem-like stanza, our judgment remains silent in charmed acquiescence.

Let us ask ourselves, however, about this stella example, whether man is naturally so constituted as to be able to imitate it. A planet moves without haste, because it is incapable of excitement; and without rest, because it is incapable of fatigue. A planet makes no effort, and encounters no friction or resistance of any kind. Man is so constituted as to feel frequently the stimulus of excitement, which immediately translates itself either into actual acceleration or into the desire for acceleration—a desire which cannot be restrained without an effort; and whatever man undertakes to do he encounters friction and resistance, which, for him, always sooner or later inevitably induce fatigue. Man is neither constituted like a star nor situated like a star,

* Lewes's "Life of Goethe," Book vii. chap. 8.

and therefore it is not possible for him to exist as stars exist.

You will object to this criticism that it handles a delicate little poem very roughly, and you may tell me that I am unfit to receive the wisdom of the poets, which is always uttered with a touch of Oriental exaggeration. Certainly Goethe could never mean that a man should kill himself by labors literally incessant. Goethe's own life is the best elucidation of his true meaning. The example of the star was held up to us to be followed only within the limits of our human nature, as a Christian points to the example of Christ. In the same spirit Matthew Arnold wrote his noble poem "Self-dependence," in which he tells us to live like the stars and the sea:—

"Ah, once more," I cried, "ye stars, ye waters,
On my heart your mighty charm renew;
Still, still let me, as I gaze upon you,
Feel my soul becoming vast like you."

From the intense, clear, star-sown vault of heaven,
Over the lit sea's unquiet way,
In the rustling night-air came the answer:
"Wouldst thou be as these are? Live as they."

"Unaffrighted by the silence round them
Undistracted by the sights they see,
These demand not that the things without them
Yield them love, amusement, sympathy."

The true intention of poetical teachings like these is in the influence they have over the feelings. If a star makes me steadier in my labor, less of a victim to vain agitation, in consequence of Goethe's verses; if the stars and the sea together renew more fully their mighty charm upon my heart because those stanzas of Arnold have fixed themselves in my memory, the poets have done their work. But the more positive *prosateur* has his work to do also, and you, as it seems to me, need this positive help of prose.

You are living a great deal too much like a star, and not enough like a human being. You do not hasten often, but you *never* rest, except when Nature mercifully prostrates you in irresistible sleep. Like the stars and the sea in Arnold's poem, you do not ask surrounding things to yield you love, amusement, sympathy. The stars and the sea can do without these refreshments of the brain and heart, but you cannot. Rest is necessary to recruit your intellectual forces; sympathy is necessary to prevent your whole nature from stiffening like a rotifer without moisture; love is necessary to make life beautiful for you, as the plumage of certain birds becomes splendid when they pair; and without amusement you will lose the gayety which

wise men try to keep as the best legacy of youth.

Let your rest be perfect in its season, like the rest of waters that are still. If you will have a model for your living, take neither the stars, for they fly without ceasing, nor the ocean that ebbs and flows, nor the river that cannot stay, but rather let your life be like that of the summer air, which has times of noble energy and times of perfect peace. It fills the sails of ships upon the sea, and the miller thanks it on the breezy uplands; it works generously for the health and wealth of all men, yet it claims its hours of rest. "I have pushed the fleet, I have turned the mill, I have refreshed the city, and now, though the captain may walk impatiently on the quarter-deck, and the miller swear, and the city stink, I will stir no more until it pleases me."

You have learned many things, my friend, but one thing you have *not* learned—the art of resting. That stone in Glen Croe ought to have impressed its lesson on the mind of many a traveller, long before Earl Russell gave it a newspaper celebrity. Have we not rested there together, you and I, a little in advance of the coach, which the weary horses were still slowly dragging up the tedious hill? And as we sat on the turf, and looked down the misty glen, did we not read the lesson there engraven? How good and *human* the idea was, the idea of setting up that graven stone in the wilderness; how full of sympathy is that inscription for all the weakness and weariness of humanity! Once, in the ardor of youth, there shone before me a golden star in heaven, and on the deep azure around it "*Ohne Hast, ohne Rast*," in letters of steady flame; but now I see more frequently a plain little stone set up in the earth, with the inscription, "Rest, and be thankful!"

Is not the stone just a little like a grave-stone, my friend? Perhaps it is. But if we take rest when we require it during life, we shall not need the grave's rest quite so soon.

LETTER VII.

TO AN ARDENT FRIEND WHO TOOK NO REST.

The regret for lost time often a needless one—Tillier's doctrine about *l'ânerie*—How much is gained in idle hours—Sainte-Beuve's conviction that whatever he did he studied the infinite book of the world and of life—Harness—Free play of the mind necessary—The freedom of a grain of desert-sand—The freedom of the wild bee.

If we asked any intellectual workman what he would do if his life were to be lived over again, I believe the answer, whatever

its form, would amount ultimately to this: "I would economize my time better." Very likely if the opportunity were granted him he would do nothing of the sort; very likely he would waste his time in ways more authorized by custom, yet waste it just as extravagantly as he had done after his own original fashion; but it always seems to us as if we could use the time better if we had it over again.

It seems to me in looking back over the last thirty years, that the only time really wasted has been that spent in laborious obedience to some external authority. It may be a dangerous doctrine which Claude Tillier expressed in an immortal sentence, but dangerous or not, it is full of intellectual truth: "*Le temps le mieux employé est celui que l'on perd.*"* If what we are accustomed to consider lost time could be removed, as to its effects at least, from the sum of our existence, it is certain that we should suffer from a great intellectual impoverishment. All the best knowledge of mankind, to begin with, is acquired in hours which hard-working people consider lost hours—in hours, that is, of pleasure and recreation. Deduct all that we have learnt about men in times of recreation, in clubs and smoking-rooms, on the hunting-field, on the cricket-ground, on the deck of the yacht, on the box of the drag or the dog-cart, would the residue be worth very much? would it not be a mere heap of dry bones without any warm flesh to cover them? Even the education of most of us, such as it is, has been in a great measure acquired out of school, as it were; I mean outside of the acknowledged duties of our more serious existence. Few Englishmen past forty have studied English literature either as a college exercise or a professional preparation; they have read it privately, as an amusement. Few Englishmen past forty have studied modern languages, or science, or the fine arts, from any obedience to duty, but merely from taste and inclination. And even if we studied these things formally, as young men often do at the present day, it is not from the formal study that we should get the *perfume* of the language or the art, but from idle hours in foreign lands and galleries. It is superfluous to recommend idleness to the unintellectual, but the intellectual too often undervalues it. The laborious intellect contracts a habit of strenuousness which is sometimes a hindrance to its best activity.

"I have arrived," said Sainte-Beuve, "perhaps by way of secretly excusing my own

idleness, perhaps by a deeper feeling of the principle that all comes to the same, at the conclusion that whatever I do or do not, working in the study at continuous labor, scattering myself in articles, spreading myself about in society, giving my time away to troublesome callers, to poor people, to *rendez-vous*, in the street, no matter to whom and to what, I cease not to do one and the same thing, to read one and the same book, the infinite book of the world and of life, that no one ever finishes, in which the wisest read farthest; I read it then at all the pages which present themselves, in broken fragments, backwards, what matters it? I never cease going on. The greater the medley, the more frequent the interruption, the more I get on with this book in which one is never beyond the middle; but the profit is to have had it open before one at all sorts of different pages."

A distinguished author wrote to another author less distinguished: "You have gone through a good deal of really vigorous study, but have not *been in harness* yet." By harness he meant discipline settled beforehand like military drill. Now, the advantages of drill are evident and very generally recognized, but the advantages of intellectual *flânerie* are not so generally recognized. For the work of the intellect to be clear and healthy, a great deal of free play of the mind is absolutely necessary. Harness is good for an hour or two at a time, but the finest intellects have never *lived* in harness. In reading any book that has much vitality you are sure to meet with many allusions and illustrations which the author hit upon, not when he was in harness, but out at grass. Harness trains us to the systematic performance of our work, and increases our practical strength by regulated exercise, but it does not supply everything that is necessary to the perfect development of the mind. The truth is, that we need both the discipline of harness and the abundant nourishment of the free pasture. Yet may not our freedom be the profitless, choiceless, freedom of a grain of desert-sand, carried hither and thither by the wind, gaining nothing and improving nothing, so that it does not signify where it was carried yesterday or where it may fall to-morrow, but rather the liberty of the wild bee, whose coming and going are ordered by no master, nor fixed by any premeditated regulation, yet which misses no opportunity of increase, and comes home laden in the twilight. Who knows where he has wandered; who can tell over what banks and streams the hum of his wings has sounded? Is anything in nature freer than he is; can

*The best employed time is that which one loses.

anything account better for a rational use of freedom? Would he do his work better if tiny harness were ingeniously contrived for him? Where then would be the golden honey, and where the waxen cells?

LETTER VIII.

TO A FRIEND (HIGHLY CULTIVATED) WHO CONGRATULATED HIMSELF ON HAVING ENTIRELY ABANDONED THE HABIT OF READING NEWSPAPERS.

advantages in economy of time—Much of what we read in newspapers is useless to our culture—The too great importance which they attach to novelty—Distortion by party spirit—An instance of false presentation—Gains to serenity by abstinence from newspapers—Newspapers keep up our daily interest in each other—The French peasantry—The newspaper-reading Americans—An instance of total abstinence from newspapers—Auguste Comte—A suggestion of Emerson's—The work of newspaper correspondents—War correspondents—Mr. Stanley—M. Erdan, of the *Tempe*.

YOUR abstinence from newspaper reading is not anew experiment in itself, though it is new in reference to your particular case, and I await its effects with interest. I shall be curious to observe the consequences, to an intellect constituted as yours is, of that total cutting off from the public interests of your own century which an abstinence from newspapers implies. It is clear that, whatever the loss may be, you have a definite gain to set against it. The time which you have hitherto given to newspapers, and which may be roughly estimated at about five hundred hours a year, is henceforth a valuable time-income to be applied to whatever purposes your best wisdom may select. When an intellectual person has contrived by the force of one simple resolution to effect so fine an economy as this, it is natural that he should congratulate himself. Your feelings must be like those of an able finance minister who has found means of closing a great leak in the treasury—if any economy possible in the finances of a State could ever relatively equal that splendid stroke of time-thrift which your force of will has enabled you to effect. In those five hundred hours, which are now your own, you may acquire a science or obtain a more perfect command over one of the languages which you have studied. Some department of your intellectual labors which has hitherto been unsatisfactory to you, because it was too imperfectly cultivated, may henceforth be as orderly and as fruitful as a well-kept garden. You may become thoroughly conversant with the works of more than one great author whom you have neglected,

not from lack of interest, but from want of time. You may open some old chamber of the memory that has been dark and disused for many a year; you may clear the cobwebs away, and let the fresh light in, and make it habitable once again.

Against these gains, of which some to a man of your industry are certain, and may be counted upon, what must be our estimate of the amount of sacrifice or loss? It is clear to both of us that much of what we read in the newspapers is useless to our culture. A large proportion of newspaper-writing is occupied with speculation on what is likely to happen in the course of a few months; therefore, by waiting until the time is past, we know the event without having wasted time in speculations which could not effect it. Another rather considerable fraction of newspaper matter consists of small events which have interest for the day, owing to their novelty, but which will not have the slightest permanent importance. The whole press of a newspaper-reading country, like England or America, may be actively engaged during the space of a week or a fortnight in discussing some incident which everybody will have forgotten in six months; and besides these sensational incidents, there are hundreds of less notorious ones, often fictitious, inserted simply for the temporary amusement of the reader. The greatest evil of newspapers, in their effect on the intellectual life, is the enormous importance which they are obliged to attach to mere novelty. From the intellectual point of view, it is of no consequence whether a thought occurred twenty-two centuries ago to Aristotle or yesterday evening to Mr. Charles Darwin, and it is one of the distinctive marks of the truly intellectual to be able to take a hearty interest in all truth, independently of the date of its discovery. The emphasis given by newspapers to novelty exhibits things in wrong relations, as the lantern shows you what is nearest at the cost of making the general landscape appear darker by the contrast. Besides this exhibition of things in wrong relations, there is a positive distortion arising from the unscrupulousness of party, a distortion which extends far beyond the limits of the empire.

An essay might be written on the distortion of English affairs in the French press, or of French affairs in the English press, by writers who are as strongly partisan in another country as in their own. "It is such a grand thing," wrote an English Paris correspondent in 1870, "for Adolphus Thiers, son of a poor laborer of Aix, and in early life a simple journalist, to be at the head of the

Government of France." This is a fair specimen of the kind of false presentation which is so common in party journalism. The newspaper from which I have quoted it was strongly opposed to Thiers, being in fact one of the principal organs of the English Bonapartists. It is not true that Thiers was the son of a poor laborer of Aix. His father was a workman of Marseilles, his mother belonging to a family in which neither wealth nor culture had been rare, and his mother's relatives had him educated at the Lycée. The art of the journalist in bringing together the two extremes of a career remarkable for its steady ascent had for its object to produce the idea of incongruity, of sudden and unsuitable elevation. Not only M. Thiers, however, but every human being starts from a very small beginning, since every man begins life as a baby. It is a great rise for one baby to the Presidency of the French Republic; it was also a great rise for other babies who have attained the premiership of England. The question is, not what Thiers may have been seventy years ago, but what he was immediately before his acceptance of the highest office of the State. He was the most trusted and the most experienced citizen, so that the last step in his career was as natural as the elevation of Reynolds to the presidency of the Academy.

It is difficult for any one who cares for justice to read party journals without frequent irritation, and it does not signify which side the newspaper takes. Men are so unfair in controversy that we best preserve the serenity of the intellect by studiously avoiding all literature that has a controversial tone. By your new rule of abstinence from newspapers you will no doubt gain almost as much in serenity as in time. To the ordinary newspaper reader there is little loss of serenity, because he reads only the newspaper that he agrees with, and however unfair it is, he is pleased by its unfairness. But the highest and best culture makes us disapprove of unfairness on our own side of the question also. We are pained by it; we feel humiliated by it; we lament its persistence and its perversity.

I have said nearly all that has to be said in favor of your rule of abstinence. I have granted that the newspapers cost us much time, which, if employed for great intellectual purposes, would carry us very far; that they give disproportionate views of things by the emphasis they give to novelty, and false views by the unfairness which belongs to party. I might have added that newspaper writers give such a preponderance to politics

—not political philosophy, but to the everyday work of politicians—that intellectual culture is thrown into the background, and the election of a single member of Parliament is made to seem of greater national importance than the birth of a powerful idea. And yet, notwithstanding all these considerations, which are serious indeed for the intellectual, I believe that your resolution is unwise, and that you will find it to be untenable. One momentous reason more than counterbalances all these considerations put together. Newspapers are to the whole civilized world what the daily house-talk is to the members of a household; they keep up our daily interest in each other, they save us from the evils of isolation. To live as a member of the great white race of men, the race that has filled Europe and America, and colonized or conquered whatever other territories it has been pleased to occupy, to share from day to day its cares, its thoughts, its aspirations, it is necessary that every man should read his daily newspaper. Why are the French peasants so bewildered and at sea, so out of place in the modern world? It is because they never read a newspaper. And why are the inhabitants of the United States, though scattered over a territory fourteen times the area of France, so much more capable of concerted political action, so much more *alive* and modern, so much more interested in new discoveries of all kinds and capable of selecting and utilizing the best of them? It is because the newspaper penetrates everywhere; and even the lonely dweller on the prairie or in the forest is not intellectually isolated from the great currents of public life which flow through the telegraph and the press.

The experiment of doing without newspapers has been tried by a whole class, the French peasantry, with the consequences that we know, and it has also from time to time been tried by single individuals belonging to more enlightened sections of society. Let us take one instance, and let us note what appear to have been the effects of this abstinence. Auguste Comte abstained from newspapers as a teetotaler abstains from spirituous liquors. Now, Auguste Comte possessed a gift of nature which, though common in minor degrees, is in the degree in which he possessed it rarer than enormous diamonds. That gift was the power of dealing with abstract intellectual conceptions, and living amidst them always, as the practical mind lives in and deals with material things. And it happened in Comte's case, as it usually does happen in cases of very peculiar endowment, that the gift was accompanied by the instincts neces-

sary to its perfect development and to its preservation. Comte instinctively avoided the conversation of ordinary people, because he felt it to be injurious to the perfect exercise of his faculty, and for the same reason he would not read newspapers. In imposing upon himself these privations he acted like a very eminent living etcher, who, having the gift of an extraordinary delicacy of hand, preserves it by abstinence from everything that may effect the steadiness of the nerves. There is a certain difference, however, between the two cases which I am anxious to accentuate. The etcher runs no risk of any kind by his rule of abstinence. He refrains from several common indulgences, but he denies himself nothing that is necessary to health. I may even go farther, and say that the rules which he observes for the sake of perfection in his art, might be observed with advantage by many who are not artists, for the sake of their own tranquillity, without the loss of anything but pleasure. The rules which Comte made for himself involved, on the other hand, a great peril. In detaching himself so completely from the interests and ways of thinking of ordinary men, he elaborated, indeed, the conceptions of the positive philosophy, but arrived afterwards at a peculiar kind of intellectual decadence from which it is possible—probable even—that the rough common sense of the newspapers might have preserved him. They would have saved him, I seriously believe, from that mysticism which led to the invention of a religion far surpassing in unreasonableness the least rational of the creeds of tradition. It is scarcely imaginable, except on the supposition of actual insanity, that any regular reader of the *Times*, the *Temps*, the *Daily News*, and the *Saturday Review*, should believe the human race to be capable of receiving as the religion of its maturity the Comtist Trinity and the Comtist Virgin Mother. A Trinity consisting of the Great Being (or humanity), the Great Fetish (or the earth), and the Great Midst (or space); a hope for the human race (how unphysiological!) that women might ultimately arrive at maternity independently of virile help,—these are conceptions so remote, not only from the habits of modern thought, but (what is more important) from its tendencies, that they could not occur to a mind in regular communication with its contemporaries.

"If you should transfer the amount of your reading day by day from the newspaper to

the standard authors?" To this suggestion of Emerson's it may be answered that the loss would be greater than the gain. The writers of Queen Anne's time could educate an Englishman of Queen Anne's time, but they can only partially educate an Englishman of Queen Victoria's time. The mind is like a merchant's ledger, it requires to be continually posted up to the latest date. Even the last telegram may have upset some venerable theory that has been received as infallible for ages.

In times when great historical events are passing before our eyes, the journalist is to future historians what the African traveller is to the map-makers. His work is neither complete nor orderly, but it is the fresh record of an eye-witness, and enables us to become ourselves spectators of the mighty drama of the world. Never was this service so well rendered as it is now, by correspondents who achieve heroic feats of bodily and mental prowess, exposing themselves to the greatest dangers, and writing much and well in circumstances the most unfavorable to literary composition. How vividly the English war correspondents brought before us the reality of the great conflict between Germany and France! What a romantic achievement, worthy to be sung in heroic verse, was the finding of Livingstone by Stanley! Not less interesting have been the admirable series of letters by M. Erdan in the *Temps*, in which, with the firmness of a master-hand, he has painted from the life, week after week, year after year, the decline and fall of the temporal power of the Papacy. I cannot think that any page of Roman history is better worth reading than his letters, more interesting, instructive, lively, or authentic. Yet with your contempt for newspapers you would lose all this profitable entertainment, and seek instead of it the accounts of former epochs not half so interesting as this fall of the temporal power, accounts written in most cases by men in libraries who had not seen the sovereigns they wrote about, nor talked with the people whose condition they attempted to describe. You have a respect for these accounts because they are printed in books, and bound in leather and entitled "history," whilst you despise the direct observation of a man like Erdan, because he is only a journalist, and his letters are published in a newspaper. Is there no some touch of prejudice in this, some mistake, some narrowness of intellectual aristocracy?

LETTER IX.

TO AN AUTHOR WHO APPRECIATED CONTEMPORARY LITERATURE.

Miss Mitford on the selfishness of authors—A suggestion of Emerson's—A laconic rule of his—Traces of jealousy—And of a more subtle feeling—A contradiction—Necessary to resist the invasion of the present—A certain equilibrium—The opposite of a pedant—The best classics not pedants, but artists.

READING the other day a letter by Miss Mitford, I was reminded of you as the eye is reminded of green when it sees scarlet. You, whose interest in literature has ever kept pace with the time, to whom no new thing is unwelcome if only it is good, are safe from her accusations; but how many authors have deserved them! Miss Mitford is speaking of a certain writer who is at the same time a clergyman, and whom it is not difficult to recognize.

"I never," she says, "saw him interested in the slightest degree by the work of any other author, except, indeed, one of his own followers or of his own clique, and then only as admiring or helping him. He has great kindness and great sympathy with working people, or with a dying friend, but I profess to you I am amazed at the utter selfishness of authors. I do not know one single poet who cares for any man's poetry but his own. In general they read no books except such as may be necessary to their own writings—that is to the work they happen to be about, and even then I suspect that they only read the bits that they may immediately want. You know the absolute ignorance in which Wordsworth lived of all modern works; and if, out of compliment to a visitor, he thought it needful to seem to read or listen to two or three stanzas, he gave unhesitating praise to the writer himself, but took especial care not to repeat the praise where it might have done him good—utterly fair and false."

There are touches of this spirit of indifference to contemporary literature in several writers and scholars whom we know. There are distinct traces of it even in published writings, though it is much more evident in private life and habit. Emerson seriously suggests that "the human mind would perhaps be a gainer if all the secondary writers were lost—say, in England, all but Shakespeare, Milton, and Bacon, through the profounder study so drawn to those wonderful minds." In the same spirit we have Emerson's laconic rule, "Never read any but famed books," which suggests the remark that if men had obeyed this rule from the beginning, no book could ever have acquired reputation, and nobody would ever have read anything.

The idea of limiting English literature to a holy trinity of Shakespeare, Milton, and Bacon, and voluntarily losing all other authors, seems to me the most intense expression of the spirit of aristocracy in reading. It is as if a man were to decide in his own mind that society would be the better if all persons except the three Emperors were excluded from it. There is a want of reliance upon one's own judgment, and an excess of faith in the estimates of others, when we resolve to read only those books which come to us in the splendor of a recognized intellectual royalty. We read either to gain information, to have good thinking suggested to us, or to have our imagination stimulated. In the way of knowledge the best authors are always the most recent, so that Bacon could not suffice. In the way of thinking, our methods have gained in precision since Milton's time, and we are helped by a larger experience than his. The one thing which Shakespeare and Milton can do for us quite perfectly still, is to fill our imagination richly, and give it a fine stimulus. But modern writers can render us the same service.

Is there not a little jealousy of contemporaries in the persistence with which some authors avoid them, and even engage others to avoid them? May not there be a shade of another feeling than jealousy, a feeling more subtle in operation, the undefined apprehension that we may find, even amongst our more obscure contemporaries, merit equal to our own? So long as we restrict our reading to old books of great fame we are safe from this apprehension, for if we find admirable qualities, we know beforehand that the world has handsomely acknowledged them, and we indulge in the hope that our own admirable qualities will be recognized by posterity with equal liberality. But it creates an unpleasant feeling of uneasiness to see quantities of obscure contemporary work, done in a plain way to earn a living by men of third or fourth-rate reputation, or of no reputation at all, which in many respects would fairly sustain a comparison with our own. It is clear that an author ought to be the last person to advise the public not to read contemporary literature, since he is himself a maker of contemporary literature; and there is a direct contradiction between the invitation to read his book, which he circulates by the act of publishing, and the advice which the book contains. Emerson is more safe from this obvious rejoinder when he suggests to us to transfer our reading day by day from the newspaper to the standard authors. But are these suggestions anything more than the

reaction of an intellectual man against the too prevalent customs of the world? The reading practised by most people, by all who do not set before themselves intellectual culture as one of the definite aims of life, is remarkable for the regularity with which it neglects all the great authors of the past. The books provided by the circulating library, the reviews and magazines, the daily newspapers, are read whilst they are novelties, but the standard authors are left on their shelves unopened. We require a firm resolution to resist this invasion of what is new, because it flows like an unceasing river, and unless we protect our time against it by some solid embankment of unshakable rule and resolution, every nook and cranny of it will be filled and flooded. An Englishman whose life was devoted to culture, but who lived in an out-of-the-way place on the Continent, told me that he considered it a decided advantage to his mind to live quite outside of the English library system, because if he wanted to read a new book he had to buy it and pay heavily for carriage besides, which made him very careful in his choice. For the same reason he rejoiced that the nearest English news-room was two hundred miles from his residence.

But, on the other hand, what would be the condition of a man's mind who never read anything but the classic authors? He would live in an intellectual monastery, and would not even understand the classic authors themselves, for we understand the past only by referring it to what we know in the present.

It is best to preserve our minds in a state of equilibrium, and not to allow our repugnance to what we see as an evil to drive us into an evil of an opposite kind. We are too often like those little toy-fish with a bit of steel in their mouths, which children attract with a magnet. If you present the positive pole of the magnet, the fish rushes at it at once, but if you offer the negative end it retreats continually. Everything relatively to our character has this positive or negative end, and we either rush to things or rush away from them. Some persons are actually driven away from the most entertaining writers because they happen to be what are called classics, because pedants boast of having read them. I know a man who is exactly the opposite of a pedant, who has a horror of the charlatanism which claims social and intellectual position as the reward for having laboriously waded through those authors who are conventionally termed "classical," and this opposition to pedantry has given him an aversion to the classics themselves, which he never opens.

The shallow pretence to admiration of famous writers which is current in the world is so distasteful to the love of honesty and reality which is the basis of his character, that by an unhappy association of ideas he has acquired a repugnance to the writers themselves. But such men as Horace, Terence, Shakespeare, Molière, though they have had the misfortune to be praised and commented upon by pedants, were in their lives the precise opposite of pedants; they were *artists* whose study was human nature, and who lived without pretension in the common world of men. The pedants have a habit of considering these genial old artists as in some mysterious way their own private property, for do not the pedants live by expounding them? And some of us are frightened away from the fairest realms of poetry by the fences of these grim guardians.

LETTER X.

TO AN AUTHOR WHO KEPT VERY IRREGULAR HOURS.

Julian Fane—His late hours—Regularity produced by habit—The time of the principal effort—That the chief work should be done in the best hours—Physicians prefer early to late work—The practice of Goethe and some modern authors—The morning worker ought to live in a tranquil neighborhood—Night-work—The medical objection to it—The student's objection to day-work—Time to be kept in masses by adults, but divided into small portions by children—Rapid turning of the mind—Cuvier eminent for this faculty—The Duke of Wellington—The faculty more available with some occupations than others—The slavery of a minute obedience to the clock—Broad rules the best—Books of agenda, good in business, but not in the higher intellectual pursuits.

WHAT you told me of your habits in the employment of your hours reminded me of Julian Fane. Mr. Lytton tells us that "after a long day of professional business, followed by a late evening of social amusement, he would return in the small hours of the night to his books, and sit, unwearied, till sunrise in the study of them. Nor did he then seem to suffer from this habit of late hours. His nightly vigils occasioned no appearance of fatigue the next day. . . . He rarely rose before noon, and generally rose much later."

But however irregular a man's distribution of his time may be in the sense of wanting the government of fixed rules, there always comes in time a certain regularity by the mere operation of habit. People who get up very late hardly ever do so in obedience to a rule; many get up early by rule, and many more are told that they ought to get up early, and believe it, and aspire to that virtue, but

fail to carry it into practice. The late-risers are rebels and sinners—in this respect—to a man, and so persistently have the wise, from Solomon downwards, harped upon the moral loveliness of early rising and the degradation which follows the opposite practice, that one can hardly get up after eight without either an uncomfortable sense of guilt or an extraordinary callousness. Yet the late-risers, though obeying no rule, for the abandoned sinner recognizes none, become regular in their late rising from the gradual fixing power of habit. Even Julian Fane, though he regretted his desultory ways, “and dwelt with great earnestness on the importance of regular habits of work,” was perhaps less irregular than he himself believed. We are sure to acquire habits; what is important is not so much that the habits should be regular, as that their regularity should be of the kind most favorable in the long run to the accomplishment of our designs, and this never comes by chance, it is the result of an effort of the will in obedience to governing wisdom.

The first question which every one who has the choice of his hours must settle for himself is at what time of day he will make his principal effort; for the day of every intellectual workman ought to be marked by a kind of artistic composition; there ought to be some one labor distinctly recognized as dominant, with others in subordination, and subordination of various degrees. Now for the hours at which the principal effort ought to be made, it is not possible to fix them by the clock so as to be suitable for everybody, but a broad rule may be arrived at which is applicable to all imaginable cases. The rule is this—to do the chief work in the best hours; to give it the pick of your day; and by the day I do not mean only the solar day, but the whole of the twenty-four hours. There is an important physiological reason for giving the best hours to the most important work. The better the condition of the brain and the body, and the more favorable the surrounding circumstances, the smaller will be the cost to the organization of the labor that has to be done. It is always the safest way to do the heaviest (or most important) work at the time and under the conditions which make it the least costly.

Physicians are unanimous in their preference of early to late work; and no doubt, if the question were not complicated by other considerations, we could not do better than to follow their advice in its simplicity. Goethe wrote in the morning, with his faculties refreshed by sleep and not yet excited by any

stimulant. I could mention several living authors of eminence who pursue the same plan, and find it favorable alike to health and to production. The rule which they follow is never to write after lunch, leaving the rest of their time free for study and society, both of which are absolutely necessary to authors. According to this system it is presumed that the hours between breakfast and lunch are the best hours. In many cases they are so. A person in fair health, after taking a light early breakfast without any heavier stimulant than tea or coffee, finds himself in a state of freshness highly favorable to sound and agreeable thinking. His brain will be in still finer order if the breakfast has been preceded by a cold bath, with friction and a little exercise. The feeling of freshness, cleanliness, and moderate exhilaration, will last for several hours, and during those hours the intellectual work will probably be both lively and reasonable. It is difficult for a man who feels cheerful and refreshed, and whose task seems easy and light, to write anything morbid or perverse.

But for the morning to be so good as I have just described it, the workman must be quite favorably situated. He ought to live in a very tranquil neighborhood, and to be as free as possible from anxiety as to what the postman may have in reserve for him. If his study-window looks out on a noisy street, and if the day is sure, as it wears on, to bring anxious business of its own, then the increasing noise and the apprehension (even though it be almost entirely unconscious) of impending business, will be quite sufficient to interfere with the work of any man who is the least in the world nervous, and almost all intellectual laborers are nervous, more or less. Men who have the inestimable advantage of absolute tranquillity, at all times, do well to work in the morning, but those who can only get tranquillity at times independent of their own choice have a strong reason for working at those times, whether they happen to be in the morning or not.

In an excellent article on “Work” (evidently written by an experienced intellectual workman), which appeared in one of the early numbers of the *Cornhill Magazine*, and was remarkable alike for practical wisdom and the entire absence of traditional dogmatism, the writer speaks frankly in favor of night-work, “If you can work at all at night, one hour at that time is worth any two in the morning. The house is hushed, the brain is clear, the distracting influences of the day are at an end. You have not to disturb your-

self with thoughts of what you are about to do, or what you are about to suffer. You know that there is a gulf between you and the affairs of the outside world, almost like the chasm of death; and that you need not take thought of the morrow until the morrow has come. There are few really great thoughts, such as the world will not willingly let die, that have not been conceived under the quiet stars."

The medical objection to night-work in the case of literary men would probably be that the night is *too* favorable to literary production. The author of the Essay just quoted says that at night "you only drift into deeper silence and *quicker inspiration*. If the right mood is upon you, *you write on*; if not, your pillow awaits you." Exactly so; that is to say, the brain, owing to the complete external tranquillity, can so concentrate its efforts on the subject in hand as to work itself up into a luminous condition which is fed by the most rapid destruction of the nervous substance that ever takes place within the walls of a human skull. "If the right mood is upon you, *you write on*;" in other words, if you have once well lighted your spirit-lamp, it will go on burning so long as any spirit is left in it, for the air is so tranquil that nothing comes to blow it out. You drift into deeper silence and "*quicker inspiration*." It is just this quicker inspiration that the physician dreads.

Against this objection may be placed the equally serious objection to day-work, that every interruption, when you are particularly anxious not to be interrupted, causes a definite loss and injury to the nervous system. The choice must therefore be made between two dangers, and if they are equally balanced there can be no hesitation, because all the *literary* interests of an author are on the side of the most tranquil time. Literary work is always sure to be much better done when there is no fear of disturbance than under the apprehension of it; and precisely the same amount of cerebral effort will produce, when the work is uninterrupted, not only better writing, but a much greater quantity of writing. The knowledge that he is working well and productively is an element of health to every workman because it encourages cheerful habits of mind.

In the division of time it is an excellent rule for adults to keep it as much as possible in *large masses*, not giving a quarter of an hour to one occupation and a quarter to another, but giving three, four, or five hours to one thing at a time. In the case of children an opposite practice should be followed; they are

able to change their attention from one subject to another much more easily than we can, whilst at the same time they cannot fix their minds for very long without cerebral fatigue leading to temporary incapacity. The custom prevalent in schools, of making the boys learn several different things in the course of the day, is therefore founded upon the necessities of the boy-nature, though most grown men would find that changes so frequent would, for them, have all the inconveniences of interruption. To boys they come as relief, to men as interruption. The reason is that the physical condition of the brain is different in the two cases; but in our loose way of talking about these things we may say that the boy's ideas are superficial, like the plates and dishes on the surface of a dinner-table, which may be rapidly changed without inconvenience, whereas the man's ideas, having all struck root down to the very depths of his nature, are more like the plants in a garden, which cannot be removed without a temporary loss both of vigor and of beauty, and the loss cannot be instantaneously repaired. For a man to do his work thoroughly well, it is necessary that he should dwell in it long enough at a time to get all the powers of his mind fully under command with reference to the particular work in hand, and he cannot do this without tuning his whole mind to the given diapason, as a tuner tunes a piano. Some men can tune their minds more rapidly, as violins are tuned, and this faculty may to a certain extent be acquired by efforts of the will very frequently repeated. Cuvier had this faculty in the most eminent degree. One of his biographers says: "His extreme facility for study, and of directing all the powers of his mind to diverse occupations of study, from one quarter of an hour to another, was one of the most extraordinary qualities of his mind." The Duke of Wellington also cultivated the habit (inestimably valuable to a public man) of directing the whole of his attention to the subject under consideration, however frequently that subject might happen to be changed. But although men of exceptional power and very exceptional flexibility may do this with apparent impunity, that still depends very much on the nature of the occupation. There are some occupations which are not incompatible with a fragmentary division of time, because these occupations are themselves fragmentary. For example, you may study languages in phrase-books during very small spaces of time, because the complete phrase is in itself a very small thing, but you could not so easily break and resume the thread of an elaborate argument. I suspect that though Cuvier appeared

to his contemporaries a man remarkably able to leave off and resume his work at will, he must have taken care to do work that would bear interruption at those times when he knew himself to be most liable to it. And although, when a man's time is unavoidably broken up into fragments, no talent of a merely auxiliary kind can be more precious than that of turning each of those fragments to advantage, it is still true that he whose time is at his own disposal will do his work most calmly, most deliberately, and therefore on the whole most thoroughly and perfectly, when he keeps it in fine masses. The mere knowledge that you have three or four clear hours before you is in itself a great help to the spirit of thoroughness, both in study and in production. It is agreeable too, when the sitting has come to an end, to perceive that a definite advance is the result of it, and advance in anything is scarcely perceptible in less than three or four hours.

There are several pursuits which cannot be followed in fragments of time, on account of the necessary preparations. It is useless to begin oil-painting unless you have full time to set your palette properly, to get your canvas into a proper state for working upon, to pose the model as you wish, and settle down to work with everything as it ought to be. In landscape-painting from nature you require the time to go to the selected place, and after your arrival to arrange your materials and shelter yourself from the sun. In scientific pursuits the preparations are usually at least equally elaborate, and often much more so. To prepare for an experiment, or for a dissection, takes time which we feel to be disproportionate when it leaves too little for the scientific work itself. It is for this reason more frequently than for any other that amateurs who begin in enthusiasm, so commonly, after awhile, abandon the objects of their pursuit.

There is a kind of slavery to which no really intellectual man would ever voluntarily submit, a minute obedience to the clock. Very conscientious people often impose upon themselves this sort of slavery. A person who has hampered himself with rules of this kind will take up a certain book, for instance, when the clock strikes nine, and begin at yesterday's mark, perhaps in the middle of a paragraph. Then he will read with great steadiness till a quarter-past nine, and exactly on the instant when the minute-hand gets opposite the dot, he will shut his book, however much the passage may happen to interest him. It was in allusion to good people of this kind that Sir Walter Scott said he had never

known a man of genius who could be perfectly regular in his habits, whilst he had known many blockheads who could. It is easy to see that a minute obedience to the clock is unintellectual in its very nature, for the intellect is not a piece of mechanism as a clock is, and cannot easily be made to act like one. There may be perfect correspondence between the locomotives and the clocks on a railway, for if the clocks are pieces of mechanism the locomotives are so likewise, but the intellect always needs a certain looseness and latitude as to time. Very broad rules are the best, such as "Write in the morning, read in the afternoon, see friends in the evening," or else "Study one day and produce another, alternately," or even "Work one week and see the world another week, alternately."

There is a fretting habit, much recommended by men of business and of great use to them, of writing the evening before the duties of the day in a book of agenda. If this is done at all by intellectual men with reference to their pursuits, it ought to be done in a very broad, loose way, never minutely. An intellectual worker ought never to make it a matter of conscience (in intellectual labor) to do a predetermined quantity of little things. This sort of conscientiousness frets and worries, and is the enemy of all serenity of thought.

PART XI.

TRADES AND PROFESSIONS.

LETTER I.

TO A YOUNG GENTLEMAN OF ABILITY AND CULTURE WHO HAD NOT DECIDED ABOUT HIS PROFESSION.

The Church—Fetters and advantages of the clerical profession—Its elevated ideal—That it is favorable to noble studies—French priests and English Clergymen—The professional point of view—Difficulty of disinterested thinking—Colored light—Want of strict accuracy—Quotation from a sermon—The drawback to the clerical life—Provisional nature of intellectual conclusions—The legal profession—That it affords gratification to the intellectual powers—Want of intellectual disinterestedness in lawyers—Their absorption in professional life—Anecdote of a London lawyer—Superiority of lawyers in their sense of affairs—Medicine—The study of it a fine preparation for the intellectual life—Social rise of medical men coincident with the mental progress of communities—Their probable future influence on education—The heroic side of their profession—The military and naval professions—Bad effect of the privation of solitude—Interruption—Anecdote of Cuvier—The fine arts—in what way they are favorable to thought—Intellectual leisure of artists—Reasoning artists—Sciences included in the fine arts.

It may be taken for granted that to a mind constituted as yours is, no profession will be satisfactory which does not afford free play to the intellectual powers. You might no doubt exercise resolution enough to bind yourself down to uncongenial work for a term of years, but it would be with the intention of retiring as soon as you had realized a competency. The happiest life is that which constantly exercises and educates what is best in us.

You had thoughts, at one time, of the Church, and the Church would have suited you in many respects very happily, yet not, I think, in all respects. The clerical profession has many great felicities and advantages: it educates and develops, by its mild but regular discipline, much of our higher nature; it sets before us an elevated ideal, worth striving for at the cost of every sacrifice but one, of which I intend to say something farther on; and it offers just that mixture of public and private life which best affords the alternation of activity and rest. It is an existence in many respects most favorable to the noblest studies. It offers the happiest combination of duties that satisfy the conscience with leisure for the cultivation of the mind; it gives the easiest access to all classes of society, providing for the parson himself a neutral and independent position, so safe that he need only conduct himself properly to preserve it. How superior, from the intellectual point of view, is this liberal existence to the narrower one of a French *curé de campagne*! I certainly think that if a good *curé* has an exceptional genius for sanctity, his chances of becoming a perfect saint are better than those of a comfortable English incumbent, who is at the same time a gentleman and man of the world, but he is not nearly so well situated for leading the intellectual life. Our own clergy have a sort of middle position between the *curé* and the layman, which without at all interfering with their spiritual vocation, makes them better judges of the character of laymen and more completely in sympathy with it.

And yet, although the life of a clergyman is favorable to culture in many ways, it is not wholly favorable to it. There exists, in clerical thinking generally, just one restriction or impediment, which is the overwhelming importance of the professional point of view. Of all the professions the ecclesiastical one is that which most decidedly and most constantly affects the judgment of persons and opinions. It is peculiarly difficult for a clergyman to attain disinterestedness in his thinking, to accept truth just as it may hap-

pen to present itself, without passionately desiring that one doctrine may turn out to be strong in evidence and another unsupported. And so we find the clergy, as a class, anxious rather to discover aids to faith, than the simple scientific truth; and the more the special priestly character develops itself, the more we find them disposed to use their intellects for the triumph of principles that are decided upon beforehand. Sometimes this disposition leads them to see the acts of laymen in a colored light and to speak of them without strict accuracy. Here is an example of what I mean. A Jesuit priest preached a sermon in London very recently, in which he said that "in Germany, France, Italy, and England, gigantic efforts were being made to rob Christian children of the blessing of a Christian education." "Herod, though dead," the preacher continued, "has left his mantle behind him; and I wish that the soldiers of Herod in those countries would plunge their swords into the breasts of little children while they were innocent, rather than have their souls destroyed by means of an unchristian and uncatholic education." No doubt this is very earnest and sincere, but it is not accurate and just thinking. The laity in the countries the preacher mentioned have certainly a strong tendency to exclude theology from State schools, because it is so difficult for a modern State to impose any kind of theological teaching without injustice to minorities; but the laity do not desire to deprive children of whatever instruction may be given to them by the clergy of their respective communions. May I add, that to the mind of a layman it seems a sanguinary desire that all little children should have swords plunged into their breasts rather than be taught in schools not clerically directed? The exact truth is, that the powerful lay element is certainly separating itself from the ecclesiastical element all over Europe, because it is found by experience that the two have a great and increasing difficulty in working harmoniously together, but the ecclesiastical element is detached and not destroyed.

The quotation I have just made is in itself a sufficient illustration of that very peculiarity in the more exalted ecclesiastical temperament, which often makes it so difficult for priests and governments, in these times, to get on comfortably together. Here is first a very inaccurate statement, and then an outburst of most passionate feeling, whereas the intellect desires the strictest truth and the most complete disinterestedness. As the temper of the laity becomes more and more intel-

lectual (and that is the direction of its movement), the sacerdotal habit will become more and more remote from it.

The clerical life has many strong attractions for the intellectual, and just one drawback to counterbalance them. It offers tranquillity, shelter from the interruptions and anxieties of the more active professions, and powerful means of influence ready to hand; but it is compatible with intellectual freedom and with the satisfaction of the conscience, only just so long as the priest really remains a believer in the details of his religion. Now, although we may reasonably hope to retain the chief elements of our belief, although what a man believes at twenty-five is always what he will most probably believe at fifty, still, in an age when free inquiry is the common habit of cultivated people of our sex, we may well hesitate before taking upon ourselves any formal engagement for the future, especially in matters of detail. The intellectual spirit does not regard its conclusions as being at any time final, but always provisional; we hold what we believe to be the truth until we can replace it by some more perfect truth, but cannot tell how much of to-day's beliefs to-morrow will retain or reject. It may be observed, however, that the regular performance of priestly functions is in itself a great help to permanence in belief by connecting it closely with practical habit, so that the clergy do really and honestly often retain through life their hold on early beliefs which as laymen they might have lost.

The profession of the law provides ample opportunities for a critical intellect with a strong love of accuracy and a robust capacity for hard work, besides which it is the best of worldly educations. Some lawyers love their work as passionately as artists do theirs, others dislike it very heartily, most of them seem to take it as a simple business to be done for daily bread. Lawyers whose heart is in their work are invariably men of superior ability, which proves that there is something in it that affords gratification to the intellectual powers. However, in speaking of lawyers, I feel ignorant and on the outside, because their profession is one of which the interior feelings can be known to no one who has not practised. One thing seems clear, they get the habit of employing the whole strength and energy of their minds for especial and temporary ends, the purpose being the service of the client, certainly not the revelation of pure truth. Hence, although they become very acute, and keen judges of that side of human nature which they habitually see (not the best side), they are not more

disinterested than clergymen.* Sometimes they take up some study outside of their profession and follow it disinterestedly, but this is rare. A busy lawyer is much more likely than a clergyman to become entirely absorbed in his professional life, because it requires so much more intellectual exertion. I remember asking a very clever lawyer who lived in London, whether he ever visited an exhibition of pictures, and he answered me by the counter-inquiry whether I had read Chitty on Contracts, Collier on Partnerships, Taylor on Evidence, Cruse's Digest, or Smith's Mercantile Law? This seemed to me at the time a good instance of the way a professional habit may narrow one's views of things, for these law-books were written for lawyers alone, whilst the picture exhibitions were intended for the public generally. My friend's answer would have been more to the point if I had inquired whether he had read Linton on Colors, and Burnet on Chiaroscuro.

There is just one situation in which we all may feel for a short time as lawyers feel habitually. Suppose that two inexperienced players sit down to a game of chess, and that each is backed by a clever person who is constantly giving him hints. The two backers represent the lawyers, and the players represent their clients. There is not much disinterested thought in a situation of this kind, but there is a strong stimulus to acuteness.

I think that lawyers are often superior to philosophers in their sense of what is relatively important in human affairs with reference to limited spaces of time, such as half a century. They especially know the enormous importance of custom, which the speculative mind very readily forgets, and they have in the highest degree that peculiar sense which fits men for dealing with others in the affairs of ordinary life. In this respect they are remarkably superior to clergymen, and superior also to artists and men of science.

The profession of medicine is, of all fairly lucrative professions, the one best suited to the development of the intellectual life. Having to deal continually with science, being constantly engaged in following and observing the operation of natural laws, it produces a sense of the working of those laws which prepares the mind for bold and original speculation, and a reliance upon their unfailing regularity, which gives it great firmness and assurance. A medical education is the best possible preparation for philosophical pur-

* The word "disinterested" is used here in the sense explained in Part II. Letter III.

suits, because it gives them a solid basis in the ascertainable. The estimation in which these studies are held is an accurate meter of the intellectual advancement of a community. When the priest is revered as a being above ordinary humanity, and the physician slightly esteemed, the condition of society is sure to be that of comparative ignorance and barbarism; and it is one of several signs which indicate barbarian feeling in our own aristocracy, that it has a contempt for the study of medicine. The progress of society towards enlightenment is marked by the steady social rise of the surgeon and the physician, a rise which still continues, even in Western Europe. It is probable that before very long the medical profession will exercise a powerful influence upon general education, and take an active share in it. There are very strong reasons for the opinion that schoolmasters educated in medicine would be peculiarly well qualified to train both body and mind for a vigorous and active manhood. An immense advantage, even from the intellectual point of view, in the pursuit of medicine and surgery, is that they supply a discipline in mental heroism. Other professions do this also, but not to the same degree. The combination of an accurate training in positive science with the habitual contempt of danger and contemplation of suffering and death, is the finest possible preparation for noble studies and arduous discoveries. I ought to add, however, that medical men in the provinces, when they have not any special enthusiasm for their work, seem peculiarly liable to the deadening influences of routine, and easily fall behind their age. The medical periodicals provide the best remedy for this.

The military and naval professions are too active, and too much bound to obedience in their activity, for the highest intellectual pursuits; but their greatest evil in this respect is the continual privation of solitude, and the frequency of interruption. A soldier's life in the higher ranks, when there is great responsibility and the necessity for personal decision, undoubtedly leads to the most brilliant employment of the mental powers, and develops a manliness of character which is often of the greatest use in intellectual work; so that a man of science may find his force augmented, and better under control, for having passed through a military experience; but the life of barracks and camps is destructive to continuity of thinking. The incompatibility becomes strikingly manifest when we reflect how impossible it would have been for Ney or Massena to do the work of Cuvier or Comte. Cuvier even declined to accompany the expe-

dition to Egypt, notwithstanding the prospects of advantage that it offered. The reason he gave for this refusal was, that he could do more for science in the tranquillity of the Jardin des Plantes. He was a strict economist of time, and dreaded the loss of it involved in following an army, even though his mission would have been purely scientific. How much more would Cuvier have dreaded the interruptions of a really military existence! It is these interruptions, and not any want of natural ability, that are the true explanation of the intellectual poverty which characterizes the military profession. Of all the liberal professions it is the least studious.

Let me say a word in conclusion about the practical pursuit of the fine arts. Painters are often remarkable for pleasant conversational power, and a degree of intelligence strikingly superior to their literary culture. This is because the processes of their art can be followed, at least under certain circumstances, by the exercise of hand and eye, directed merely by artistic taste and experience, whilst the intellect is left free either for reflection or conversation. Rubens liked to be read to when he painted; many artists like to hear people talk, and to take a share occasionally in the conversation. The truth is that artists, even when they work very assiduously, do in fact enjoy great spaces of intellectual leisure, and often profit by them. Painting itself is also a fine discipline for some of the best faculties of the mind, though it is well known that the most gifted artists think least about their art. Still there is a large class of painters, including many eminent ones, who *proceed intellectually* in the execution of their works, who reason them out philosophically step by step, and exercise a continual criticism upon their manual labor as it goes forward. I find, as I know art and artists better, that this class is more numerous than is commonly suspected, and that the charming effects which we believe to be the result of pure inspiration have often been elaborately reasoned out like a problem in mathematics. We are very apt to forget that art includes a great science, the science of natural appearances, and that the technical work of painters and engravers cannot go forward safely without the profoundest knowledge of certain delicate materials, this being also a science, and a difficult one. The common tendency is to underrate (from ignorance) what is intellectual in the practice of the fine arts; and yet the artists of past times have left evidence enough that they thought about art, and thought deeply. Artists are often illiterate; but it is possible to be at the

same time illiterate and intellectual; as we see frequent examples of book-learning in people who have scarcely a single idea of their own.

LETTER II.

TO A YOUNG GENTLEMAN WHO HAD LITERARY AND ARTISTIC TASTES, BUT NO PROFESSION.

The world only recognizes performance—Uselessness of botch-work—Vastness of the interval between botch-work and handicraft—Delusions of the well-to-do—Quotation from Charles Lever—Indifference, and even contempt, for skill—Moral contempt for skill—The contempt which comes from the pride of knowledge—Intellectual value of skill and of professional discipline.

It is not a graceful thing for me to say, nor pleasant for you to hear, that what you have done hitherto in art and literature is neither of any value in itself nor likely to lead you to that which is truly and permanently satisfying. I believe you have natural ability, though it would not be easy for any critic to measure its degree when it has never been developed by properly-directed work. Most critics would probably err on the unfavorable side, for we are easily blind to powers that are little more than latent. To see anything encouraging in your present performance, it would need the sympathy and intelligence of the American sculptor Greenough, of whom it was said that "his recognition was not limited to achievement, but extended to latent powers." The world, however, recognizes nothing short of performance, because the performance is what it needs, and promises are of no use to it.

In this rough justice of the world there is a natural distribution of rewards. You will be paid, in fame and money, for all excellent work; and you will be paid, in money, though not in fame, for all work that is even simply good, provided it be of a kind that the world needs, or fancies that it needs. But you will never be paid at all for botch-work, neither in money nor in fame, nor by your own inward approval.

For we all of us either know that our botch-work is worthless, or else have serious misgivings about it. That which is less commonly realized by those who have not undergone the test of professional labor is the vastness of the interval that separates botch-work from handicraft, and the difficulty of getting over it. "There are few delusions," Charles Lever said in "The Bramleighs," "more common with well-to-do people than the belief that if 'put to it' they could earn their own livelihood in a variety of ways. Almost

every man has some two or three or more accomplishments which he fancies would be quite adequate to his support; and remembering with what success the exercise of these gifts has ever been hailed in the society of his friends, he has a sort of generous dislike to be obliged to eclipse some poor drudge of a professional, who, of course, will be consigned to utter oblivion after his own performance. Augustus Bramleigh was certainly not a conceited or a vain man, and yet he had often in his palmy days imagined how easy it would be for him to provide for his own support. He was something of a musician; he sang pleasingly; he drew a little; he knew something of three or four modern languages; he had that sort of smattering acquaintance with questions of religion, politics, and literature which the world calls being 'well-informed,' and yet nothing short of the grave necessity revealed to him that towards the object of securing a livelihood a cobbler in his bulk was out-and-out his master. The world has no need of the man of small acquirements, and would rather have its shoes mended by the veriest botch of a professional than by the cleverest amateur that ever studied a Greek sandal."

Something of this illusion, which Charles Lever has touched so truly, may be due to a peculiarity of the English mind in its present (not quite satisfactory) stage of development, a peculiarity which I am not the first to point out, since it has been already indicated by Mr. Pointer, the distinguished artist; and I think that this peculiarity is to be found in very great force, perhaps in greater force than elsewhere, in that well-to-do English middle class in which you have been born and educated. It consists in a sort of indifference to skill of all kinds, which passes into something not very far from active contempt when a call is made for attention, recognition, admiration. The source of this feeling will probably be found in the inordinate respect for wealth, between which and highly developed personal skill, in anything, there is a certain antagonism or incompatibility. The men of real skill are almost always men who earn their living by their skill. The feeling of the middle-class capitalists concerning the skilful man may be expressed, not unjustly, as follows: "Yes, he is very clever; he may well be clever—it is his trade; he gets his living by it." This is held to exonerate us from the burden of admiration, and there is not any serious interest in the achievements of human endeavor as evidence of the marvellous natural endowments and capabilities of the human organism. In some minds the indifference to

skill is more active and grows into very real, though not openly expressed contempt. This contempt is partly moral. The skilful man always rejoices in his skill with a heaven-bestowed joy and delight—one of the purest and most divine pleasures given by God to man—an encouragement to labor, and a reward, the best reward, after his arduous apprenticeship. But there is a sour and severe spirit, hating all innocent pleasures, which despises the gladness of the skilful as so much personal vanity.

There is also the contempt for skill which comes from the pride of knowledge. To attain skill in anything a degree of application is necessary which absorbs more time than the acquisition of knowledge *about* the thing, so that the remarkably skilful man is not likely to be the erudite man. There have been instances of men who possessed both skill and learning. The American sculptor Greenough, and the English painter Dyce, were at the same time both eminently skilful in their craft and eminently learned out of it; but the combination is very rare. Therefore the possession of skill has come to be considered presumptive evidence of a want of general information.

But the truth is that professional skill is knowledge tested and perfected by practical application, and therefore has a great intellectual value. Professional life is to private individuals what active warfare is to a military state. It brings to light every deficiency, and reveals our truest needs. And therefore it seems to me a matter for regret that you should pass your existence in irresponsible privacy, and not have your attainments tested by the exigencies of some professional career. The discipline which such a career affords, and which no private resolution can ever adequately replace, may be all that is wanting to your development

being "at the head of the profession"? Byron's vexation was not entirely due to jealousy of Wordsworth, though that may have had something to do with it, nor was it due either to an aristocratic dislike of being in a "profession" himself, though this feeling may have had a certain influence; it was due to a proper sense of the dignity of the intellectual life. Buffon could not bear to be called a "naturalist," and Cuvier in the same way disliked the title of Hellenist, because it sounded professional: he said that though he knew more Greek than all the Academy he was not a Hellenist as Gail was, because he did not live by Greek.

Now, if this feeling had arisen merely from a dislike to having it supposed that one is obliged to earn his own living, it would have been a contemptibly vulgar sentiment, whoever professed it. Nothing can be more honorable to a man than to earn his bread by honest industry of any kind, whether it be manual or intellectual, and still I feel with Byron, and Buffon, and Cuvier, that the great instruments of the world's intellectual culture ought not to be, in the ordinary sense, professions. Byron said that poetry, as he understood it, was "an art, an attribute," but not what is understood by a "profession." Surely the same is true of all the highest intellectual work, in whatever kind. You could scarcely consider Faraday's life to be what is commonly understood by a professional life. Tyndall says that if Faraday had chosen to employ his talents in analytical chemistry he might have realized a fortune of 150,000*l*. Now that would have been a professional existence; but the career which Faraday chose (happily for science) was not professional, but intellectual. The distinction between the professional and the intellectual lives is perfectly clear in my own mind, and therefore I ought to be able to express it clearly. Let me make the attempt.

The purpose of a profession, of a profession pure and simple, is to turn knowledge and talent to pecuniary profit. On the other hand, the purpose of cultivated men, or men of genius, who work in an unprofessional spirit, is to increase knowledge, or make it more accurate, or else simply to give free exercise to high faculties which demand it. The distinction is so clear and trenchant that most intellectual men, whose private fortunes are not large, prefer to have a profession distinct from their higher intellectual work, in order to secure the perfect independence of the latter. Mr. Smiles, in his valuable book on "Character," gives a list of eminent intellectual men who have pursued real professional

LETTER III.

TO A YOUNG GENTLEMAN WHO WISHED TO DEVOTE HIMSELF TO LITERATURE AS A PROFESSION.

Byron's vexation at the idea of poetry being considered a profession—Buffon could not bear to be called a naturalist—Cuvier would not be called a Hellenist—Faraday's life not professional—The intellectual life frequently protected by professions outside of it—Professional work ought to be plain business work—Michelet's account of the incubation of a book—Necessity for too great rapidity of production in professional literature—It does not pay to do your best—Journalism and magazine-writing—Illustration from a sister art—Privilege of an author to be allowed to write little.

Do you remember how put out Byron was when some reviewer spoke of Wordsworth as

avocations of various kinds separately from their literary or scientific activity, and he mentions an observation of Gifford's which is much to my present purpose:—"Gifford, the editor of the *Quarterly*, who knew the drudgery of writing for a living, once observed that 'a single hour of composition, won from the business of the day, is worth more than the whole day's toil of him who works at the trade of literature: in the one case, the spirit comes joyfully to refresh itself, like a hart to the water-brooks; in the other, it pursues its miserable way, panting and jaded, with the dogs of hunger and necessity behind.'" So Coleridge said that "three hours of leisure, unalloyed by any alien anxiety, and looked forward to with delight as a change and recreation, will suffice to realize in literature a larger product of what is truly genial than weeks of compulsion." Coleridge's idea of a profession was, that it should be "some regular employment which could be carried on so far mechanically, that an average quantum only of health, spirits, and intellectual exertion are requisite to its faithful discharge." Without in the least desiring to undervalue good professional work of any kind, I may observe that, to be truly professional, it ought to be always at command, and therefore that the average power of the man's intellect, not his rare flashes of highest intellectual illumination, ought to suffice for it. Professional work ought always to be plain business work, requiring knowledge and skill, but not any effort of genius. For example, in medicine, it is professional work to prescribe a dose or amputate a limb, but not to discover the nervous system or the circulation of the blood.

If literature paid sufficiently well to allow it, a literary man might very wisely consider *study* to be his profession, and not *production*. He would then study regularly, say, six hours a day, and write when he had something to say, and really wanted to express it. His book, when it came out, would have had time to be properly hatched, and would probably have natural life in it. Michelet says of one of his books: "*Cette œuvre a du moins le caractère d'être venue comme vient toute vraie création vivante. Elle s'est faite à la chaleur d'une douce incubation.*"* It would be impossible, in so short a space, to give a more accurate description of the natural manner in which a book comes into existence. A book ought always to be "*fait à la chaleur d'une douce incubation.*"

But when you make a profession of litera-

ture this is what you can hardly ever get leave to do. Literary men require to see something of the world; they can hardly be hermits, and the world cannot be seen without a constant running expenditure, which at the end of the year represents an income. Men of culture and refinement really *cannot* live like very poor people without deteriorating in refinement, and falling behind in knowledge of the world. When they are married, and have families, they can hardly let their families live differently from themselves; so that there are the usual expenses of the English professional classes to be met, and these are heavy when they have to be got out of the profits of literature. The consequence is, that if a book is to be written prudently it must be written quickly, and with the least amount of preparatory labor that can possibly be made to serve. This is very different from the "*douce incubation*" of Michelet. Goldsmith said of hack-writing, that it was difficult to imagine a combination more prejudicial to taste than that of the author whose interest it is to write as much as possible, and the bookseller, whose interest it is to pay as little as possible. The condition of authors has no doubt greatly improved since Goldsmith's time, but still the fact remains that the most careful and finished writing, requiring extensive preparatory study, is a luxury in which the professional writer can only indulge himself at great risk. Careful writing does, no doubt, occasionally pay for the time it costs; but such writing is more commonly done by men who are either independent by fortune, or who make themselves, as authors, independent by the pursuit of some other profession, than by regular men of letters whose whole income is derived from their inkstands. And when, by way of exception, the hack-writer does produce very highly-finished and concentrated work, based upon an elaborate foundation of hard study, that work is seldom professional in the strictest sense, but is a labor of love, outside the hasty journalism or magazine-writing that wins his daily bread. In cases of this kind it is clear that the best work is not done as a regular part of professional duty, and that the author might as well earn his bread in some other calling, if he still had the same amount of leisure for the composition of real literature.

The fault I find with writing as a profession is that *it does not pay to do your best*. I don't mean to insinuate that downright slovenly or careless work is the most profitable; but I do mean to say that any high degree of conscientiousness, especially in the way of study and research, is a direct injury to the professional

* "This work has at any rate the character of having come into the world like every really living creation. It has been produced by the heat of a gentle incubation."

writer's purse. Suppose, for example, that he is engaged in reviewing a book, and is to get 3*l.* 10*s.* for the review when it is written. If by the accident of previous accumulation his knowledge is already fully equal to the demand upon it, the review may be written rapidly, and the day's work will have been a profitable one; but if, on the other hand, it is necessary to consult several authorities, to make some laborious researches, then the reviewer is placed in a dilemma between literary thoroughness and duty to his family. He cannot spend a week in reading up a subject for the sum of 3*l.* 10*s.* Is it not much easier to string together a few phrases which will effectually hide his ignorance from everybody but the half-dozen enthusiasts who have mastered the subject of the book? It is strange that the professional pursuit of literature should be a direct discouragement to study; yet it is so. There are hack-writers who study, and they deserve much honor for doing so, since the temptations the other way are always so pressing and immediate. Sainte-Beuve was a true student, loving literature for its own sake, and preparing for his articles with a diligence rare in the profession. But he was scarcely a hack-writer, having a modest independency, and living besides with the quiet frugality of a bachelor.

The truth seems to be that literature of the highest kind can only in the most exceptional cases be made a profession, yet that a skilful writer may use his pen professionally if he chooses. The production of the printed talk of the day is a profession, requiring no more than average ability, and the tone and temper of ordinary educated men. The outcome of it is journalism and magazine-writing; and now let me say a word or two about these.

The highest kind of journalism is very well done in England; the men who do it are often either highly educated, or richly gifted by nature, or both. The practice of journalism is useful to an author in giving him a degree of readiness and rapidity, a skill in turning his materials to immediate account, and a power of presenting one or two points effectively, which may often be valuable in literature of a more permanent order. The danger of it may be illustrated by a reference to a sister art. I was in the studio of an English landscape-painter when some pictures arrived from an artist in the country to go along with his own to one of the exhibitions. They were all very pretty and very clever—indeed, so clever were they, that their cleverness was almost offensive—and so long as they were looked at by themselves, the brilliance of them was rather dazzling. But the instant they

were placed by the side of thoroughly careful and earnest work, it became strikingly evident that they had been painted hastily, and would be almost immediately exhausted by the purchaser. Now these pictures were the *journalism of painting*; and my friend told me that when once an artist has got into the habit of doing hasty work like that, he seldom acquires better habits afterwards.

Professional writers who follow journalism for its immediate profits, are liable in like manner to retain the habit of diffuseness in literature which ought to be more finished and more concentrated. Therefore, although journalism is a good teacher of promptitude and decision, it often spoils a hand for higher literature by incapacitating it for perfect finish; and it is better for a writer who has ambition to write little, *but always his best*, than to dilute himself in daily columns. One of the greatest privileges which an author can aspire to is to be *allowed to write little*, and that is a privilege which the professional writer does not enjoy, except in such rare instances as that of Tennyson, whose careful finish is as prudent in the professional sense as it is satisfactory to the scrupulous fastidiousness of the artist.

LETTER IV.

TO AN ENERGETIC AND SUCCESSFUL COTTON MANUFACTURER.

Two classes in their lower grades inevitably hostile—The spiritual and temporal powers—The functions of both not easily exercised by the same person—Humboldt, Faraday, Livingstone—The difficulty about time—Limits to the energy of the individual—Jealousy between the classes—That this jealousy ought not to exist—Some of the sciences based upon an industrial development—The work of the intellectual class absolutely necessary in a highly civilised community—That it grows in numbers and influence side by side with the industrial class.

OUR last conversation together, in the privacy of your splendid new drawing-room after the guests had gone away and the music had ceased for the night, left me under the impression that we had not arrived at a perfect understanding of each other. This was due in a great measure to my unfortunate incapacity for expressing anything exactly by spoken words. The constant habit of writing, which permits a leisurely selection from one's ideas, is often very unfavorable to readiness in conversation. Will you permit me, then, to go over the ground we traversed, this time in my own way, pen in hand?

We represent, you and I, two classes which in their lower grades are inevitably hostile; but the superior members of these classes

ought not to feel any hostility, since both are equally necessary to the world. We are, in truth, the spiritual and the temporal powers in their most modern form. The chief of industry and the man of letters stand to-day in the same relation to each other and to mankind as the baron and bishop of the Middle Ages. We are not recognised, either of us, by formally conferred titles, we are both held to be somewhat intrusive by the representatives of a former order of things, and there is, or was until very lately, a certain disposition to deny what we consider our natural rights; but we know that our powers are not to be resisted, and we have the inward assurance that the forces of nature are with us.

This, with reference to the outer world. But there is a want of clearness in the relation between ourselves. You understand your great temporal function, which is the wise direction of the industry of masses, the accumulation and distribution of wealth; but you do not so clearly understand the spiritual function of the intellectual class, and you do not think of it quite justly. This want of understanding is called by some of us your Philistinism. Will you permit me to explain what the intellectual class thinks of you, and what is its opinion about itself?

Pray excuse any appearance of presumption on my part if I say we of the intellectual class and you of the industrial. My position is something like that of the clergyman who reads, "Let him come to me or to some other learned and discreet minister of God's word," thereby calling himself learned and discreet. It is a simple matter of fact that I belong to the intellectual class, since I lead its life, just as it is a fact that you have a quarter of a million of money.

First, I want to show that the existence of my class is necessary.

Although men in various occupations often acquire a considerable degree of culture outside their trade, the highest results of culture can scarcely ever be attained by men whose time is taken up in earning a fortune. Every man has but a limited flow of mental energy per day; and if this is used up in an industrial leadership, he cannot do much more in the intellectual sphere than simply ascertain what has been done by others. Now, although we have a certain respect, and the respect is just, for those who know what others have accomplished, it is clear that if no one did more than this, if no one made any fresh discoveries, the world would make no progress whatever; and in fact, if nobody ever had been dedicated to intellectual pursuits in preceding ages, the men who only learn what

others have done, would in these days have had nothing to learn. Past history proves the immensity of the debt which the world owes to men who gave their whole time and attention to intellectual pursuits; and if the existences of these men could be eliminated from the past of the human race, its present would be very different from what it is. A list has been published of men who have done much good work in the intervals of business, but still the fact remains that the great intellectual pioneers were absorbed and devoted men, scorning wealth so far as it affected themselves, and ready to endure everything for knowledge beyond the knowledge of their times. Instances of such enthusiasm abound, an enthusiasm fully justified by the value of the results which it has achieved. When Alexander Humboldt sold his inheritance to have the means for his great journey in South America, and calmly dedicated the whole of a long life, and the strength of a robust constitution, to the advancement of natural knowledge, he acted foolishly indeed, if years, and strength, and fortune are given to us only to be well invested in view of money returns; but the world has profited by his decision. Faraday gave up the whole of his time to discovery when he might have earned a large fortune by the judicious investment of his extraordinary skill in chemistry. Livingstone has sacrificed everything to the pursuit of his great work in Africa. Lives such as these—and many resemble them in useful devotion of which we hear much less—are clearly not compatible with much money-getting. A decent existence, free from debt, is all that such men ought to be held answerable for.

I have taken two or three leading instances, but there is quite a large class of intellectual people who cannot in the nature of things serve society effectively in their own way without being quite outside of the industrial life. There is a real incompatibility between some pursuits and others. I suspect that you would have been a good general, for you are a born leader and commander of men; but it would have been difficult to unite a regular military career with strict personal attention to your factories. We often find the same difficulty in our intellectual pursuits. We are not always quite so unpractical as you think we are; but the difficulty is how to find the time, and how to arrange it so as not to miss two or three distinct classes of opportunities. We are not all of us exactly imbeciles in money matters, though the pecuniary results of our labors seem no doubt pitiful enough. There is a tradition that a Greek

philosopher, who was suspected by the practical men of his day of incapacity for affairs, devoted a year to prove the contrary, and traded so judiciously that he amassed thereby great riches. It may be doubtful whether he could do it in one year, but many a fine intellectual capacity has overshadowed a fine practical capacity in the same head by the withdrawal of time and effort.

It is because the energies of one man are so limited, and there is so little time in a single human life, that the intellectual and industrial functions must, *in their highest development*, be separated. No one man could unite in his own person your life and Humboldt's, though it is possible that he might have the natural capacity for both. Grant us, then, the liberty *not* to earn very much money, and this being once granted, try to look upon our intellectual superiority as a simple natural fact, just as we look upon your pecuniary superiority.

In saying in this plain way that we are intellectually superior to you and your class, I am guilty of no more pride and vanity than you when you affirm or display your wealth. The fact is there, in its simplicity. We have culture because we have paid the twenty or thirty years of labor which are the price of culture, just as you have great factories and estates which are the reward of your life's patient and intelligent endeavor.

Why should there be any narrow jealousy between us; why any contempt on the one side or the other? Each has done his appointed work, each has caused to fructify the talent which the Master gave.

Yet a certain jealousy *does* exist, if not between you and me personally, at least between our classes. The men who have culture without wealth are jealous of the power and privileges of those who possess money without culture; and on the other hand, the men whose time has been too entirely absorbed by commercial pursuits to leave them any margin sufficient to do justice to their intellectual powers, are often painfully sensitive to the contempt of the cultivated, and strongly disposed, from jealousy, to undervalue culture itself. Both are wrong so far as they indulge any unworthy and unreasonable feeling of this kind. The existence of the two classes is necessary to an advanced civilization. The science of accumulating and administering material wealth, of which you yourself are a great practical master, is the foundation of the material prosperity of nations, and it is only when this prosperity is fully assured to great numbers that the arts and sciences can develop themselves in perfect liberty and

with the tranquil assurance of their own permanence. The advancement of material well-being in modern states tends so directly to the advancement of intellectual pursuits, even when the makers of fortunes are themselves indifferent to this result, that it ought always to be a matter of congratulation for the intellectual class itself, which needs the support of a great public with leisure to read and think. It is easy to show how those arts and sciences which our class delights to cultivate are built upon those developments of industry which have been brought about by the energy of yours. Suppose the case of a scientific chemist: the materials for his experiments are provided ready to his hand by the industrial class; the record of them is preserved on paper manufactured by the same industrial class; and the public which encourages him by its attention is usually found in great cities which are maintained by the labors of the same useful servants of humanity. It is possible, no doubt, in these modern times, that some purely pastoral or agricultural community might produce a great chemist, because a man of inborn scientific genius who came into the world in an agricultural country might in these days get his books and materials from industrial centres at a distance, but his work would still be based on the industrial life of others. No pastoral or agricultural community which was really isolated from industrial communities ever produced a chemist. And now consider how enormously important this one science of chemistry has proved itself even to our intellectual life! Several other sciences have been either greatly strengthened or else altogether renewed by it, and the wonderful photographic processes have been for nature and the fine arts what printing was for literature, placing reliable and authentic materials for study within the reach of every one. Literature itself has profited by the industrial progress of the present age, in the increased cheapness of everything that is material in books. I please myself with the reflection that even you make paper cheaper by manufacturing so much cotton.

All these are reasons why we ought not to be jealous of you; and now permit me to indicate a few other reasons why it is unreasonable on your part to feel any jealousy of us.

Suppose we were to cease working to-morrow—cease working, I mean, in our peculiar ways—and all of us become colliers and factory operatives instead, with nobody to supply our places. Or, since you may possibly be of opinion that there is enough literature and science in the world at the present day,

suppose rather that at some preceding date the whole literary and scientific and artistic labor of the human race; had come suddenly to a standstill. Mind, I do not say of Englishmen merely, but of the whole race, for if any intellectual work had been done in France or Germany, or even in Japan, you would have imported it like cotton and foreign cereals. Well, I have no hesitation in telling you that although there was a good deal of literature and science in England before the 1st of January, 1800, the present condition of the nation would have been a very chaotic condition if the intellectual class had ceased on that day to think and observe and to place on record its thoughts and observations. The life of a progressive nation cannot long go forward exclusively on the thinking of the past: its thoughtful men must not be all dead men, but living men who accompany it on its course. It is they who make clear the lessons of experience; it is they who discover the reliable general laws upon which all safe action must be founded in the future; it is they who give decision to human action in every direction by constantly registering, in language of comprehensive accuracy, both its successes and its failures. It is their great and arduous labor which makes knowledge accessible to men of action at the cost of little effort and the smallest possible expenditure of time. The intellectual class grows in numbers and in influence along with the numbers and influence of the materially productive population of the State. And not only are the natural philosophers, the writers of contemporary and past history, the discoverers in science, necessary in the strictest sense to the life of such a community as the modern English community, but even the poets, the novelists, the artists are necessary to the perfection of its life. Without them and their work the national mind would be as incomplete as would be the natural universe without beauty. But this, perhaps, you will perceive less clearly, or be less willing to admit.

LETTER V.

TO A YOUNG ETONIAN WHO THOUGHT OF BECOMING A COTTON-SPINNER.

Absurd old prejudices against commerce—Stigma attached to the great majority of occupations—Traditions of feudalism—Distinctions between one trade and another—A real instance of an Etonian who had gone into the cotton-trade—Observations on this case—The trade a fine field for energy—A poor one for intellectual culture—It develops practical ability—Culture not possible without leisure—The founders of commercial fortunes.

It is agreeable to see various indications that the absurd old prejudices against commerce are certainly declining. There still remains quite enough contempt for trade in the professional classes and the aristocracy, to give us frequent opportunities for studying it as a relic of former superstition, unhappily not yet rare enough to be quite a curiosity; but as time passes and people become more rational, it will retreat to out-of-the-way corners of old country mansions and rural parsonages, at a safe distance from the light-giving centres of industry. It is a surprising fact, and one which proves the almost pathetic spirit of deference and submission to superiors which characterizes the English people, that out of the hundreds of occupations which are followed by the busy classes of this country, only three are entirely free from some degrading stigma, so that they may be followed by a high-born youth without any sacrifice of caste. The wonder is that the great active majority of the nation, the men who by their industry and intelligence have made England what she is, should ever have been willing to submit to so insolent a rule as this rule of caste, which, instead of honoring industry, honored idleness, and attached a stigma to the most useful and important trades. The landowner, the soldier, the priest, these three were pure from every stain of degradation, and only these three were quite absolutely and ethereally pure. Next to them came the lawyer and the physician, on whom there rested some traces of the lower earth; so that although the youthful baron would fight or preach, he would neither plead nor heal. And after these came the lower professions and the innumerable trades, all marked with stigmas of deeper and deeper degradation.

From the intellectual point of view these prejudices indicate a state of society in which public opinion has not emerged from barbarism. It understands the strength of the feudal chief having land, with serfs or voters on the land; it knows the uses of the sword, and it dreads the menaces of the priesthood. Beyond this it knows little, and despises what it does not understand. It is ignorant of science, and industry, and art; it despises them as servile occupations beneath its conception of the gentleman. This is the tradition of countries which retain the impressions of feudalism; but notwithstanding all our philosophy, it is difficult for us to avoid some feeling of astonishment when we reflect that the public opinion of England—a country that owes so much of her greatness and nearly all her wealth to commercial enter-

prise—should be contemptuous towards commerce.

I may notice, in passing, a very curious form of this narrowness. Trade is despised, but distinctions are established between one trade and another. A man who sells wine is considered more of a gentleman than a man who sells figs and raisins; and I believe you will find, if you observe people carefully, that a woollen manufacturer is thought to be a shade less vulgar than a cotton manufacturer. These distinctions are seldom based on reason, for the work of commerce is generally very much the same sort of work, mentally, whatever may be the materials it deals in. You may be heartily congratulated on the strength of mind, firmness of resolution, and superiority to prejudice, which have led you to choose the business of a cotton-spinner. It is an excellent business, and, in itself, every whit as honorable as dealing in corn and cattle, which our nobles do habitually without reproach. But now that I have disclaimed any participation in the stupid narrowness which despises trade in general, and the cotton-trade in particular, let me add a few words upon the effects of the cotton business on the mind.

There appeared in one of the newspapers a little time since a most interesting and evidently genuine letter from an Etonian, who had actually entered business in a cotton factory, and devoted himself to it so as to earn the confidence of his employers and a salary of 400*l.* a year as manager. He had waited some time uselessly for a diplomatic appointment which did not arrive, and so, rather than lose the best years of early manhood, as a more indolent fellow would have done very willingly, in pure idleness, he took the resolution of entering business, and carried out his determination with admirable persistence. At first nobody would believe that the "swell" could be serious; people thought that his idea of manufacturing was a mere freak, and expected him to abandon it when he had to face the tedium of the daily work; but the swell *was* serious—went to the mill at six in the morning and stayed there till six at night, from Monday till Saturday inclusive. After a year of this, his new companions believed in him.

Now, all this is very admirable indeed as a manifestation of energy, and that truest independence which looks to fortune as the reward of its own manly effort, but it may be permitted to me to make a few observations on this young gentleman's resolve. What he did seems to me rather the act of an energetic nature seeking an outlet for energy, than of

an intellectual nature seeking pasture and exercise for the intellect. I am far indeed from desiring, by this comparison, to cast any disparaging light on the young gentleman's natural endowments, which appear to have been valuable in their order and robust in their degree, nor do I question the wisdom of his choice; all I mean to imply is, that although he had chosen a fine large field for simple energy, it was a poor and barren field for the intellect to pasture in. Consider for one moment the difference in this respect between the career which he had abandoned and the trade he had embraced. As an *attaché* he would have lived in capital cities, have had the best opportunities for perfecting himself in modern languages, and for meeting the most varied and the most interesting society. In every day there would have been precious hours of leisure, to be employed in the increase of his culture. If an intellectual man, having to choose between diplomacy and cotton-spinning, preferred cotton-spinning it would be from the desire for wealth, or from the love of an English home. The life of a cotton manufacturer, who personally attends to his business with that close supervision which has generally conducted to success, leaves scarcely any margin for intellectual pleasure or spare energy for intellectual work. After ten hours in the mill, it is difficult to sit down and study; and even if there were energy enough, the mind would not readily cast off the burden of great practical anxieties and responsibilities so as to attune itself to disinterested thinking. The leaders of industry often display mental power of as high an order as that which is employed in the government of great empires; they show the highest administrative ability, they have to deal continually with financial questions which on their smaller scale require as much forethought and acumen as those that concern the exchequer; but the ability they need is always strictly practical, and there is the widest difference between the practical and the intellectual minds. A constant and close pressure of practical considerations develops the sort of power which deals effectually with the present and its needs but atrophies the higher mind. The two minds which we call intelligence and intellect resemble the feet and wings of birds. Eagles and swallows walk badly or not at all, but they have a marvellous strength of flight; ostriches are great pedestrians, but they know nothing of the regions of the air. The best that can be hoped for men immersed in the details of business is that they may be able, like partridges and pheasants, to take a

short flight on an emergency, and rise, if only for a few minutes, above the level of the stubble and the copee.

Without, therefore, desiring to imply any prejudiced contempt for trade, I do desire to urge the consideration of its inevitable effects upon the mind. For men of great practical intelligence and abundant energy, trade is all-sufficing, but it could never entirely satisfy an intellectual nature. And although there is drudgery in every pursuit, for even literature and painting are full of it, still there are certain kinds of drudgery which intellectual natures find to be harder to endure than others. The drudgery which they bear least easily is an incessant attention to duties which have no intellectual interest, and yet which cannot be properly performed mechanically so as to leave the mind at liberty for its own speculations. Deep thinkers are notoriously absent, for thought requires abstraction from what surrounds us, and it is hard for them to be denied the liberty of dreaming. An intellectual person might be happy as a stone-breaker on the roadside, because the work would leave his mind at liberty; but he would certainly be miserable as an engine-driver at a coal-pit shaft, where the abstraction of an instant would imperil the lives of others.

In a recent address delivered by Mr. Gladstone at Liverpool, he acknowledged the neglect of culture which is one of the shortcomings of our trading community, and held out the hope (perhaps in some degree illusory) that the same persons might become eminent in commerce and in learning. No doubt there have been instances of this; and when a "concern" has been firmly established by the energy of a predecessor, the heir to it may be satisfied with a royal sort of supervision, leaving the drudgery of detail to his managers, and so secure for himself that sufficient leisure without which high culture is not possible. But the *founders* of great commercial fortunes have, I believe, in every instance thrown their *whole* energy into their trade, making wealth their aim, and leaving culture to be added in another generation. The founders of commercial families are in this country usually men of great mother-wit and plenty of determination—but illiterate.

PART XII.

SURROUNDINGS.

LETTER I.

TO A FRIEND WHO OFTEN CHANGED HIS PLACE OF RESIDENCE.

An unsettled class of English people—Effect of localities on the mind—Reaction against surroundings—Landscape-painting a consequence of it—Crushing effect of too much natural magnificence—The mind takes color from its surroundings—Selection of a place of residence—Charles Dickens—Heinrich Heine—Dr. Arnold at Rugby—His house in the lake district—Tycho Brahe—His establishment on the island of Hween—The young Humboldts in the Castle of Tegel—Alexander Humboldt's appreciation of Paris—Dr. Johnson—Mr. Buckle—Cowper—Galileo.

I FIND that there is a whole class of English subjects (you belong to that class) of whom it is utterly impossible to predict where they will be living in five years. Indeed, as you are the worst of correspondents, I only learned your present address, by sheer accident, from a perfect stranger, and he told me, of course, that you had plans for going somewhere else, but where that might be he knew not. The civilized English nomad is usually, like yourself, a person of independent means, rich enough to bear the expenses of frequent removals, but without the cares of property. His money is safely invested in the funds, or in railways; and so, wherever the postman can bring his dividends, he can live in freedom from material cares. When his wife is as unsettled as himself, the pair seem to live in a balloon, or in a sort of Noah's ark, which goes whither the wind lists, and takes ground in the most unexpected places.

Have you ever studied the effect of localities on the mind—on your own mind? That which we are is due in great part to the accident of our surroundings, which act upon us in one or two quite opposite ways. Either we feel in harmony with them, in which case they produce a positive effect upon us, or else we are out of harmony, and then they drive us into the strangest reactions. A great ugly English town, like Manchester, for instance, makes some men such thorough townsmen that they cannot live without smoky chimneys; or it fills the souls of others with such a passionate longing for beautiful scenery and rustic retirement, that they find it absolutely necessary to bury themselves from time to time in the recesses of picturesque mountains. The development of modern landscape-painting has not been due to habits of rural existence, but to the growth of very big and hide-

ous modern cities, which made men long for shady forests, and pure streams, and magnificent spectacles of sunset, and dawn, and moonlight. It is by this time a trite observation that people who have always lived in beautiful scenery do not, and cannot, appreciate it; that too much natural magnificence positively crushes the activity of the intellect, and that its best effect is simply that of refreshment for people who have not access to it every day. It happens too, in a converse way, that rustics and mountaineers have the strongest appreciation of the advantages of great cities, and thrive in them often more happily than citizens who are born in the brick streets. Those who have great facilities for changing their place of residence ought always to bear in mind that every locality is like a dyer's vat, and that the residents take its color, or some other color, from it just as the clothes do that the dyer steeps in stain. If you look back upon your past life, you will assuredly admit that every place has colored your mental habits; and that although other tints from other places have supervened, so that it may be difficult to say precisely what remains of the place you lived in many years ago, still something does remain, like the effect of the first painting on a picture, which tells on the whole work permanently, though it may have been covered over and over again by what painters call scumblings and glazings.

The selection of a place of residence, even though we only intend to pass a few short years in it, is from the intellectual point of view a matter so important that one can hardly exaggerate its consequences. We see this quite plainly in the case of authors, whose minds are more visible to us than the minds of other men, and therefore more easily and conveniently studied. We need no biographer to inform us that Dickens was a Londoner, that Browning had lived in Italy, that Ruskin had passed many seasons in Switzerland and Venice. Suppose for one moment that these three authors had been born in Ireland, and had never quitted it, is it not certain that their production would have been different? Let us carry our supposition farther still, and conceive, if we can, the difference to their literary performance if they had been born, not in Ireland, but in Iceland, and lived there all their lives! Is it not highly probable that in this case their production would have been so starved and impoverished from insufficiency of material and of suggestion, that they would have uttered nothing but some simple expression of sentiment and imagination, some homely song or tale? All

sights and sounds have their influence on our temper and on our thoughts, and our inmost being is not the same in one place as in another. We are like blank paper that takes a tint by reflection from what is nearest, and changes it as its surroundings change. In a dull gray room, how gray and dull it looks! but it will be bathed in rose or amber if the hangings are crimson or yellow. There are natures that go to the streams of life in great cities as the heart goes to the water-brooks; there are other natures that need the solitude of primeval forests and the silence of the Alps. The most popular of English novelists sometimes went to write in the tranquillity of beautiful scenery, taking his manuscript to the shore of some azure lake in Switzerland, in sight of the eternal snow; but all that beauty and peace, all that sweetness of pure air and color, were not seductive enough to overcome for many days the deep longing for the London streets. His genius needed the streets, as a bee needs the summer flowers, and languished when long separated from them. Others have needed the wild heather, or the murmur of the ocean, or the sound of autumn winds that strip great forest-trees. Who does not deeply pity poor Heine in his last sad years, when he lay fixed on his couch of pain in that narrow Parisian lodging, and compared it to the sounding grave of Merlin the enchanter, "which is situated in the wood of Brozeliande, in Brittany, under lofty oaks whose tops taper, like emerald flames, towards heaven. O brother Merlin," he exclaims, and with what touching pathos! "O brother Merlin, I envy thee those trees, with their fresh breezes, for never a green leaf rustles about this mattress-grave of mine in Paris, where from morning till night I hear nothing but the rattle of wheels, the clatter of hammers, street-brawls, and the jingling of pianofortes!"

In the biography of Dr. Arnold, his longing for natural beauty recurs as one of the peculiarities of his constitution. He did not need very grand scenery, though he enjoyed it deeply, but some wild natural loveliness was such a necessity for him that he pined for it unhappily in its absence. Rugby could offer him scarcely anything of this. "We have no hills," he lamented, "no plains—not a single wood, and but one single copse; no heath, no down, no rock, no river, no clear stream—scarcely any flowers, for the *lias* is particularly poor in them—nothing but one endless monotony of enclosed fields and hedgerow trees. This is to me a daily privation; it robs me of what is naturally my anti-attrition; and as I grow older I begin to feel it. . . . The pos-

itive dulness of the country about Rugby makes it to me a mere working-place: I cannot expatiate there even in my walks."

"The monotonous character of the midland scenery of Warwickshire," says Dr. Arnold's biographer, "was to him, with his strong love of natural beauty and variety, absolutely repulsive; there was something almost touching in the eagerness with which, amidst that 'endless succession of fields and hedgerows,' he would make the most of any features of a higher order; in the pleasure with which he would cherish the few places where the current of the Avon was perceptible, or where a glimpse of the horizon could be discerned; in the humorous despair with which he would gaze on the dull expanse of fields eastward from Rugby. It is no wonder we do not like looking that way, when one considers that there is nothing fine between us and the Ural mountains. Conceive what you look over, for you just miss Sweden, and look over Holland, the north of Germany, and the centre of Russia."*

This dreadful midland monotony impelled Dr. Arnold to seek refreshment and compensation in a holiday home in the Lake district, and there he found all that his eyes longed for, streams, hills, woods, and wild-flowers. Nor had his belief in the value of these sweet natural surroundings been illusory; such instincts are not given for our betrayal, and the soul of a wise man knows its own needs, both before they are supplied, and after. Westmoreland gave him all he had hoped from it, and more. "Body and mind," he wrote, "alike seem to repose greedily in delicious quiet, without dulness, which we enjoy in Westmoreland." And again: "At Allan Bank, in the summer, I worked on the Roman history, and hope to do so again in the winter. It is very inspiring to write with such a view before one's eyes as that from our drawing-room at Allan Bank, where the trees of the shrubbery gradually run up into the trees of the cliff, and the mountain-side, with its infinite variety of rocky peaks and points upon which the cattle expatiate, rises over the tops of the trees."

Of all happily-situated mental laborers who have worked since the days of Horace, surely Tycho Brahe was the happiest and most to be envied. King Frederick of Denmark gave him a delightful island for his habitation, large enough for him not to feel imprisoned (the circumference being about five miles), yet little enough for him to feel as snugly at home there as Mr. Waterton in his

high-walled park. The land was fertile and rich in game, so that the scientific Robinson Crusoe lived in material abundance; and as he was only about seven miles from Copenhagen, he could procure everything necessary to his convenience. He built a great house on the elevated land in the midst of the isle, about three-quarters of a mile from the sea, a palace of art and science, with statues and paintings and all the apparatus which the ingenuity of that age could contrive for the advancement of astronomical pursuits. Uniting the case of a rich nobleman's existence with every aid to science, including special erections for his instruments, and a printing establishment that worked under his own immediate direction, he lived far enough from the capital to enjoy the most perfect tranquillity, yet near enough to escape the consequences of too absolute isolation. Aided in all he undertook by a staff of assistants that he himself had trained, supported in his labor by the encouragement of his sovereign, and especially by his own unflagging interest in scientific investigation, he led in that peaceful island the ideal intellectual life. Of that mansion where he labored, of the observatory where he watched the celestial phenomena, surrounded but not disturbed by the waves of a shallow sea, there remains at this day literally not one stone upon another; but many a less fortunate laborer in the same field, harassed by poverty, distracted by noise and interruption, has remembered with pardonable envy the splendid peace of Uranienborg.

It was one of the many fortunate circumstances in the position of the two Humboldts that they passed their youth in the quiet old castle of Tegel, separated from Berlin by a pine-wood, and surrounded by walks and gardens. They too, like Tycho Brahe, enjoyed that happy combination of tranquillity with the neighborhood of a capital city which is so peculiarly favorable to culture. In later life, when Alexander Humboldt had collected those immense masses of material which were the result of his travels in South America, he warmly appreciated the unequalled advantages of Paris. He knew how to extract from the solitudes of primæval nature what he wanted for the enrichment of his mind; but he knew also how to avail himself of all the assistance and opportunities which are only to be had in great capitals. He was not attracted to town-life, like Dr. Johnson and Mr. Buckle, to the exclusion of wild nature; but neither, on the other hand, had he that horror of towns which was a morbid defect in Cowper, and which condemns those who suffer from it to rusticity. Even Galileo, who

* How purely this is the misery of a man of culture! A peasant would not have gone so far.

thought the country especially favorable to speculative intellects, and the walls of cities an imprisonment for them, declared that the best years of his life were those he had spent in Padua.

LETTER II.

TO A FRIEND WHO MAINTAINED THAT SURROUNDINGS WERE A MATTER OF INDIFFERENCE TO A THOROUGHLY OCCUPIED MIND.

Archimedes at the siege of Syracuse—Geoffroy St. Hilaire in the besieged city of Alexandria—Goethe at the bombardment of Verdun—Lullo, the Oriental missionary—Giordano Bruno—Unacknowledged effect of surroundings—Effect of Frankfurt on Goethe—Great capitals—Goethe—His garden-house—What he said about Béranger and Paris—Fortunate surroundings of Titian.

THERE are so many well-known instances of men who have been able to continue their intellectual labors under the most unfavorable conditions, that your argument might be powerfully supported by an appeal to actual experience. There is Archimedes, of course, to begin with, who certainly seems to have abstracted himself sufficiently from the tumult of a great siege to forget it altogether when occupied with his mathematical problems. The prevalent stories of his death, though not identical, point evidently to a habit of abstraction which had been remarked as a peculiarity by those about him, and it is probable enough that a great inventor in engineering would follow his usual speculations under circumstances which, though dangerous, had lasted long enough to become habitual. Even modern warfare, which from the use of gunpowder is so much noisier than that which raged at Syracuse, does not hinder men from thinking and writing when they are used to it. Geoffroy St. Hilaire never worked more steadily and regularly in his whole life than he did in the midst of the besieged city of Alexandria. "Knowledge is so sweet," he said long afterwards, in speaking of this experience, "that it never entered my thoughts how a bombshell might in an instant have cast into the abyss both me and my documents." By good luck two electric fish had been caught and given to him just then, so he immediately began to make experiments, as if he had been in his own cabinet in Paris, and for three weeks he thought of nothing else, utterly forgetting the fierce warfare that filled the air with thunder and flame, and the streets with victims. He had sixty-four hypotheses to amuse him, and it was necessary to review his whole scientific acquirement with reference to each of these as he consid-

ered them one by one. It may be doubted, however, whether he was more in danger from the bombardment or from the intensity of his own mental concentration. He grew thin and haggard, slept one hour in the twenty-four, and lived in a perilous condition of nervous strain and excitement. Goethe at the bombardment of Verdun, letting his mind take its own course, found that it did not occupy itself with tragedies, or with anything suggested by what was passing in the conflict around him, but by scientific considerations about the phenomena of colors. He noticed, in a passing observation, the bad effect of war upon the mind, how it makes people destructive one day and creative the next, how it accustoms them to phases intended to excite hope in desperate circumstances, thus producing a peculiar sort of hypocrisy different from the priestly and courtly kind. This is the extent of his interest in the war; but when he finds some soldiers fishing he is attracted to the spot and profoundly occupied—not with the soldiers, but with the optical phenomena on the water. He was never very much moved by external events, nor did he take that intense interest in the politics of the day which we often find in people less studious of literature and science. Raimond Lullo, the Oriental missionary, continued to write many volumes in the midst of the most continual difficulties and dangers, preserving as much mental energy and clearness as if he had been safe and tranquil in a library. Giordano Bruno worked constantly also in the midst of political troubles and religious persecutions, and his biographer tells us that "il desiderio vivissimo della scienza aveva ben più efficacia sull' animo del Bruno, che non gli avvenimenti esterni."

These examples which have just occurred to me, and many others that it would be easy to collect, may be taken to prove at least so much as this, that it is possible to be absorbed in private studies when surrounded by the most disturbing influences; but even in these cases it would be a mistake to conclude that the surroundings had no effect whatever. There can be no doubt that Geoffroy St. Hilaire was intensely excited by the siege of Alexandria, though he may not have attributed his excitement to that cause. His mind was occupied with the electrical fishes, but his nervous system was wrought upon by the siege, and kept in that state of tension which at the same time enabled him to get through a gigantic piece of intellectual labor and made him incapable of rest. Had this condition been prolonged it must have terminated either in exhaustion or in madness. Men have

often engaged in literature or science to escape the pressure of anxiety, which strenuous mental labor permits us, at least temporarily, to forget; but the circumstances which surround us have invariably an influence of some kind upon our thinking, though the connection may not be obvious. Even in the case of Goethe, who could study optics on a battle-field, his English biographer recognizes the effect of the Frankfort life which surrounded the great author in his childhood. "The old Frankfort city, with its busy crowds, its fairs, its mixed population, and its many sources of excitement, offered great temptations and great pasture to so desultory a genius. This is perhaps a case wherein circumstances may be seen influencing the direction of character. . . . A large continuity of thought and effort was perhaps radically uncongenial to such a temperament; yet one cannot help speculating whether under other circumstances he might not have achieved it. Had he been reared in a quiet little old German town, where he would have daily seen the same faces in the silent streets, and come in contact with the same characters, his culture might have been less various, but it might perhaps have been deeper. Had he been reared in the country, with only the changing seasons and the sweet serenities of nature to occupy his attention when released from study, he would certainly have been a different poet. The long summer afternoons spent in lonely rambles, the deepening twilights filled with shadowy visions, the slow uniformity of his external life necessarily throwing him more and more upon the subtler diversities of inward experience, would inevitably have influenced his genius in quite different directions, would have animated his works with a very different spirit."

We are sometimes told that life in a great capital is essential to the development of genius, but Frankfort was the largest town Goethe ever lived in, and he never visited either Paris or London. Much of the sanity of his genius may have been due to his residence in so tranquil a place as Weimar, where he could shut himself up in his "garden-house" and lock all the gates of the bridge over the Ilm. "The solitude," says Mr. Lewes, "is absolute, broken only by the occasional sound of the church clock, the music from the barracks, and the screaming of the peacocks spreading their superb beauty in the park." Few men of genius have been happier in their surroundings than Goethe. He had tranquillity, and yet was not deprived of intellectual intercourse; the scenery without—excursion—distance from his home was in-

teresting and even inspiring, yet not so splendid as to be overwhelming. We know from his conversations that he was quite aware of the value of those little centres of culture to Germany, and yet in one place he speaks of Béranger in the tone which seems to imply an appreciation of the larger life of Paris. "Fancy," he says, "this same Béranger away from Paris, and the influence and opportunities of a world-city, born as the son of a poor tailor, at Jena or Weimar; let him run his wretched career in either of the two small cities, and see what fruit would have grown on such a soil and in such an atmosphere."

We cannot too frequently be reminded that we are nothing of ourselves, and by ourselves, and are only something by the place we hold in the intellectual chain of humanity by which electricity is conveyed to us and through us—to be increased in the transmission if we have great natural power and are favorably situated, but not otherwise. A child is born to the Vecelli family at Cadore, and when it is nine years old is taken to Venice and placed under the tuition of Sebastian Zuccato. Afterwards he goes to Bellini's school, and there gets acquainted with another student, one year his junior, whose name is Barbarelli. They live together and work together in Venice; then young Barbarelli (known to posterity as Giorgione), after putting on certain spaces of wall and squares of canvas such color as the world had never before seen, dies in his early manhood and leaves Vecellio, whom we call Titian, to work on there in Venice till the plague stays his hand in his hundredth year. The genius came into the world, but all the possibilities of his development depended upon the place and the time. He came exactly in the right place and precisely at the right time. To be born not far from Venice in the days of Bellini, to be taken there at nine years old, to have Giorgione for one's comrade, all this was as fortunate for an artistic career as the circumstances of Alexander of Macedon were for a career of conquest.

LETTER III.

TO AN ARTIST WHO WAS FITTING UP A MAGNIFICENT NEW STUDIO.

Pleasure of planning a studio—Opinions of an outsider—Saint Bernard—Father Ravignan—Goethe's study and bed-room—Gustave Doré's studio—Leslie's painting-room—Turner's opinion—Habits of Scott and Dickens—Extremes good—Vulgar mediocrity not so good—Value of beautiful views to literary men—Montaigne—Views from the author's windows.

NOTHING in the life of an artist is more agreeable than the building and furnishing of the studio in which he hopes to produce his most mature and perfect work. It is so pleasant to labor when we are surrounded by beauty and convenience, that painters find a large and handsome studio to be an addition to the happiness of their lives, and they usually dream of it, and plan it, several years before the dream is realized.

Only a few days ago I was talking on this very subject with an intellectual friend who is not an artist, and who maintained that the love of fine studios is in great part a mere illusion. He admitted the necessity for size, and for a proper kind of light, but laughed at carved oak, and tapestry, and armor, and the knickknacks that artists encumber themselves with. He would have it that a mind thoroughly occupied with its own business knew nothing whatever of the objects that surrounded it, and he cited two examples—Saint Bernard, who travelled all day by the shore of Lake Lemane without seeing it, and the *père* Ravignan, who worked in a bare little room with a common table of blackened pine and a cheap rush-bottomed chair. On this I translated to him, from Goethe's life by Lewes, a passage which was new to him and delighted him as a confirmation of his theory. The biographer describes the poet's study as "a low-roofed narrow room, somewhat dark, for it is lighted only through two tiny windows, and furnished with a simplicity quite touching to behold. In the centre stands a plain oval table of unpolished oak. No arm-chair is to be seen, no sofa, nothing which speaks of ease. A plain hard chair has beside it the basket in which he used to place his handkerchief. Against the wall, on the right, is a long pear-tree table, with bookshelves, on which stand lexicons and manuals. . . . On the side-wall again, a bookcase with some works of poets. On the wall to the left is a long desk of soft wood, at which he was wont to write. A sheet of paper with notes of contemporary history is fastened near the door. The same door leads into a bed-room, if bed-room it can be called, which no maid-of-all-work in England would accept without a murmur: it is a closet with a window. A simple bed, an arm-chair by its side, and a tiny washing-table with a small white basin on it, and a sponge, is all the furniture. To enter this room with any feeling for the greatness and goodness of him who slept here, and who here slept his last sleep, brings tears into our eyes, and makes the breathing deep."

When I had finished reading this passage, my friend exclaimed triumphantly, "There!

don't you see that it was just because Goethe had imaginative power of a strong and active kind that he cared nothing about what surrounded him when he worked? He had statues and pictures to occupy his mind when it was disengaged, but when he wrote he preferred that bare little cell where nothing was to be seen that could distract his attention for an instant. Depend upon it, Goethe acted in this matter either from a deliberate and most wise calculation, or else from the sure instinct of genius."

Whilst we were on this subject I thought over other instances, and remembered my surprise on visiting Gustave Doré in his painting-room in Paris. Doré has a Gothic exuberance of imagination, so I expected a painting-room something like Victor Hugo's house, rather barbarous, but very rich and interesting, with plenty of carved cabinets, and tapestry, and *bibles*, as they call picturesque curiosities in Paris. To my surprise, there was nothing (except canvases and easels) but a small deal table, on which tubes of oil-color were thrown in disorder, and two cheap chairs. Here, evidently, the pleasure of painting was sufficient to occupy the artist; and in the room where he made his illustrations the characteristics were simplicity and good practical arrangements for order, but there was nothing to amuse the imagination. Mr. Lealie used to paint in a room which was just like any other in the house, and had none of the peculiarities of a studio. Turner did not care in the least what sort of a room he painted in, provided it had a door, and a bolt on the inside. Scott could write anywhere, even in the family sitting-room, with talk going forward as usual; and after he had finished Abbotsford, he did not write in any of its rich and noble rooms, but in a simple closet with book-shelves round it. Dickens wrote in a comfortable room, well lighted and cheerful, and he liked to have funny little bronzes on his writing-table.

The best way appears to be to surround ourselves, whenever it can be conveniently done, with whatever we know by experience to be favorable to our work. I think the barest cell monk ever prayed in would be a good place for imaginative composition, and so too would be the most magnificent rooms in Chatsworth or Blenheim. A middling sort of place with a Philistine character, vulgar upholstery, and vulgar pictures or engravings, is really dangerous, because these things often attract attention in the intervals of labor and occupy it in a mean way. An artist is always the better for having something that may profitably amuse and occupy his

eye when he quits his picture, and I think it is a right instinct which leads artists to surround themselves with many picturesque and beautiful things, not too orderly in their arrangement, so that there may be pleasant surprises for the eye, as there are in nature.

For literary men there is nothing so valuable as a window with a cheerful and beautiful prospect. It is good for us to have this refreshment for the eye when we leave off working, and Montaigne did wisely to have his study up in a tower from which he had extensive views.

There is a well-known objection to extensive views, as wanting in snugness and comfort, but this objection scarcely applies to the especial case of literary men. What we want is not so much snugness as relief, refreshment, suggestion, and we get these, as a general rule, much better from wide prospects than from limited ones. I have just alluded to Montaigne,—will you permit me to imitate that dear old philosopher in his egotism and describe to you the view from the room I write in, which cheers and amuses me continually? But before describing this let me describe another of which the recollection is very dear to me and as vivid as a freshly-painted picture. In years gone by, I had only to look up from my desk and see a noble loch in its inexhaustible loveliness, and a mountain in its majesty. It was a daily and hourly delight to watch the breezes play about the enchanted isles, on the delicate silvery surface, dimming some clear reflection, or trailing it out in length, or cutting sharply across it with acres of rippling blue. It was a frequent pleasure to see the clouds play about the crest of Cruachan and Ben Vorich's golden head, gray mists that crept upwards from the valleys till the sunshine suddenly caught them and made them brighter than the snows they shaded. And the leagues and leagues of heather on the lower land to the

southward that became like the aniline dyes of deepest purple and blue, when the sky was gray in the evening—all save one orange-streak! Ah, those were spectacles never to be forgotten, splendors of light and glory, and sadness of deepening gloom when the eyes grew moist in the twilight and secretly drank their tears.

And yet, wonderful as it was, that noble and passionately beloved Highland scenery was wanting in one great element that a writer imperatively needs. In all that natural magnificence humanity held no place. Hidden behind a fir-clad promontory to the north, there still remained, it is true, the gray ruin of old Kilchurn, and far to the southwest, in another reach of the lake, the island-fortress of Ardconnel. But there was not a visible city with spires and towers, there were only the fir-trees on the little islands and a few gravestones on the largest. Beyond, were the depopulated deserts of Breadalbane.

Here, where I write to you now, it seems as if mankind were nearer, and the legends of the ages written out for me on the surface of the world. Under the shadow of Jove's hill rises before me one of the most ancient of European cities, *soror et æmula Romæ*. She bears on her walls and edifices the record of sixty generations. Temple, and arch, and pyramid, all these bear witness still, and so do her ancient bulwarks, and many a stately tower. High above all, the cathedral spire is drawn dark in the morning mist, and often in the clear summer evenings it comes brightly in slanting sunshine against the steep woods behind. Then the old city arrays herself in the warmest and mellowest tones, and glows as the shadows fall. She reigns over the whole width of her valley to the folds of the far blue hills. Even so ought our life to be surrounded by the loveliness of nature—surrounded, but not subdued.

tion of both sexes equally. In these latter days of civilization, however, we see that in the dress of men the regard for appearance has in a considerable degree yielded to the regard for comfort; while in their education the useful has of late been trenching on the ornamental. In neither direction has this change gone so far with women. The wearing of earrings, finger-rings, bracelets; the elaborate dressings of the hair; the still occasional use of paint; the immense labor bestowed in making habiliments sufficiently attractive; and the great discomfort that will be submitted to for the sake of conformity; show how greatly in the attiring of women, the desire of approbation overrides the desire for warmth and convenience. And similarly in their education, the immense preponderance of "accomplishments" proves how here, too, use is subordinated to display. Dancing, deportment, the piano, singing, drawing—what a large space do these occupy! If you ask why Italian and German are learnt, you will find that under all the sham reasons given, the real reason is, that a knowledge of those tongues is thought ladylike. It is not that the books written in them may be utilized, which they scarcely ever are; but that Italian and German songs may be sung, and that the extent of attainment may bring whispered admiration. The births, deaths, and marriages of kings, and other like historic trivialities, are committed to memory, not because of any direct benefits that can possibly result from knowing them; but because society considers them parts of a good education—because the absence of such knowledge may bring the contempt of others. When we have named reading, writing, spelling, grammar, arithmetic, and sewing, we have named about all the things a girl is taught with a view to their direct uses in life; and even some of these have more reference to the good opinion of others than to immediate personal welfare.

Thoroughly to realize the truth that with the mind as with the body the ornamental precedes the useful, it is needful to glance at its rationale. This lies in the fact that, from the far past down even to the present, social needs have subordinated individual needs, and that the chief social need has been the control of individuals. It is not, as we commonly suppose, that there are no governments but those of monarchs, and parliaments, and constituted authorities. These acknowledged governments are supplemented by other unacknowledged ones, that grow up in all circles, in which every man or woman strives to be king or queen or lesser dignitary. To get above some and be revered by them, and

to propitiate those who are above us, is the universal struggle in which the chief energies of life are expended. By the accumulation of wealth, by style of living, by beauty of dress, by display of knowledge or intellect, each tries to subjugate others; and so aids in weaving that ramified network of restraints by which society is kept in order. It is not the savage chief only, who, in formidable war-paint, with scalps at his belt, aims to strike awe into his inferiors; it is not only the belle who, by elaborate toilet, polished manners, and numerous accomplishments, strives to "make conquests;" but the scholar, the historian, the philosopher, use their acquirements to the same end. We are none of us content with quietly unfolding our own individualities to the full in all directions; but have a restless craving to impress our individualities upon others, and in some way subordinate them. And this it is which determines the character of our education. Not what knowledge is of most real worth, is the consideration; but what will bring most applause, honor, respect—what will most conduce to social position and influence—what will be most imposing. As, throughout life, not what we are, but what we shall be thought, is the question; so in education, the question is, not the intrinsic value of knowledge, so much as its extrinsic effects on others. And this being our dominant idea, direct utility is scarcely more regarded than by the barbarian when filing his teeth and staining his nails.

If there needs any further evidence of the rude, undeveloped character of our education, we have it in the fact that the comparative worths of different kinds of knowledge have been as yet scarcely even discussed—much less discussed in a methodic way with definite results. Not only is it that no standard of relative values has yet been agreed upon; but the existence of any such standard has not been conceived in any clear manner. And not only is it that the existence of any such standard has not been clearly conceived; but the need for it seems to have been scarcely even felt. Men read books on this topic, and attend lectures on that; decide that their children shall be instructed in these branches of knowledge, and shall not be instructed in those; and all under the guidance of mere custom, or liking, or prejudice; without ever considering the enormous importance of determining in some rational way what things are really most worth learning. It is true that in all circles we have occasional remarks on the importance of this or the other order

of information. But whether the degree of its importance justifies the expenditure of the time needed to acquire it; and whether there are not things of more importance to which the time might be better devoted; are queries which, if raised at all, are disposed of quite summarily, according to personal predilections. It is true also, that from time to time, we hear revived the standing controversy respecting the comparative merits of classics and mathematics. Not only, however, is this controversy carried on in an empirical manner, with no reference to an ascertained criterion; but the question at issue is totally insignificant when compared with the general question of which it is part. To suppose that deciding whether a mathematical or a classical education is the best, is deciding what is the proper *curriculum*, is much the same thing as to suppose that the whole of dietetics lies in determining whether or not bread is more nutritive than potatoes!

The question which we contend is of such transcendent moment, is, not whether such or such knowledge is of worth, but what is its *relative* worth? When they have named certain advantages which a given course of study has secured them, persons are apt to assume that they have justified themselves: quite forgetting that the adequateness of the advantages is the point to be judged. There is, perhaps, not a subject to which men devote attention that has not *some* value. A year diligently spent in getting up heraldry, would very possibly give a little further insight into ancient manners and morals, and into the origin of names. Any one who should learn the distances between all the towns in England, might, in the course of his life, find one or two of the thousand facts he had acquired of some slight service when arranging a journey. Gathering together all the small gossip of a county, profitless occupation as it would be, might yet occasionally help to establish some useful fact—say, a good example of hereditary transmission. But in these cases, every one would admit that there was no proportion between the required labor and the probable benefit. No one would tolerate the proposal to devote some years of a boy's time to getting such information, at the cost of much more valuable information which he might else have got. And if here the test of relative value is appealed to and held conclusive, then should it be appealed to and held conclusive throughout. Had we time to master all subjects we need not be particular. To quote the old song:—

Could a man be secure
That his days would endure

As of old, for a thousand long years,
What things might he know!
What deeds might he do!
And all without hurry or care.

"But we that have but span-long lives" must ever bear in mind our limited time for acquisition. And remembering how narrowly this time is limited, not only by the shortness of life, but also still more by the business of life, we ought to be especially solicitous to employ what time we have to the greatest advantage. Before devoting years to some subject which fashion or fancy suggests, it is surely wise to weigh with great care the worth of the results, as compared with the worth of various alternative results which the same years might bring if otherwise applied.

In education, then, this is the question of questions, which it is high time we discussed in some methodic way. The first in importance, though the last to be considered, is the problem—how to decide among the conflicting claims of various subjects on our attention. Before there can be a rational *curriculum*, we must settle which things it most concerns us to know; or, to use a word of Bacon's, now unfortunately obsolete—we must determine the relative values of knowledges.

To this end, a measure of value is the first requisite. And happily, respecting the true measure of value, as expressed in general terms, there can be no dispute. Every one in contending for the worth of any particular order of information, does so by showing its bearing upon some part of life. In reply to the question, "Of what use is it?" the mathematician, linguist, naturalist, or philosopher, explains the way in which his learning beneficially influences action—saves from evil or secures good—conduces to happiness. When the teacher of writing has pointed out how great an aid writing is to success in business—that is, to the obtaining of sustenance—that is, to satisfactory living; he is held to have proved his case. And when the collector of dead facts (say a numismatist) fails to make clear any appreciable effects which these facts can produce on human welfare, he is obliged to admit that they are comparatively valueless. All then, either directly or by implication, appeal to this as the ultimate test.

How to live?—that is the essential question for us. Not how to live in the mere material sense only, but in the widest sense. The general problem which comprehends every special problem is—the right ruling of conduct in all directions under all circumstances. In what way to treat the body; in what way to

treat the mind; in what way to manage our affairs; in what way to bring up a family; in what way to behave as a citizen; in what way to utilize all those sources of happiness which nature supplies—how to use all our faculties to the greatest advantage of ourselves and others—how to live completely? And this being the great thing needful for us to learn, is, by consequence, the great thing which education has to teach. To prepare us for complete living is the function which education has to discharge; and the only rational mode of judging of any educational course is, to judge in what degree it discharges such function.

This test, never used in its entirety, but rarely even partially used, and used then in a vague, half conscious way, has to be applied consciously, methodically, and throughout all cases. It behoves us to set before ourselves, and ever to keep clearly in view, complete living as the end to be achieved; so that in bringing up our children we may choose subjects and methods of instruction, with deliberate reference to this end. Not only ought we to cease from the mere unthinking adoption of the current fashion in education, which has no better warrant than any other fashion; but we must also rise above that rude, empirical style of judging displayed by those more intelligent people who do bestow some care in overseeing the cultivation of their children's minds. It must not suffice simply to *think* that such or such information will be useful in after life, or that this kind of knowledge is of more practical value than that; but we must seek out some process of estimating their respective values, so that as far as possible we may positively *know* which are most deserving of attention.

Doubtless the task is difficult—perhaps never to be more than approximately achieved. But, considering the vastness of the interests at stake, its difficulty is no reason for pusillanimously passing it by; but rather for devoting every energy to its mastery. And if we only proceed systematically, we may very soon get at results of no small moment.

Our first step must obviously be to classify, in the order of their importance, the leading kinds of activity which constitute human life. They may be naturally arranged into:—1. Those activities which directly minister to self-preservation; 2. Those activities which, by securing the necessities of life, indirectly minister to self-preservation; 3. Those activities which have for their end the rearing and discipline of offspring; 4. Those activities which are involved in the maintain-

ance of proper social and political relations; 5. Those miscellaneous activities which make up the leisure part of life, devoted to the gratification of the tastes and feelings.

That these stand in something like their true order of subordination, it needs no long consideration to show. The actions and precautions by which, from moment to moment, we secure personal safety, must clearly take precedence of all others. Could there be a man, ignorant as an infant of all surrounding objects and movements, or how to guide himself among them, he would pretty certainly lose his life the first time he went into the street: notwithstanding any amount of learning he might have on other matters. And as entire ignorance in all other directions would be less promptly fatal than entire ignorance in this direction, it must be admitted that knowledge immediately conducive to self-preservation is of primary importance.

That next after direct self-preservation comes the indirect self-preservation: which consists in acquiring the means of living, none will question. That a man's industrial functions must be considered before his parental ones, is manifest from the fact that, speaking generally, the discharge of the parental functions is made possible only by the previous discharge of the industrial ones. The power of self-maintenance necessarily preceding the power of maintaining offspring, it follows that knowledge needful for self-maintenance has stronger claims than knowledge needful for family welfare—is second in value to none save knowledge needful for immediate self-preservation.

As the family comes before the State in order of time—as the bringing up of children is possible before the State exists, or when it has ceased to be, whereas the State is rendered possible only by the bringing up of children; it follows that the duties of the parent demand closer attention than those of the citizen. Or, to use a further argument—since the goodness of a society ultimately depends on the nature of its citizens; and since the nature of its citizens is more modifiable by early training than by anything else; we must conclude that the welfare of the family underlies the welfare of society. And hence knowledge directly conducing to the first, must take precedence of knowledge directly conducing to the last.

Those various forms of pleasurable occupation which fill up the leisure left by graver occupations—the enjoyments of music, poetry, painting, etc.—manifestly imply a pre-existing society. Not only is a considerable development of them impossible without a

long-established social union; but their very subject-matter consists in great part of social sentiments and sympathies. Not only does society supply the conditions to their growth; but also the ideas and sentiments they express. And, consequently, that part of human conduct which constitutes good citizenship is of more moment than that which goes out in accomplishments or exercise of the tastes; and, in education, preparation for the one must rank before preparation for the other.

Such then, we repeat, is something like the rational order of subordination:—That education which prepares for direct self-preservation; that which prepares for indirect self-preservation; that which prepares for parenthood; that which prepares for citizenship; that which prepares for the miscellaneous refinements of life. We do not mean to say that these divisions are definitely separable. We do not deny that they are intricately entangled with each other in such way that there can be no training for any that is not in some measure a training for all. Nor do we question that of each division there are portions more important than certain portions of the preceding divisions: that, for instance, a man of much skill in business but little other faculty, may fall further below the standard of complete living than one of but moderate power of acquiring money but great judgment as a parent; or that exhaustive information bearing on right social action, joined with entire want of general culture in literature and the fine arts, is less desirable than a more moderate share of the one joined with some of the other. But, after making all qualifications, there still remain these broadly-marked divisions; and it still continues substantially true that these divisions subordinate one another in the foregoing order, because the corresponding divisions of life make one another *possible* in that order.

Of course the ideal of education is—complete preparation in all these divisions. But failing this ideal, as in our phase of civilization every one must do more or less, the aim should be to maintain a *due proportion* between the degrees of preparation in each. Not exhaustive cultivation in any one, supremely important though it may be—not even an exclusive attention to the two, three, or four divisions of greatest importance; but an attention to all,—greatest where the value is greatest, less where the value is less, least where the value is least. For the average man (not to forget the cases in which peculiar aptitude for some one department of

knowledge rightly makes that one the bread-winning occupation)—for the average man, we say, the desideratum is, a training that approaches nearest to perfection in the things which most subserve complete living, and falls more and more below perfection in the things that have more and more remote bearings on complete living.

In regulating education by this standard, there are some general considerations that should be ever present to us. The worth of any kind of culture, as aiding complete living, may be either necessary or more or less contingent. There is knowledge of intrinsic value; knowledge of quasi-intrinsic value and knowledge of conventional value. Such facts as that sensations of numbness and tingling commonly precede paralysis, that the resistance of water to a body moving through it varies as the square of the velocity, that chlorine is a disinfectant,—these, and the truths of Science in general, are of intrinsic value: they will bear on human conduct ten thousand years hence as they do now. The extra knowledge of our own language, which is given by an acquaintance with Latin and Greek, may be considered to have a value that is quasi-intrinsic: it must exist for us and for other races whose languages owe much to these sources; but will last only as long as our languages last. While that kind of information which, in our schools, usurps the name History—the mere tissue of names and dates and dead unmeaning events—has a conventional value only: it has not the remotest bearing upon any of our actions; and is of use only for the avoidance of those unpleasant criticisms which current opinion passes upon its absence. Of course, as those facts which concern all mankind throughout all time must be held of greater moment than those which concern only a portion of them during a limited era, and of far greater moment than those which concern only a portion of them during the continuance of a fashion; it follows that in a rational estimate, knowledge of intrinsic worth must, other things equal, take precedence of knowledge that is of quasi-intrinsic or conventional worth.

One further preliminary. Acquirement of every kind has two values—value as *knowledge* and value as *discipline*. Besides its use for guidance in conduct, the acquisition of each order of facts has also its use as mental exercise; and its effects as a preparative for complete living have to be considered under both these heads.

These, then, are the general ideas with which we must set out in discussing a *curriculum*:—Life as divided into several kinds of

activity of successively decreasing importance; the worth of each order of facts as regulating these several kinds of activity, intrinsically, quasi-intrinsically, and conventionally; and their regulative influences estimated both as knowledge and discipline.

Happily, that all-important part of education which goes to secure direct self-preservation, is in great part already provided for. Too momentous to be left to our blundering, Nature takes it into her own hands. While yet in its nurse's arms, the infant, by hiding its face and crying at the sight of a stranger, shows the dawning instinct to attain safety by flying from that which is unknown and may be dangerous; and when it can walk, the terror it manifests if an unfamiliar dog comes near, or the screams with which it runs to its mother after any startling sight or sound, shows this instinct further developed. Moreover, knowledge subserving direct self-preservation is that which it is chiefly busied in acquiring from hour to hour. How to balance its body; how to control its movements so as to avoid collisions; what objects are hard, and will hurt if struck; what objects are heavy, and injure if they fall on the limbs; which things will bear the weight of the body, and which not; the pains inflicted by fire, by missiles, by sharp instruments—these, and various other pieces of information needful for the avoidance of death or accident, it is ever learning. And when, a few years later, the energies go out in running, climbing, and jumping, in games of strength and games of skill, we see in all these actions by which the muscles are developed, the perceptions sharpened, and the judgment quickened, a preparation for the safe conduct of the body among surrounding objects and movements; and for meeting those greater dangers that occasionally occur in the lives of all. Being thus, as we say, so well cared for by Nature, this fundamental education needs comparatively little care from us. What we are chiefly called upon to see, is, that there shall be free scope for gaining this experience, and receiving this discipline,—that there shall be no such thwarting of Nature as that by which stupid schoolmistresses commonly prevent the girls in their charge from the spontaneous physical activities they would indulge in; and so render them comparatively incapable of taking care of themselves in circumstances of peril.

This, however, is by no means all that is comprehended in the education that prepares for direct self-preservation. Besides guarding the body against mechanical damage or

destruction, it has to be guarded against injury from other causes—against the disease and death that follow breaches of physiologic law. For complete living it is necessary, not only that sudden annihilations of life shall be ward off; but also that there shall be escaped the incapacities and the slow annihilation which unwise habits entail. As, without health and energy, the industrial, the parental, the social, and all other activities become more or less impossible; it is clear that this secondary kind of direct self-preservation is only less important than the primary kind; and that knowledge tending to secure it should rank very high.

It is true that here, too, guidance is in some measure ready supplied. By our various physical sensations and desires, Nature has insured a tolerable conformity to the chief requirements. Fortunately for us, want of food, great heat, extreme cold, produce promptings too peremptory to be disregarded. And would men habitually obey these and all like promptings when less strong, comparatively few evils would arise. If fatigue of body or brain were in every case followed by desistance; if the oppression produced by a close atmosphere always led to ventilation; if there were no eating without hunger, or drinking without thirst; then would the system be but seldom out of working order. But so profound an ignorance is there of the laws of life, that men do not even know that their sensations are their natural guides, and (when not rendered morbid by long-continued disobedience) their trustworthy guides. So that though, to speak teleologically, Nature has provided efficient safeguards to health, lack of knowledge makes them in a great measure useless.

If any one doubts the importance of an acquaintance with the fundamental principles of physiology as a means to complete living, let him look around and see how many men and women he can find in middle or later life who are thoroughly well. Occasionally only do we meet with an example of vigorous health continued to old age; hourly do we meet with examples of acute disorder, chronic ailment, general debility, premature decrepitude. Scarcely is there one to whom you put the question, who has not, in the course of his life, brought upon himself illnesses which a little knowledge would have saved him from. Here is a case of heart disease consequent on a rheumatic fever that followed reckless exposure. There is a case of eyes spoiled for life by overstudy. Yesterday the account was of one whose long-enduring lameness was brought on by continuing, spite of the pain,

to use a knee after it had been slightly injured. And to-day we are told of another who has had to lie by for years, because he did not know that the palpitation he suffered from resulted from overtaxed brain. Now we hear of an irremediable injury that followed some silly feat of strength; and, again, of a constitution that has never recovered from the effects of excessive work needlessly undertaken. While on all sides we see the perpetual minor ailments which accompany feebleness. Not to dwell on the natural pain, the weariness, the gloom, the waste of time and money thus entailed, only consider how greatly ill-health hinders the discharge of all duties—makes business often impossible, and always more difficult; produces an irritability fatal to the right management of children; puts the functions of citizenship out of the question; and makes amusement a bore. Is it not clear that the physical sins—partly our forefathers' and partly our own—which produce this ill-health, deduct more from complete living than anything else? and to a great extent make life a failure and a burden instead of a benefaction and a pleasure?

To all which add the fact, that life, besides being thus immensely deteriorated, is also cut short. It is not true, as we commonly suppose, that a disorder or disease from which we have recovered leaves us as before. No disturbance of the normal course of the functions can pass away and leave things exactly as they were. In all cases a permanent damage is done—not immediately appreciable, it may be, but still there; and along with other such items which Nature in her strict accounting never drops, will tell against us to the inevitable shortening of our days. Through the accumulation of small injuries it is that constitutions are commonly undermined, and break down, "long before their time. And if we call to mind how far the average duration of life falls below the possible duration, we see how immense is the loss. When, to the numerous partial deductions which bad health entails, we add this great final deduction, it results that ordinarily more than one-half of life is thrown away.

Hence, knowledge which subserves direct self-preservation by preventing this loss of health, is of primary importance. We do not contend that possession of such knowledge would by any means wholly remedy the evil. For it is clear that in our present phase of civilization men's necessities often compel them to transgress. And it is further clear that, even in the absence of such compulsion, their inclinations would frequently lead them, spite of their knowledge, to sacrifice future

good to present gratification. But we do contend that the right knowledge impressed in the right way would effect much; and we further contend that as the laws of health must be recognized before they can be fully conformed to, the imparting of such knowledge must precede a more rational living—come when that may. We infer that as vigorous health and its accompanying high spirits are larger elements of happiness than any other things whatever, the teaching how to maintain them is a teaching that yields in moment to no other whatever. And therefore we assert that such a course of physiology as is needful for the comprehension of its general truths, and their bearings on daily conduct, is an all-essential part of a rational education.

Strange that the assertion should need making! Stranger still that it should need defending! Yet are there not a few by whom such a proposition will be received with something approaching to derision. Men who would blush if caught saying Iphigénia instead of Iphigenia, or would resent as an insult any imputation of ignorance respecting the fabled labors of a fabled demi-god, show not the slightest shame in confessing that they do not know where the Eustachian tubes are, what are the actions of the spinal cord, what is the normal rate of pulsation, or how the lungs are inflated. While anxious that their sons should be well up in the superstitions of two thousand years ago, they care not that they should be taught anything about the structure and functions of their own bodies—nay, would even disapprove such instruction. So overwhelming is the influence of established routine! So terribly in our education does the ornamental override the useful!

We need not insist on the value of that knowledge which aids indirect self-preservation by facilitating the gaining of a livelihood. This is admitted by all; and, indeed, by the mass is perhaps too exclusively regarded as the end of education. But while every one is ready to endorse the abstract proposition that instruction fitting youths for the business of life is of high importance, or even to consider it of supreme importance; yet scarcely any inquire what instruction will so fit them. It is true that reading, writing, and arithmetic are taught with an intelligent appreciation of their uses; but when we have said this we have said nearly all. While the great bulk of what else is acquired has no bearing on the industrial activities, an immensity of information that has a direct bearing on the industrial activities is entirely passed over.

For, leaving out only some very small classes, what are all men employed in? They are employed in the production, preparation, and distribution of commodities. And on what does efficiency in the production, preparation, and distribution of commodities depend? It depends on the use of methods fitted to the respective natures of these commodities; it depends on an adequate knowledge of their physical, chemical, or vital properties, as the case may be; that is, it depends on Science. This order of knowledge, which is in great part ignored in our school courses, is the order of knowledge underlying the right performance of all those processes by which civilized life is made possible. Undeniable as is this truth, and thrust upon us as it is at every turn, there seems to be no living consciousness of it: its very familiarity makes it unregarded. To give due weight to our argument, we must, therefore, realize this truth to the reader by a rapid review of the facts.

For all the higher arts of construction, some acquaintance with Mathematics is indispensable. The village carpenter, who, lacking rational instruction, lays out his work by empirical rules learnt in his apprenticeship, equally with the builder of a Britannia Bridge, makes hourly reference to the laws of quantitative relations. The surveyor on whose survey the land is purchased; the architect in designing a mansion to be built on it; the builder in preparing his estimates; his foreman in laying out the foundations; the masons in cutting the stones; and the various artisans who put up the fittings; are all guided by geometrical truths. Railway-making is regulated from beginning to end by mathematics: alike in the preparation of plans and sections; in staking out the line; in the mensuration of cuttings and embankments; in the designing, estimating, and building of bridges, culverts, viaducts, tunnels, stations. And similarly with the harbors, docks, piers, and various engineering and architectural works that fringe the coasts and overspread the face of the country; as well as the mines that run underneath it. Out of geometry, too, as applied to astronomy, the art of navigation has grown; and so, by this science, has been made possible that enormous foreign commerce which supports a large part of our population, and supplies us with many necessities and most of our luxuries. And now-a-days even the farmer, for the correct laying out of his drains, has recourse to the level—that is, to geometrical principles. When from those divisions of mathematics which deal with *space*,

and *number*, some small smattering of which is given in schools, we turn to that other division which deals with *force*, of which even a smattering is scarcely ever given, we meet with another large class of activities which this science presides over. On the application of rational mechanics depends the success of nearly all modern manufacture. The properties of the lever, the wheel and axle, etc., are involved in every machine—every machine is a solidified mechanical theorem; and to machinery in these times we owe nearly all production. Trace the history of the breakfast-roll. The soil out of which it came was drained with machine-made tiles; the surface was turned over by a machine; the seed was put in by a machine; the wheat was reaped, thrashed, and winnowed by machines; by machinery it was ground and bolted; and had the flour been sent to Gosport it might have been made into biscuits by a machine. Look round the room in which you sit. If modern, probably the bricks in its walls were machine-made; by machinery the flooring was sawn and planed, the mantle shelf sawn and polished, the paper-hanging made and printed; the veneer on the table, the turned legs of the chairs, the carpet, the curtains, are all products of machinery. And your clothing—plain, figured, or printed—is it not wholly woven, nay, perhaps even sewed by machinery? And the volume you are reading—are not its leaves fabricated by one machine and covered with these words by another? Add to which that for the means of distribution over both land and sea we are similarly indebted. And then let it be remembered that according as the principles of mechanics are well or ill used to these ends comes success or failure—individual and national. The engineer who misapplies his formulae for the strength of materials, builds a bridge that breaks down. The manufacturer whose apparatus is badly devised, cannot compete with another whose apparatus wastes less in friction and inertia. The ship-builder adhering to the old model, is outsailed by one who builds on the mechanically-justified wave-line principle. And as the ability of a nation to hold its own against other nations depends on the skilled activity of its units, we see that on such knowledge may turn the national fate. Judge then the worth of mathematics.

Pass next to Physics. Joined with mathematics, it has given us the steam-engine, which does the work of millions of laborers. That section of physics which deals with the laws of heat, has taught us how to economize fuel in our various industries; how to increase the produce of our smelting furnaces.

by substituting the hot for the cold blast; how to ventilate our mines; how to prevent explosions by using the safety-lamp; and, through the thermometer, how to regulate innumerable processes. That division which has the phenomena of light for its subject, gives eyes to the old and the myopic; aids through the microscope in detecting diseases and adulterations; and by improved light-houses prevents shipwrecks. Researches in electricity and magnetism have saved incalculable life and property by the compass; have subserved sundry arts by the electro-type; and now, in the telegraph, have supplied us with the agency by which for the future all mercantile transactions will be regulated, political intercourse carried on, and perhaps national quarrels often avoided. While in the details of indoor life, from the improved kitchen-range up to the stereoscope on the drawing-room table, the applications of advanced physics underlie our comforts and gratifications.

Still more numerous are the bearings of Chemistry on those activities by which men obtain the means of living. The bleacher, the dyer, the calico-printer, are severally occupied in processes that are well or ill done according as they do or do not conform to chemical laws. The economical reduction from their ores of copper, tin, zinc, lead, silver, iron, are in a great measure questions of chemistry. Sugar-refining, gas-making, soap-boiling, gunpowder manufacture, are operations all partly chemical; as are also those by which are produced glass and porcelain. Whether the distiller's wort stops at the alcoholic fermentation or passes into the acetous, is a chemical question on which hangs his profit or loss and the brewer, if his business is sufficiently large, finds it pay to keep a chemist on his premises. Glance through a work on technology, and it becomes at once apparent that there is now scarcely any process in the arts or manufactures over some part of which chemistry does not preside. And then, lastly, we come to the fact that in these times, agriculture, to be profitably carried on, must have like guidance. The analysis of manures and soils; their adaptations to each other; the use of gypsum or other substance for fixing ammonia; the utilization of coprolites; the production of artificial manures—all these are boons of chemistry which it behoves the farmer to acquaint himself with. Be it in the lucifer match, or in disinfecting sewage, or in photographs—in bread made without fermentation, or perfumes extracted from refuse, we may perceive that chemistry affects all our industries; and that,

by consequence, knowledge of it concerns every one who is directly or indirectly connected with our industries.

And then the science of life—Biology: does not this, too, bear fundamentally upon these processes of indirect self-preservation? With what we ordinarily call manufactures, it has, indeed, little connection; but with the all-essential manufacture—that of food—it is inseparably connected. As agriculture must conform its methods to the phenomena of vegetable and animal life, it follows necessarily that the science of these phenomena is the rational basis of agriculture. Various biological truths have indeed been empirically established and acted upon by farmers while yet there has been no conception of them as science: such as that particular manures are suited to particular plants; that crops of certain kinds unfit the soil for other crops; that horses cannot do good work on poor food; that such and such diseases of cattle and sheep are caused by such and such conditions. These, and the every-day knowledge which the agriculturist gains by experience respecting the right management of plants and animals, constitute his stock of biological facts; on the largeness of which greatly depends his success. And as these biological facts, scanty, indefinite, rudimentary, though they are, aid him so essentially; judge what must be the value to him of such facts when they become positive, definite, and exhaustive. Indeed, even now we may see the benefits that rational biology is conferring on him. The truth that the production of animal heat implies waste of substance, and that, therefore, preventing loss of heat prevents the need for extra food—a purely theoretical conclusion—now guides the fattening of cattle: it is found that by keeping cattle warm, fodder is saved. Similarly with respect to variety of food.

The experiments of physiologists have shown that not only is change of diet beneficial, but that digestion is facilitated by a mixture of ingredients in each meal: both which truths are now influencing cattle-feeding. The discovery that a disorder known as "the staggers," of which many thousands of sheep have died annually, is caused by an entozoon which presses on the brain; and that if the creature is extracted through the softened place in the skull which marks its position, the sheep usually recovers; is another debt which agriculture owes to biology. When we observe the marked contrast between our farming and farming on the Continent, and remember that this contrast is mainly due to the far greater influence science has had upon farm-

ing here than there; and when we see how, daily, competition is making the adoption of scientific methods more general and necessary; we shall rightly infer that very soon, agricultural success in England will be impossible without a competent knowledge of animal and vegetable physiology.

Yet one more science have we to note as bearing directly on industrial success—the Science of Society. Without knowing it, men who daily look at the state of the money-market, glance over prices current, discuss the probable crops of corn, cotton, sugar, wool, silk, weigh the chances of war, and from all those data decide on their mercantile operations, are students of social science: empirical and blundering students it may be; but still, students who gain the prizes or are plucked of their profits, according as they do or do not reach the right conclusion. Not only the manufacturer and the merchant must guide their transactions by calculations of supply and demand, based on numerous facts, and tacitly recognizing sundry general principles of social action; but even the retailer must do the like: his prosperity very greatly depending upon the correctness of his judgments respecting the future wholesale prices and the future rates of consumption. Manifestly, all who take part in the entangled commercial activities of a community, are vitally interested in understanding the laws according to which those activities vary.

Thus, to all such as are occupied in the production, exchange, or distribution of commodities, acquaintance with science in some of its departments, is of fundamental importance. Whoever is immediately or remotely implicated in any form of industry (and few are not) has a direct interest in understanding something of the mathematical, physical, and chemical properties of things; perhaps, also, has a direct interest in biology; and certainly has in sociology. Whether he does or does not succeed well in that indirect self-preservation which we call getting a good livelihood, depends in a great degree on his knowledge of one or more of these sciences: not, it may be, a rational knowledge; but still a knowledge, though empirical. For what we call learning a business, really implies learning the science involved in it; though not perhaps under the name of science. And hence a grounding in science is of great importance, both because it prepares for all this, and because rational knowledge has an immense superiority over empirical knowledge. Moreover, not only is it that scientific culture is requisite for each, that he may understand the *how* and the *why* of the things and proc-

esses with which he is concerned as maker or distributor; but it is often of much moment that he should understand the *how* and the *why* of various other things and processes. In this age of joint-stock undertakings, nearly every man above the laborer is interested as capitalist in some other occupation than his own; and, as thus interested, his profit or loss often depends on his knowledge of the sciences bearing on this other occupation. Here is a mine, in the sinking of which many shareholders ruined themselves, from not knowing that a certain fossil belonged to the old red sandstone, below which no coal is found. Not many years ago, 20,000*l.* was lost in the prosecution of a scheme for collecting the alcohol that distils from bread in baking: all which would have been saved to the subscribers, had they known that less than a hundredth part by weight of the flour is changed in fermentation. Numerous attempts have been made to construct electro-magnetic engines, in the hope of superseding steam; but had those who supplied the money, understood the general law of the correlation and equivalence of forces, they might have had better balances at their bankers. Daily are men induced to aid in carrying out inventions which a mere tyro in science could show to be futile. Scarcely a locality but has its history of fortunes thrown away over some impossible project.

And if already the loss from want of science is so frequent and so great, still greater and more frequent will it be to those who hereafter lack science. Just as fast as productive processes become more scientific, which competition will inevitably make them do; and just as fast as joint-stock undertakings spread, which they certainly will; so fast will scientific knowledge grow necessary to every one.

That which our school courses leave almost entirely out, we thus find to be that which most nearly concerns the business of life. All our industries would cease, were it not for that information which men begin to acquire as they best may after their education is said to be finished. And were it not for this information, that has been from age to age accumulated and spread by unofficial means, these industries would never have existed. Had there been no teaching but such as is given in our public schools, England would now be what it was in feudal times. That increasing acquaintance with the laws of phenomena which has through successive ages enabled us to subjugate Nature to our needs, and in these days gives the common laborer comforts which a few centuries ago kings

could not purchase, is scarcely in any degree owed to the appointed means of instructing our youth. The vital knowledge—that by which we have grown as a nation to what we are, and which now underlies our whole existence, is a knowledge that has got itself taught in nooks and corners; while the ordained agencies for teaching have been mumbling little else but dead formulas.

We come now to the third great division of human activities—a division for which no preparation whatever is made. If by some strange chance not a vestige of us descended to the remote future save a pile of our school-books or some college examination papers, we may imagine how puzzled an antiquary of the period would be on finding in them no indication that the learners were ever likely to be parents. "This must have been the *curriculum* for their celibates," we may fancy him concluding. "I perceive here an elaborate preparation for many things: especially for reading the books of extinct nations and of co-existing nations (from which indeed it seems clear that these people had very little worth reading in their own tongue); but I find no reference whatever to the bringing up of children. They could not have been so absurd as to omit all training for this gravest of responsibilities. Evidently then, this was the school course of one of their monastic orders."

Seriously, is it not an astonishing fact, that though on the treatment of offspring depend their lives or deaths, and their moral welfare or ruin; yet not one word of instruction on the treatment of offspring is ever given to those who will hereafter be parents? Is it not monstrous that the fate of a new generation should be left to the chances of unreasoning custom, impulse, fancy—joined with the suggestions of ignorant nurses and the prejudiced counsel of grandmothers? If a merchant commenced business without any knowledge of arithmetic and book-keeping, we should exclaim at his folly, and look for disastrous consequences. Or if, before studying anatomy, a man set up as a surgical operator, we should wonder at his audacity and pity his patients. But that parents should begin the difficult task of rearing children without ever having given a thought to the principles—physical, moral, or intellectual—which ought to guide them, excites neither surprise at the actors nor pity for their victims.

To tens of thousands that are killed, add hundreds of thousands that survive with feeble constitutions, and millions that grow up

with constitutions not so strong as they should be; and you will have some idea of the curse inflicted on their offspring by parents ignorant of the laws of life. Do but consider for a moment that the regimen to which children are subject is hourly telling upon them to their life-long injury or benefit; and that there are twenty ways of going wrong to one way of going right; and you will get some idea of the enormous mischief that is almost everywhere inflicted by the thoughtless, haphazard system in common use. Is it decided that a boy shall be clothed in some flimsy short dress, and be allowed to go playing about with limbs reddened by cold? The decision will tell on his whole future existence—either in illnesses; or in stunted growth; or in deficient energy; or in a maturity less vigorous than it ought to have been, and consequent hindrances to success and happiness. Are children doomed to a monotonous dietary, or a dietary that is deficient in nutritiveness? Their ultimate physical power and their efficiency as men and women, will inevitably be more or less diminished by it. Are they forbidden vociferous play, or (being too ill-clothed to bear exposure), are they kept in-doors in cold weather? They are certain to fall below that measure of health and strength to which they would else have attained. When sons and daughters grow up sickly and feeble, parents commonly regard the event as a misfortune—as a visitation of Providence. Thinking after the prevalent chaotic fashion, they assume that these evils come without causes; or that the causes are supernatural. Nothing of the kind. In some cases the causes are doubtless inherited; but in most cases foolish regulations are the causes. Very generally parents themselves are responsible for all this pain, this debility, this depression, this misery. They have undertaken to control the lives of their offspring from hour to hour; with cruel carelessness they have neglected to learn anything about these vital processes which they are unceasingly affecting by their commands and prohibitions; in utter ignorance of the simplest physiologic laws, they have been year by year undermining the constitutions of their children; and have so inflicted disease and premature death, not only on them but on their descendants.

Equally great are the ignorance and the consequent injury, when we turn from physical training to moral training. Consider the young mother and her nursery legislation. But a few years ago she was at school, where her memory was crammed with words, and names, and dates, and her reflective faculties

scarcely in the slightest degree exercised—where not one idea was given her respecting the methods of dealing with the opening mind of childhood; and where her discipline did not in the least fit her for thinking out methods of her own. The intervening years have been passed in practising music, in fancy-work, in novel-reading, and in party-going: no thought having yet been given to the grave responsibilities of maternity; and scarcely any of that solid intellectual culture obtained which would be some preparation for such responsibilities. And now see her with an unfolding human character committed to her charge—see her profoundly ignorant of the phenomena with which she has to deal, undertaking to do that which can be done but imperfectly even with the aid of the profoundest knowledge. She knows nothing about the nature of the emotions, their order of evolution, their functions, or where use ends and abuse begins. She is under the impression that some of the feelings are wholly bad, which is not true of any one of them; and that others are good, however far they may be carried, which is also not true of any one of them. And then, ignorant as she is of that with which she has to deal, she is equally ignorant of the effects that will be produced on it by this or that treatment. What can be more inevitable than the disastrous results we see hourly arising? Lacking knowledge of mental phenomena, with their causes and consequences, her interference is frequently more mischievous than absolute passivity would have been. This and that kind of action, which are quite normal and beneficial, she perpetually thwarts; and so diminishes the child's happiness and profit, injures its temper and her own, and produces estrangement. Deeds which she thinks it desirable to encourage, she gets performed by threats and bribes, or by exciting a desire for applause: considering little what the inward motive may be, so long as the outward conduct conforms; and thus cultivating hypocrisy, and fear, and selfishness, in place of good feeling. While insisting on truthfulness, she constantly sets an example of untruth, by threatening penalties which she does not inflict. While inculcating self-control, she hourly visits on her little ones angry scoldings for acts that do not call for them. She has not the remotest idea that in the nursery, as in the world, that alone is the truly salutary discipline which visits on all conduct, good and bad, the natural consequences—the consequences, pleasurable or painful, which in the nature of things such conduct tends to bring. Being thus without

theoretic guidance, and quite incapable of guiding herself by tracing the mental processes going on in her children, her rule is impulsive, inconsistent, mischievous, often, in the highest degree; and would indeed be generally ruinous, were it not that the overwhelming tendency of the growing mind to assume the moral type of the race, usually subordinates all minor influences.

And then the culture of the intellect—is not this, too, mismanaged in a similar manner? Grant that the phenomena of intelligence conform to laws; grant that the evolution of intelligence in a child also conforms to laws; and it follows inevitably that education can be rightly guided only by a knowledge of these laws. To suppose that you can properly regulate this process of forming and accumulating ideas, without understanding the nature of the process, is absurd. How widely, then, must teaching as it is, differ from teaching as it should be; when hardly any parents, and but few teachers, know anything about psychology. As might be expected, the system is grievously at fault, alike in matter and in manner. While the right class of facts is withheld, the wrong class is forcibly administered in the wrong way and in the wrong order. With that common limited idea of education which confines it to knowledge gained from books, parents thrust primers into the hands of their little ones years too soon, to their great injury. Not recognizing the truth that the function of books is supplementary—that they form an indirect means to knowledge when direct means fail—a means of seeing through other men what you cannot see for yourself; they are eager to give second-hand facts in place of first-hand facts. Not perceiving the enormous value of that spontaneous education which goes on in early years—not perceiving that a child's restless observation, instead of being ignored or checked, should be diligently administered to, and made as accurate and complete as possible; they insist on occupying its eyes and thoughts with things that are, for the time being, incomprehensible and repugnant. Possessed by a superstition which worships the symbols of knowledge instead of the knowledge itself, they do not see that only when his acquaintance with the objects and processes of the household, the streets, and the fields, is becoming tolerably exhaustive—only then should a child be introduced to the new sources of information which books supply: and this, not only because immediate cognition is of far greater value than mediate cognition; but also, because the words contained in books can be rightly in-

terpreted into ideas, only in proportion to the antecedent experience of things. Observe next, that this formal instruction, far too soon commenced, is carried on with but little reference to the laws of mental development.

Intellectual progress is of necessity from the concrete to the abstract. But regardless of this, highly abstract subjects, such as grammar, which should come quite late, are begun quite early. Political geography, dead and uninteresting to a child, and which should be an appendage of sociological studies, is commenced betimes; while physical geography, comprehensible and comparatively attractive to a child, is in great part passed over. Nearly every subject dealt with is arranged in abnormal order: definitions, and rules, and principles being put first, instead of being disclosed, as they are in the order of nature, through the study of cases. And then, pervading the whole, is the vicious system of rote learning—a system of sacrificing the spirit to the letter. See the results. What with perceptions unnaturally dulled by early thwarting, and a coerced attention to books—what with the mental confusion produced by teaching subjects before they can be understood, and in each of them giving generalizations before the facts of which these are the generalizations—what with making the pupil a mere passive recipient of other's ideas, and not in the least leading him to be an active inquirer or self-instructor—and what with taxing the faculties to excess; there are very few minds that become as efficient as they might be. Examinations being once passed, books are laid aside; the greater part of what has been acquired, being unorganized, soon drops out of recollection; what remains is mostly inert—the art of applying knowledge not having been cultivated; and there is but little power either of accurate observation or independent thinking. To all which add, that while much of the information gained is of relatively small value, an immense mass of information of transcendent value is entirely passed over.

Thus we find the facts to be such as might have been inferred *à priori*. The training of children—physical, moral, and intellectual—is dreadfully defective. And in great measure it is so, because parents are devoid of that knowledge by which this training can alone be rightly guided. What is to be expected when one of the most intricate of problems is undertaken by those who have given scarcely a thought to the principles on which its solution depends? For shoe-making or house-building, for the management of a ship or a

locomotive-engine, a long apprenticeship is needful. Is it, then, that the unfolding of a human being in body and mind, is so comparatively simple a process, that any one may superintend and regulate it with no preparation whatever? If not—if the process is with one exception more complex than any in Nature, and the task of administering to it one of surpassing difficulty; is it not madness to make no provision for such a task? Better sacrifice accomplishments than omit this all-essential instruction. When a father, acting on false dogmas adopted without examination, has alienated his sons, driven them into rebellion by his harsh treatment, ruined them, and made himself miserable; he might reflect that the study of Ethology would have been worth pursuing, even at the cost of knowing nothing about *Æschylus*. When a mother is mourning over a first-born that has sunk under the sequelæ of scarlet-fever—when perhaps a candid medical man has confirmed her suspicion that her child would have recovered had not its system been enfeebled by over-study—when she is prostrate under the pangs of combined grief and remorse; it is but a small consolation that she can read Dante in the original.

Thus we see that for regulating the third great division of human activities, a knowledge of the laws of life is the one thing needful. Some acquaintance with the first principles of physiology and the elementary truths of psychology is indispensable for the right bringing up of children. We doubt not that this assertion will by many be read with a smile. That parents in general should be expected to acquire a knowledge of subjects so abstruse, will seem to them an absurdity. And if we proposed that an exhaustive knowledge of these subjects should be obtained by all fathers and mothers, the absurdity would indeed be glaring enough. But we do not. General principles only, accompanied by such detailed illustrations as may be needed to make them understood, would suffice. And these might be readily taught—if not rationally, then dogmatically. Be this as it may, however, here are the indisputable facts:—that the development of children in mind and body rigorously obeys certain laws; that unless these laws are in some degree conformed to by parents, death is inevitable; that unless they are in a great degree conformed to, there must result serious physical and mental defects; and that only when they are completely conformed to, can a perfect maturity be reached. Judge, then, whether all who may one day be parents, should not strive with some anxiety to learn what these laws are.

From the parental functions let us pass now to the functions of the citizen. We have here to inquire what knowledge best fits a man for the discharge of these functions. It cannot be alleged, as in the last case, that the need for knowledge fitting him for these functions is wholly overlooked; for our school courses contain certain studies which, nominally at least, bear upon political and social duties. Of these the only one that occupies a prominent place is History.

But as already more than once hinted, the historic information commonly given is almost valueless for purposes of guidance. Scarcely any of the facts set down in our school-histories, and very few even of those contained in the more elaborate works written for adults, give any clue to the right principles of political action. The biographies of monarchs (and our children commonly learn little else) throw scarcely any light upon the science of society. Familiarity with court intrigues, plots, usurpations, or the like, and with all the personalities accompanying them, aids very little in elucidating the principles, on which national welfare depends. We read of some squabble for power, that it led to a pitched battle; that such and such were the names of the generals and their leading subordinates; that they had each so many thousand infantry and cavalry, and so many cannon; that they arranged their forces in this and that order; that they manoeuvred, attacked, and fell back in certain ways; that at this part of the day such disasters were sustained and at that such advantages gained; that in one particular movement some leading officer fell, while in another a certain regiment was decimated; that after all the changing fortunes of the fight, the victory was gained by this or that army; and that so many were killed and wounded on each side, and so many captured by the conquerors. And now, out of the accumulated details which make up the narrative, say which it is that helps you in deciding on your conduct as a citizen. Supposing even that you had diligently read, not only "The Fifteen Decisive Battles of the World," but accounts of all other battles that history mentions; how much more judicious would your vote be at the next election? "But these are facts—interesting facts," you say. Without doubt they are facts (such, at least, as are not wholly or partially fictions); and to many they may be interesting facts. But this by no means implies that they are valuable. Factitious or morbid opinion often gives seeming value to things that have scarcely any. A tulipomaniac will not part with a choice bulb for its weight in gold. To

another man an ugly piece of cracked old china seems his most desirable possession. And there are those who give high prices for the relics of celebrated murderers. Will it be contended that these tastes are any measures of value in the things that gratify them? If not, then it must be admitted that the liking felt for certain classes of historical facts is no proof of their worth; and that we must test their worth as we test the worth of other facts, by asking to what uses they are applicable. Were some one to tell you that your neighbor's cat kittened yesterday, you would say the information was worthless. Fact though it might be, you would say it was an utterly useless fact—a fact that could in no way influence your actions in life—a fact that would not help you in learning how to live completely. Well, apply the same test to the great mass of historical facts, and you will get the same results. They are facts from which no conclusions can be drawn—*unorganizable* facts; and therefore facts which can be of no service in establishing principles of conduct, which is the chief use of facts. Read them, if you like, for amusement; but do not flatter yourself they are instructive.

That which constitutes History, properly so called, is in great part omitted from works on the subject. Only of late years have historians commenced giving us, in any considerable quantity, the truly valuable information. As in past ages the king was everything and the people nothing; so, in past histories the doings of the king fill the entire picture, to which the national life forms but an obscure background. While only now, when the welfare of nations rather than of rulers is becoming the dominant idea, are historians beginning to occupy themselves with the phenomena of social progress. That which it really concerns us to know, is the natural history of society. We want all facts which help us to understand how a nation has grown and organized itself. Among these, let us of course have an account of its government; with as little as may be of gossip about the men who officered it, and as much as possible about the structure, principles, methods, prejudices, corruptions, etc., which it exhibited: and let this account not only include the nature and actions of the central government, but also those of local governments, down to their minutest ramifications. Let us of course also have a parallel description of the ecclesiastical government—its organization, its conduct, its power, its relations to the State: and accompanying this, the ceremonial, creed, and religious ideas—not only those nominally believed, but those really believed and acted

upon. Let us at the same time be informed of the control exercised by class over class, as displayed in all social observances—in titles, salutations, and forms of address. Let us know, too, what were all the other customs which regulated the popular life out of doors and in-doors: including those which concern the relations of the sexes, and the relations of parents to children. The superstitions, also, from the more important myths down to the charms in common use, should be indicated. Next should come a delineation of the industrial system; showing to what extent the division of labor was carried; how trades were regulated, whether by caste, guilds, or otherwise; what was the connection between employers and employed; what were the agencies for distributing commodities, what were the means of communication; what was the circulating medium. Accompanying all which should come an account of the industrial arts technically considered: stating the processes in use, and the quality of the products. Further, the intellectual condition of the nation in its various grades should be depicted: not only with respect to the kind and amount of education, but with respect to the progress made in science, and the prevailing manner of thinking. The degree of æsthetic culture, as displayed in architecture, sculpture, painting, dress, music, poetry, and fiction, should be described. Nor should there be omitted a sketch of the daily lives of the people—their food, their homes, and their amusements. And lastly, to connect the whole, should be exhibited the morals, theoretical and practical, of all classes: as indicated in their laws, habits, proverbs, deeds. All these facts, given with as much brevity as consists with clearness and accuracy, should be so grouped and arranged that they may be comprehended in their *ensemble*; and thus may be contemplated as mutually dependent parts of one great whole. The aim should be so to present them that we may readily trace the *consensus* subsisting among them; with the view of learning what social phenomena co-exist with what others. And then the corresponding delineations of succeeding ages should be so managed as to show us, as clearly as may be, how each belief, institution, custom and arrangement was modified; and how the *consensus* of preceding structures and functions was developed into the *consensus* of succeeding ones. Such alone is the kind of information respecting past times, which can be of service to the citizen for the regulation of his conduct. The only history that is of practical value, is what may be called Descriptive Sociology. And the high-

est office of the historian is to so narrate the lives of nations, as to furnish materials for a Comparative Sociology; and for the subsequent determination of the ultimate laws to which social phenomena conform.

But now mark, that even supposing an adequate stock of this truly valuable historical knowledge has been acquired, it is of comparatively little use without the key. And the key is to be found only in Science. Without an acquaintance with the general truths of biology and psychology, rational interpretation of social phenomena is impossible. Only in proportion as men obtain a certain rude, empirical knowledge of human nature, are they enabled to understand even the simplest facts of social life: as, for instance, the relation between supply and demand. And if not even the most elementary truths of sociology can be reached until some knowledge is obtained of how men generally think, feel, and act under given circumstances; then it is manifest that there can be nothing like a wide comprehension of sociology, unless through a competent knowledge of man in all his faculties, bodily and mental. Consider the matter in the abstract, and this conclusion is self-evident. Thus:—Society is made up of individuals; all that is done in society is done by the combined actions of individuals; and therefore, in individual actions only can be found the solutions of social phenomena. But the actions of individuals depend on the laws of their natures; and their actions cannot be understood until these laws are understood. These laws, however, when reduced to their simplest expression, are found to depend on the laws of body and mind in general. Hence it necessarily follows, that biology and psychology are indispensable as interpreters of sociology. Or, to state the conclusions still more simply:—all social phenomena are phenomena of life—are the most complex manifestations of life—are ultimately dependent on the laws of life—and can be understood only when the laws of life are understood. Thus, then, we see that for the regulation of this fourth division of human activities, we are, as before, dependent on Science. Of the knowledge commonly imparted in educational courses, very little is of any service in guiding a man in his conduct as a citizen. Only a small part of the history he reads is of practical value; and of this small part he is not prepared to make proper use. He commonly lacks not only the materials for, but the very conception of, descriptive sociology; and he also lacks that knowledge of the organic sciences, without which even descriptive sociology can give him but little aid.

And now we come to that remaining division of human life which includes the relaxations, pleasures, and amusements filling leisure hours. After considering what training best fits for self-preservation, for the obtaining of sustenance, for the discharge of parental duties, and for the regulation of social and political conduct; we have now to consider what training best fits for the miscellaneous ends not included in these—for the enjoyments of Nature, of Literature, and of the Fine Arts, in all their forms. Postponing them as we do to things that bear more vitally upon human welfare; and bringing everything, as we have, to the test of actual value; it will perhaps be inferred that we are inclined to slight these less essential things. No greater mistake could be made, however. We yield to none in the value we attach to æsthetic culture and its pleasures. Without painting, sculpture, music, poetry, and the emotions produced by natural beauty of every kind, life would lose half its charm. So far from thinking that the training and gratification of the tastes are unimportant, we believe the time will come when they will occupy a much larger share of human life than now. When the forces of Nature have been fully conquered to man's use—when the means of production have been brought to perfection—when labor has been economized to the highest degree—when education has been so systematized that a preparation for the more essential activities may be made with comparative rapidity—and when, consequently, there is a great increase of spare time; then will the poetry, both of Art and Nature, rightly fill a large space in the minds of all.

But it is one thing to admit that æsthetic culture is in a high degree conducive to human happiness; and another thing to admit that it is a fundamental requisite to human happiness. However important it may be, it must yield precedence to those kinds of culture which bear more directly upon the duties of life. As before hinted, literature and the fine arts are made possible by those activities which make individual and social life possible; and manifestly, that which is made possible, must be postponed to that which makes it possible. A florist cultivates a plant for the sake of its flower; and regards the roots and leaves as of value, chiefly because they are instrumental in producing the flower. But while, as an ultimate product, the flower is the thing to which everything else is subordinate, the florist very well knows that the root and leaves are intrinsically of greater importance; because on them the evolution of the flower depends. He bestows every care

in rearing a healthy plant; and knows it would be folly if, in his anxiety to obtain the flower, he were to neglect the plant. Similarly in the case before us. Architecture, sculpture, painting, music, poetry, etc., may be truly called the efflorescence of civilized life. But even supposing them to be of such transcendent worth as to subordinate the civilized life out of which they grow (which can hardly be asserted), it will still be admitted that the production of a healthy civilized life must be the first consideration; and that the knowledge conducing to this must occupy the highest place.

And here we see most distinctly the vice of our educational system. It neglects the plant for the sake of the flower. In anxiety for elegance, it forgets substance. While it gives no knowledge conducive to self-preservation—while of knowledge that facilitates gaining a livelihood it gives but the rudiments, and leaves the greater part to be picked up any how in after life—while for the discharge of parental functions it makes not the slightest provision—and while for the duties of citizenship it prepares by imparting a mass of facts, most of which are irrelevant, and the rest without a key; it is diligent in teaching everything that adds to refinement, polish, *éclat*. However fully we may admit that extensive acquaintance with modern languages is a valuable accomplishment, which, through reading, conversation, and travel, aids in giving a certain finish; it by no means follows that this result is rightly purchased at the cost of that vitally important knowledge sacrificed to it. Supposing it true that classical education conduces to elegance and correctness of style; it cannot be said that elegance and correctness of style are comparable in importance to a familiarity with the principles that should guide the rearing of children. Grant that the taste may be greatly improved by reading all the poetry written in extinct languages; yet it is not to be inferred that such improvement of taste is equivalent in value to an acquaintance with the laws of health. Accomplishments, the fine arts, *belles-lettres*, and all those things which, as we say, constitute the efflorescence of civilization, should be wholly subordinate to that knowledge and discipline in which civilization rests. *As they occupy the leisure part of life, so should they occupy the leisure part of education.*

Recognizing thus the true position of æsthetics, and holding that while the cultivation of them should form a part of education from its commencement, such cultivation should

be subsidiary; we have now to inquire what knowledge is of most use to this end—what knowledge best fits for this remaining sphere of activity. To this question the answer is still the same as heretofore. Unexpected as the assertion may be, it is nevertheless true, that the highest Art of every kind is based upon Science—that without Science there can be neither perfect production nor full appreciation. Science, in that limited technical acceptance current in society, may not have been possessed by many artists of high repute; but acute observers as they have been, they have always possessed a stock of those empirical generalizations which constitute science in its lowest phase; and they have habitually fallen far below perfection, partly because their generalizations were comparatively few and inaccurate. That science necessarily underlies the fine arts, becomes manifest, *a priori*, when we remember that art-products are all more or less representative of objective or subjective phenomena; that they can be true only in proportion as they conform to the laws of these phenomena; and that before they can thus conform the artist must know what these laws are. That this *a priori* conclusion tallies with experience we shall soon see.

Youths preparing for the practice of sculpture, have to acquaint themselves with the bones and muscles of the human frame in their distribution, attachments, and movements. This is a portion of science; and it has been found needful to impart it for the prevention of those many errors which sculptors who do not possess it commit. For the prevention of other mistakes, a knowledge of mechanical principles is requisite; and such knowledge not being usually possessed, grave mechanical mistakes are frequently made. Take an instance. For the stability of a figure it is needful that the perpendicular from the centre of gravity—"the line of direction," as it is called—should fall within the base of support; and hence it happens, that when a man assumes the attitude known as "standing at ease," in which one leg is straightened and the other relaxed, the line of direction falls within the foot of the straightened leg. But sculptors unfamiliar with the theory of equilibrium, not uncommonly so represent this attitude, that the line of direction falls midway between the feet. Ignorance of the laws of momentum leads to analogous errors: as witness the admired Discobolus, which, as it is posed, must inevitably fall forward the moment the quoit is delivered.

In painting, the necessity for scientific knowledge, empirical if not rational, is still

more conspicuous. In what consists the grotesqueness of Chinese pictures, unless in their utter disregard of the laws of appearances—in their absurd linear perspective, and their want of aerial perspective? In what are the drawings of a child so faulty, if not in a similar absence of truth—an absence arising, in great part, from ignorance of the way in which the aspects of things vary with the conditions? Do but remember the books and lectures by which students are instructed; or consider the criticisms of Ruskin; or look at the doings of the Pre-Raphaelites; and you will see that progress in painting implies increasing knowledge of how effects in Nature are produced. The most diligent observation, if not aided by science, fails to preserve from error. Every painter will indorse the assertion that unless it is known what appearances must exist under given circumstances, they often will not be perceived; and to know what appearances must exist, is, in so far, to understand the science of appearances. From want of science Mr. J. Lewis, careful painter as he is, casts the shadow of a lattice-window in sharply-defined lines upon an opposite wall; which he would not have done, had he been familiar with the phenomena of penumbrae. From want of science, Mr. Rosetti, catching sight of a peculiar iridescence displayed by certain hairy surfaces under particular lights (an iridescence caused by the diffraction of light in passing the hairs), commits the error of showing this iridescence on surfaces and in positions where it could not occur.

To say that music, too, has need of scientific aid will seem still more surprising. Yet it is demonstrable that music is but an idealization of the natural language of emotion; and that consequently, music must be good or bad according as it conforms to the laws of this natural language. The various inflections of voice which accompany feelings of different kinds and intensities, have been shown to be the germs out of which music is developed. It has been further shown, that these inflections and cadences are not accidental or arbitrary; but that they are determined by certain general principles of vital action; and that their expressiveness depends on this. Whence it follows that musical phrases and the melodies built of them, can be effective only when they are in harmony with these general principles. It is difficult here properly to illustrate this position. But perhaps it will suffice to instance the swarms of worthless ballads that infest drawing-rooms, as compositions which science would forbid. They sin against science by setting to music ideas that are not emotional enough to prompt

musical expression; and they also sin against science by using musical phrases that have no natural relation to the ideas expressed: even where these are emotional. They are bad because they are untrue. And to say they are untrue, is to say they are unscientific.

Even in poetry the same thing holds. Like music, poetry has its root in those natural modes of expression which accompany deep feeling. Its rhythm, its strong and numerous metaphors, its hyperboles, its violent inversions, are simply exaggerations of the traits of excited speech. To be good, therefore, poetry must pay respect to those laws of nervous action which excited speech obeys. In intensifying and combining the traits of excited speech, it must have due regard to proportion—must not use its appliances without restriction; but, where the ideas are least emotional, must use the forms of poetical expression sparingly; must use them more freely as the emotion rises; and must carry them all to their greatest extent only where the emotion reaches a climax. The entire contravention of these principles results in bombast or doggerel. The insufficient respect for them is seen in didactic poetry. And it is because they are rarely fully obeyed, that we have so much poetry that is inartistic.

Not only is it that the artist, of whatever kind, cannot produce a truthful work without he understands the laws of the phenomena he represents; but it is that he must also understand how the minds of spectators or listeners will be affected by the several peculiarities of his work—a question in psychology. What impression any given art-product generates, manifestly depends upon the mental natures of those to whom it is presented; and as all mental natures have certain general principles in common, there must result certain corresponding general principles on which alone art-products can be successfully framed. These general principles cannot be fully understood and applied, unless the artist sees how they follow from the laws of mind. To ask whether the composition of a picture is good, is really to ask how the perceptions and feelings of observers will be affected by it. To ask whether a drama is well constructed, is to ask whether its situations are so arranged as duly to consult the power of attention of an audience, and duly to avoid overtaxing any one class of feelings. Equally in arranging the leading divisions of a poem or fiction, and in combining the words of a single sentence, the goodness of the effect depends upon the skill with which the mental energies and susceptibilities of the reader are economized. Every artist, in the course of

his education and after-life, accumulates a stock of maxims by which his practice is regulated. Trace such maxims to their roots, and you find they inevitably lead you down to psychological principles. And only when the artist rationally understands these psychological principles and their various corollaries, can he work in harmony with them.

We do not for a moment believe that science will make an artist. While we contend that the leading laws both of objective and subjective phenomena must be understood by him, we by no means contend that knowledge of such laws will serve in place of natural perception. Not only the poet, but also the artist of every type, is born, not made. What we assert is, that innate faculty alone will not suffice; but must have the aid of organized knowledge. Intuition will do much, but it will not do all. Only when Genius is married to Science can the highest results be produced.

As we have above asserted, Science is necessary not only for the most successful production, but also for the full appreciation of the fine arts. In what consists the greater ability of a man than of a child to perceive the beauties of a picture; unless it is in his more extended knowledge of those truths in nature or life which the picture renders? How happens the cultivated gentleman to enjoy a fine poem so much more than a boor does; if it is not because his wider acquaintance with objects and actions enables him to see in the poem much that the boor cannot see? And if, as is here so obvious, there must be some familiarity with the things represented, before the representation can be appreciated; then the representation can be completely appreciated, only in proportion as the things represented are completely understood. The fact is, that every additional truth which a work of art expresses, gives an additional pleasure to the percipient mind—a pleasure that is missed by those ignorant of this truth. The more realities an artist indicates in any given amount of work, the more faculties does he appeal to; the more numerous associated ideas does he suggest; the more gratification does he afford. But to receive this gratification the spectator, listener, or reader, must know the realities which the artist has indicated; and to know these realities is to know so much science.

And now let us not overlook the further great fact, that not only does science underlie sculpture, painting, music, poetry, but that science is itself poetic. The current opinion that science and poetry are opposed is a delusion. It is doubtless true that as states of

consciousness, cognition and emotion tend to exclude each other. And it is doubtless also true that an extreme activity of the reflective powers tends to deaden the feelings; while an extreme activity of the feelings tends to deaden the reflective powers; in which sense, indeed, all orders of activity are antagonistic to each other. But it is not true that the facts of science are unpoetical: or that the cultivation of science is necessarily unfriendly to the exercise of imagination or the love of the beautiful. On the contrary science opens up realms of poetry where to the unscientific all is a blank. Those engaged in scientific researches constantly show us that they realize not less vividly, but more vividly, than others, the poetry of their subjects. Whoever will dip into Hugh Miller's works on geology, or read Mr. Lewes's "*Seaside Studies*," will perceive that science excites poetry rather than extinguishes it. And whoever will contemplate the life of Goethe will see that the poet and the man of science can co-exist in equal activity. Is it not, indeed, an absurd and almost a sacrilegious belief that the more a man studies Nature the less he reveres it? Think you that a drop of water, which to the vulgar eye is but a drop of water, loses anything in the eye of the physicist who knows that its elements are held together by a force which, if suddenly liberated, would produce a flash of lightning? Think you that what is carelessly looked upon by the uninitiated as a mere snow-flake, does not suggest higher associations to one who has seen through a microscope the wondrously varied and elegant forms of snow-crystals? Think you that the rounded rock marked with parallel scratches calls up as much poetry in an ignorant mind as in the mind of a geologist, who knows that over this rock a glacier slid a million years ago? The truth is, that those who have never entered upon scientific pursuits know not a tithe of the poetry by which they are surrounded. Whoever has not in youth collected plants and insects, knows not half the halo of interest which lanes and hedgerows can assume. Whoever has not sought for fossils, has little idea of the poetical associations that surround the places where imbedded treasures were found. Whoever at the seaside has not had a microscope and aquarium, has yet to learn what the highest pleasures of the seaside are. Sad, indeed, is it to see how men occupy themselves with trivialities, and are indifferent to the grandest phenomena—care not to understand the architecture of the Heavens, but are deeply interested in some contemptible controversy about the intrigues of Mary Queen of Scots!

—are learnedly critical over a Greek ode, and pass by without a glance that grand epic written by the finger of God upon the strata of the Earth!

We find, then, that even for this remaining division of human activities, scientific culture is the proper preparation. We find that æsthetics in general are necessarily based upon scientific principles; and can be pursued with complete success only through an acquaintance with these principles. We find that for the criticism and due appreciation of works of art, a knowledge of the constitution of things, or in other words, a knowledge of science, is requisite. And we not only find that science is the handmaid to all forms of art and poetry, but that, rightly regarded, science is itself poetical.

Thus far our question has been, the worth of knowledge of this or that kind for purposes of guidance. We have now to judge the relative values of different kinds of knowledge for purposes of discipline. This division of our subject we are obliged to treat with comparative brevity; and happily, no very lengthened treatment of it is needed. Having found what is best for the one end, we have by implication found what is best for the other. We may be quite sure that the acquirement of those classes of facts which are most useful for regulating conduct, involves a mental exercise best fitted for strengthening the faculties. It would be utterly contrary to the beautiful economy of Nature, if one kind of culture were needed for the gaining of information and another kind were needed as a mental gymnastic. Everywhere throughout creation we find faculties developed through the performance of those functions which it is their office to perform; not through the performance of artificial exercises devised to fit them for these functions. The Red Indian acquires the swiftness and agility which make him a successful hunter, by the actual pursuit of animals; and by the miscellaneous activities of his life, he gains a better balance of physical powers than gymnastics ever give. That skill in tracking enemies and prey which he has reached by long practice, implies a subtlety of perception far exceeding anything produced by artificial training. And similarly throughout. From the Bushman, whose eye, which being habitually employed in identifying distant objects that are to be pursued or fled from, has acquired a quite telescopic range, to the accountant whose daily practice enables him to add up several columns of figures simultaneously, we find that the highest power of a faculty

results from the discharge of those duties which the conditions of life require it to discharge. And we may be certain, *à priori*, that the same law holds throughout education. The education of most value for guidance, must at the same time be the education of most value for discipline. Let us consider the evidence.

One advantage claimed for that devotion to language-learning which forms so prominent a feature in the ordinary *curriculum*, is, that the memory is thereby strengthened. And it is apparently assumed that this is an advantage peculiar to the study of words. But the truth is, that the sciences afford far wider fields for the exercise of memory. It is no slight task to remember all the facts ascertained respecting our solar system; much more to remember all that is known concerning the structure of our galaxy. The new compounds which chemistry daily accumulates, are so numerous that few, save professors, know the names of them all; and to recollect the atomic constitutions and affinities of all these compounds, is scarcely possible without making chemistry the occupation of life. In the enormous mass of phenomena presented by the Earth's crust, and in the still more enormous mass of phenomena presented by the fossils it contains, there is matter which it takes the geological student years of application to master. In each leading division of physics—sound, heat, light, electricity—the facts are numerous enough to alarm any one proposing to learn them all. And when we pass to the organic sciences, the effort of memory required becomes still greater. In human anatomy alone, the quantity of detail is so great, that the young surgeon has commonly to get it up half-a-dozen times before he can permanently retain it. The number of species of plants which botanists distinguish, amounts to some 320,000; while the varied forms of animal life with which the zoologist deals, are estimated at some two millions. So vast is the accumulation of facts which men of science have before them, that only by dividing and subdividing their labors can they deal with it. To a complete knowledge of his own division, each adds but a general knowledge of the rest. Surely, then, science, cultivated even to a very moderate extent, affords adequate exercise for memory. To say the very least, it involves quite as good a training for this faculty as language does.

But now mark that while for the training of mere memory, science is as good as, if not better than, language; it has an immense superiority in the kind of memory it cultivates. In the acquirement of a language, the connec-

tions of ideas to be established in the mind correspond to facts that are in great measure accidental; whereas, in the acquirement of science, the connections of ideas to be established in the mind correspond to facts that are mostly necessary. It is true that the relations of words to their meaning is in one sense natural, and that the genesis of these relations may be traced back a certain distance; though very rarely to the beginning; (to which let us add the remark that the laws of this genesis form a branch of mental science—the science of philology.) But since it will not be contended that in the acquisition of languages, as ordinarily carried on, these natural relations between words and their meanings are habitually traced, and the laws regulating them explained; it must be admitted that they are commonly learned as fortuitous relations. On the other hand, the relations which science presents are casual relations; and, when properly taught, are understood as such. Instead of being practically accidental, they are necessary; and as such, give exercise to the reasoning faculties. While language familiarizes with non-rational relations, science familiarizes with rational relations. While the one exercises memory only, the other exercises both memory and understanding.

Observe next that a great superiority of science over language as a means of discipline, is, that it cultivates the judgment. As, in a lecture on mental education delivered at the Royal Institution, Professor Faraday well remarks, the most common intellectual fault is deficiency of judgment. He contends that "society, speaking generally, is not only ignorant as respects education of the judgment, but it is also ignorant of its ignorance." And the cause to which he ascribes this state is want of scientific culture. The truth of his conclusion is obvious. Correct judgment with regard to all surrounding things, events, and consequences, becomes possible only through knowledge of the way in which surrounding phenomena depend on each other. No extent of acquaintance with the meanings of words, can give the power of forming correct inferences respecting causes and effects. The constant habit of drawing conclusions from data, and then of verifying those conclusions by observation and experiment, can alone give the power of judging correctly. And that it necessitates this habit is one of the immense advantages of science.

Not only, however, for intellectual discipline is science the best; but also for *moral* discipline. The learning of languages tends, if anything, further to increase the already undue respect for authority. Such and such

are the meanings of these words, says the teacher or the dictionary. So and so is the rule in this case, says the grammar. By the pupil these dicta are received as unquestionable. His constant attitude of mind is that of submission to dogmatic teaching. And a necessary result is a tendency to accept without inquiry whatever is established. Quite opposite is the attitude of mind generated by the cultivation of science. By science, constant appeal is made to individual reason. Its truths are not accepted upon authority alone; but all are at liberty to test them—nay, in many cases, the pupil is required to think out his own conclusions. Every step in a scientific investigation is submitted to his judgment. He is not asked to admit it without seeing it to be true. And the trust in his own powers thus produced, is further increased by the constancy with which Nature justifies his conclusions when they are correctly drawn. From all which there flows that independence which is a most valuable element in character. Nor is this the only moral benefit bequeathed by scientific culture. When carried on, as it should always be, as much as possible under the form of independent research, it exercises perseverance and sincerity. As says Professor Tyndall of inductive inquiry, "it requires patient industry, and an humble and conscientious acceptance of what Nature reveals. The first condition of success is an honest receptivity and a willingness to abandon all preconceived notions, however cherished, if they be found to contradict the truth. Believe me, a self-renunciation which has something noble in it, and of which the world never hears, is often enacted in the private experience of the true votary of science."

Lastly we have to assert—and the assertion will, we doubt not, cause extreme surprise—that the discipline of science is superior to that of our ordinary education, because of the *religious* culture that it gives. Of course we do not here use the words scientific and religious in their ordinary limited acceptations; but in their widest and highest acceptations. Doubtless, to the superstitions that pass under the name of religion, science is antagonistic; but not to the essential religion which these superstitions merely hide. Doubtless, too, in much of the science that is current, there is a pervading spirit of irreligion; but not in that true science which has passed beyond the superficial into the profound.

"True science and true religion," says Professor Huxley at the close of a recent course of lectures, "are twin-sisters, and the separation of either from the other is sure to prove the death of both. Science prospers exactly in proportion as it is religious; and religion flourishes in exact proportion to the scientific depth and firmness of its basis. The great deeds of

philosophers have been less the fruit of their intellect than of the direction of that intellect by an eminently religious tone of mind. Truth has yielded herself rather to their patience, their love, their single-heartedness, and their self-denial, than to their logical acumen."

So far from science being irreligious, as many think, it is the neglect of science that is irreligious—it is the refusal to study the surrounding creation that is irreligious. Take a humble simile. Suppose a writer were daily saluted with praises couched in superlative language. Suppose the wisdom, the grandeur, the beauty of his works, were the constant topics of the eulogies addressed to him. Suppose those who unceasingly uttered these eulogies on his works were content with looking at the outsides of them; and had never opened them, much less tried to understand them. What value should we put upon their praises? What should we think of their sincerity? Yet, comparing small things to great, such is the conduct of mankind in general, in reference to the Universe and its Cause. Nay, it is worse. Not only do they pass by without study, these things which they daily proclaim to be so wonderful; but very frequently they condemn as mere triflers those who give time to the observation of Nature—they actually scorn those who show any active interest in these marvels. We repeat, then, that not science, but the neglect of science, is irreligious. Devotion to science is a tacit worship—a tacit recognition of worth in the things studied; and by implication in their Cause. It is not a mere lip-homage, but a homage expressed in actions—not a mere professed respect, but a respect proved by the sacrifice of time, thought, and labor.

Nor is it thus only that true science is essentially religious. It is religious, too, inasmuch as it generates a profound respect for, and an implicit faith in, those uniform laws which underlie all things. By accumulated experiences the man of science acquires a thorough belief in the unchanging relations of phenomena—in the invariable connection of cause and consequence—in the necessity of good or evil results. Instead of the rewards and punishments of traditional belief, which men vaguely hope they may gain, or escape, spite of their disobedience; he finds that there are rewards and punishments in the ordained constitution of things, and that the evil results of disobedience are inevitable. He sees that the laws to which we must submit are not only inexorable but beneficent. He sees that in virtue of these laws, the process of things is ever towards a greater perfection and a higher happiness. Hence he is led constantly to insist on these laws, and is indignant when

men disregard them. And thus does he, by asserting the eternal principles of things and the necessity of conforming to them, prove himself intrinsically religious.

To all which add the further religious aspect of science, that it alone can give us true conceptions of ourselves and our relation to the mysteries of existence. At the same time that it shows us all which can be known, it shows us the limits beyond which we can know nothing. Not by dogmatic assertion does it teach the impossibility of comprehending the ultimate cause of things; but it leads us clearly to recognize this impossibility by bringing us in every direction to boundaries we cannot cross. It realizes to us in a way which nothing else can, the littleness of human intelligence in the face of that which transcends human intelligence. While towards the traditions and authorities of men its attitude may be proud, before the impenetrable veil which hides the Absolute its attitude is humble—a true pride and a true humility. Only the sincere man of science (and by this title we do not mean the mere calculator of distances, or analyzer of compounds, or labeller of species; but him who through lower truths seeks higher, and eventually the highest)—only the genuine man of science, we say, can truly know how utterly beyond, not only human knowledge, but human conception, is the Universal Power of which Nature, and Life, and Thought are manifestations.

We conclude, then, that for discipline, as well as for guidance, science is of chiefest value. In all its effects, learning the meanings of things, is better than learning the meanings of words. Whether for intellectual, moral, or religious training, the study of surrounding phenomena is immensely superior to the study of grammars and lexicons.

Thus to the question with which we set out—What knowledge is of most worth?—the uniform reply is—Science. This is the verdict on all the counts. For direct self-preservation, or the maintenance of life and health, the all-important knowledge, is—Science. For that indirect self-preservation which we call gaining a livelihood, the knowledge of greatest value is—Science. For the due discharge of parental functions, the proper guidance is to be found only in—Science. For that interpretation of national life, past and present, without which the citizen cannot rightly regulate his conduct, the indispensable key is—Science. Alike for the most perfect production and highest enjoyment of art in all its forms, the needful preparation is still—Science. And for purposes of discipline—in-

tellectual, moral, religious—the most efficient study is, once more—Science. The question which at first seemed so perplexed, has become, in the course of our inquiry, comparatively simple. We have not to estimate the degrees of importance of different orders of human activity, and different studies as severally fitting us for them; since we find that the study of Science, in its most comprehensive meaning, is the best preparation for all these orders of activity. We have not to decide between the claims of knowledge of great though conventional value, and knowledge of less though intrinsic value; seeing that the knowledge which we find to be of most value in all other respects, is intrinsically most valuable: its worth is not dependent upon opinion, but is as fixed as is the relation of man to the surrounding world. Necessary and eternal as are its truths, all Science concerns all mankind for all time. Equally at present, and in the remotest future, must it be of incalculable importance for the regulation of their conduct, that men should understand the science of life, physical, mental, and social; and that they should understand all other science as a key to the science of life.

And yet the knowledge which is of such transcendent value is that which, in our age of boasted education, receives the least attention. While this which we call civilization could never have arisen had it not been for science; science forms scarcely an appreciable element in what men consider civilized training. Though to the progress of science we owe it, that millions find support where once there was food only for thousands; yet of these millions but a few thousands pay any respect to that which has made their existence possible. Though this increasing knowledge of the properties and relations of things has not only enabled wandering tribes to grow into populous nations, but has given to the countless members of those populous nations comforts and pleasures which their few naked ancestors never even conceived, or could have believed, yet is this kind of knowledge only now receiving a grudging recognition in our highest educational institutions. To the slowly growing acquaintance with the uniform co-existences and sequences of phenomena—to the establishment of invariable laws, we owe our emancipation from the grossest superstitions. But for science we should be still worshipping fetishes; or, with hecatombs of victims, propitiating diabolical deities. And yet this science, which, in place of the most degrading conceptions of things, has given us some insight into the grandeurs

of creation, is written against in our theologies and frowned upon from our pulpits.

Paraphrasing an Eastern fable, we may say that in the family of knowledges, Science is the household drudge, who, in obscurity, hides unrecognized perfections. To her has been committed all the work; by her skill, intelligence and devotion, have all the conveniences and gratifications been obtained; and while ceaselessly occupied ministering to the rest, she has been kept in the background, that her haughty sisters might flaunt their tripperies in the eyes of the world. The parallel holds yet further. For we are fast coming to the *dénouement*, when the positions will be changed; and while these haughty sisters sink into merited neglect, Science, proclaimed as highest alike in worth and beauty, will reign supreme.

CHAPTER II.

INTELLECTUAL EDUCATION.

THERE cannot fail to be a relationship between the successive systems of education, and the successive social states with which they have co-existed. Having a common origin in the national mind, the institutions of each epoch, whatever be their special functions, must have a family likeness. When men received their creed and its interpretations from an infallible authority deigning no explanations, it was natural that the teaching of children should be purely dogmatic. While "believe and ask no questions" was the maxim of the Church, it was fitly the maxim of the school. Conversely, now that Protestantism has gained for adults a right of private judgment and established the practice of appealing to reason, there is harmony in the change that has made juvenile instruction a process of exposition addressed to the understanding. Along with political despotism, stern in its commands, ruling by force of terror, visiting trifling crimes with death, and implacable in its vengeance on the disloyal, there necessarily grew up an academic discipline similarly harsh—a discipline of multiplied injunctions and blows for every breach of them—a discipline of unlimited autocracy upheld by rods, and ferules, and the black-hole. On the other hand, the increase of political liberty, the abolition of law restricting individual action, and the amelioration of the criminal code, have been accompanied by a kindred progress towards non-

coercive education: the pupil is hampered by fewer restraints, and other means than punishments are used to govern him. In those ascetic days when men, acting on the greatest misery principle, held that the more gratifications they denied themselves the more virtuous they were, they, as a matter of course, considered that the best education which most thwarted the wishes of their children, and cut short all spontaneous activity with—"You mustn't do so." While on the contrary, now that happiness is coming to be regarded as a legitimate aim—now that hours of labor are being shortened and popular recreations provided, parents and teachers are beginning to see that most childish desires may rightly be gratified, that childish sports should be encouraged, and that the tendencies of the growing mind are not altogether so diabolical as was supposed. The age in which all thought that trades must be established by bounties and prohibitions; that manufacturers needed their materials and qualities and prices to be prescribed; and that the value of money could be determined by law; was an age which unavoidably cherished the notions that a child's mind could be made to order; that its powers were to be imparted by the schoolmaster; that it was a receptacle into which knowledge was to be put and there built up after its teacher's ideal. In this free-trade era, however, when we are learning that there is much more self-regulation in things than was supposed; that labor, and commerce, and agriculture, and navigation can do better without management than with it; that political governments, to be efficient, must grow up from within and not be imposed from without; we are also beginning to see that there is a natural process of mental evolution which is not to be disturbed without injury; that we may not force on the unfolding mind our artificial forms; but that Psychology, also, discloses to us a law of supply and demand, to which, if we would not do harm, we must conform. Thus alike in its oracular dogmatism, in its harsh discipline, in its multiplied restrictions, in its professed asceticism, and in its faith in the devices of men, the old educational regime was akin to the social systems with which it was contemporaneous; and similarly, in the reverse of these characteristics our modern modes of culture correspond to our more liberal religious and political institutions.

But there remain further parallelisms to which we have not yet adverted: that, namely, between the processes by which these respective changes have been wrought out; and that between the several states of het-

nion to which they have
uries ago there was uniform-

repeated experiment and failure, be expla-
ed. And by this aggregation of truths as
elimination of errors, there must eventual
be developed a correct and complete body
doctrine. Of the three phases through which
human opinion passes—the unanimity of the
ignorant, the disagreement of the inquirers,
and the unanimity of the wise—it is manife-
that the second is the parent of the third.
They are not sequences in time only; they
are sequences in causation. However im-
tensely, therefore, we may witness the pre-
ent conflict of educational systems, and how-
ever much we may regret its accompanying
evils, we must recognize it as a transit-
stage needful to be passed through, and be-
efficient in its ultimate effects.

Meanwhile may we not advantageously
take stock of our progress? After fifty years
of discussion, experiment, and comparison
results, may we not expect a few steps to-
wards the goal to be already made good? So-
old methods must by this time have fallen
out of use; some new ones must have been
established; and many others must be in
process of general abandonment or adoption.
Probably we may see in these various
changes, when put side by side, similar char-
acteristics—may find in them a common ten-
dency; and so, by inference, may get a clue
to the direction in which experience is lead-
ing us, and gather hints how we may achieve
further improvements. Let us then, as a
preliminary to a deeper consideration of the
matter, glance at the leading contrasts be-
tween the education of the past and of the
present.

The suppression of every error is common-
ly followed by a temporary ascendancy of
contrary one; and it so happened, that at
the ages when physical development alone
was aimed at, there came an age when care
of the mind was the sole solicitude—when
children had lesson-books put before them
between two and three years old—when
school-hours were protracted, and the getting
of knowledge was thought the one thing
needful. As, further, it usually happens
that after one of these reactions the next
advance is achieved by co-ordinating the an-
tagonist errors, and perceiving that they are
opposite sides of one truth; so we are now com-
ing to the conviction that body and mind
must both be cared for, and the whole be-
unfolded. The forcing system has been
great measure given up, and precocity is
encouraged. People are beginning to see
the first requisite to success in life, is to
be a good animal. The best brain is found of

service, if there be not enough vital energy to work it; and hence to obtain the one by sacrificing the source of the other, is now considered a folly—a folly which the eventual failure of juvenile prodigies constantly illustrates. Thus we are discovering the wisdom of the saying, that one secret in education is "to know how wisely to lose time."

The once universal practice of learning by rote, is daily falling more into discredit. All modern authorities condemn the old mechanical way of teaching the alphabet. The multiplication table is now frequently taught experimentally. In the acquirement of languages, the grammar-school plan is being superseded by plans based on the spontaneous process followed by the child in gaining its mother tongue. Describing the methods there used, the "Reports on the Training School at Battersea" say:—"The instruction in the whole preparatory course is chiefly oral, and is illustrated as much as possible by appeals to nature." And so throughout. The rote-system, like other systems of its age, made more of the forms and symbols than of the things symbolized. To repeat the words correctly was everything; to understand their meaning nothing: and thus the spirit was sacrificed to the letter. It is at length perceived, that in this case as in others, such a result is not accidental but necessary—that in proportion as there is attention to the signs, there must be inattention to the things signified; or that, as Montaigne long ago said—*Savoir par cœur n'est pas savoir*.

Along with rote-teaching, is declining also the nearly allied teaching by rules. The particulars first, and then the generalization, is the new method—a method, as the Battersea School Reports remark, which, though "the reverse of the method usually followed which consists in giving the pupil the rule first," is yet proved by experience to be the right one. Rule-teaching is now condemned as imparting a merely empirical knowledge—as producing an appearance of understanding without the reality. To give the net product of inquiry, without the inquiry that leads to it, is found to be both enervating and inefficient. General truths to be of due and permanent use, must be earned. "Easy come easy go," is a saying as applicable to knowledge as to wealth. While rules, lying isolated in the mind—not joined to its other contents as outgrowths from them—are continually forgotten, the principles which those rules express piecemeal, become, when once reached by the understanding, enduring possessions. While the rule-taught youth is at sea when beyond his rules, the youth instructed in principles

solves a new case as readily as an old one. Between a mind of rules and a mind of principles, there exists a difference such as that between a confused heap of materials, and the same materials organized into a complete whole, with all its parts bound together. Of which types this last has not only the advantage that its constituent parts are better retained, but the much greater advantage, that it forms an efficient agent for inquiry, for independent thought, for discovery—ends for which the first is useless. Nor let it be supposed that this is a simile only: it is the literal truth. The union of facts into generalizations is the organization of knowledge, whether considered as an objective phenomenon, or a subjective one: and the mental grasp may be measured by the extent to which this organization is carried.

From the substitution of principles for rules, and the necessarily co-ordinate practice of leaving abstractions untaught until the mind has been familiarized with the facts from which they are abstracted, has resulted the postponement of some once early studies to a late period. This is exemplified in the abandonment of that intensely stupid custom, the teaching of grammar to children. As M. Marcel says:—"It may without hesitation be affirmed that grammar is not the stepping-stone, but the finishing instrument." As Mr. Wyse argues:—"Grammar and Syntax are a collection of laws and rules. Rules are gathered from practice: they are the results of induction to which we come by long observation and comparison of facts. It is, in fine, the science, the philosophy of language. In following the process of nature, neither individuals nor nations ever arrive at the science *first*. A language is spoken, and poetry written, many years before either a grammar or prosody is even thought of. Men did not wait till Aristotle had constructed his logic, to reason. In short, as grammar was made after language, so ought it to be taught after language: an inference which all who recognize the relationship between the evolution of the race and of the individual, will see to be unavoidable.

Of new practices that have grown up during the decline of these old ones, the most important is the systematic culture of the powers of observation. After long ages of blindness men are at last seeing that the spontaneous activity of the observing faculties in children has a meaning and a use. What was once thought mere purposeless action or play, or mischief, as the case might be, is now recognized as the process of acquiring a knowledge on which all after-knowledge is

based. Hence the well-conceived but ill-conducted system of *object-lessons*. The saying of Bacon, that physics is the mother of sciences, has come to have a meaning in education. Without an accurate acquaintance with the visible and tangible properties of things, our conceptions must be erroneous, our inferences fallacious, and our operations unsuccessful. "The education of the senses neglected, all after education partakes of a drowsiness, a haziness, an insufficiency which it is impossible to cure." Indeed, if we consider it, we shall find that exhaustive observation is an element in all great success. It is not to artists, naturalists, and men of science only, that it is needful; it is not only that the skilful physician depends on it for the correctness of his diagnosis, and that to the good engineer it is so important that some years in the workshop are prescribed for him; but we may see that the philosopher also is fundamentally one who *observes* relationships of things which others had overlooked, and that the poet, too, is one who *sees* the fine facts in nature which all recognize when pointed out, but did not before remark. Nothing requires more to be insisted on than that vivid and complete impressions are all essential. No sound fabric of wisdom can be woven out of raw material.

While the old method of presenting truths in the abstract has been falling out of use, there has been a corresponding adoption of the new method of presenting them in the concrete. The rudimentary facts of exact science are now being learnt by direct intuition, as textures, and tastes, and colors are learnt. Employing the ball-frame for first lessons in arithmetic exemplifies this. It is well illustrated, too, in Professor De Morgan's mode of explaining the decimal notation. M. Marcel, rightly repudiating the old system of tables, teaches weights and measures by referring to the actual yard and foot, pound and ounce, gallon and quart; and lets the discovery of their relationships be experimental. The use of geographical models and models of the regular bodies, etc., as introductory to geography and geometry respectively, are facts of the same class. Manifestly a common trait of these methods is, that they carry each child's mind through a process like that which the mind of humanity at large has gone through. The truths of number, of form, of relationship in position, were all originally drawn from objects; and to present these truths to the child in the concrete is to let him learn them as the race learnt them. By and by, perhaps, it will be seen that he cannot possibly learn them in any other way; for

that if he is made to repeat them as abstractions, the abstractions can have no meaning for him, until he finds that they are simply statements of what he intuitively discerns.

But of all the changes taking place, the most significant is the growing desire to make the acquirement of knowledge pleasurable rather than painful—a desire based on the more or less distinct perception that at each age the intellectual action which a child likes is a healthful one for it; and conversely. There is a spreading opinion that the rise of an appetite for any kind of knowledge implies that the unfolding mind has become fit to assimilate it, and needs it for the purposes of growth; and that on the other hand, the disgust felt towards any kind of knowledge is a sign either that it is prematurely presented, or that it is presented in an indigestible form. Hence the efforts to make early education amusing, and all education interesting. Hence the lectures on the value of play. Hence the defence of nursery rhymes, and fairy tales. Daily we more and more conform our plans to juvenile opinion. Does the child like this or that kind of teaching? does he take to it? we constantly ask. "His natural desire of variety should be indulged," says M. Marcel; "and the gratification of his curiosity should be combined with his improvement." "Lessons," he again remarks, "should cease before the child evinces symptoms of weariness." And so with later education. Short breaks during school-hours, excursions into the country, amusing lectures, choral songs—in these and many like traits, the change may be discerned. Asceticism is disappearing out of education as out of life; and the usual test of political legislation—its tendency to promote happiness—is beginning to be, in a great degree, the test of legislation for the school and the nursery.

What now is the common characteristic of these several changes? Is it not an increasing conformity to the methods of nature? The relinquishment of early forcing against which nature ever rebels, and the leaving of the first years for exercise of the limbs and senses, show this. The superseding of rote-learned lessons by lessons orally and experimentally given, like those of the field and play-ground, shows this. The disuse of rule-teaching, and the adoption of teaching by principles—that is, the leaving of generalization until there are particulars to base them on—show this. The system of object-lessons shows this. The teaching of the rudiments of science in the concrete instead of the abstract, shows this. And above all, this tendency is shown in the variously directed ef-

forts to present knowledge in attractive forms, and so to make the acquirement of it pleasurable. For as it is the order of nature in all creatures that the gratification accompanying the fulfilment of needful functions serves as a stimulus to their fulfilment—as during the self-education of the young child, the delight taken in the biting of corals, and the pulling to pieces of toys, becomes the prompter to actions which teach it the properties of matter; it follows that, in choosing the succession of subjects and the modes of instruction which most interest the pupil, we are fulfilling nature's behests, and adjusting our proceedings to the laws of life.

Thus, then, we are on the highway towards the doctrine long ago enunciated by Pestalozzi, that alike in its order and its methods, education must conform to the natural process of mental evolution—that there is a certain sequence in which the faculties spontaneously develop, and a certain kind of knowledge which each requires during its development; and that it is for us to ascertain this sequence, and supply this knowledge. All the improvements above alluded to are partial applications of this general principle. A fabulous perception of it now prevails among teachers; and it is daily more insisted on in educational works. "The method of nature is the archetype of all methods," says M. Marcel. "The vital principle in the pursuit is to enable the pupil rightly to instruct himself," writes Mr. Wyse. The more science familiarizes us with the constitution of things the more do we see in them an inherent self-sufficiency. A higher knowledge tends continually to limit our interference with the processes of life. As in medicine the old "heroic treatment" has given place to mild treatment, and often no treatment save a normal regimen—as we have found that it is not needful to mould the bodies of babes by bandaging them in papoose fashion or otherwise—as in jails it is being discovered that the cunningly devised discipline of ours is so inefficient in producing reformation as the natural discipline, the making prisoners maintain themselves by productive labor; so in education we are finding that success is to be achieved only by rendering our measures subservient to that spontaneous unfolding which all minds go through in their progress to maturity.

Of course, this fundamental principle of education, that the arrangement of matter and method must correspond with the order of evolution and mode of activity of the faculties—a principle so obviously true, that once stated it seems almost self-evident—has never

been wholly disregarded. Teachers have unavoidably made their school-courses coincide with it in some degree, for the simple reason that education is possible only on that condition. Boys were never taught the rule-of-three until after they had learnt addition. They were not set to write exercises before they had got into their copy-books. Conic sections have always been preceded by Euclid. But the error of the old methods consists in this, that they do not recognize in detail what they are obliged to recognize in the general. Yet the principle applies throughout. If from the time when a child is able to conceive two things as related in position, years must elapse before it can form a true concept of the earth, as a sphere made up of land and sea, covered with mountains, forests, rivers, and cities, revolving on its axis, and sweeping round the sun—if it gets from the one concept to the other by degrees—if the intermediate concepts which it forms are consecutively larger and more complicated; is it not manifest that there is a general succession through which only it can pass; that each larger concept is made by the combination of smaller ones, and presupposes them; and that to present any of these compound concepts before the child is in possession of its constituent ones, is only less absurd than to present the final concept of the series before the initial one? In the mastering of every subject some course of increasingly complex ideas has to be gone through. The evolution of the corresponding faculties consists in the assimilation of these; which in any true sense, is impossible without they are put into the mind in the normal order. And when this order is not followed, the result is, that they are received with apathy or disgust; and that unless the pupil is intelligent enough to eventually fill up the gaps himself, they lie in his memory as dead facts, capable of being turned to little or no use.

"Why trouble ourselves about any curriculum at all?" it may be asked. "If it be true that the mind like the body has a predetermined course of evolution,—if it unfolds spontaneously—if its successive desires for this or that kind of information arise when these are severally required for its nutrition,—if there thus exists in itself a prompter to the right species of activity at the right time; why interfere in any way? Why not leave children *wholly* to the discipline of nature?—why not remain quite passive and let them get knowledge as they best can?—why not be consistent throughout?" This is an awkward looking question. Plausibly implying as it does, that a system of complete *laissez-faire*

is the logical outcome of the doctrines set forth, it seems to furnish a disproof of them by *reductio ad absurdum*. In truth, however, they do not, when rightly understood, commit us to any such untenable position. A glance at the physical analogies will clearly show this. It is a general law of all life that the more complex the organism to be produced, the longer the period during which it is dependent on a parent organism for food and protection. The contrast between the minute, rapidly-formed, and self-moving spore of a conferva, and the slowly developed seed of a tree, with its multiplied envelopes and large stock of nutriment laid by to nourish the germ during its first stages of growth, illustrates this law in its application to the vegetable world. Among animal organisms we may trace it in a series of contrasts from the monad whose spontaneously-divided halves are as self-sufficing the moment after their separation as was the original whole; up to man, whose offspring not only passes through a protracted gestation, and subsequently long depends on the breast for sustenance; but after that must have its food artificially administered; must, after it has learned to feed itself, continue to have bread, clothing, and shelter provided; and does not acquire the power of complete self-support until a time varying from fifteen to twenty years after its birth. Now this law applies to the mind as to the body. For mental pabulum also, every higher creature, and especially man, is at first dependent on adult aid. Lacking the ability to move about, the babe is as powerless to get materials on which to exercise its perceptions as it is to get supplies for its stomach. Unable to prepare its own food, it is in like manner unable to reduce many kinds of knowledge to a fit form for assimilation. The language through which all higher truths are to be gained it wholly derives from those surrounding it. And we see in such an example as the Wild Boy of Aveyron, the arrest of development that results when no help is received from parents and nurses. Thus, in providing from day to day the right kind of facts, prepared in the right manner, and giving them in due abundance at appropriate intervals, there is as much scope for active ministration to a child's mind as to its body. In either case it is the chief function of parents to see that the *conditions* requisite to growth are maintained. And, as in supplying aliment, and clothing, and shelter, they may fulfil this function without at all interfering with the spontaneous development of the limbs and viscera either in their order or

mode; so they may supply sounds for imitation, objects for examination, books for reading, problems for solution, and, if they use neither direct nor indirect coercion, may do this without in any way disturbing the normal process of mental evolution; or rather, may greatly facilitate that process. Hence the admission of the doctrines enunciated does not, as some might argue, involve the abandonment of all teaching; but leaves ample room for an active and elaborate course of culture.

Passing from generalities to special considerations it is to be remarked that in practice the Pestalozzian system seems scarcely to have fulfilled the promise of its theory. We hear of children not at all interested in its lessons,—disgusted with them rather; and so far as we can gather, the Pestalozzian schools have not turned out any unusual proportion of distinguished men,—if even they have reached the average. We are not surprised at this. The success of every appliance depends mainly upon the intelligence with which it is used. It is a trite remark that, having the choicest tools, an unskilful artisan will botch his work; and bad teachers will fail even with the best methods. Indeed, the goodness of the method becomes in such case a cause of failure; as, to continue the simile, the perfection of the tool becomes in undisciplined hands a source of imperfection in results. A simple unchanging, almost mechanical routine of tuition may be carried out by the commonest intellects, with such small beneficial effect as it is capable of producing; but a complete system,—a system as heterogeneous in its appliances as the mind in its faculties,—a system proposing a special means for each special end, demands for its right employment powers such as few teachers possess. The mistress of a dame-school can hear spelling-lessons; any hedge-schoolmaster can drill boys in the multiplication-table; but to teach spelling rightly by using the powers of the letters instead of their names, or to instruct in numerical combinations by experimental synthesis, a modicum of understanding is needful: and to pursue a like rational course throughout the entire range of studies, and with an amount of judgment, of invention, of intellectual sympathy, of analytical faculty, which we shall never see applied to while the tutorial office is held in such small esteem. The true education is practical only to the true philosopher. Judge, then, what prospect a philosophical method has of being acted out! Knowing so little of what we yet do of Psychology, and ignorant as to

teachers are of that little, what chance has a system which requires Psychology for its basis?

Further hindrance and discouragement has arisen from confounding the Pestalozzian principle with the forms in which it has been embodied. Because particular plans have not answered expectation, discredit has been cast upon the doctrine associated with them; no inquiry being made whether these plans truly conform to such doctrine. Judging as usual by the concrete rather than the abstract, men have blamed the theory for the bunglings of the practice. It is as though Papin's futile attempt to construct a steam-engine had been held to prove that steam could not be used as a motive power. Let it be constantly borne in mind that while right in his fundamental ideas Pestalozzi was not therefore right in all his applications of them: and we believe the fact to be that he was often wrong. As described even by his admirers, Pestalozzi was a man of partial intuitions, a man who had occasional flashes of insight, rather than a man of systematic thought. His first great success at Stantz was achieved when he had no books or appliances of ordinary teaching, and when "the only object of his attention was to find out at each moment what instruction his children stood peculiarly in need of, and what was the best manner of connecting it with the knowledge they already possessed." Much of his power was due, not to calmly reasoned-out plans of culture, but to his profound sympathy, which gave him an instinctive perception of childish needs and difficulties. He lacked the ability logically to co-ordinate and develop the truths which he thus from time to time laid hold of; and had in great measure to leave this to his assistants, Kruesi, Tobler, Buss, Niederer, and Schmid. The result is that in their details his own plans, and those vicariously devised, contain numerous crudities and inconsistencies. His nursery-method, described in "The Mother's Manual," beginning as it does with a nomenclature of the different parts of the body, and proceeding next to specify their relative positions, and next their connections, may be proved not at all in accordance with the initial stages of mental evolution. His process of teaching the mother tongue by formal exercises in the meanings of words and in the construction of sentences, is quite needless, and must entail on the pupil loss of time, labor, and happiness. His proposed mode of teaching geography is utterly un-Pestalozzian. And often where his plans are essentially sound they are either incomplete or vitiated by some remnant of the old regime.

While, therefore, we would defend in its entire extent the general doctrine which Pestalozzi inaugurated, we think great evil likely to result from an uncritical reception of his specific devices. That tendency which mankind constantly exhibit to canonize the forms and practices along with which any great truth has been bequeathed to them,—their liability to prostrate their intellects before the prophet, and swear by his every word,—their proneness to mistake the clothing of the idea for the idea itself; renders it needful to insist strongly upon the distinction between the fundamental principle of the Pestalozzian system, and the set of expedients devised for its practice: and to suggest that while the one may be considered as established, the other is probably nothing but an adumbration of the normal course. Indeed, on looking at the state of our knowledge we may be quite sure that this is the case. Before our educational methods can be made to harmonize in character and arrangement with the faculties in their mode and order of unfolding, it is first needful that we ascertain with some completeness how the faculties do unfold. At present our knowledge of the matter extends only to a few general notions. These general notions must be developed in detail,—must be transformed into a multitude of specific propositions, before we can be said to possess that *science* on which the *art* of education must be based. And then when we have definitely made out in what succession, and in what combinations the mental powers become active, it remains to choose out of the many possible ways of exercising each of them that which best conforms to its natural mode of action. Evidently, therefore, it is not to be supposed that even our most advanced modes of teaching are the right ones, or nearly the right ones.

Bearing in mind then this distinction between the principle and the practice of Pestalozzi, and inferring from the grounds assigned that the last must necessarily be very defective, the reader will rate at its true worth the dissatisfaction with the system which some have expressed; and will see that the due realization of the Pestalozzian idea remains to be achieved. Should he argue, however, from what has just been said that no such realization is at present practicable, and that all effort ought to be devoted to the preliminary inquiry; we reply, that though it is not possible for a scheme of culture to be perfected either in matter or form until a rational Psychology has been established, it is possible, with the aid of certain guiding principles, to make empirical approximations towards a

perfect scheme. To prepare the way for further research we will now specify these principles. Some of them have already been more or less distinctly implied in the foregoing pages; but it will be well here to state them all in logical order.

1. That in education we should proceed from the simple to the complex is a truth which has always been to some extent acted upon; not professedly, indeed, nor by any means consistently. The mind grows. Like all things that grow it progresses from the homogeneous to the heterogeneous; and a normal training system being an objective counterpart of this subjective process, must exhibit the like progression. Moreover, regarding it from this point of view, we may see that this formula has much wider applications than at first appears. For its *rational* involves not only that we should proceed from the single to the combined in the teaching of each branch of knowledge; but that we should do the like with knowledge as a whole. As the mind, consisting at first of but few active faculties, has its later-completed faculties successively awakened, and ultimately comes to have all its faculties in simultaneous action; it follows that our teaching should begin with but few subjects at once, and successively adding to these, should finally carry on all subjects abreast—that not only in its details should education proceed from the simple to the complex, but in its *ensemble* also.

2. To say that our lessons ought to start from the concrete and end in the abstract, may be considered as in part a repetition of the foregoing. Nevertheless it is a maxim that needs to be stated: if with no other view, then with the view of showing in certain cases what are truly the simple and the complex. For unfortunately there has been much misunderstanding on this point. General formulas which men have devised to express groups of details, and which have severally simplified their conceptions by uniting many facts into one fact, they have supposed must simplify the conceptions of the child also; quite forgetting that a generalization is simple only in comparison with the whole mass of particular truths it comprehends—that it is more complex than any one of these truths taken singly—that only after many of these single truths have been acquired does the generalization ease the memory and help the reason—and that to the child not possessing these single truths it is necessarily a mystery. Thus confounding two kinds of simplification, teachers have constantly erred by

setting out with “first principles”: a proceeding essentially, though not apparently, at variance with the primary rule; which implies that the mind should be introduced to principles through the medium of examples, and so should be led from the particular to the general—from the concrete to the abstract.

3. The education of the child must accord both in mode and arrangement with the education of mankind as considered historically: or in other words, the genesis of knowledge in the individual must follow the same course as the genesis of knowledge in the race. To M. Comte we believe society owes the enunciation of this doctrine—a doctrine which we may accept without committing ourselves to his theory of the genesis of knowledge either in its causes or its order. In support of this doctrine two reasons may be assigned, either of them sufficient to establish it. One is deducible from the law of hereditary transmission as considered in its wider consequences. For if it be true that men exhibit likeness to ancestry both in aspect and character—if it be true that certain mental manifestations, as insanity, will occur in successive members of the same family at the same age—if, passing from individual cases in which the traits of many dead ancestors mixing with those of a few living ones greatly obscure the law, we turn to national types, and remark how the contrasts between them are persistent from age to age—if we remember that these respective types came from a common stock, and that hence the present marked differences between them must have arisen from the action of modifying circumstances upon successive generations who severally transmitted the accumulated effects to their descendants—if we find the differences to be now organic, so that the French child grows into a French man even when brought up among strangers—and if the general fact thus illustrated is true of the whole nature, intellect inclusive; then it follows that if there be an order in which the human race has mastered its various kinds of knowledge, there will arise in every child an aptitude to acquire these kinds of knowledge in the same order. So that even were the order intrinsically indifferent, it would facilitate education to lead the individual mind through the steps traversed by the general mind. But the order is *not* intrinsically indifferent; and hence the fundamental reason why education should be a repetition of civilization in little. It is alike provable that the historical sequence was, in its main outlines, a necessary one; and that the causes which determined it apply to the child as to the race. Not to specify these

causes in detail, it will suffice here to point out that as the mind of humanity placed in the midst of phenomena and striving to comprehend them, has, after endless comparisons, speculations, experiments, and theories, reached its present knowledge of each subject by a specific route; it may rationally be inferred that the relationship between mind and phenomena is such as to prevent this knowledge from being reached by any other route; and that as each child's mind stands in this same relationship to phenomena, they can be accessible to it only through the same route. Hence in deciding upon the right method of education, an inquiry into the method of civilization will help to guide us.

4. One of the conclusions to which such an inquiry leads is, that in each branch of instruction we should proceed from the empirical to the rational. A leading fact in human progress is, that every science is evolved out of its corresponding art. It results from the necessity we are under, both individually and as a race, of reaching the abstract by way of the concrete, that there must be practice and an accruing experience with its empirical generalizations, before there can be science. Science is organized knowledge; and before knowledge can be organized, some of it must first be possessed. Every study, therefore, should have a purely experimental introduction; and only after an ample fund of observations has been accumulated, should reasoning begin. As illustrative applications of this rule, we may instance the modern course of placing grammar, not before language, but after it; or the ordinary custom of prefacing perspective by practical drawing. By and by further applications of it will be indicated.

5. A second corollary from the foregoing general principle, and one which cannot be too strenuously insisted upon, is, that in education the process of self-development should be encouraged to the fullest extent. Children should be led to make their own investigations, and to draw their own inferences. They should be *told* as little as possible, and induced to *discover* as much as possible. Humanity has progressed solely by self-instruction; and that to achieve the best results, each mind must progress somewhat after the same fashion, is continually proved by the marked success of self-made men. Those who have been brought up under the ordinary school-drill, and have carried away with them the idea that education is practicable only in that style, will think it hopeless to make children their own teachers. If, however, they will call to mind that the all-important knowledge of surrounding objects which a child gets

in its early years is got without help—if they will remember that the child is self-taught in the use of its mother tongue—if they will estimate the amount of that experience of life, that out-of-school wisdom, which every boy gathers for himself—if they will mark the unusual intelligence of the uncared-for London *gamin*, as shown in all the directions in which his faculties have been tasked—if further, they will think how many minds have struggled up unaided, not only through the mysteries of our irrationally planned *curriculum*, but through hosts of other obstacles besides; they will find it a not unreasonable conclusion, that if the subjects be put before him in right order and right form, any pupil of ordinary capacity will surmount his successive difficulties with but little assistance. Who indeed can watch the ceaseless observation, and inquiry, and inference going on in a child's mind, or listen to its acute remarks on matters within the range of its faculties, without perceiving that these powers which it manifests, if brought to bear systematically upon any studies *within the same range*, would readily master them without help? This need for perpetual telling is the result of our stupidity, not of the child's. We drag it away from the facts in which it is interested, and which it is actively assimilating of itself; we put before it facts far too complex for it to understand, and therefore distasteful to it; finding that it will not voluntarily acquire these facts, we thrust them into its mind by force of threats and punishment; by thus denying the knowledge it craves, and cramming it with knowledge it cannot digest, we produce a morbid state of its faculties, and a consequent disgust for knowledge in general; and when, as a result partly of the stolid indolence we have brought on, and partly of still continued unfitness in its studies, the child can understand nothing without explanation, and becomes a mere passive recipient of our instruction, we infer that education must necessarily be carried on thus. Having by our method induced helplessness, we straightway make the helplessness a reason for our method. Clearly then the experience of pedagogues cannot rationally be quoted against the doctrine we are defending. And whoever sees this will see that we may safely follow the method of nature throughout—may, by a skilful ministration, make the mind as self-developing in its later stages as it is in its earlier ones; and that only by doing this can we produce the highest power and activity.

6. As a final test by which to judge any plan of culture, should come the question,—Does it create a pleasurable excitement in the

pupils? When in doubt whether a particular mode or arrangement is or is not more in harmony with the foregoing principles than some other, we may safely abide by this criterion. Even when, as considered theoretically, the proposed course seems the best, yet if it produce no interest, or less interest than another course, we should relinquish it; for a child's intellectual instincts are more trustworthy than our reasonings. In respect to the knowing faculties, we may confidently trust in the general law, that under normal conditions, healthful action is pleasurable, while action which gives pain is not healthful. Though at present very incompletely conformed to by the emotional nature, yet by the intellectual nature, or at least by those parts of it which the child exhibits, this law is almost wholly conformed to. The repugnances to this and that study which vex the ordinary teacher, are not innate, but result from his unwise system. Fellenberg says, "Experience has taught me that *indolence* in young persons is so directly opposite to their natural disposition to activity, that unless it is the consequence of bad education, it is almost invariably connected with some constitutional defect." And the spontaneous activity to which children are thus prone, is simply the pursuit of those pleasures which the healthful exercise of the faculties gives. It is true that some of the higher mental powers as yet but little developed in the race, and congenitally possessed in any considerable degree only by the most advanced, are indisposed to the amount of exertion required of them. But these, in virtue of their very complexity, will in a normal course of culture, come last into exercise, and will therefore have no demands made upon them until the pupil has arrived at an age when ulterior motives can be brought into play, and an indirect pleasure made to counterbalance a direct displeasure. With all faculties lower than these, however, the direct gratification consequent on activity is the normal stimulus; and under good management the only needful stimulus. When we are obliged to fall back on some other, we must take the fact as evidence that we are on the wrong track. Experience is daily showing with greater clearness that there is always a method to be found productive of interest—even of delight; and it ever turns out that this is the method proved by all other tests to be the right one.

With most, these guiding principles will weigh but little if left in this abstract form. Partly, therefore, to exemplify their application, and partly with a view of making sundry specific suggestions, we propose now to

pass from the theory of education to the practice of it.

It was the opinion of Pestalozzi—an opinion which has ever since his day been gaining ground—that education of some kind should begin from the cradle. Whoever has watched with any discernment, the wide-eyed gaze of the infant at surrounding objects, knows very well that education *does* begin thus early, whether we intend it or not; and that these fingerings and suckings of everything it can lay hold of, these open-mouthed listenings to every sound, are the first steps in the series which ends in the discovery of unseen planets, the invention of calculating engines, the production of great paintings, or the composition of symphonies and operas. This activity of the faculties from the very first being spontaneous and inevitable, the question is whether we shall supply in due variety the materials on which they may exercise themselves; and to the question so put, none but an affirmative answer can be given. As before said, however, agreement with Pestalozzi's theory does not involve agreement with his practice; and here occurs a case in point. Treating of instruction in spelling he says:—

"The spelling-book ought, therefore, to contain all the sounds of the language, and these ought to be taught in every family from the earliest infancy. The child who learns his spelling-book ought to repeat them to the infant in the cradle, before it is able to pronounce even one of them, so that they may be deeply impressed upon its mind by frequent repetition."

Joining this with the suggestions for "a nursery-method," as set down in his "Mother's Manual," in which he makes the names, positions, connections, numbers, properties, and uses of the limbs and body his first lessons, it becomes clear that Pestalozzi's notions on early mental development were too crude to enable him to devise judicious planes. Let us inquire into the course which Psychology dictates.

The earliest impressions which the mind can assimilate, are those given to it by the undecomposable sensations—resistance, light, sound, etc. Manifestly decomposable states of consciousness cannot exist before the states of consciousness out of which they are composed. There can be no idea of form until some familiarity with light in its gradations and qualities, or resistance in its different intensities, has been acquired; for, as has been long known, we recognize visible form by means of varieties of light, and tangible form by means of varieties of resistance. Similarly, no articulate sound is cognizable until the inarticulate sounds which go to make it up have been learned. And thus must it be

in every other case. Following, therefore, the necessary law of progression from the simple to the complex, we should provide for the infant a sufficiency of objects presenting different degrees and kinds of resistance, a sufficiency of objects reflecting different amounts and qualities of light, and a sufficiency of sounds contrasted in their loudness, their pitch and their *timbre*. How fully this *a priori* conclusion is confirmed by infantile instincts all will see on being reminded of the delight which every young child has in biting its toys, in feeling its brother's bright jacket-buttons, and pulling papa's whiskers—how absorbed it becomes in gazing at any gaudily painted object, to which it applies the word "pretty," when it can pronounce it, wholly in virtue of the bright colors—and how its face broadens into a laugh at the tattlings of its nurse, the snapping of a visitor's fingers, or any sound which it has not before heard. Fortunately, the ordinary practices of the nursery fulfil these early requirements of education to a considerable degree. Much, however, remains to be done; and it is of more importance that it should be done than at first appears. Every faculty during the period of its greatest activity—the period in which it is spontaneously evolving itself—is capable of receiving more vivid impressions than at any other period. Moreover, as these simplest elements must eventually be mastered, and as the mastery of them whenever achieved must take time, it becomes an economy of time to occupy this first stage of childhood, during which no other intellectual action is possible, in gaining a complete familiarity with them in all their modifications. Add to which, that both temper and health will be improved by the continual gratification resulting from a due supply of these impressions which every child so greedily assimilates. Space, could it be spared, might here be well filled by some suggestions towards a more systematic ministration to these simplest of the perceptions. But it must suffice to point out that any such ministration ought to be based upon the general truth that in the development of every faculty, markedly contrasted impressions are the first to be distinguished: that hence sounds greatly differing in loudness and pitch, colors very remote from each other, and substances widely unlike in hardness or texture, should be the first supplied; and that in each case the progression must be by slow degrees to impressions more nearly allied.

Passing on to object-lessons, which manifestly form a natural continuation of this primary culture of the senses, it is to be re-

marked, that the system commonly pursued is wholly at variance with the method of nature, as alike exhibited in infancy, in adult life, and in the course of civilization. "The child," says M. Marcel, "must be *shown* how all the parts of an object are connected, etc.;" and the various manuals of these object-lessons severally contain lists of the facts which the child is to be *told* respecting each of the things put before it. Now it needs but a glance at the daily life of the infant to see that all the knowledge of things which is gained before the acquirement of speech, is self-gained—that the qualities of hardness and weight associated with certain visual appearances, the possession of particular forms and colors by particular persons, the production of special sounds by animals of special aspects, are phenomena which it observes for itself. In manhood too, when there are no longer teachers at hand, the observations and inferences required for daily guidance, must be made unhelped; and success in life depends upon the accuracy and completeness with which they are made. Is it probable then, that while the process displayed in the evolution of humanity at large, is repeated alike by the infant and the man, a reverse process must be followed during the period between infancy and manhood? and that too, even in so simple a thing as learning the properties of objects? Is it not obvious, on the contrary, that one method must be pursued throughout? And is not nature perpetually thrusting this method upon us, if we had but the wit to see it, and the humility to adopt it? What can be more manifest than the desire of children for intellectual sympathy? Mark how the infant sitting on your knee thrusts into your face the toy it holds, that you too may look at it. See when it makes a creak with its wet finger on the table, how it turns and looks at you; does it again, and again looks at you; thus saying as clearly as it can—"Hear this new sound." Watch how the elder children come into the room exclaiming—"Mamma, see what a curious thing," "Mamma, look at this," "Mamma, look at that;" and would continue the habit, did not the silly mamma tell them not to tease her. Observe how, when out with the nurse-maid, each little one runs up to her with the new flower it has gathered, to show her how pretty it is, and to get her also, to say it is pretty. Listen to the eager volubility with which every urchin describes any novelty he has been to see, if only he can find some one who will attend with any interest. Does not the induction lie on the surface? Is it not clear that we must conform our course to these intellectual instincts

—that we must just systematize the natural process—that we must listen to all the child has to tell us about each object, must induce it to say everything it can think of about such object, must occasionally draw its attention to facts it has not yet observed, with the view of leading it to notice them itself whenever they recur, and must go on by and by to indicate or supply new series of things for a like exhaustive examination? See the way in which, on this method, the intelligent mother conducts her lessons. Step by step she familiarizes her little boy with the names of the simpler attributes, hardness, softness, color, taste, size, etc., in doing which she finds him eagerly help by bringing this to show her that it is red, and the other to make her feel that it is hard, as fast as she gives him words for these properties. Each additional property, as she draws his attention to it in some fresh thing which he brings her, she takes care to mention in connection with those he already knows; so that by the natural tendency to imitate, he may get into the habit of repeating them one after another. Gradually as there occur cases in which he omits to name one or more of the properties he has become acquainted with, she introduces the practice of asking him whether there is not something more that he can tell her about the thing he has got. Probably he does not understand. After letting him puzzle awhile she tells him; perhaps laughing at him at him a little for his failure. A few recurrences of this, and he perceives what is to be done. When next she says she knows something more about the object than he has told her, his pride is roused; he looks at it intently; he thinks over all that he has heard; and the problem being easy, presently finds it out. He is full of glee at his success, and she sympathizes with him. In common with every child, he delights in the discovery of his powers. He wishes for more victories, and goes in quest of more things about which to tell her. As his faculties unfold she adds quality after quality to his list: progressing from hardness and softness to roughness and smoothness, from color to polish, from simple bodies to composite ones—thus constantly complicating the problem as he gains competence, constantly taxing his attention and memory to a greater extent, constantly maintaining his interest by supplying him with new impressions such as his mind can assimilate, and constantly gratifying him by conquests over such small difficulties as he can master. In doing this she is manifestly but following out that spontaneous process that was going on during a still earlier period—simply aiding self-evolution;

and is aiding it in the mode suggested by the boy's instinctive behavior to her. Manifestly, too, the course she is pursuing is the one best calculated to establish a habit of exhaustive observation; which is the professed aim of these lessons. To *tell* a child this and to *show* it the other, is not to teach it how to observe, but to make it a mere recipient of another's observations: a proceeding which weakens rather than strengthens its powers of self-instruction—which deprives it of the pleasures resulting from successful activity—which presents this all-attractive knowledge under the aspect of formal tuition—and which thus generates that indifference and even disgust with which these object-lessons are not unfrequently regarded. On the other hand, to pursue the course above described is simply to guide the intellect to its appropriate food; to join with the intellectual appetites their natural adjuncts—*amour propre* and the desire for sympathy; to induce by the union of all these an intensity of attention which insures perceptions alike vivid and complete; and to habituate the mind from the beginning to that practice of self-help which it must ultimately follow.

Object-lessons should not only be carried on after quite a different fashion from that commonly pursued, but should be extended to a range of things far wider, and continue to a period far later, than now. They should not be limited to the contents of the house: but should include those of the fields and hedges, the quarry and the sea-shore. They should not cease with early childhood; but should be so kept up during youth¹ as insensibly to merge into the investigations of the naturalist and the man of science. Here again we have but to follow nature's leadings. Where can be seen an intenser delight than that of children picking up new flowers and watching new insects, or hoarding pebbles and shells? And who is there but perceives that by sympathizing with them they may be led on to any extent of inquiry into the qualities and structures of these things? Every botanist who has had children with him in the woods and the lanes must have noticed how eagerly they joined in his pursuits, how keenly they searched out plants for him, how intently they watched whilst he examined them, how they overwhelmed him with questions. The consistent follower of Bacon—the “servant and interpreter of nature,” will see that we ought modestly to adopt the course of culture thus indicated. Having gained due familiarity with the simpler properties of inorganic objects, the child should by the same process be led on to a like exhaustive

examination of the things it picks up in its daily walks—the less complex facts they present being alone noticed at first: in plants, the color, number, and forms of the petals and shapes of the stalks and leaves: in insects, the numbers of the wings, legs, and antennæ, and their colors. As these become fully appreciated and invariably observed, further facts may be successively introduced: in the one case, the numbers of stamens and pistils, the forms of the flowers, whether radial or bilateral in symmetry, the arrangement and character of the leaves, whether opposite or alternate, stalked or sessile, smooth or hairy, serrated, toothed, or crenate; in the other, the divisions of the body, the segments of the abdomen, the markings of the wings, the number of joints in the legs, and the forms of the smaller organs—the system pursued throughout being that of making it the child's ambition to say respecting everything it finds, all that can be said. Then when a fit age has been reached, the means of preserving these plants which have become so interesting in virtue of the knowledge obtained of them, may as a great favor be supplied; and eventually, as a still greater favor, may also be supplied the apparatus needful for keeping the larvæ of our common butterflies and moths through their transformations—a practice which, as we can personally testify, yields the highest gratification; is continued with ardor for years; when joined with the formation of an entomological collection, adds immense interest to Saturday-afternoon rambles; and forms an admirable introduction to the study of physiology.

We are quite prepared to hear from many that all this is throwiſg away time and energy; and that children would be much better occupied in writing their copies or learning their pence-tables, and so fitting themselves for the business of life. We regret that such crude ideas of what constitutes education and such a narrow conception of utility, should still be generally prevalent. Saying nothing on the need for a systematic culture of the perceptions and the value of the practices above inculcated as subserving that need, we are prepared to defend them even on the score of the knowledge gained. If men are to be mere cits, mere porers over ledgers, with no ideas beyond their trades—if it is well that they should be as the cockney whose conception of rural pleasures extends no further than sitting in a tea-garden smoking pipes and drinking porter; or as the squire who thinks of woods as places for shooting in, of uncultivated plants as nothing but weeds, and who classifies animals into game, vermin, and

stock—then indeed it is needless for men to learn anything that does not directly help to replenish the till and fill the larder. But if there is a more worthy aim for us than to be drudges—if there are other uses in the things around us than their power to bring money—if there are higher faculties to be exercised than acquisitive and sensual ones—if the pleasures which poetry and art and science and philosophy can bring are of any moment—then is it desirable that the instinctive inclination which every child shows to observe natural beauties and investigate natural phenomena should be encouraged. But this gross utilitarianism which is content to come into the world and quit it again without knowing what kind of a world it is or what it contains, may be met on its own ground. It will by and by be found that a knowledge of the laws of life is more important than any other knowledge whatever—that the laws of life include not only all bodily and mental processes, but by implication all the transactions of the house and the street, all commerce, all politics, all morals—and that therefore without a due acquaintance with them neither personal nor social conduct can be rightly regulated. It will eventually be seen too, that the laws of life are essentially the same throughout the whole organic creation; and further, that they cannot be properly understood in their complex manifestations until they have been studied in their simpler ones. And when this is seen, it will be also seen that in aiding the child to acquire the out-of-door information for which it shows so great an avidity, and in encouraging the acquisition of such information throughout youth, we are simply inducing it to store up the raw material for future organization—the facts that will one day bring home to it with due force those great generalizations of science by which actions may be rightly guided.

The spreading recognition of drawing as an element of education, is one amongst many signs of the more rational views on mental culture now beginning to prevail. Once more it may be remarked that teachers are at length adopting the course which nature has for ages been pressing upon their notice. The spontaneous efforts made by children to represent the men, houses, trees, and animals around them—on a slate if they can get nothing better, or with lead-pencil on paper, if they can beg them—are familiar to all. To be shown through a picture-book is one of their highest gratifications; and as usual, their strong imitative tendency presently generates in them the ambition to make pictures themselves also. This attempt to depict

the striking things they see is a further instinctive exercise of the perceptions—a means whereby still greater accuracy and completeness of observation is induced. And alike by seeking to interest us in their discoveries of the sensible properties of things, and by their endeavors to draw, they solicit from us just that kind of culture which they most need.

Had teachers been guided by nature's hints not only in the making of drawing a part of education, but in the choice of their modes of teaching it, they would have done still better than they have done. What is it that the child first tries to represent? Things that are large, things that are attractive in color, things round which its pleasurable associations most cluster—human beings from whom it has received so many emotions, cows and dogs which interest by the many phenomena they present, houses that are hourly visible and strike by their size and contrast of parts. And which of all the processes of representation gives it most delight? Coloring. Paper and pencil are good in default of something better; but a box of paints and a brush—these are the treasures. The drawing of outlines immediately becomes secondary to coloring—is gone through mainly with a view to the coloring; and if leave can be got to color a book of prints, how great is the favor? Now, ridiculous as such a position will seem to drawing-masters, who postpone coloring and who teach form by a dreary discipline of copying lines, we believe that the course of culture thus indicated is the right one. That priority of color to form, which, as already pointed out, has a psychological basis, and in virtue of which psychological basis arises this strong preference in the child, should be recognized from the very beginning; and from the very beginning also the things imitated should be real. That greater delight in color which is not only conspicuous in children but persists in most persons throughout life, should be continuously employed as the natural stimulus to the mastery of the comparatively difficult and unattractive form—should be the prospective reward for the achievement of form. And these instinctive attempts to represent interesting actualities should be all along encouraged; in the conviction that as, by a widening experience, smaller and more practicable objects become interesting they too will be attempted; and that so a gradual approximation will be made towards imitations having some resemblance to the realities. No matter how grotesque the shapes produced: no matter how daubed and glaring the colors. The question is not whether the child is producing

good drawings: the question is, whether it is developing its faculties. It has first to gain some command over its fingers, some crude notions of likeness; and this practice is better than any other for these ends; seeing that it is the spontaneous and the interesting one. During these early years, be it remembered, no formal drawing-lessons are possible: shall we therefore repress, or neglect to aid, these efforts at self-culture? or shall we encourage and guide them as normal exercises of the perceptions and the powers of manipulation? If by the supply of cheap woodcuts to be colored, and simple contour-maps to have their boundary lines tinted, we can not only pleasantly draw out the faculty of color, but can incidentally produce some familiarity with the outlines of things and countries, and some ability to move the brush steadily; and if by the supply of temptingly-painted objects we can keep up the instinctive practice of making representations, however rough, it must happen that by the time drawing is commonly commenced there will exist a facility that would else have been absent. Time will have been gained; and trouble, both to teacher and pupil, saved.

From all that has been said, it may be readily inferred that we wholly disapprove of the practice of drawing from copies; and still more so of that formal discipline in making straight lines and curved lines and compound lines, with which it is the fashion of some teachers to begin. We regret to find that the Society of Arts has recently, in its series of manuals on "Rudimentary Art-Instruction," given its countenance to an elementary drawing-book, which is the most vicious in principle that we have seen. We refer to the "Outline from Outline, or from the Flat," by John Bell, sculptor. As expressed in the prefatory note, this publication proposes "to place before the student a simple, yet logical mode of instruction;" and to this end sets out with a number of definitions thus:—

"A simple line in drawing is a thin mark drawn from one point to another.

"Lines may be divided, as to their nature in drawing, into two classes:—

"1. *Straight*, which are marks that go the shortest road between two points, as A B.

"2. Or *Curved*, which are marks which do not go the shortest road between two points, as C D."

And so the introduction progresses to horizontal lines, perpendicular lines, oblique lines, angles of the several kinds, and the various figures which lines and angles make up. The work is, in short, a grammar of form, with exercises. And thus the system of commencing

with a dry analysis of elements, which, in the teaching of language, has been exploded, is to be re-instituted in the teaching of drawing. The abstract is to be preliminary to the concrete. Scientific conceptions are to precede empirical experiences. That this is an inversion of the normal order, we need scarcely repeat. It has been well said concerning the custom of prefacing the art of speaking any tongue by a drilling in the parts of speech and their functions, that it is about as reasonable as prefacing the art of walking by a course of lessons on the bones, muscles, and nerves of the legs; and much the same thing may be said of the proposal to preface the art of representing objects by a nomenclature and definitions of the lines which they yield on analysis. These technicalities are alike repulsive and needless. They render the study distasteful at the very outset; and all with the view of teaching that, which, in the course of practice, will be learnt unconsciously. Just as the child incidentally gathers the meanings of ordinary words from the conversations going on around it, without the help of dictionaries; so, from the remarks on objects, pictures, and its own drawings, will it presently acquire, not only without effort but even pleasurably, those same scientific terms which, if presented at first, are a mystery and a weariness.

If any dependence is to be placed upon the general principles of education that have been laid down, the process of learning to draw should be throughout continuous with those efforts of early childhood described above, as so worthy of encouragement. By the time that the voluntary practice thus initiated has given some steadiness of hand, and some tolerable ideas of proportion, there will have arisen a vague notion of body as presenting its three dimensions in perspective. And when, after sundry abortive, Chinese-like attempts to render this appearance on paper there has grown up a pretty clear perception of the thing to be achieved, and a desire to achieve it, a first lesson in empirical perspective may be given by means of the apparatus occasionally used in explaining perspective as a science. This sounds formidable; but the experiment is both comprehensive and interesting to any boy or girl of ordinary intelligence. A plate of glass so framed as to stand vertically on the table, being placed before the pupil, and a book, or like simple object, laid on the other side of it, he is requested, whilst keeping the eye in one position, to make ink dots upon the glass, so that they may coincide with, or hide the corners of this object. He is then told to

join these dots by lines; on doing which he perceives that the lines he makes hide, or coincide with, the outlines of the object. And then on being asked to put a sheet of paper on the other side of the glass, he discovers that the lines he has thus drawn represent the object as he saw it. They not only look like it, but he perceives that they must be like it, because he made them agree with its outlines; and by removing the paper he can repeatedly convince himself that they do agree with its outlines. The fact is new and striking; and serves him as an experimental demonstration, that lines of certain lengths, placed in certain directions on a plane, can represent lines of other lengths, and having other directions in space. Subsequently, by gradually changing the position of the object he may be led to observe how some lines shorten and disappear, whilst others come into sight and lengthen. The convergence of parallel lines, and, indeed, all the leading facts of perspective may, from time to time, be similarly illustrated to him. If he has been duly accustomed to self-help, he will gladly, when it is suggested, make the attempt to draw one of these outlines upon paper, by the eye only; and it may soon be made an exciting aim to produce, unassisted, a representation, as like as he can, to one subsequently sketched on the glass. Thus, without the unintelligent mechanical practice of copying other drawings, but by a method at once simple and attractive—rational, yet not abstract, a familiarity with the linear appearances of things, and a faculty of rendering them, may be, step by step, acquired. To which advantages add these:—that even thus early the pupil learns, almost unconsciously, the true theory of a picture—namely, that it is a delineation of objects as they appear when projected on a plane placed between them and the eye; and that when he reaches a fit age for commencing scientific perspective he is already thoroughly acquainted with the facts which form its logical basis.

As exhibiting a rational mode of communicating primary conceptions in geometry, we cannot do better than quote the following passage from Mr. Wyse:—

"A child has been in the habit of using cubes for arithmetic; let him use them also for the elements of geometry. I would begin with solids, the reverse of the usual plan. It saves all the difficulty of absurd definitions, and bad explanations on points, lines, and surfaces, which are nothing but abstractions. . . . A cube presents many of the principal elements of geometry; it at once exhibits points, straight lines, parallel lines, angles, parallelograms, etc., etc. These cubes are divisible into various parts. The pupil has already been familiarized with such divisions in numeration, and he now proceeds to a comparison of their several parts, and of the relation of these parts to each other. . . . From thence he

advances to globes, which furnish him with elementary notions of the circle, of curves generally, etc., etc.

"Being tolerably familiar with solids, he may now substitute planes. The transition may be made very easy. Let the cube, for instance, be cut into thin divisions, and placed on paper: he will then see as many plane rectangles as he has divisions: so with all the others. Globes may be treated in the same manner; he will thus see how surfaces really are generated, and be enabled to abstract them with facility in every solid.

"He has thus acquired the alphabet and reading of geometry. He now proceeds to write it.

"The simplest operation, and therefore the first, is merely to place these planes on a piece of paper, and pass the pencil round them. When this has been frequently done, the plane may be put at a little distance, and the child required to copy it, and so on."

A stock of geometrical conceptions having been obtained, in some such manner as this recommended by Mr. Wyse, a further step may, in course of time, be taken, by introducing the practice of testing the correctness of all figures drawn by the eye; thus alike exciting an ambition to make them exact, and continually illustrating the difficulty of fulfilling that ambition. There can be little doubt that geometry had its origin (as, indeed, the word implies) in the methods discovered by artisans and others, of making accurate measurement for the foundations of buildings, areas of inclosures, and the like; and that its truths came to be treasured up, merely with a view to their immediate utility. They should be introduced to the pupil under analogous relationships. In the cutting out of pieces for his card-houses, in the drawing of ornamental diagrams for coloring, and in those various instructive occupations which an inventive teacher will lead him into, he may be for a length of time advantageously left, like the primitive builder, to tentative processes; and will so gain an abundant experience of the difficulty of achieving his aims by the unaided senses. When, having meanwhile undergone a valuable discipline of the perceptions, he has reached a fit age for using a pair of compasses, he will, whilst duly appreciating these as enabling him to verify his ocular guesses, be still hindered by the difficulties of the approximative method. In this stage he may be left for a further period: partly as being yet too young for anything higher; partly because it is desirable that he should be made to feel still more strongly the want of systematic contrivances. If the acquisition of knowledge is to be made continuously interesting; and if, in the early civilization of the child, as in the early civilization of the race, science becomes attractive only as ministering to art; it is manifest that the proper preliminary to geometry is a long practice in those constructive processes which geometry will facilitate. Observe that here, too, nature points the way. Almost invariably, children show a strong

propensity to cut out things in paper, to make, to build—a propensity which, if duly encouraged and directed, will not only prepare the way for scientific conceptions, but will develop those powers of manipulation in which most people are so deficient.

When the observing and inventive faculties have attained the requisite power, the pupil may be introduced to empirical geometry; that is—geometry dealing with methodical solutions, but not with the demonstrations of them. Like all other transitions in education, this should be made not formally but incidentally; and the relationship to constructive art should still be maintained. To make a tetrahedron in cardboard, like one given to him, is a problem which will alike interest the pupil, and serve as a convenient starting-point. In attempting this, he finds it needful to draw four equilateral triangles arranged in special positions. Being unable in the absence of an exact method to do this accurately he discovers on putting the triangles into their respective positions, that he cannot make their sides fit, and that their angles do not properly meet at the apex. He may now be shown how by describing a couple of circles, each of these triangles may be drawn with perfect correctness and without guessing; and after his failure he will duly value the information. Having thus helped him to the solution of his first problem, with the view of illustrating the nature of geometrical methods, he is in future to be left altogether to his own ingenuity in solving the questions put to him. To bisect a line, to erect a perpendicular, to describe a square, to bisect an angle, to draw a line parallel to a given line, to describe a hexagon, are problems which a little patience will enable him to find out. And from these he may be led on step by step to questions of a more complex kind; all of which, under judicious management, he will puzzle through unhelped. Doubtless, many of those brought up under the old regime, will look upon this assertion sceptically. We speak from facts, however, and those neither few nor special. We have seen a class of boys become so interested in making out solutions to these problems, as to look forward to their geometry lesson as a chief event of the week. Within the last month, we have been told of one girls' school, in which some of the young ladies voluntarily occupy themselves with geometrical questions out of school-hours; and of another, in which they not only do this, but in which one of them is begging for problems to find out during the holidays—both which facts we state on the authority of the teacher. There could indeed be no stronger proofs than are thus afforded

of the practicability and the immense advantage of self-development. A branch of knowledge which as commonly taught is dry and even repulsive, may, by following the method of nature, be made extremely interesting and profoundly beneficial. We say profoundly beneficial, because the effects are not confined to the gaining of geometrical facts, but often revolutionize the whole state of mind. It has repeatedly occurred, that those who have been stupefied by the ordinary school-drill—by its abstract formulas, by its wearisome tasks, by its cramming—have suddenly had their intellects roused, by thus ceasing to make them passive recipients, and inducing them to become active discoverers. The discouragement brought about by bad teaching having been diminished by a little sympathy, and sufficient perseverance induced to achieve a first success, there arises a revulsion of feeling affecting the whole nature. They no longer find themselves incompetent; they too can do something. And gradually as success follows success, the incubus of despair disappears, and they attack the difficulties of their other studies with a courage that insures conquest.

This empirical geometry which presents an endless series of problems, and should be continued along with other studies for years, may throughout be advantageously accompanied by those concrete applications of its principles which serve as its preliminary. After the cube, the octahedron, and the various forms of pyramid and prism have been mastered, may come the more complex regular bodies—the dodecahedron, and the icosahedron—to construct which out of single pieces of cardboard requires considerable ingenuity. From these, the transition may naturally be made to such modified forms of the regular bodies as are met with in crystals—the truncated cube, the cube with its dihedral as well as its solid angles truncated, the octahedron and the various prisms as similarly modified; in imitating which numerous forms assumed by different metals and salts, an acquaintance with the leading facts of mineralogy will be incidentally gained. After long continuance in exercises of this kind, rational geometry, as may be supposed, presents no obstacles. Constantly habituated to contemplate relationships of form and quantity, and vaguely perceiving from time to time the necessity of certain results as reached by certain means, the pupil comes to regard the demonstrations of Euclid as the missing supplements to his familiar problems. His well-disciplined faculties enable him easily to master its successive propositions, and to appreciate their value; and he has the occasional gratification of

finding some of his own methods proved to be true. Thus he enjoys what is to the unprepared a dreary task. It only remains to add, that his mind will presently arrive at a fit condition for that most valuable of all exercises for the reflective faculties—the making of original demonstrations. Such theorems as those appended to the successive books of the Messrs. Chambers' Euclid, will soon become practicable to him; and in proving them the process of self-development will be not intellectual only, but moral.

To continue much further these suggestions would be to write a detailed treatise on education, which we do not purpose. The foregoing outlines of plans for exercising the perceptions in early childhood for conducting object-lessons for teaching drawing and geometry, must be considered as roughly-sketched illustrations of the method dictated by the general principles previously specified. We believe that on examination they will be found not only to progress from the simple to the complex, from the concrete to the abstract, from the empirical to the rational; but to satisfy the further requirements that education shall be a repetition of civilization in little, that it shall be as much as possible a process of self-evolution, and that it shall be pleasurable. That there should be one type of method capable of satisfying all these conditions, tends alike to verify the conditions, and to prove that type of method the right one. And when we add that this method is the logical outcome of the tendency, characterizing all modern systems of instruction—that it is but an adoption in full of the method of nature which they adopt partially—that it displays this complete adoption of the method of nature, not only by conforming to the above principles, but by following the suggestions which the unfolding mind itself gives, facilitating its spontaneous activities, and so aiding the developments which nature is busy with—when we add this, there seems abundant reason to conclude, that the mode of procedure above exemplified, closely approximates to the true one.

A few paragraphs must be appended in further inculcation of the two general principles, alike the most important and the least attended to: we mean the principle that throughout youth, as in early childhood and in maturity, the process shall be one of self-instruction; and the obverse principle, that the mental action induced by this process shall be throughout intrinsically grateful. If progression from simple to complex, and from concrete to abstract, be considered the essential

requirements as dictated by abstract psychology, then do these requirements that knowledge shall be self-mastered, and pleurably mastered, become the tests by which we may judge whether the dictates of abstract psychology are being fulfilled. If the first embody the leading generalizations of the science of mental growth, the last are the chief canons of the art of fostering mental growth. For manifestly if the steps in our curriculum are so arranged that they can be successively ascended by the pupil himself with little or no help, they must correspond with the stages of evolution in his faculties; and manifestly if the successive achievements of these steps are intrinsically gratifying to him, it follows that they require no more than a normal exercise of his powers.

But the making education a process of self-evolution has other advantages than this of keeping our lessons in the right order. In the first place, it guarantees a vividness and permanency of impression which the usual methods can never produce. Any piece of knowledge which the pupil has himself acquired, any problem which he has himself solved, becomes by virtue of the conquest much more thoroughly his than it could else be. The preliminary activity of mind which his success implies, the concentration of thought necessary to it, and the excitement consequent on his triumph, conspire to register all the facts in his memory in a way that no mere information heard from a teacher, or read in a school-book, can be registered. Even if he fails, the tension to which his faculties have been wound up insures his remembrance of the solution when given to him, better than half a dozen repetitions would. Observe again, that this discipline necessitates a continuous organization of the knowledge he acquires. It is in the very nature of facts and inferences, assimilated in this normal manner, that they successively become the premises of further conclusions,—the means of solving still further questions. The solution of yesterday's problem helps the pupil in mastering to-day's. Thus the knowledge is turned into faculty as soon as it is taken in, and forthwith aids in the general function of thinking—does not lie merely written in the pages of an internal library, as when rote-learned. Mark further, the importance of the moral culture which this constant self-help involves. Courage in attacking difficulties, patient concentration of the attention, perseverance through failures—these are characteristics which after-life specially requires; and these are characteristics which this system of making the mind work for its food specially pro-

duces. That it is thoroughly practicable to carry out instruction after this fashion we can ourselves testify; having been in youth thus led to successively solve the comparatively complex problems of Perspective. And that leading teachers have been gradually tending in this direction is indicated alike in the saying of Fellenberg, that "the individual, independent activity of the pupil is of much greater importance than the ordinary busy officiousness of many who assume the office of educators;" in the opinion of Horace Mann, that "unfortunately education amongst us at present consists too much in *telling*, not in *training*;" and in the remark of M. Marcel that "what the learner discovers by mental exertion is better known than what is told to him."

Similarly with the correlative requirement, that the method of culture pursued shall be one productive of an intrinsically happy activity,—an activity not happy in virtue of extrinsic rewards to be obtained, but in virtue of its own healthfulness. Conformity to this requirement not only guards us against thwarting the normal process of evolution, but incidentally secures positive benefits of importance. Unless we are to return to an ascetic morality, the maintenance of youthful happiness must be considered as in itself a worthy aim. Not to dwell upon this, however, we go on to remark that a pleasurable state of feeling is far more favorable to intellectual action than one of indifference or disgust. Every one knows that things read, heard, or seen with interest, are better remembered than those read, heard, or seen with apathy. In the one case the faculties appealed to are actively occupied with the subject presented; in the other they are inactively occupied with it; and the attention is continually drawn away after more attractive thoughts. Hence the impressions are respectively strong and weak. Moreover, the intellectual listlessness which a pupil's lack of interest in any study involves, is further complicated by his anxiety, by his fear of consequences, which distract his attention, and increase the difficulty he finds in bringing his faculties to bear upon these facts that are repugnant to them. Clearly, therefore, the efficiency of any intellectual action will, other things equal, be proportionate to the gratification with which it is performed.

It should be considered also, that important moral consequences depend upon the habitual pleasure or pain which daily lessons produce. No one can compare the faces and manners of two boys—the one made happy by mastering interesting subjects, and the other made mis-

erable by disgust with his studies, by consequent failure, by cold looks, by threats, by punishment—without seeing that the disposition of the one is being benefited, and that of the other greatly injured. Whoever has marked the effect of intellectual success upon the mind, and the power of the mind over the body, will see that in the one case both temper and health are favorably affected; whilst in the other there is danger of permanent moroseness, of permanent timidity, and even of permanent constitutional depression. To all which considerations we must add the further one, that the relationship between teachers and their pupils is, other things equal, rendered friendly and influential, or antagonistic and powerless, according as the system of culture produces happiness or misery. Human beings are at the mercy of their associated ideas. A daily minister of pain cannot fail to be regarded with a secret dislike, and if he causes no emotions but painful ones, will inevitably be hated. Conversely, he who constantly aids children to their ends, hourly provides them with the satisfactions of conquest, hourly encourages them through their difficulties and sympathizes in their successes, cannot fail to be liked; nay, if his behavior is consistent throughout, must be loved. And when we remember how efficient and benign is the control of a master who is felt to be a friend, when compared with the control of one who is looked upon with aversion, or at best indifference, we may infer that the indirect advantages of conducting education on the happiness principle do not fall far short of the direct ones. To all who question the possibility of acting out the system here advocated, we reply as before, that not only does theory point to it, but experience commends it. To the many verdicts of distinguished teachers who since Pestalozzi's time have testified this, may be here added that of Professor Pillans, who asserts that "where young people are taught as they ought to be, they are quite as happy in school as at play, seldom less delighted, nay, often more, with the well-directed exercise of their mental energies, than with that of their muscular powers."

As suggesting a final reason for making education a process of self-instruction, and by consequence a process of pleasurable instruction, we may advert to the fact that, in proportion as it is made so, is there a probability that education will not cease when school-days end. As long as the acquisition of knowledge is rendered habitually repugnant, so long will there be a prevailing tendency to discontinue it when free from the coercion of parents and masters. And when the acquisi-

tion of knowledge has been rendered habitually gratifying, then will there be as prevailing a tendency to continue, without superintendence, that same self-culture previously carried on under superintendence. These results are inevitable. While the laws of mental association remain true—while men dislike the things and places that suggest painful recollections, and delight in those which call to mind bygone pleasures—painful lessons will make knowledge repulsive, and pleasurable lessons will make it attractive. The men to whom in boyhood information came in dreary tasks along with threats of punishment, and who were never led into habits of independent inquiry, are unlikely to be students in after years; while those to whom it came in the natural forms, at the proper times, and who remember its facts as not only interesting in themselves, but as the occasions of a long series of gratifying successes, are likely to continue through life that self-instruction commenced in youth.

CHAPTER III.

MORAL EDUCATION.

STRANGELY enough, the most glaring defect in our programmes of education is entirely overlooked. While much is being done in the detailed improvement of our systems in respect both of matter and manner, the most pressing desideratum has not yet been even recognized as a desideratum. To prepare the young for the duties of life is tacitly admitted by all to be the end which parents and schoolmasters should have in view; and happily the value of the things taught, and the goodness of the method followed in teaching them, are now ostensibly judged by their fitness to this end. The propriety of substituting for an exclusively classical training a training in which the modern languages shall have a share, is argued on this ground. The necessity of increasing the amount of science is urged for like reasons. But though some care is taken to fit youth of both sexes for society and citizenship, no care whatever is taken to fit them for the still more important position they will ultimately have to fill—the position of parents. While it is seen that for the purpose of gaining a livelihood, an elaborate preparation is needed, it appears to be thought that for the bringing up of children, no preparation whatever is needed. While many years are spent by a boy in gaining knowledge, of which the chief value is that it constitutes "the education of a gentleman;"

and while many years are spent by a girl in those decorative acquirements which fit her for evening parties; not an hour is spent by either of them in preparation for that gravest of all responsibilities—the management of a family. Is it that this responsibility is but a remote contingency? On the contrary, it is certain to devolve on nine out of ten. Is it that the discharge of it is easy? Certainly not: of all functions which the adult has to fulfil this is the most difficult. Is it that each may be trusted by self-instruction to fit himself, or herself, for the office of parent? No: not only is the need for such self-instruction unrecognized, but the complexity of the subject renders it the one of all others in which self-instruction is least likely to succeed. No rational plea can be put forward for leaving the Art of Education out of our curriculum. Whether as bearing upon the happiness of parents themselves, or whether as affecting the characters and lives of their children and remote descendants, we must admit that a knowledge of the right methods of juvenile culture, physical, intellectual, and moral, is a knowledge second to none in importance. This topic should occupy the highest and last place in the course of instruction passed through by each man and woman. As physical maturity is marked by the ability to produce offspring, so mental maturity is marked by the ability to train those offspring. *The subject which involves all other subjects, and therefore the subject in which the education of every one should culminate, is the Theory and Practice of Education.*

In the absence of this preparation, the management of children, and more especially the moral management, is lamentably bad. Parents either never think about the matter at all, or else their conclusions are crude and inconsistent. In most cases, and especially on the part of mothers, the treatment adopted on every occasion is that which the impulse of the moment prompts: it springs not from any reasoned-out conviction as to what will most conduce to the child's welfare, but merely expresses the passing parental feelings, whether good or ill; and varies from hour to hour as these feelings vary. Or if these blind dictates of passion are supplemented by any definite doctrines and methods, they are those that have been handed down from the past, or those suggested by the remembrances of childhood, or those adopted from nurses and servants—methods devised not by the enlightenment, but by the ignorance of the time. Commenting on the chaotic state of opinion and practice relative to family government, Richter writes:—

"If the secret variances of a large class of ordinary fathers were brought to light, and laid down as a plan of studies, and reading catalogued for a moral education, they would run somewhat after this fashion:—In the first hour 'pure morality must be read to the child, either by myself or the tutor;' in the second, 'mixed morality, or that which may be applied to one's own advantage;' in the third, 'do you not see that your father does so and so?' in the fourth, 'you are little, and this is only fit for grown-up people;' in the fifth, 'the chief matter is that you should succeed in the world, and become something in the state;' in the sixth, 'not the temporary, but the eternal, determines the worth of a man;' in the seventh, 'therefore rather suffer injustice, and be kind;' in the eighth, 'but defend yourself bravely if any one attack you;' in the ninth, 'do not make a noise, dear child;' in the tenth, 'a boy must not sit so quiet;' in the eleventh, 'you must obey your parents better;' in the twelfth, 'and educate yourself.' So by the hourly change of his principles, the father conceals their untenableness and onesidedness. As for his wife, she is neither like him, nor yet like that harlequin who came on to the stage with a bundle of papers under each arm, and answered to the inquiry, what he had under his right arm, 'orders,' and to what he had under his left arm, 'counter-orders.' But the mother might be much better compared to a giant Briareus, who had a hundred arms, and a bundle of papers under each."

This state of things is not to be readily changed. Generations must pass before any great amelioration of it can be expected. Like political constitutions, educational systems are not made, but grow; and within brief periods growth is insensible. Slow, however, as must be any improvement, even that improvement implies the use of means; and among the means is discussion.

We are not among those who believe in Lord Palmerston's dogma, that "all children are born good." On the whole, the opposite dogma, untenable as it is, seems to us less wide of the truth. Nor do we agree with those who think that, by skilful discipline, children may be made altogether what they should be. Contrariwise, we are satisfied that though imperfections of nature may be diminished by wise management, they cannot be removed by it. The notion that an ideal humanity might be forthwith produced by a perfect system of education, is near akin to that shadowed forth in the poems of Shelley, that would mankind give up their old institutions, prejudices, and errors, all the evils in the world would at once disappear: neither notion being acceptable to such as have dispassionately studied human affairs.

Not that we are without sympathy with those who entertain these too sanguine hopes. Enthusiasm, pushed even to fanaticism, is a useful motive-power—perhaps an indispensable one. It is clear that the ardent politician would never undergo the labors and make the sacrifices he does, did he not believe that the reform he fights for is the one thing needful. But for his conviction that drunkenness is the root of almost all social evils, the teetotaler would agitate far less energetically.

cally. In philanthropy as in other things great advantage results from division of labor; and that there may be division of labor, each class of philanthropists must be more or less subordinated to its function—must have an exaggerated faith in its work. Hence, of those who regard education, intellectual or moral, as the panacea, their undue expectations are not without use; and that perhaps it is part of the beneficent order of things that their confidence cannot be shaken.

Even were it true, however, that by some possible system of moral government children could be moulded into the desired form; and even could every parent be duly indoctrinated with this system; we should still be far from achieving the object in view. It is forgotten that the carrying out of any such system, presupposes, on the part of adults, a degree of intelligence, of goodness, of self-control, possessed by no one. The great error made by those who discuss questions of juvenile discipline, is in ascribing all the faults and difficulties to the children, and none to the parents. The current assumption respecting family government, as respecting national government, is, that the virtues are with the rulers and the vices with the ruled. Judging by educational theories, men and women are entirely transfigured in the domestic relation. The citizens we do business with, the people we meet in the world, we all know to be very imperfect creatures. In the daily scandals, in the quarrels of friends, in bankruptcy disclosures, in lawsuits, in police reports, we have constantly thrust before us the pervading selfishness, dishonesty, brutality. Yet when we criticise nursery management, and canvass the misbehavior of juveniles, we habitually take for granted that these culpable men and women are free from moral delinquency in the treatment of their offspring! So far is this from the truth, that we do not hesitate to say that to parental misconduct is traceable a great part of the domestic disorder commonly ascribed to the perversity of children. We do not assert this of the more sympathetic and self-restrained, among whom we hope most of our readers may be classed, but we assert it of the mass. What kind of moral discipline is to be expected from a mother who, time after time, angrily shakes her infant because it will not suckle her, which we once saw a mother do? How much love of justice and generosity is likely to be instilled by a father who, on having his attention drawn by his child's scream to the fact that its finger is jammed between the window sash and the sill, forthwith begins to beat the child instead of releasing it? Yet that there are

such fathers is testified to us by an eye-witness. Or, to take a still stronger case, also vouched for by direct testimony—what are the educational prospects of the boy who, on being taken home with a dislocated thigh, is saluted with a castigation? It is true that these are extreme instances—instances exhibiting in human beings that blind instinct which impels brutes to destroy the weakly and injured of their own race. But extreme though they are, they typify feelings and conduct daily observable in many families. Who has not repeatedly seen a child slapped by nurse or parent for a fretfulness probably resulting from bodily derangement? Who, when watching a mother snatch up a fallen little one, has not often traced, both in the rough manner and in the sharply-uttered exclamation—"You stupid little thing!"—an irascibility foretelling endless future squabbles? Is there not in the harsh tones in which a father bids his children be quiet, evidence of a deficient fellow-feeling with them? Are not the constant, and often quite needless, thwartings that the young experience—the injunctions to sit still, which an active child cannot obey without suffering great nervous irritation, the commands not to look out of the window when travelling by railway, which on a child of any intelligence entails serious deprivation—are not these thwartings, we ask, signs of a terrible lack of sympathy? The truth is, that the difficulties of moral education are necessarily of dual origin—necessarily result from the combined faults of parents and children. If hereditary transmission is a law of nature, as every naturalist knows it to be, and as our daily remarks and current proverbs admit it to be; then on the average of cases, the defects of children mirror the defects of their parents;—on the average of cases, we say, because, complicated as the results are by the transmitted traits of remoter ancestors, the correspondence is not special but only general. And if, on the average of cases, this inheritance of defects exists, then the evil passions which parents have to check in their children imply like evil passions in themselves; hidden, it may be, from the public eye; or perhaps obscured by other feelings; but still there. Evidently, therefore, the general practice of any ideal system of discipline is hopeless: parents are not good enough.

Moreover, even were there methods by which the desired end could be at once effected, and even had fathers and mothers sufficient insight, sympathy, and self-command to employ these methods consistently, it might still be contended that it would be of

no use to reform family discipline faster than other things are reformed. What is it that we aim to do? Is it not that education of whatever kind has for its proximate end to prepare a child for the business of life—to produce a citizen who, at the same time that he is well conducted, is also able to make his way in the world? And does not making his way in the world (by which we mean, not the acquirement of wealth, but of the means requisite for properly bringing up a family)—does not this imply a certain fitness for the world as it now is? And if by any system of culture an ideal human being could be produced, is it not doubtful whether he would be fit for the world as it now is? May we not, on the contrary, suspect that his too keen sense of rectitude, and too elevated standard of conduct, would make life alike intolerable and impossible? And however admirable the results might be, considered individually, would it not be self-defeating in so far as society and posterity are concerned? It may, we think, be argued with much reason, that as in a nation so in a family, the kind of government is, on the whole, about as good as the general state of human nature permits it to be. It may be said that in the one case, as in the other, the average character of the people determines the quality of the control exercised. It may be inferred that in both cases amelioration of the average character leads to an amelioration of system; and further, that were it possible to ameliorate the system without the average character being first ameliorated, evil, rather than good, would follow. It may be urged that such degree of harshness as children now experience from their parents and teachers, is but a preparation for that greater harshness which they will meet with on entering the world; and that were it possible for parents and teachers to behave towards them with perfect equity and entire sympathy, it would but intensify the sufferings which the selfishness of men must, in after life, inflict on them.*

* This is the plea put in by some for the rough treatment experienced by boys at our public schools; where, as it is said, they are introduced to a miniature world whose imperfections and hardships prepare them for those of the real world; and it must be admitted that the plea has some force. But it is a very insufficient plea. For whereas domestic and school discipline, though they should not be very much better than the discipline of adult life, should at any rate be somewhat better; the discipline which boys meet with at Eton, Winchester, Harrow, etc., is much worse than that of adult life—much more unjust, cruel, brutal. Instead of being an aid to human progress, which all culture should be, the culture of our public schools, by accustoming boys to a despotic form of government and an intercourse regulated by brute force, tends to fit them for a lower state of society than that which

"But does not this prove too much?" some one will ask. "If no system of moral culture can forthwith make children altogether what they should be; if, even were there a system that would do this, existing parents are too imperfect to carry it out; and if even could such a system be successfully carried out, its results would be disastrously incongruous with the present state of society; does it not follow that a reform in the system now in use is neither practicable nor desirable?" No. It merely follows that reform in domestic government must go on, *pari passu* with other reforms. It merely follows that methods of discipline neither can be nor should be ameliorated, except by instalments. It merely follows that the dictates of abstract rectitude will, in practice, inevitably be subordinated by the present state of human nature—by the imperfections alike of children, of parents, and of society; and can only be better fulfilled as the general character becomes better.

"At any rate, then," may rejoin our critic, "it is clearly useless to set up any ideal standard of family discipline. There can be no advantage in elaborating and recommending methods that are in advance of the time." Again we must contend for the contrary. Just as in the case of political government, though pure rectitude may be at present impracticable, it is requisite to know where the right lies, so that the changes we make may be *towards* the right instead of *away* from it; so in the case of domestic government, an ideal must be upheld, that there may be gradual approximations to it. We need fear no evil consequences from the maintenance of such an ideal. On the average the constitutional conservatism of mankind is always strong enough to prevent a too rapid change. So admirable are the arrangements of things that until men have grown up to the level of a higher belief, they cannot receive it: nominally, they may hold it, but not virtually. And even when the truth gets recognized, the obstacles to conformity with it are so persistent as to outlive the patience of philanthropists and even philosophers. We may be quite sure, therefore, that the many difficulties standing in the way of a normal government of children, will always put an adequate check upon the efforts to realize it.

With these preliminary explanations, let us go on to consider the true aims and methods of moral education—moral education, strictly so called, we mean; for we do not propose to

exists. And chiefly recruited as our legislature is from among those who are brought up at these schools, this barbarizing influence becomes a serious hindrance to national progress.

enter upon the question of religious education as an aid to the education exclusively moral. This we omit as a topic better dealt with separately. After a few pages devoted to the settlement of general principles, during the perusal of which we bespeak the reader's patience, we shall aim by illustrations to make clear the right methods of parental behavior in the hourly occurring difficulties of family government.

When a child falls, or runs its head against the table, it suffers a pain, the remembrance of which tends to make it more careful for the future; and by an occasional repetition of like experiences, it is eventually disciplined into a proper guidance of its movements. If it lays hold of the fire-bars, thrusts its finger into the candle-flame, or spills boiling water on any part of its skin, the resulting burn or scald is a lesson not easily forgotten. So deep an impression is produced by one or two such events, that afterwards no persuasion will induce it again to disregard the laws of its constitution in these ways.

Now in these and like cases, Nature illustrates to us in the simplest way, the true theory and practice of moral discipline—a theory and practice which, however much they may seem to the superficial like those commonly received, we shall find on examination to differ from them very widely.

Observe, in the first place, that in bodily injuries and their penalties we have misconduct and its consequences reduced to their simplest forms. Though, according to their popular acceptations, *right* and *wrong* are words scarcely applicable to actions that have none but direct bodily effects; yet whoever considers the matter will see that such actions must be as much classifiable under these heads as any other actions. From whatever basis they start, all theories of morality agree in considering that conduct whose total results, immediate and remote, are beneficial, is good conduct; while conduct whose total results, immediate and remote, are injurious, is bad conduct. The happiness or misery caused by it are the *ultimate* standards by which all men judge of behavior. We consider drunkenness wrong because of the physical degeneracy and accompanying moral evils entailed on the transgressor and his dependents. Did theft uniformly give pleasure both to taker and looser, we should not find it in our catalogue of sins. Were it conceivable that benevolent actions multiplied human pains, we should condemn them—should not consider them benevolent. It needs but to

read the first newspaper leader, or listen to any conversation touching social affairs, to see that acts of parliament, political movements, philanthropic agitations, in common with the doings of individuals, are judged by their anticipated results in multiplying the pleasures or pains of men. And if on looking on all secondary superinduced ideas, we find these to be our ultimate tests of right and wrong, we cannot refuse to class purely physical actions as right or wrong according to the beneficial or detrimental results they produce.

Note, in the second place, the character of the punishments by which these physical transgressions are prevented. Punishments, we call them, in the absence of a better word; for they are not punishments in the literal sense. They are not artificial and unnecessary inflictions of pain; but are simply the beneficent checks to actions that are essentially at variance with bodily welfare—checks in the absence of which life would quickly be destroyed by bodily injuries. It is the peculiarity of these penalties, if we must so call them, that they are nothing more than the *unavoidable consequences* of the deeds which they follow: they are nothing more than the *inevitable reactions* entailed by the child's actions.

Let it be further borne in mind that these painful reactions are proportionate to the degree in which the organic laws have been transgressed. A slight accident brings a slight pain, a more serious one, a greater pain. When a child tumbles over the doorstep, it is not ordained that it shall suffer in excess of the amount necessary, with the view of making it still more cautious than the necessary suffering will make it. But from its daily experience it is left to learn the greater or less penalties of greater or less errors; and to behave accordingly.

And then mark, lastly, that these natural reactions which follow the child's wrong actions, are constant, direct, unhesitating, and not to be escaped. No threats: but a silent, rigorous performance. If a child runs a pin into its finger, pain follows. If it does it again, there is again the same result: and so on perpetually. In all its dealings with surrounding inorganic nature it finds this unswerving persistence, which listens to no excuse, and from which there is no appeal; and very soon recognizing this stern though beneficent discipline, it becomes extremely careful not to transgress.

Still more significant will these general truths appear, when we remember that they hold throughout adult life as well as through-

out infantine life. It is by an experimentally-gained knowledge of the natural consequences, that men and women are checked when they go wrong. After home education has ceased, and when there are no longer parents and teachers to forbid this or that kind of conduct, there comes into play a discipline like that by which the young child is taught its first lessons in self-guidance. If the youth entering upon the business of life idles away his time and fulfils slowly or unskilfully the duties entrusted to him, there by and by follows the natural penalty: he is discharged, and left to suffer for awhile the evils of relative poverty. On the unpunctual man, failing alike his appointments of business and pleasure, there continually fall the consequent inconveniences, losses, and deprivations. The avaricious tradesman who charges too high a rate of profit, loses his customers, and so is checked in his greediness. Diminishing practice teaches the inattentive doctor to bestow more trouble on his patients. The too credulous creditor and the over-sanguine speculator alike learn by the difficulties which rashness entails on them, the necessity of being more cautious in their engagements. And so throughout the life of every citizen. In the quotation so often made *à propos* of these cases—"The burnt child dreads the fire"—we see not only that the analogy between this social discipline and Nature's early discipline of infants is universally recognized; but we also see an implied conviction that this discipline is of the most efficient kind. Nay more, this conviction is not only implied, but distinctly stated. Every one has heard others confess that only by "dearly bought experience" had they been induced to give up some bad or foolish course of conduct formerly pursued. Every one has heard, in the criticisms passed on the doings of this spendthrift or the other speculator, the remark that advice was useless, and that nothing but "bitter experience" would produce any effect: nothing, that is, but suffering the unavoidable consequences. And if further proof be needed that the penalty of the natural reaction is not only the most efficient, but that no humanly-devised penalty can replace it, we have such further proof in the notorious ill-success of our various penal systems. Out of the many methods of criminal discipline that have been proposed and legally enforced, none have answered the expectations of their advocates. Not only have artificial punishments failed to produce reformation, but they have in many cases increased the criminality. The only successful reformatories are those privately-established ones which have approxi-

mated their *régime* to the method of Nature—which have done little more than administer the natural consequences of criminal conduct: the natural consequences being, that by imprisonment or other restraint, the criminal shall have his liberty of action diminished as much as is needful for the safety of society; and that he shall be made to maintain himself while living under this restraint. Thus we see not only that the discipline by which the young child is so successfully taught to regulate its movements is also the discipline by which the great mass of adults are kept in order, and more or less improved; but that the discipline humanly-devised for the worst adults, fails when it diverges from this divinely-ordained discipline, and begins to succeed when it approximates to it.

Have we not here, then, the guiding principle of moral education? Must we not infer that the system so beneficent in its effects, alike during infancy and maturity, will be equally beneficent throughout youth? Can any one believe that the method which answers so well in the first and the last divisions of life will not answer in the intermediate division? Is it not manifest that as "ministers and interpreters of Nature" it is the function of parents to see that their children habitually experience the true consequences of their conduct—the natural reactions: neither warding them off, nor intensifying them, nor putting artificial consequences in place of them? No unprejudiced reader will hesitate in his assent.

Probably, however, not a few will contend that already most parents do this—that the punishments they inflict are, in the majority of cases, the true consequences of ill-conduct—that parental anger, venting itself in harsh words and deeds, is the result of a child's transgression—and that, in the suffering, physical or moral, which the child is subject to, it experiences the natural reaction of its misbehavior. Along with much error this assertion, doubtless, contains some truth. It is unquestionable that the displeasure of fathers and mothers is a true consequence of juvenile delinquency; and that the manifestation of it is a normal check upon such delinquency. It is unquestionable that the scoldings, and threats, and blows, which a passionate parent visits on offending little ones, are effects actually produced in such a parent by their offences; and so are, in some sort, to be considered as among the natural reactions of their wrong actions. And we are by no means prepared to say that these modes of treatment are not relatively right—

right, that is in relation to the uncontrollable children of ill-controlled adults: and right in relation to a state of society in which such ill-controlled adults make up the mass of the people. As already suggested, educational systems, like political and other institutions, are generally as good as the state of human nature permits. The barbarous children of barbarous parents are probably only to be restrained by the barbarous methods which such parents spontaneously employ; while submission to these barbarous methods is perhaps the best preparation such children can have for the barbarous society in which they are presently to play a part. Conversely, the civilized members of a civilized society will spontaneously manifest their displeasure in less violent ways—will spontaneously use milder measures: measures strong enough for their better-natured children. Thus it is doubtless true that, in so far as the expression of parental feeling is concerned, the principle of the natural reaction is always more or less followed. The system of domestic government ever gravitates towards its right form.

But now observe two important facts. In the first place, observe that, in states of rapid transition like ours, which witness a long-drawn battle between old and new theories and old and new practices, the educational methods in use are apt to be considerably out of harmony with the times. In deference to dogmas fit only for the ages that uttered them, many parents inflict punishments that do violence to their own feelings, and so visit on their children unnatural reactions; while other parents, enthusiastic in their hopes of immediate perfection, rush to the opposite extreme. And then observe, in the second place, that the discipline on which we are insisting is not so much the experience of parental approbation, or disapprobation, which, in most cases, is only a secondary consequence of a child's conduct; but it is the experience of those results which would naturally flow from the conduct in the absence of parental opinion or interference. The truly instructive and salutary consequences are not those inflicted by parents when they take upon themselves to be Nature's proxies; but they are those inflicted by Nature herself. We will endeavor to make this distinction clear by a few illustrations, which, while they show what we mean by natural reactions as contrasted with artificial ones, will afford some directly practical suggestions.

In every family where there are young children there almost daily occur cases of what mothers and servants call "making a litter." A child has had out its box of toys,

and leaves them scattered about the floor. Or a handful of flowers, brought in from a morning walk, is presently seen dispersed over tables and chairs. Or a little girl, making doll's-clothes, disfigures the room with shreds. In most cases the trouble of rectifying this disorder falls anywhere but in the right place: if in the nursery, the nurse herself, with many grumblings about "tiresome little things," etc., undertakes the task; if below stairs, the task usually devolves either on one of the elder children or on the housemaid; the transgressor being visited with nothing more than a scolding. In this very simple case, however, there are many parents wise enough to follow out, more or less consistently, the normal course—that of making the child itself collect the toys or shreds. The labor of putting things in order is the true consequence of having put them in disorder. Every trader in his office, every wife in her household, has daily experience of this fact. And if education be a preparation for the business of life, then every child should also, from the beginning, have daily experience of this fact. If the natural penalty be met by any refractory behavior (which it may perhaps be where the general system of moral discipline previously pursued has been bad), then the proper course is to let the child feel the ulterior reaction consequent on its disobedience. Having refused or neglected to pick up and put away the things it has scattered about, and having thereby entailed the trouble of doing this on some one else, the child should, on subsequent occasions, be denied the means of giving this trouble. When next it petitions for its toy-box, the reply of its mamma should be—"The last time you had your toys you left them lying on the floor, and Jane had to pick them up. Jane is too busy to pick up every day the things you leave about; and I cannot do it myself. So that, as you will not put away your toys when you have done with them, I cannot let you have them." This is obviously a natural consequence, neither increased nor lessened; and must be so recognized by a child. The penalty comes, too, at the moment when it is most keenly felt. A new-born desire is balked at the moment of anticipated gratification; and the strong impression so produced can scarcely fail to have an effect on the future conduct; an effect which, by consistent repetition, will do whatever can be done in curing the fault. Add to which, that, by this method, a child is early taught the lesson which cannot be learnt too soon, that in this world of ours pleasures are rightly to be obtained only by labor.

Take another case. Not long since we had frequently to listen to the reprimands visited on a little girl who was scarcely ever ready in time for the daily walk. Of eager disposition, and apt to become thoroughly absorbed in the occupation of the moment, Constance never thought of putting on her things until the rest were ready. The governess and the other children had almost invariably to wait; and from the mamma there almost invariably came the same scolding. Utterly as this system failed it never occurred to the mamma to let Constance experience the natural penalty. Nor, indeed, would she try it when it was suggested to her. In the world the penalty of being behind time is the loss of some advantage that would else have been gained: the train is gone; or the steamboat is just leaving its moorings; or the best things in the market are sold; or all the good seats in the concert-room are filled. And every one, in cases perpetually occurring, may see that it is the prospective deprivations entailed by being too late which prevent people from being too late. Is not the inference obvious? Should not these prospective deprivations control the child's conduct also? If Constance is not ready at the appointed time, the natural result is that of being left behind, and losing her walk. And no one can, we think, doubt that after having once or twice remained at home while the rest were enjoying themselves in the fields, and after having felt that this loss of a much-prized gratification was solely due to want of promptitude, some amendment would take place. At any rate, the measure would be more effective than that perpetual scolding which ends only in producing callousness.

Again, when children, with more than usual carelessness, break or lose the things given to them, the natural penalty—the penalty which makes grown-up persons more careful—is the consequent inconvenience. The want of the lost or damaged article, and the cost of supplying its place, are the experiences by which men and women are disciplined in these matters; and the experience of children should be as much as possible assimilated to theirs. We do not refer to that early period at which toys are pulled to pieces in the process of learning their physical properties, and at which the results of carelessness cannot be understood; but to a later period, when the meaning and advantages of property are perceived. When a boy, old enough to possess a penknife, uses it so roughly as to snap the blade, or leaves it in the grass by some hedge-side, where he was cutting a stick, a thoughtless parent, or some indulgent relative, will

commonly forthwith buy him another; not seeing that, by doing this, a valuable lesson is lost. In such a case, a father may properly explain that penknives cost money, and that to get money requires labor; that he cannot afford to purchase new penknives for one who loses or breaks them; and that until he sees evidence of greater carefulness he must decline to make good the loss. A parallel discipline may be used as a means of checking extravagance.

These few familiar instances, here chosen because of the simplicity with which they illustrate our point, will make clear to every one the distinction between those natural penalties which we contend are the truly efficient ones, and those artificial penalties which parents commonly substitute for them. Before going on to exhibit the higher and subtler applications of this principle, let us note its many and great superiorities over the principle, or rather the empirical practice, which prevails in most families.

In the first place, right conceptions of cause and effect are early formed; and by frequent and consistent experience are eventually rendered definite and complete. Proper conduct in life is much better guaranteed when the good and evil consequences of actions are rationally understood, than when they are merely believed on authority. A child who finds that disorderliness entails the subsequent trouble of putting things in order, or who misses a gratification from dilatoriness, or whose want of care is followed by the loss or breakage of some much-prized possession, not only experiences a keenly-felt consequence, but gains a knowledge of causation: both the one and the other being just like those which adult life will bring. Whereas a child who in such cases receives some reprimand or some factitious penalty, not only experiences a consequence for which it often cares very little, but lacks that instruction respecting the essential natures of good and evil conduct, which it would else have gathered. It is a vice of the common system of artificial rewards and punishments, long since noticed by the clear-sighted, that by substituting for the natural results of misbehavior certain threatened tasks or castigations, it produces a radically wrong standard of moral guidance. Having throughout infancy and boyhood always regarded parental or tutorial displeasure as the result of a forbidden action, the youth has gained an established association of ideas between such action and such displeasure, as cause and effect; and consequently when parents and tutors have abdicated, and their displeasure is not to be

feared, the restraint on a forbidden action is in great measure removed: the true restraints, the natural reactions, having yet to be learnt by sad experience. As writes one who has had personal knowledge of this short-sighted system:—"Young men let loose from school, particularly those whose parents have neglected to exert their influence, plunge into every description of extravagance; they know no rule of action—they are ignorant of the reasons for moral conduct—they have no foundation to rest upon—and until they have been severely disciplined by the world are extremely dangerous members of society."

Another great advantage of this natural system of discipline is, that it is a system of pure justice; and will be recognized by every child as such. Whoso suffers nothing more than the evil which obviously follows naturally from his own misbehavior, is much less likely to think himself wrongly treated than if he suffers an evil artificially inflicted on him; and this will be true of children as of men. Take the case of a boy who is habitually reckless of his clothes—scrambles through hedges without caution, or is utterly regardless of mud. If he is beaten, or sent to bed, he is apt to regard himself as ill-used; and his mind is more likely to be occupied by thinking over his injuries than repenting of his transgressions. But suppose he is required to rectify as far as he can the harm he has done—to clean off the mud with which he has covered himself, or to mend the tear as well as he can. Will he not feel that the evil is one of his own producing? Will he not while paying this penalty be continuously conscious of the connection between it and its cause? And will he not, spite his irritation, recognize more or less clearly the justice of the arrangement? If several lessons of this kind fail to produce amendment—if suits of clothes are prematurely spoiled—if pursuing this same system of discipline a father declines to spend money for new ones until the ordinary time has elapsed—and if, meanwhile, there occur occasions on which, having no decent clothes to go in, the boy is debarred from joining the rest of the family on holiday excursions and *fête* days, it is manifest that while he will keenly feel the punishment, he can scarcely fail to trace the chain of causation, and to perceive that his own carelessness is the origin of it; and seeing this, he will not have that same sense of injustice as when there is no obvious connection between the transgression and its penalty.

Again, the tempers both of parents and children are much less liable to be ruffled under this system than under the ordinary

system. Instead of letting children experience the painful results which naturally follow from wrong conduct, the usual course pursued by parents is to inflict themselves certain other painful results. A double mischief arises from this. Making, as they do, multiplied family laws; and identifying their own supremacy and dignity with the maintenance of these laws; it happens that every transgression comes to be regarded as an offence against themselves, and a cause of anger on their part. Add to which the further irritations which result from taking upon themselves, in the shape of extra labor or cost, those evil consequences which should have been allowed to fall on the wrong-doers. Similarly with the children. Penalties which the necessary reaction of things brings round upon them—penalties which are inflicted by impersonal agency, produce an irritation that is comparatively slight and transient; whereas, penalties which are voluntarily inflicted by a parent, and are afterwards remembered as caused by him or her, produce an irritation both greater and more continued. Just consider how disastrous would be the result if this empirical method were pursued from the beginning. Suppose it were possible for parents to take upon themselves the physical sufferings entailed on their children by ignorance and awkwardness; and that while bearing these evil consequences they visited on their children certain other evil consequences, with the view of teaching them the impropriety of their conduct. Suppose that when a child, who had been forbidden to meddle with the kettle, spilt some boiling water on its foot, the mother vicariously assumed the scald and gave a blow in place of it; and similarly in all other cases. Would not the daily mishaps be sources of far more anger than now? Would not there be chronic ill-temper on both sides? Yet an exactly parallel policy is pursued in after years. A father who punishes his boy for carelessly or wilfully breaking a sister's toy, and then himself pays for a new toy, does substantially this same thing—inflicts an artificial penalty on the transgressor, and takes the natural penalty on himself: his own feelings and those of the transgressor being alike needlessly irritated. If he simply required restitution to be made, he would produce far less heartburning. If he told the boy that a new toy must be bought at his, the boy's cost, and that his supply of pocket-money must be withheld to the needful extent, there would be much less cause for ebullition of temper on either side; while in the deprivation afterwards felt, the boy would experience the equitable and salutary

consequence. In brief, the system of discipline by natural reactions is less injurious to temper, alike because it is perceived on both sides to be nothing more than pure justice, and because it more or less substitutes the impersonal agency of nature for the personal agency of parents.

Whence also follows the manifest corollary, that under this system the parental and filial relation will be a more friendly, and therefore a more influential one. Whether in parent or child, anger, however caused, and to whomsoever directed, is more or less detrimental. But anger in a parent towards a child, and in a child towards a parent, is especially detrimental; because it weakens that bond of sympathy which is essential to a beneficent control. In virtue of the general law of association of ideas, it inevitably results, both in young and old, that dislike is contracted towards things which in our experience are habitually connected with disagreeable feelings. Or where attachment originally existed, it is weakened, or destroyed, or turned into repugnance, according to the quantity of painful impressions received. Parental wrath, with its accompanying reprimands and castigations, cannot fail, if often repeated, to produce filial alienation; while the resentment and sulkiness of children cannot fail to weaken the affection felt for them, and may even end in destroying it. Hence the numerous cases in which parents (and especially fathers, who are commonly deputed to express the anger and inflict the punishment) are regarded with indifference, if not with aversion; and hence the equally numerous cases in which children are looked upon as inflictions. Seeing, then, as all must do, that estrangement of this kind is fatal to a salutary moral culture, it follows that parents cannot be too solicitous in avoiding occasions of direct antagonism with their children—occasions of personal resentment. And therefore they cannot too anxiously avail themselves of this discipline of natural consequences—this system of letting the penalty be inflicted by the laws of things; which, by saving the parent from the function of a penal agent, prevents these mutual exasperations and estrangements.

Thus we see that this method of moral culture by experience of the normal reactions which is the divinely-ordained method alike for infancy and for adult life, is equally applicable during the intermediate childhood and youth. And among the advantages of this method we see—First. That it gives that rational comprehension of right and wrong conduct which results from actual ex-

perience of the good and bad consequences caused by them. Second. That the child, suffering nothing more than the painful effects brought upon it by its own wrong actions, must recognize more or less clearly the justice of the penalties. Third. That, recognizing the justice of the penalties, and receiving those penalties through the working of things, rather than at the hands of an individual, its temper will be less disturbed; while the parent occupying the comparatively passive position of taking care that the natural penalties are felt, will preserve a comparative equanimity. And Fourth. That mutual exasperation being thus in great measure prevented, a much happier, and a more influential state of feeling, will exist between parent and child.

“But what is to be done with more serious misconduct?” some will ask. “How is this plan to be carried out when a petty theft has been committed? or when a lie has been told? or when some younger brother or sister has been ill-used?”

Before replying to these questions, let us consider the bearings of a few illustrative facts.

Living in the family of his brother-in-law, a friend of ours had undertaken the education of his little nephew and niece. This he had conducted, more perhaps from natural sympathy than from reasoned-out conclusions, in the spirit of the method above set forth. The two children were in doors his pupils and out of doors his companions. They daily joined him in walks and botanizing excursions, eagerly sought out plants for him, looked on while he examined and identified them, and in this and other ways were ever gaining both pleasure and instruction in his society. In short, morally considered, he stood to them much more in the position of parent than either their father or mother did. Describing to us the results of this policy, he gave, among other instances, the following. One evening, having need for some article lying in another part of the house, he asked his nephew to fetch it for him. Deeply interested as the boy was in some amusement of the moment, he, contrary to his wont, either exhibited great reluctance or refused, we forget which. His uncle, disapproving of a coercive course, fetched it himself; merely exhibiting by his manner the annoyance this ill-behavior gave him. And when, later in the evening, the boy made overtures for the usual play, they were gravely repelled—the uncle manifested just that coldness of feeling naturally produced in him, and so let the boy

experience the necessary consequences of his conduct. Next morning at the usual time for rising, our friend heard a new voice outside the door, and in walked his little nephew with the hot water; and then the boy, peering about the room to see what else could be done, exclaimed, "Oh! you want your boots," and forthwith rushed down stairs to fetch them. In this and other ways he showed a true penitence for his misconduct; he endeavored by unusual services to make up for the service he had refused; his higher feelings had of themselves conquered his lower ones, and acquired strength by the conquest; and he valued more than before the friendship he thus regained.

This gentleman is now himself a father; acts on the same system; and finds it answer completely. He makes himself thoroughly his children's friend. The evening is longed for by them because he will be at home; and they especially enjoy the Sunday because he is with them all day. Thus possessing their perfect confidence and affection, he finds that the simple display of his approbation or disapprobation gives him abundant power of control. If, on his return home, he hears that one of his boys has been naughty, he behaves towards him with that comparative coldness which the consciousness of the boy's misconduct naturally produces; and he finds this a most efficient punishment. The mere withholding of the usual caresses, is a source of the keenest distress—produces a much more prolonged fit of crying than a beating would do. And the dread of this purely moral penalty is, he says, ever present during his absence: so much so, that frequently during the day his children inquire of their mamma how they have behaved, and whether the report will be good. Recently, the eldest, an active urchin of five, in one of those bursts of animal spirits common in healthy children, committed sundry extravagances during his mamma's absence—cut off part of his brother's hair and wounded himself with a razor taken from his father's dressing-case. Hearing of these occurrences on his return, the father did not speak to the boy either that night or next morning. Not only was the tribulation great, but the subsequent effect was, that when, a few days after, the mamma was about to go out, she was earnestly entreated by the boy not to do so; and on inquiry, it appeared his fear was that he might again transgress in her absence.

We have introduced these facts before replying to the question—"What is to be done with the graver offences?" for the purpose of first exhibiting the relation that may and ought to

be established between parents and children; for on the existence of this relation depends the successful treatment of these graver offences. And as a further preliminary, we must now point out that the establishment of this relation will result from adopting the system we advocate. Already we have shown that by letting a child experience simply the painful reactions of its own wrong actions, a parent in great measure avoids assuming the attitude of an enemy, and escapes being regarded as one; but it still remains to be shown that where this course has been consistently pursued from the beginning, a strong feeling of active friendship will be generated.

At present, mothers and fathers are mostly considered by their offspring as friend-enemies. Determined as their impressions inevitably are by the treatment they receive; and oscillating as that treatment does between bribery and thwarting, between petting and scolding, between gentleness and castigation; children necessarily acquire conflicting beliefs respecting the parental character. A mother commonly thinks it quite sufficient to tell her little boy that she is his best friend; and assuming that he is in duty bound to believe her, concludes that he will forthwith do so. "It is all for your good;" "I know what is proper for you better than you do yourself;" "You are not old enough to understand it now, but when you grow up you will thank me for doing what I do;"—these, and like assertions, are daily reiterated. Meanwhile the boy is daily suffering positive penalties; and is hourly forbidden to do this, that, and the other, which he was anxious to do. By words he hears that his happiness is the end in view; but from the accompanying deeds he habitually receives more or less pain. Utterly incompetent as he is to understand that future which his mother has in view, or how this treatment conduces to the happiness of that future, he judges by such results as he feels; and finding these results anything but pleasurable, he becomes sceptical respecting these professions of friendship. And is it not folly to expect any other issue? Must not the child judge by such evidence as he has got? and does not this evidence seem to warrant his conclusion? The mother would reason in just the same way if similarly placed. If, in the circle of her acquaintance, she found some one who was constantly thwarting her wishes, uttering sharp reprimands, and occasionally inflicting actual penalties on her, she would pay but little attention to any professions of anxiety for her welfare which accompanied these acts. Why, then, does she suppose that her boy will conclude otherwise?

But now observe how different will be the results if the system we contend for be consistently pursued—if the mother not only avoids becoming the instrument of punishment, but plays the part of a friend, by warning her boy of the punishments which Nature will inflict. Take a case; and that it may illustrate the mode in which this policy is to be early initiated, let it be one of the simplest cases. Suppose that, prompted by the experimental spirit so conspicuous in children, whose proceedings instinctively conform to the inductive method of inquiry—suppose that so prompted the child is amusing himself by lighting pieces of paper in the candle and watching them burn. If his mother is of the ordinary unreflective stamp, she will either, on the plea of keeping the child “out of mischief,” or from fear that he will burn himself, command him to desist; and in case of non-compliance will snatch the paper from him. On the other hand, should he be so fortunate as to have a mother of sufficient rationality, who knows that this interest with which the child is watching the paper burn results from a healthy inquisitiveness, without which he would never have emerged out of infantine stupidity, and who is also wise enough to consider the moral results of interference, she will reason thus:—“If I put a stop to this I shall prevent the acquirement of a certain amount of knowledge. It is true that I may save the child from a burn; but what then? He is sure to burn himself sometime; and it is quite essential to his safety in life that he should learn by experience the properties of flame. Moreover, if I forbid him from running this present risk, he is sure hereafter to run the same or a greater risk when no one is present to prevent him; whereas, if he should have any accident now that I am by, I can save him from any great injury; add to which the advantage that he will have in future some dread of fire, and will be less likely to burn himself to death, or set the house in a flame when others are absent. Furthermore, were I to make him desist, I should thwart him in the pursuit of what is in itself a purely harmless, and indeed, instructive gratification; and he would be sure to regard me with more or less ill-feeling. Ignorant as he is of the pain from which I would save him, and feeling only the pain of a balked desire, he could not fail to look upon me as the cause of that pain. To save him from a hurt which he cannot conceive, and which has therefore no existence for him, I inflict upon him a hurt which he feels keenly enough; and so become, from his point of view, a minister of evil. My best course then, is

simply to warn him of the danger, and to be ready to prevent any serious damage.” And following out this conclusion, she says to the child—“I fear you will hurt yourself if you do that.” Suppose, now, that the child perseveres, as he will very probably do; and suppose that he ends by burning himself. What are the results? In the first place he has gained an experience which he must gain eventually, and which, for his own safety he cannot gain too soon. And in the second place, he has found that his mother’s disapproval or warning was meant for his welfare: he has a further positive experience of her benevolence—a further reason for placing confidence in her judgment and her kindness—a further reason for loving her.

Of course, in those occasional hazards where there is a risk of broken limbs or other serious bodily injury, forcible prevention is called for. But leaving out these extreme cases, the system pursued should be not that of guarding a child against the small dangers into which it daily runs, but that of advising and warning it against them. And by consistently pursuing this course, a much stronger filial affection will be generated than commonly exists. If here, as elsewhere, the discipline of the natural reactions is allowed to come into play—if in all those out-of-door scramblings and in-door experiments, by which children are liable to hurt themselves, they are allowed to persevere, subject only to dissuasion more or less earnest according to the risk, there cannot fail to arise an ever-increasing faith in the parental friendship and guidance. Not only, as before shown, does the adoption of this principle enable fathers and mothers to avoid the chief part of that odium which attaches to the infliction of positive punishment; but, as we here see, it enables them further to avoid the odium that attaches to constant thwartings; and even to turn each of those incidents which commonly cause squabbles, into a means of strengthening the mutual good feeling. Instead of being told in words, which deeds seem to contradict, that their parents are their best friends, children will learn this truth by a consistent daily experience; and so learning it, will acquire a degree of trust and attachment which nothing else can give.

And now having indicated the much more sympathetic relation which must result from the habitual use of this method, let us return to the question above put—How is this method to be applied to the graver offences?

Note, in the first place, that these graver offences are likely to be both less frequent and

less grave under the *régime* we have described than under the ordinary *régime*. The perpetual ill-behavior of many children is itself the consequence of that chronic irritation in which they are kept by bad management. The state of isolation and antagonism produced by frequent punishment, necessarily deadens the sympathies; necessarily, therefore, opens the way to those transgressions which the sympathies should check. That harsh treatment which children of the same family inflict on each other is often, in great measure, a reflex of the harsh treatment they receive from adults—partly suggested by direct example, and partly generated by the ill-temper and the tendency to vicarious retaliation, which follow chastisements and scoldings. It cannot be questioned that the greater activity of the affections and happier state of feeling, maintained in children by the discipline we have described, must prevent their sins against each other from being either so great or so frequent. Moreover, the still more reprehensible offences, as lies and petty thefts, will, by the same causes, be diminished. Domestic estrangement is a fruitful source of such transgressions. It is a law of human nature, visible enough to all who observe, that those who are debarred the higher gratifications fall back upon the lower; those who have no sympathetic pleasures seek selfish ones; and hence, conversely, the maintenance of happier relations between parents and children is calculated to diminish the number of those offences of which selfishness is the origin.

When, however, such offences are committed, as they will occasionally be even under the best system, the discipline of consequences may still be resorted to; and if there exist that bond of confidence and affection which we have described, this discipline will be found efficient. For what are the natural consequences, say, of a theft? They are of two kinds—direct and indirect. The direct consequence, as dictated by pure equity, is that of making restitution. An absolutely just ruler (and every parent should aim to be one) will demand that, wherever it is possible, a wrong act shall be undone by a right one: and in the case of theft this implies either the restoration of the thing stolen, or, if it is consumed, then the giving of an equivalent: which, in the case of a child, may be effected out of its pocket-money. The indirect and more serious consequence is the grave displeasure of parents—a consequence which inevitably follows among all peoples sufficiently civilized to regard theft as a crime; and the manifestation of this displeas-

ure is, in this instance, the most severe of the natural reactions produced by the wrong action. "But," it will be said, "the manifestation of parental displeasure, either in words or blows, is the ordinary course in these cases: the method leads here to nothing new." Very true. Already we have admitted that, in some directions, this method is spontaneously pursued. Already we have shown that there is a more or less manifest tendency for educational systems to gravitate towards the true system. And here we may remark, as before, that the intensity of this natural reaction will, in the beneficent order of things, adjust itself to the requirements—that this parental displeasure will vent itself in violent measures during comparatively barbarous times, when the children are also comparatively barbarous; and will express itself less cruelly in those more advanced social states in which, by implication, the children are amenable to milder treatment. But what it chiefly concerns us here to observe is, that the manifestation of strong parental displeasure, produced by one of these graver offences, will be potent for good just in proportion to the warmth of the attachment existing between parent and child. Just in proportion as the discipline of the natural consequences has been consistently pursued in other cases, will it be efficient in this case. Proof is within the experience of all, if they will look for it.

For does not every man know that when he has offended another person, the amount of genuine regret he feels (of course, leaving worldly considerations out of the question) varies with the degree of sympathy he has for that person. Is he not conscious that when the person offended stands to him in the position of an enemy, the having given him annoyance is apt to be a source rather of secret satisfaction than of sorrow? Does he not remember that where umbrage has been taken by some total stranger, he has felt much less concern than he would have done had such umbrage been taken by one with whom he was intimate? While, conversely, has not the anger of an admired and cherished friend been regarded by him as a serious misfortune, long and keenly regretted? Clearly, then, the effects of parental displeasure upon children must similarly depend upon the pre-existing relationship. Where there is an established alienation, the feeling of a child who has transgressed is a purely selfish fear of the evil consequences likely to fall upon it in the shape of physical penalties or deprivations; and after these evil consequences have been inflicted, there

are aroused an antagonism and dislike which are morally injurious, and tend further to increase the alienation. On the contrary, where there exists a warm filial affection produced by a consistent parental friendship—a friendship not dogmatically asserted as an excuse for punishments and denials, but daily exhibited in ways that a child can comprehend—a friendship which avoids needless thwartings, which warns against impending evil consequences, and which sympathizes with juvenile pursuits—there the state of mind caused by parental displeasure will not only be salutary as a check to future misconduct of like kind, but will also be intrinsically salutary. The moral pain consequent upon having, for the time being, lost so loved a friend, will stand in place of the physical pain usually inflicted; and where this attachment exists, will prove equally, if not more, efficient. While instead of the fear and vindictiveness excited by the one course, there will be excited by the other more or less of sympathy with parental sorrow, a genuine regret for having caused it, and a desire, by some atonement, to re-establish the habitual friendly relationship. Instead of bringing into play those purely egoistic feelings whose predominance is the cause of criminal acts, there will be brought into play those altruistic feelings which check criminal acts. Thus the discipline of the natural consequences is applicable to grave as well as trivial faults; and the practice of it conduces not simply to the repression, but to the eradication of such faults.

In brief, the truth is that savageness begets savageness, and gentleness begets gentleness. Children who are unsympathetically treated become relatively unsympathetic; whereas treating them with due fellow-feeling is a means of cultivating their fellow-feeling. With family governments as with political ones, a harsh despotism itself generates a great part of the crimes it has to repress; while conversely a mild and liberal rule not only avoids many causes of dissension, but so ameliorates the tone of feeling as to diminish the tendency to transgression. As John Locke long since remarked, "Great severity of punishment does but very little good, nay, great harm, in education; and I believe it will be found that, *ceteris paribus*, those children who have been most chastised seldom make the best men." In confirmation of which opinion we may cite the fact not long since made public by Mr. Rogers, Chaplain of the Pentonville Prison, that those juvenile criminals who have been whipped are those who most frequently return to prison.

On the other hand, as exhibiting the beneficial effects of a kinder treatment, we will instance the fact stated to us by a French lady, in whose house we recently staid in Paris. Apologizing for the disturbance daily caused by a little boy who was unmanageable both at home and at school, she expressed her fear that there was no remedy save that which had succeeded in the case of an elder brother; namely, sending him to an English school. She explained that at various schools in Paris this elder brother had proved utterly untractable; that in despair they had followed the advice to send him to England; and that on his return home he was as good as he had before been bad. And this remarkable change she ascribed entirely to the comparative mildness of the English discipline.

After this exposition of principles, our remaining space may best be occupied by a few of the chief maxims and rules deducible from them; and with a view to brevity we will put these in a more or less hortatory form.

Do not expect from a child any great amount of moral goodness. During early years every civilized man passes through that phase of character exhibited by the barbarous race from which he is descended. As the child's features—flat nose, forward-opening nostrils, large lips, wide-apart eyes, absent frontal sinus, etc.—resemble for a time those of the savage, so, too, do his instincts. Hence the tendencies to cruelty, to thieving, to lying, so general among children—tendencies which, even without the aid of discipline, will become more or less modified just as the features do. The popular idea that children are "innocent," while it may be true in so far as it refers to evil *knowledge*, is totally false in so far as it refers to evil *impulses*, as half an hour's observation in the nursery will prove to any one. Boys when left to themselves, as at a public school, treat each other far more brutally than men do; and were they left to themselves at an earlier age their brutality would be still more conspicuous.

Not only is it unwise to set up a high standard for juvenile good conduct, but it is even unwise to use very urgent incitements to such good conduct. Already most people recognize the detrimental results of intellectual precocity; but there remains to be recognized the truth that there is a *moral precocity* which is also detrimental. Our higher moral faculties, like our higher intellectual ones, are comparatively complex. By consequence they are both comparatively late in their evolution. And with the one as with the other, a very early activity produced by stimulation will be at the expense of the future character.

Hence the not uncommon fact that those who during childhood were instanced as models of juvenile goodness, by and by undergo some disastrous and seemingly inexplicable change, and end by being not above but below par; while relatively exemplary men are often the issue of a childhood by no means so promising.

Be content, therefore, with moderate measures and moderate results. Constantly bear in mind the fact that a higher morality, like a higher intelligence, must be reached by a slow growth; and you will then have more patience with those imperfections of nature which your child hourly displays. You will be less prone to that constant scolding, and threatening, and forbidding, by which many parents induce a chronic domestic irritation, in the foolish hope that they will thus make their children what they should be.

This comparatively liberal form of domestic government, which does not seek despotically to regulate all the details of a child's conduct, necessarily results from the system for which we have been contending. Satisfy yourself with seeing that your child always suffers the natural consequences of his actions, and you will avoid that excess of control in which so many parents err. Leave him wherever you can to the discipline of experience, and you will so save him from that hothouse virtue which over-regulation produces in yielding natures, or that demoralizing antagonism which it produces in independent ones.

By aiming in all cases to administer the natural reactions to your child's actions, you will put an advantageous check upon your own temper. The method of moral education pursued by many, we fear by most, parents, is little else than that of venting their anger in the way that first suggests itself. The slaps, and rough shakings, and sharp words, with which a mother commonly visits her offspring's small offences (many of them not offences considered intrinsically), are very generally but the manifestations of her own ill-controlled feelings—result much more from the promptings of those feelings than from a wish to benefit the offenders. While they are injurious to her own character, these outbursts tend, by alienating her children and by decreasing their respect for her, to diminish her influence over them. But by pausing in each case of transgression to consider what is the natural consequence, and how that natural consequence may best be brought home to the transgressor, some little time is necessarily obtained for the mastery of yourself; the mere blind anger first aroused in you settles down into a less vehe-

ment feeling, and one not so likely to mislead you.

Do not, however, seek to behave as an utterly passionless instrument. Remember that besides the natural consequences of your child's conduct which the working of things tends to bring round on him, your own approbation or disapprobation is also a natural consequence, and one of the ordained agencies for guiding him. The terror which we have been combating is that of *substituting* parental displeasure and its artificial penalties, for the penalties which nature has established. But while it should not be *substituted* for these natural penalties, it by no means follows that it should not, in some form, *accompany* them. The *secondary* kind of punishment should not usurp the place of the *primary* kind; but, in moderation, it may rightly supplement the primary kind. Such amount of disapproval, or sorrow, or indignation, as you feel, should be expressed in words or manner or otherwise; subject, of course, to the approval of your judgment. The degree and kind of feeling produced in you will necessarily depend upon your own character, and it is therefore useless to say it should be this or that. All that can be recommended is, that you should aim to modify the feeling into that which you believe ought to be entertained. Beware, however, of the two extremes; not only in respect of the intensity, but in respect of the duration of your displeasure. On the one hand, anxiously avoid that weak impulsiveness, so general among mothers, which scolds and forgives almost in the same breath. On the other hand, do not unduly continue to show estrangement of feeling, lest you accustom your child to do without your friendship and so lose your influence over him. The moral reactions called forth from you by your child's actions, you should as much as possible assimilate to those which you conceive would be called forth from a parent of perfect nature.

Be sparing of commands. Command only in those cases in which other means are inapplicable, or have failed. "In frequent orders the parents' advantage is more considered than the child's," says Richter. As in primitive societies a breach of law is punished, not so much because it is intrinsically wrong as because it is a disregard of the king's authority—a rebellion against him; so in many families, the penalty visited on a transgressor proceeds less from reprobation of the offence than from anger at the disobedience. Listen to the ordinary speeches—"How dare you disobey me?" "I tell you I'll make you do it,

sir." "I'll soon teach you who is *master*"—and then consider what the words, the tone, and the manner imply. A determination to subjugate is much more conspicuous in them than an anxiety for the child's welfare. For the time being the attitude of mind differs but little from that of the despot bent on punishing a recalcitrant subject. The right-feeling parent, however, like the philanthropic legislator, will not rejoice in coercion, but will rejoice in dispensing with coercion. He will do without law in all cases where other modes of regulating conduct can be successfully employed; and he will regret the having recourse to law when it is necessary. As Richter remarks—"The best rule in politics is said to be '*pas trop gouverner*;' it is also true in education." And in spontaneous conformity with this maxim, parents whose lust of dominion is restrained by a true sense of duty, will aim to make their children control themselves wherever it is possible, and will fall back upon absolutism only as a last resort.

But whenever you *do* command, command with decision and consistency. If the case is one which really cannot be otherwise dealt with, then issue your fiat, and having issued it, never afterwards swerve from it. Consider well beforehand what you are going to do; weigh all the consequences; think whether your firmness of purpose will be sufficient; and then, if you finally make the law, enforce it uniformly at whatever cost. Let your penalties be like the penalties inflicted by inanimate nature—inevitable. The hot cinder burns a child the first time he seizes it; it burns him the second time; it burns him the third time; it burns him every time; and he very soon learns not to touch the hot cinder. If you are equally consistent—if the consequences which you tell your child will follow certain acts, follow with like uniformity, he will soon come to respect your laws as he does those of Nature. And this respect once established will prevent endless domestic evils. Of errors in education one of the worst is that of inconsistency. As in a community, crimes multiply when there is no certain administration of justice; so in a family, an immense increase of transgressions results from a hesitating or irregular infliction of penalties. A weak mother, who perpetually threatens and rarely performs—who makes rules in haste and repents of them at leisure—who treats the same offence now with severity and now with leniency, according as the passing humor dictates, is laying up miseries both for herself and her children. She is making herself contemptible in their eyes; she is setting them an example of uncontrolled feelings;

she is encouraging them to transgress by the prospect of probable impunity; she is entailing endless squabbles and accompanying damage to her own temper and the tempers of her little ones; she is reducing their minds to a moral chaos, which after-years of bitter experience will with difficulty bring into order. Better even a barbarous form of domestic government carried out consistently, than a humane one inconsistently carried out. Again we say, avoid coercive measures whenever it is possible to do so; but when you find despotism really necessary, be despotic in good earnest.

Bear constantly in mind the truth that the aim of your discipline should be to produce a *self-governing* being; not to produce a being to be *governed by others*. Were your children fated to pass their lives as slaves, you could not too much accustom them to slavery during their childhood; but as they are by and by to be free men, with no one to control their daily conduct, you cannot too much accustom them to self-control while they are still under your eye. This it is which makes the system of discipline by natural consequences, so especially appropriate to the social state which we in England have now reached. Under early, tyrannical forms of society, when one of the chief evils the citizen had to fear was the anger of his superiors, it was well that during childhood parental vengeance should be a predominant means of government. But now that the citizen has little to fear from any one—now that the good or evil which he experiences throughout life is mainly that which in the nature of things results from his own conduct, it is desirable that from his first years he should begin to learn, experimentally, the good or evil consequences which naturally follow this or that conduct. Aim, therefore, to diminish the amount of parental government as fast as you can substitute for it in your child's mind that self-government arising from a foresight of results. In infancy a considerable amount of absolutism is necessary. A three-year-old urchin playing with an open razor, cannot be allowed to learn by this discipline of consequences; for the consequences may, in such a case, be too serious. But as intelligence increases, the number of instances calling for peremptory interference may be and should be, diminished; with the view of gradually ending them as maturity is approached. All periods of transition are dangerous; and the most dangerous is the transition from the restraint of the family circle to the non-restraint of the world. Hence the importance of pursuing the policy we advocate; which, alike by cultivating a child's

faculty of self-restraint, by continually increasing the degree in which it is left to its self-constraint, and by so bringing it, step by step, to a state of unaided self-restraint, obliterates the ordinary sudden and hazardous change from externally-governed youth to internally governed maturity. Let the history of your domestic rule typify, in little, the history of our political rule: at the outset, autocratic control, where control is really needful; by and by an incipient constitutionalism, in which the liberty of the subject gains some express recognition; successive extensions of this liberty of the subject; gradually ending in parental abdication.

Do not regret the exhibition of considerable self-will on the part of your children. It is the correlative of that diminished coerciveness so conspicuous in modern education. The greater tendency to assert freedom of action on the one side, corresponds to the smaller tendency to tyrannize on the other. They both indicate an approach to the system of discipline we contend for, under which children will be more and more led to rule themselves by the experience of natural consequences; and they are both the accompaniments of our more advanced social state. The independent English boy is the father of the independent English man; and you cannot have the last without the first. German teachers say that they had rather manage a dozen German boys than one English one. Shall we, therefore, wish that our boys had the manageableness of the German ones, and with it the submissiveness and political serfdom of adult Germans? Or shall we not rather tolerate in our boys those feelings which make them free men, and modify our methods accordingly?

Lastly, always remember that to educate rightly is not a simple and easy thing, but a complex and extremely difficult thing: the hardest task which devolves upon adult-life. The rough and ready style of domestic government is indeed practicable by the meanest and most uncultivated intellects. Slaps and sharp words are penalties that suggest themselves alike to the least reclaimed barbarian and the most stolid peasant. Even brutes can use this method of discipline; as you may see in the growl and half-bite with which a bitch will check a too-exigent puppy. But if you would carry out with success a rational and civilized system, you must be prepared for considerable mental exertion—for some study, some ingenuity, some patience, some self-control. You will have habitually to trace the consequences of conduct—to consider what are the results which in adult life

follow certain kind of acts; and then you will have to devise methods by which parallel results shall be entailed on the parallel acts of your children. You will daily be called upon to analyze the motives of juvenile conduct: you must distinguish between acts that are really good and those which, though externally simulating them, proceed from inferior impulses: while you must be ever on your guard against the cruel mistake not unfrequently made, of translating neutral acts into transgressions, or ascribing worse feelings than were entertained. You must more or less modify your method to suit the disposition of each child; and must be prepared to make further modifications as each child's disposition enters on a new phase. Your faith will often be taxed to maintain the requisite perseverance in a course which seems to produce little or no effect. Especially if you are dealing with children who have been wrongly treated, you must be prepared for a lengthened trial of patience before succeeding with better methods; seeing that that which is not easy even where a right state of feeling has been established from the beginning, becomes doubly difficult when a wrong state of feeling has to be set right. Not only will you have constantly to analyze the motives of your children, but you will have to analyze your own motives—to discriminate between those internal suggestions springing from a true paternal solicitude, and those which spring from your own selfishness, from your love of ease, from your lust of dominion. And then, more trying still, you will have not only to detect, but to curb these baser impulses. In brief, you will have to carry on your higher education at the same time that you are educating your children. Intellectually you must cultivate to good purpose that most complex of subjects—human nature and its laws, as exhibited in your children, in yourself, and in the world. Morally, you must keep in constant exercise your higher feelings, and restrain your lower. It is a truth yet remaining to be recognized, that the last stage in the mental development of each man and woman is to be reached only through the proper discharge of the parental duties. And when this truth is recognized, it will be seen how admirable is the ordination in virtue of which human beings are led by their strongest affections to subject themselves to a discipline which they would else elude.

While some will probably regard this conception of education as it should be, with doubt and discouragement, others will, we think, perceive in the exalted ideal which it

involves, evidence of its truth. That it cannot be realized by the impulsive, the unsympathetic, and the short-sighted, but demands the higher attributes of human nature, they will see to be evidence of its fitness for the more advanced states of humanity. Though it calls for much labor and self-sacrifice, they will see that it promises an abundant return of happiness, immediate and remote. They will see that while in its injurious effects on both parent and child a bad system is twice cursed, a good system is twice blessed—it blesses him that trains and him that's trained.

It will be seen that we have said nothing in this Chapter about the transcendental distinction between right and wrong, of which wise men know so little, and children nothing. All thinkers are agreed that we may find the criterion of right in the effect of actions, if we do not find the rule there; and that is sufficient for the purpose we have had in view. Nor have we introduced the religious element. We have confined our inquiries to a nearer, and a much more neglected field, though a very important one. Our readers may supplement our thoughts in any way they please; we are only concerned that they should be accepted as far as they go.

CHAPTER IV.

PHYSICAL EDUCATION.

EQUALLY at the squire's table after the withdrawal of the ladies, at the farmers' market-drawal, and at the village ale-house, the topic which, after the political question of the day, excites perhaps the most general interest, is the management of animals. Riding home from hunting, the conversation is pretty sure to gravitate towards horse-breeding, and pedigrees, and comments on this or that "good point;" while a day on the moors is very unlikely to pass without something being said on the treatment of dogs. When crossing the fields together from church, the tenants of adjacent farms are apt to pass from criticisms on the sermon to criticisms on the weather, the crops, and the stock; and thence to slide into discussions on the various kinds of fodder and their feeding qualities. Hodge and Giles, after comparing notes over their respective pig-styes, show by their remarks that they have been more or less observant of their masters' beasts and sheep; and of the effects produced on them by this or that kind of treatment. Nor is it only among the rural popu-

lation that the regulations of the kennel, the stable, the cow-shed, and the sheep-pen, are favorite subjects. In towns, too, the numerous artisans who keep dogs, the young men who are rich enough to now and then indulge their sporting tendencies, and their more staid seniors who talk over agricultural progress or read Mr. Mechi's annual reports and Mr. Caird's letters to the *Times*, form, when added together, a large portion of the inhabitants. Take the adult males throughout the kingdom, and a great majority will be found to show some interest in the breeding, rearing, or training of animals, of one kind or other.

But, during after-dinner conversations, or at other times of like intercourse, who hears anything said about the rearing of children? When the country gentleman has paid his daily visit to the stable, and personally inspected the condition and treatment of his horses; when he has glanced at his minor live stock, and given directions about them; how often does he go up to the nursery and examine into its dietary, its hours, its ventilation? On his library shelves may be found White's "Farriery," Stephen's "Book of the Farm," Nimrod "On the Condition of Hunters;" and with the contents of these he is more or less familiar; but how many books has he read on the management of infancy and childhood? The fattening properties of oil-cake, the relative values of hay and chopped straw, the dangers of unlimited clover, are points on which every landlord, farmer, and peasant has some knowledge; but what proportion of them know much about the qualities of the food they give their children, and its fitness to the constitutional needs of growing boys and girls? Perhaps the business interests of these classes will be assigned as accounting for this anomaly. The explanation is inadequate, however; see that the same contrast holds more or less among other classes. Of a score of townspeople few, if any, would prove ignorant of the fact that it is undesirable to work a horse soon after it has eaten; and yet, of this same score, supposing them all to be fathers, probably not one would be found who had considered whether the time elapsing between his children's dinner and their resumption of lessons was sufficient. Indeed, on cross-examination, nearly every man would disclose the latent opinion that the regimen of the nursery was no concern of his. "Oh, I leave all those things to the women," would probably be the reply. And in most cases the tone and manner of this reply would convey the implication, that such cares are not consistent with masculine dignity.

Consider the fact from any but the conventional point of view, and it will seem strange that while the raising of first-rate bullocks is an occupation on which men of education willingly bestow much time, inquiry, and thought, the bringing up of fine human beings is an occupation tacitly voted unworthy of their attention. Mammals who have been taught little but languages, music, and accomplishments, aided by nurses full of antiquated prejudices, are held competent regulators of the food, clothing, and exercise of children. Meanwhile the fathers read books and periodicals, attend agricultural meetings, try experiments, and engage in discussions, all with the view of discovering how to fatten prize pigs! Infinite pains will be taken to produce a racer that shall win the Derby: none to produce a modern athlete. Had Gulliver narrated of the Laputians that the men vied with each other in learning how best to rear the offspring of other creatures, and were careless of learning how best to rear their own offspring, he would have paralleled any of the other absurdities he ascribes to them.

The matter is a serious one, however. Ludicrous as is the antithesis, the fact it expresses is not less disastrous. As remarks a suggestive writer, the first requisite to success in life is "to be a good animal;" and to be a nation of good animals is the first condition to national prosperity. Not only is it that the event of a war often turns on the strength and hardiness of soldiers; but it is that the contests of commerce are in part determined by the bodily endurance of producers. Thus far we have found no reason to fear trials of strength with other races in either of these fields. But there are not wanting signs that our powers will presently be taxed to the uttermost. Already under the keen competition of modern life, the application required of almost every one is such as few can bear without more or less injury. Already thousands break down under the high pressure they are subject to. If this pressure continues to increase, as it seems likely to do, it will try severely all but the soundest constitution. Hence it is becoming of especial importance that the training of children should be so carried on, as not only to fit them mentally for the struggle before them, but also to make them physically fit to bear its excessive wear and tear.

Happily the matter is beginning to attract attention. The writings of Mr. Kingsley indicate a reaction against over-culture; carried, as reactions usually are, somewhat too far. Occasional letters and leaders in the newspapers have shown an awakening inter-

est in physical training. And the formation of a school, significantly nicknamed that of "muscular Christianity," implies a growing opinion that our present methods of bringing up children do not sufficiently regard the welfare of the body. The topic is evidently ripe for discussion.

To conform the regimen of the nursery and the school to the established truths of modern science—this is the desideratum. It is time that the benefits which our sheep and oxen have for years past derived from the investigations of the laboratory, should be participated in by our children. Without calling in question the great importance of horse-training and pig-feeding, we would suggest that, as the rearing of well-grown men and women is also of some moment, the conclusions indicated by theory, and endorsed by practice, ought to be acted on in the last case as in the first. Probably not a few will be startled—perhaps offended—by this collocation of ideas. But it is a fact not to be disputed, and to which we had best reconcile ourselves, that man is subject to the same organic laws as inferior creatures. No anatomist, no physiologist, no chemist, will for a moment hesitate to assert, that the general principles which rule over the vital processes in animals equally rule over the vital processes in man. And a candid admission of this fact is not without its reward: namely, that the truths established by observation and experiment on brutes, become more or less available for human guidance. Rudimentary as is the Science of Life, it has already attained to certain fundamental principles underlying the development of all organisms, the human included. That which has now to be done, and that which we shall endeavor in some measure to do, is to show the bearing of these fundamental principles upon the physical training of childhood and youth.

The rhythmical tendency which is traceable in all departments of social life—which is illustrated in the access of despotism after revolution, or, among ourselves, in the alternation of reforming epochs and conservative epochs—which, after a dissolute age, brings an age of asceticism, and conversely—which, in commerce, produces the regularly recurring inflations and panics—which carries the devotees of fashion from one absurd extreme to the opposite one;—this rhythmical tendency affects also our table-habits, and by implication, the dietary of the young. After a period distinguished by hard drinking and hard eating, has come a period of comparative sobriety, which, in teetotalism and vege-

tarianism, exhibits extreme forms of its protest against the riotous living of the past. And along with this change in the regimen of adults, has come a parallel change in the regimen for boys and girls. In past generations, the belief was, that the more a child could be induced to eat, the better; and even now, among farmers and in remote districts, where traditional ideas most linger, parents may be found who tempt their children to gorge themselves. But among the educated classes, who chiefly display this reaction towards abstemiousness, there may be seen a decided leaning to the under-feeding, rather than the over-feeding, of children. Indeed their disgust for bygone animalism is more clearly shown in the treatment of their offspring than in the treatment of themselves; seeing that while their disguised asceticism is, in so far as their personal conduct is concerned, kept in check by their appetites, it has full play in legislating for juveniles.

That over-feeding and under-feeding are both bad, is a truism. Of the two, however, the last is the worst. As writes a high authority, "the effects of casual repletion are less prejudicial, and more easily corrected, than those of inanition."* Add to which, that where there has been no injudicious interference, repletion will seldom occur. "Excess is the vice rather of adults than of the young, who are rarely either gourmands or epicures, unless through the fault of those who rear them."† This system of restriction which many parents think so necessary, is based upon very inadequate observation, and very erroneous reasoning. There is an over-legislation in the nursery, as well as an over-legislation in the State; and one of the most injurious forms of it is this limitation in the quantity of food.

"But are children to be allowed to surfeit themselves? Shall they be suffered to take their fill of dainties and make themselves ill, as they certainly will do?" As thus put, the question admits of but one reply. But as thus put, it assumes the point at issue. We contend that, as appetite is a good guide to all the lower creation—as it is a good guide to the infant—as it is a good guide to the invalid—as it is a good guide to the differently-placed races of men, and as it is a good guide for every adult who leads a healthful life; it may safely be inferred that it is a good guide for childhood. It would be strange indeed were it here alone untrustworthy.

Probably not a few will read this reply with some impatience; being able, as they think,

to cite facts totally at variance with it. It will appear absurd if we deny the relevancy of these facts; and yet the paradox is quite defensible. The truth is, that the instances of excess which such persons have in mind, are usually the *consequences* of the restrictive system they seem to justify. They are the sensual reactions caused by a more or less ascetic regimen. They illustrate on a small scale that commonly remarked fact, that those who during youth have been subject to the most rigorous discipline, are apt afterwards to rush into the wildest extravagances. They are analogous to those frightful phenomena, once not uncommon in convents, where nuns suddenly lapsed from the extremest austerities into an almost demoniac wickedness. They simply exhibit the uncontrollable vehemence of a long-denied desire. Consider the ordinary tastes and the ordinary treatment of children. The love of sweets is conspicuous and almost universal among them. Probably ninety-nine people in a hundred, presume that there is nothing more in this than gratification of the palate; and that, in common with other sensual desires, it should be discouraged. The physiologist, however, whose discoveries lead him to an ever-increasing reverence for the arrangements of things, will suspect that there is something more in this love of sweets than the current hypothesis supposes; and a little inquiry confirms the suspicion. Any work on organic chemistry shows that sugar plays an important part in the vital processes. Both saccharine and fatty matters are eventually oxidized in the body; and there is an accompanying evolution of heat. Sugar is the form to which sundry other compounds have to be reduced before they are available as heat-making food; and this *formation* of sugar is carried on in the body. Not only is starch changed into sugar in the course of digestion, but it has been proved by M. Claude Bernard that the liver is a factory in which other constituents of food are transformed into sugar. Now, when to the fact that children have a marked desire for this valuable heat-food, we join the fact that they have usually a marked dislike to that food which gives out the greatest amount of heat during its oxidation (namely, fat), we shall see strong reason for thinking that excess of the one compensates for defect of the other—that the organism demands more sugar because it cannot deal with much fat. Again, children are usually very fond of vegetable acids. Fruits of all kinds are their delight; and, in the absence of anything better, they will devour unripe gooseberries and the sourest of crabs. Now, not only are veg-

* "Cyclopaedia of Practical Medicine."

† *Ibid.*

etable acids, in common with mineral ones, very good tonics, and beneficial as such when taken in moderation; but they have, when administered in their natural forms, other advantages. "Ripe fruit," says Dr. Andrew Combe, "is more freely given on the Continent than in this country; and, particularly when the bowels act imperfectly, it is often very useful." See, then, the discord between the instinctive wants of children and their habitual treatment. Here are two dominant desires, which there is good reason to believe express certain needs of the juvenile constitution; and not only are they ignored in the nursery regimen, but there is a general tendency to forbid the gratification of them. Bread-and-milk in the morning, tea and bread-and-butter at night, or some dietary equally insipid, is rigidly adhered to; and any ministration to the palate is thought not only needless but wrong. What is the necessary consequence? When, on fête-days there is an unlimited access to good things—when a gift of pocket-money brings the contents of the confectioner's window within reach, or when by some accident the free run of a fruit-garden is obtained; then the long-denied, and therefore intense, desires lead to great excesses. There is an impromptu carnival, caused not only by the release from past restraints, but also by the consciousness that a long Lent will begin on the morrow. And then, when the evils of repletion display themselves, it is argued that children must not be left to the guidance of their appetites! These disastrous results of artificial restrictions, are themselves cited as proving the need for further restrictions! We contend, therefore, that the reasoning commonly used to justify this system of interference is vicious. We contend that, were children allowed daily to partake of these more sapid edibles, for which there is a physiological requirement, they would rarely exceed, as they now mostly do when they have the opportunity: were fruit, as Dr. Combe recommends, "to constitute a part of the regular food" (given, as he advises, not between meals, but along with them), there would be none of that craving which prompts the devouring of such fruits as crabs and sloes. And similarly in other cases.

Not only is it that the *a priori* reasons for trusting the appetites of children are so strong; and that the reasons assigned for distrusting them are invalid; but it is that no other guidance is worthy of any confidence. What is the value of this parental judgment, set up as an alternative regulator? When to "Oliver asking for more," the mamma or the governess replies in the negative, on what

data does she proceed? She *thinks* he has had enough. But where are her grounds for so thinking? Has she some secret understanding with the boy's stomach—some *clairvoyant* power enabling her to discern the needs of his body? If not, how can she safely decide? Does she not know that the demand of the system for food is determined by numerous and involved causes—varies with the temperature, with the hygrometric state of the air, with the electric state of the air—varies also according to the exercise taken, according to the kind and quality of food eaten at the last meal, and according to the rapidity with which the last meal was digested? How can she calculate the result of such a combination of causes? As we heard said by the father of a five-years-old boy who stands a head taller than most of his age, and is proportionately robust, rosy, and active:—"I can see no artificial standard by which to mete out his food. If I say, 'this much is enough,' it is a mere guess; and the guess is as likely to be wrong as right. Consequently, having no faith in guesses, I let him eat his fill." And certainly, any one judging of his policy by its effects, would be constrained to admit its wisdom. In truth, this confidence, with which most parents take upon themselves to legislate for the stomachs of their children, proves their unacquaintance with the principles of physiology: if they knew more, they would be more modest. "The pride of science is humble when compared with the pride of ignorance." If any one would learn how little faith is to be placed in human judgments, and how much in the pre-established arrangements of things, let him compare the rashness of the inexperienced physician with the caution of the most advanced; or let him dip into Sir John Forbes' work, "On Nature and Art in the Cure of Disease;" and he will then see that, in proportion as men gain a greater knowledge of the laws of life, they come to have less confidence in themselves, and more in Nature.

Turning from the question of *quantity* of food to that of *quality*, we may discern the same ascetic tendency. Not simply a more or less restricted diet, but a comparatively low diet, is thought proper for children. The current opinion is, that they should have but little animal food. Among the less wealthy classes, economy seems to have dictated this opinion—the wish has been father to the thought. Parents not affording to buy much meat, and liking meat themselves, answer the petitions of juveniles with—"Meat is not good for little boys and girls;" and this, at

first, probably nothing but a convenient excuse, has by repetition grown into an article of faith. While the classes with whom cost is not a consideration, have been swayed partly by the example of the majority, partly by the influence of nurses drawn from the lower classes, and in some measure by the reaction against past animalism.

If, however, we inquire for the basis of this opinion, we find little or none. It is a dogma repeated and received without proof, like that which, for thousands of years, insisted on the necessity of swaddling-clothes. It may indeed be true that, to the young child's stomach, not yet endowed with much muscular power, meat, which requires considerable trituration before it can be made into chyme, is an unfit aliment. But this objection does not tell against animal food from which the fibrous part has been extracted; nor does it apply when, after the lapse of two or three years, considerable muscular vigor has been acquired. And while the evidence in support of this dogma, partially valid in the case of very young children, is not valid in the case of older children, who are, nevertheless, ordinarily treated in conformity with the dogma, the adverse evidence is abundant and conclusive. The verdict of science is exactly opposite to the popular opinion. We have put the question to two of our leading physicians, and to several of the most distinguished physiologists, and they uniformly agree in the conclusion, that children should have a diet not *less* nutritive, but, if anything, *more* nutritive than that of adults.

The grounds for this conclusion are obvious, and the reasoning simple. It needs but to compare the vital processes of a man with those of a boy, to see at once that the demand for sustenance is relatively greater in the boy than in the man. What are the ends for which a man requires food? Each day his body undergoes more or less wear—wear through muscular exertion, wear of the nervous system through mental actions, wear of the viscera in carrying on the functions of life; and the tissue thus wasted has to be renewed. Each day, too, by perpetual radiation, his body loses a large amount of heat; and as, for the continuance of the vital actions, the temperature of the body must be maintained, this loss has to be compensated by a constant production of heat: to which end certain constituents of the food are unceasingly undergoing oxidation. To make up for the day's waste, and to supply fuel for the day's expenditure of heat, are, then, the sole purposes for which the adult requires food. Consider, now, the case of the boy. He, too,

wastes the substance of his body by action; and it needs but to note his restless activity to see that, in proportion to his bulk, he probably wastes as much as a man. He, too, loses heat by radiation; and, as his body exposes a greater surface in proportion to its mass than does that of a man, and therefore loses heat more rapidly, the quantity of heat-food he requires is, bulk for bulk, greater than that required by a man. So that even had the boy no other vital processes to carry on than the man has, he would need, relatively to his size, a somewhat larger supply of nutriment. But, besides repairing his body and maintaining its heat, the boy has to make new tissue—to grow. After waste and thermal loss have been provided for, such surplus of nutriment as remains, goes to the further building up of the frame; and only in virtue of this surplus is normal growth possible—the growth that sometimes takes place in the absence of such surplus, causing a manifest prostration consequent upon defective repair. How peremptory is the demand of the unfolding organism for materials is seen alike in that "school-boy hunger," which after-life rarely parallels in intensity, and in the comparatively quick return of appetite. And if there needs further evidence of this extra necessity for nutriment, we have it in the fact that, during the famines following shipwrecks and other disasters, the children are the first to die.

This relatively greater need for nutriment being admitted, as it must perforce be, the question that remains is—shall we meet it by giving an excessive quantity of what may be called dilute food, or a more moderate quantity of concentrated food? The nutriment obtainable from a given weight of meat is obtainable only from a larger weight of bread, or from a still larger weight of potatoes, and so on. To fulfil the requirement, the quantity must be increased as the nutritiveness is diminished. Shall we, then, respond to the extra wants of the growing child by giving an adequate quantity of food as good as that of adults? Or, regardless of the fact that its stomach has to dispose of a relatively larger quantity even of this good food, shall we further tax it by giving an inferior food in still greater quantity?

The answer is tolerably obvious. The more the labor of digestion can be economized, the more energy is left for the purposes of growth and action. The functions of the stomach and intestines cannot be performed without a large supply of blood and nervous power; and in the comparative lassitude that follows a hearty meal, every adult has proof that this

supply of blood and nervous power is at the expense of the system at large. If the requisite nutriment is furnished by a great quantity of innutritious food, more work is entailed on the viscera than when it is furnished by a moderate quantity of nutritious food. This extra work is so much sheer loss—a loss which in children shows itself either in diminished energy, or in smaller growth, or in both. The inference is, then, that they should have a diet which combines, as much as possible, nutritiveness and digestibility.

It is doubtless true that boys and girls may be brought up upon an exclusively, or almost exclusively, vegetable diet. Among the upper classes are to be found children to whom comparatively little meat is given; and who, nevertheless, grow and appear in good health. Animal food is scarcely tasted by the offspring of laboring people; and yet they reach a healthy maturity. But these seemingly adverse facts have by no means the weight commonly supposed. In the first place, it does not follow that those who in early years flourish on bread and potatoes, will eventually reach a fine development; and a comparison between the agricultural laborers and the gentry, in England, or between the middle and lower classes in France, is by no means in favor of vegetable feeders. In the second place, the question is not only a question of *bulk*, but also a question of *quality*. A soft, flabby flesh makes as good a show as a firm one; but though to the careless eye, a child of full, flaccid tissue may appear the equal of one whose fibres are well toned, a trial of strength will prove the difference. Obesity in adults is often a sign of feebleness. Men lose weight in training. And hence the appearance of these low-fed children is by no means conclusive. In the third place, not only *size*, but *energy* has to be considered. Between children of the meat-eating classes and those of the bread-and-potato-eating classes, there is a marked contrast in this respect. Both in mental and physical vivacity the low-fed peasant-boy is greatly inferior to the better-fed son of a gentleman.

If we compare different classes of animals, or different races of men, or the same animals or men when differently fed, we find still more distinct proof that *the degree of energy essentially depends on the nutritiveness of the food*.

In a cow, subsisting on so innutritive a food as grass, we see that the immense quantity required to be eaten necessitates an enormous digestive system; that the limbs, small in comparison with the body, are burdened by its weight; that in carrying about

this heavy body and digesting this excessive quantity of food, a great amount of force is expended; and that, having but little energy remaining, the creature is sluggish. Compare with the cow a horse—an animal of nearly allied structure, but adapted to a more concentrated food. Here we see that the body, and more especially its abdominal region, bears a much smaller ratio to the limbs; that the powers are not taxed by the support of such massive viscera, nor the digestion of so bulky a food; and that, as a consequence, there is great locomotive energy and considerable vivacity. If, again, we contrast the stolid inactivity of the graminivorous sheep with the liveliness of the dog, subsisting upon flesh or farinaceous food, or a mixture of the two, we see a difference similar in kind, but still greater in degree. And after walking through the Zoological Gardens, and noting the restlessness with which the carnivorous animals pace up and down their cages, it needs but to remember that none of the herbivorous animals habitually display this superfluous energy, to see how clear is the relation between concentration of food and degree of activity.

That these differences are not directly consequent upon differences of constitution, as some may argue; but are directly consequent upon differences in the food which the creatures are constituted to subsist on; is proved by the fact, that they are observable between different divisions of the same species. Take the case of mankind. The Australians, Bushmen, and others of the lowest savages who live on roots and berries, varied by larvæ of insects and the like meagre fare, are comparatively puny in stature, have large abdomens, soft and undeveloped muscles, and are quite unable to cope with Europeans, either in a struggle or in prolonged exertion. Count up the wild races who are well grown, strong and active, as the Kaffirs, North-American Indians, and Patagonians, and you find them large consumers of flesh. The ill-fed Hindoo goes down before the Englishman fed on more nutritive food; to whom he is as inferior in mental as in physical energy. And generally, we think, the history of the world shows that the well-fed races have been the energetic and dominant races.

Still stronger, however, becomes the argument, when we find that the same individual animal becomes capable of more or less exertion according as its food is more or less nutritive. This has been clearly demonstrated in the case of the horse. Though flesh may be gained by a grazing horse, strength is lost; as putting him to hard work proves. "The

consequence of turning horses out to grass is relaxation of the muscular system." "Grass is a very good preparation for a bullock for Smithfield market, but a very bad one for a hunter." It was well known of old that, after passing the summer months in the fields, hunters required some months of stable-feeding before becoming able to follow the hounds; and that they did not get into good condition until the beginning of the next spring. And the modern practice is that insisted on by Mr. Apperley—"Never to give a hunter what is called 'a summer's run at grass,' and, except under particular and very favorable circumstances, never to turn him out at all." That is to say, never give him poor food: great energy and endurance are to be obtained only by the continuous use of very nutritive food. So true is this that, as proved by Mr. Apperley, prolonged high-feeding will enable a middling horse to equal, in his performances, a first-rate horse fed in the ordinary way. To which various evidences add the familiar fact that, when a horse is required to do double duty, it is the practice to give him beans—a food containing a larger proportion of nitrogenous, or flesh-making material, than his habitual oats.

Once more, in the case of individual men the truth has been illustrated with equal, or still greater, clearness. We do not refer to men in training for feats of strength, whose regimen, however, thoroughly conforms to the doctrine. We refer to the experience of railway contractors and their laborers. It has been for years past a well-established fact that the English navy, eating largely of flesh, is far more efficient than a Continental navy living on a less nutritive food: so much more efficient, that English contractors for Continental railways have habitually taken their laborers with them. That difference of diet and not difference of race caused this superiority, has been of late distinctly shown. For it has turned out, that when the Continental navvies live in the same style as their English competitors, they presently rise, more or less nearly, to a par with them in efficiency. To which fact let us here add the converse one, to which we can give personal testimony based upon six months' experience of vegetarianism, that abstinence from meat entails diminished energy of both body and mind.

Do not these various evidences distinctly endorse our argument respecting the feeding of children? Do they not imply that, even supposing the same stature and bulk to be attained on an innutritive as on a nutritive diet, the quality of tissue is greatly inferior? Do they not establish the position that, where

energy as well as growth has to be maintained, it can only be done by high feeding? Do they not confirm the *a priori* conclusion that, though a child of whom little is expected in the way of bodily or mental activity, may thrive tolerably well on farinaceous substances, a child who is daily required, not only to form the due amount of new tissue, but to supply the waste consequent on great muscular action, and the further waste consequent on hard exercise of brain, must live on substances containing a larger ratio of nutritive matter? And is it not an obvious corollary, that denial of this better food will be at the expense either of growth, or of bodily activity, or of mental activity; as constitution and circumstances may determine? We believe no logical intellect will question it. To think otherwise is to entertain in a disguised form the old fallacy of the perpetual-motion schemers—that it is possible to get power out of nothing.

Before leaving the question of food, a few words must be said on another requisite—*variety*. In this respect the dietary of the young is very faulty. If not, like our soldiers, condemned to "twenty years of boiled beef," our children have mostly to bear a monotony which, though less extreme and less lasting, is quite as clearly at variance with the laws of health. At dinner, it is true, they usually have food that is more or less mixed, and that is changed day by day. But week after week, month after month, year after year, comes the same breakfast of bread-and-milk, or, it may be, oatmeal porridge. And with like persistence the day is closed, perhaps with a second edition of the bread-and-milk, perhaps with tea and bread-and-butter.

This practice is opposed to the dictates of physiology. The satiety produced by an often-repeated dish, and the gratification caused by one long a stranger to the palate, are *not* meaningless, as many carelessly assume; but they are the incentives to a wholesome diversity of diet. It is a fact, established by numerous experiments, that there is scarcely any one food, however good, which supplies in due proportions or right forms all the elements required for carrying on the vital processes in a normal manner: from whence it is to be inferred that frequent change of food is desirable to balance the supply of all the elements. It is a further fact, well known to physiologists, that the enjoyment given by a much-liked food is a nervous stimulus, which, by increasing the action of the heart and so propelling the blood with increased vigor, aids in the subsequent digestion. And these truths are in harmony with

the maxims of modern cattle-feeding, which dictate a rotation of diet.

Not only, however, is periodic change of food very desirable; but, for the same reasons, it is very desirable that a mixture of food should be taken at each meal. The better balance of ingredients, and the greater nervous stimulation, are advantages which hold here as before. If facts are asked for, we may name as one, the comparative ease with which the stomach disposes of a French dinner, enormous in quantity but extremely varied in material. Few will contend that an equal weight of one kind of food, however well cooked, could be digested with as much facility. If any desire further facts, they may find them in every modern book on the management of animals. Animals thrive best when each meal is made up of several things. And indeed, among men of science the truth has been long ago established. The experiments of Goss and Stark "afford the most decisive proof of the advantage, or rather the necessity, of a mixture of substances, in order to produce the compound which is the best adapted for the action of the stomach."*

Should any object, as probably many will, that a rotating dietary for children, and one which also requires a mixture of food at each meal, would entail too much trouble; we reply, that no trouble is thought too great which conduces to the mental development of children, and that for their future welfare, good bodily development is equally important. Moreover, it seems alike sad and strange that a trouble which is cheerfully taken in the fattening of pigs, should be thought too great in the rearing of children.

One more paragraph, with the view of warning those who may propose to adopt the regimen indicated. The change must not be made suddenly; for continued low-feeding so enfeebles the system, as to disable it from at once dealing with a high diet. Deficient nutrition is itself a cause of dyspepsia. This is true even of animals. "When calves are fed with skimmed milk, or whey, or other poor food, they are liable to indigestion."* Hence, therefore, where the energies are low, the transition to a generous diet must be gradual: each increment of strength gained, justifying a further increase of nutriment. Further, it should always be borne in mind that the concentration of nutriment may be carried too far. A bulk sufficient to fill the stomach is one requisite of a proper meal; and this requisite negatives a diet deficient in those matters

which give adequate mass. Though the size of the digestive organs is less in the well-fed civilized races than in the ill-fed savage ones; and, though their size may eventually diminish still further; yet, for the time being, the bulk of the ingesta must be determined by the existing capacity. But, paying due regard to these two qualifications our conclusions are—that the food of children should be highly nutritive; that it should be varied at each meal and at successive meals; and that it should be abundant.

With clothing as with food, the established tendency is towards an improper scantiness. Here, too, asceticism peeps out. There is a current theory, vaguely entertained, if not put into a definite formula, that the sensations are to be disregarded. They do not exist for our guidance, but to mislead us, seems to be the prevalent belief reduced to its naked form. It is a grave error: we are much more beneficently constituted. It is not obedience to the sensations, but disobedience to them, which is the habitual cause of bodily evils. It is not the eating when hungry, but the eating in the absence of appetite, which is bad. It is not the drinking when thirsty, but the continuing to drink when thirst has ceased, that is the vice. Harm results not from breathing that fresh air which every healthy person enjoys; but from continuing to breathe foul air, spite of the protest of the lungs. Harm results not from taking that active exercise which, as every child shows us, nature strongly prompts; but from a persistent disregard of nature's promptings. Not that mental activity which is spontaneous and enjoyable does the mischief; but that which is persevered in after a hot or aching head commands desistance. Not that bodily exertion which is pleasant or indifferent, does injury; but that which is continued when exhaustion forbids. It is true that, in those who have long led unhealthy lives, the sensations are not trustworthy guides. People who have for years been almost constantly indoors, who have exercised their brains very much, and their bodies scarcely at all, who in eating have obeyed their clocks without consulting their stomachs, may very likely be misled by their vitiated feelings. But their abnormal state is itself the result of transgressing their feelings. Had they from childhood up never disobeyed what we may term the physical conscience, it would not have been seared, but would have remained a faithful monitor.

* "Cyclopaedia of Anatomy and Physiology."

* "Morrison's Cyclopaedia of Agriculture."

Among the sensations serving for our guidance are those of heat and cold; and a clothing for children which does not carefully consult these sensations is to be condemned. The common notion about "hardening" is a grievous delusion. Children are not unfrequently "hardened" out of the world; and those who survive, permanently suffer either in growth or constitution. "Their delicate appearance furnishes ample indication of the mischief thus produced, and their frequent attacks of illness might prove a warning even to unreflecting parents," says Dr. Combe. The reasoning on which this hardening theory rests is extremely superficial. Wealthy parents, seeing little peasant boys and girls playing about in the open air only half-clothed, and joining with this fact the general healthiness of laboring people, draw the unwarrantable conclusion that the healthiness is the result of the exposure, and resolve to keep their own offspring scantily covered! It is forgotten that these urchins who gambol upon village-greens are in many respects favorably circumstanced—that their days are spent in almost perpetual play; that they are always breathing fresh air; and that their systems are not disturbed by over-taxed brains. For aught that appears to the contrary, their good health may be maintained, not in consequence of, but in spite of, their deficient clothing. This alternative conclusion we believe to be the true one; and that an inevitable detriment results from the needless loss of animal heat to which they are subject.

For when, the constitution being sound enough to bear it, exposure does produce hardness, it does so at the expense of growth. This truth is displayed alike in animals and in man. The Shetland pony bears greater inclemencies than the horses of the south, but is dwarfed. Highland sheep and cattle, living in a colder climate, are stunted in comparison with English breeds. In both the arctic and antarctic regions the human race falls much below its ordinary height: the Laplander and Esquimaux are very short; and the Terra del Fuegians, who go naked in a cold latitude, are described by Darwin as so stunted and hideous, that "one can hardly make one's self believe they are fellow-creatures."

Science clearly explains this dwarfishness produced by great abstraction of heat: showing that, food and other things being equal, it unavoidably results. For, as before pointed out, to make up for that cooling by radiation which the body is constantly undergoing, there must be a constant oxidation of certain

matters which form part of the food. And in proportion as the thermal loss is great, must the quantity of these matters required for oxidation be great. But the power of the digestive organs is limited. Hence it follows, that when they have to prepare a large quantity of this material needful for maintaining the temperature, they can prepare but a small quantity of the material which goes to build up the frame. Excessive expenditure for fuel entails diminished means for other purposes: wherefore there necessarily results a body small in size, or inferior in texture, or both.

Hence the great importance of clothing. As Liebig says:—"Our clothing is, in reference to the temperature of the body, merely an equivalent for a certain amount of food." By diminishing the loss of heat, it diminishes the amount of fuel needful for maintaining the heat; and when the stomach has less to do in preparing fuel, it can do more in preparing other materials. This deduction is entirely confirmed by the experience of those who manage animals. Cold can be borne by animals only at an expense of fat, or muscle, or growth, as the case may be. "If fattening cattle are exposed to a low temperature, either their progress must be retarded, or a great additional expenditure of food incurred."* Mr. Apperley insists strongly that, to bring hunters into good condition, it is necessary that the stable should be kept warm. And among those who rear racers, it is an established doctrine that exposure is to be avoided.

The scientific truth thus illustrated by ethnology, and recognized by agriculturists and sportsmen, applies with double force to children. In proportion to their smallness and the rapidity of their growth is the injury from cold great. In France, new-born infants often die in winter from being carried to the office of the *maire* for registration. "M. Quetelet has pointed out, that in Belgium two infants die in January for one that dies in July." And in Russia the infant mortality is something enormous. Even when near maturity, the undeveloped frame is comparatively unable to bear exposure: as witness the quickness with which young soldiers succumb in a trying campaign. The *rationale* is obvious. We have already adverted to the fact that, in consequence of the varying relation between surface and bulk, a child loses a relatively larger amount of heat than an adult; and here we must point out that the disadvantage under which the child thus labors is

* MORTON'S "Cyclopædia of Agriculture."

very great. Lehmann says:—"If the carbonic acid excreted by children or young animals is calculated for an equal bodily weight, it results that children produce nearly twice as much acid as adults." Now the quantity of carbonic acid given off varies with tolerable accuracy as the quantity of heat produced. And thus we see that in children the system, even when not placed at a disadvantage, is called upon to provide nearly double the proportion of material for generating heat.

See, then, the extreme folly of clothing the young scantily. What father, full-grown though he is, losing heat less rapidly as he does, and having no physiological necessity but to supply the waste of each day—what father, we ask, would think it salutary to go about with bare legs, bare arms, and bare neck? Yet this tax upon the system, from which he would shrink, he inflicts upon his little ones, who are so much less able to bear it! or, if he does not inflict it, sees it inflicted without protest. Let him remember that every ounce of nutriment needlessly expended for the maintenance of temperature, is so much deducted from the nutriment going to build up the frame and maintain the energies; and that even when colds, congestions, or other consequent disorders are escaped, diminished growth or less perfect structure is inevitable.

"The rule is, therefore, not to dress in an invariable way in all cases, but to put on clothing in kind and quantity *sufficient in the individual case to protect the body effectually from an abiding sensation of cold, however slight.*" This rule, the importance of which Dr. Combe indicates by the italics, is one in which men of science and practitioners agree. We have met with none competent to form a judgment on the matter, who do not strongly condemn the exposure of children's limbs. If there is one point above others in which "pestilent custom" should be ignored, it is this.

Lamentable, indeed, is it to see mothers seriously damaging the constitutions of their children out of compliance with an irrational fashion. It is bad enough that they should themselves conform to every folly which our Gallic neighbors please to initiate; but that they should clothe their children in any mountebank dress which *Le petit Courier des Dames* indicates, regardless of its insufficiency and unfitness, is monstrous. Discomfort more or less great, is inflicted; frequent disorders are entailed; growth is checked or stamina undermined; premature death not uncommonly caused; and all because it is thought needful to make frocks of a size and material dictated by French caprice. Not

only is it that for the sake of conformity, mothers thus punish and injure their little ones by scantiness of covering; but it is that from an allied motive they impose a style of dress which forbids healthful activity. To please the eye, colors and fabrics are chosen totally unfit to bear that rough usage which unrestrained play involves; and then to prevent damage the unrestrained play is interdicted. "Get up this moment: you will soil your clean frock," is the mandate issued to some urchin creeping about on the floor. "Come back: you will dirty your stockings," calls out the governess to one of her charges, who has left the footpath to scramble up a bank. Thus is the evil doubled. That they may come up to their mamma's standard of prettiness, and be admired by her visitors, children must have habiliments deficient in quantity and unfit in texture; and that these easily-damaged habiliments may be kept clean and uninjured, the restless activity, so natural and needful for the young, is more or less restrained. The exercise which becomes doubly requisite when the clothing is insufficient, is cut short, lest it should deface the clothing. Would that the terrible cruelty of this system could be seen by those who maintain it. We do not hesitate to say that, through enfeebled health, defective energies, and consequent non-success in life, thousands are annually doomed to unhappiness by this unscrupulous regard for appearances: even when they are not, by early death, literally sacrificed to the Moloch of maternal vanity. We are reluctant to counsel strong measures, but really the evils are so great as to justify, or even to demand, a peremptory interference on the part of fathers.

Our conclusions are, then—that, while the clothing of children should never be in such excess as to create oppressive warmth, it should always be sufficient to prevent any general feeling of cold;* that, instead of the flimsy cotton, linen, or mixed fabrics commonly used, it should be made of some good non-conductor, such as coarse woollen cloth; that it should be so strong as to receive little damage from the hard wear and tear which childish sports will give it; and that its colors should be such as will not soon suffer from use and exposure.

* It is needful to remark that children whose legs and arms have been from the beginning habitually without covering, cease to be conscious that the exposed surfaces are cold; just as by use we have all ceased to be conscious that our faces are cold, even when out of doors. But though in such children the sensations no longer protest, it does not follow that the system escapes injury; any more than it follows that the Fuegian is undamaged by exposure, because he bears with indifference the melting of the falling snow on his naked body.

To the importance of bodily exercise most people are in some degree awake. Perhaps less needs saying on this requisite of physical education than on most others: at any rate, in so far as boys are concerned. Public schools and private schools alike furnish tolerably adequate playgrounds; and there is usually a fair share of time for out-of-door games, and a recognition of them as needful. In this, if in no other direction, it seems admitted that the natural promptings of boyish instinct may advantageously be followed; and, indeed, in the modern practice of breaking the prolonged morning and afternoon's lessons by a few minutes' open-air recreation, we see an increasing tendency to conform school regulations to the bodily sensations of the pupils. Here, then, little needs to be said in the way of expostulation or suggestion.

But we have been obliged to qualify this admission by inserting the clause "in so far as boys are concerned." Unfortunately, the fact is quite otherwise in the case of girls. It chanced, somewhat strangely, that we have daily opportunity of drawing a comparison. We have both a boy's and a girl's school within view; and the contrast between them is remarkable. In the one case, nearly the whole of a large garden is turned into an open, gravelled space, affording ample scope for games, and supplied with poles and horizontal bars for gymnastic exercises. Every day before breakfast, again towards eleven o'clock, again at midday, again in the afternoon, and once more after school is over the neighborhood is awakened by a chorus of shouts and laughter as the boys rush out to play; and for as long as they remain, both eyes and ears give proof that they are absorbed in that enjoyable activity which makes the pulse bound and ensures the healthful activity of every organ. How unlike is the picture offered by the "Establishment for Young Ladies"! Until the fact was pointed out, we actually did not know that we had a girls' school as close to us as the school for boys. The garden, equally large with the other, affords no sign whatever of any provision for juvenile recreation; but is entirely laid out with prim grassplots, gravel-walks, shrubs, and flowers, after the usual suburban style. During five months we have not once had our attention drawn to the premises by a shout or a laugh. Occasionally girls may be observed sauntering along the paths with their lesson books in their hands, or else walking arm-in-arm. Once, indeed, we saw one chase another round the garden; but, with this exception, nothing like vigorous exertion has been visible.

Why this astonishing difference? Is it that the constitution of a girl differs so entirely from that of a boy as not to need these active exercises? Is it that a girl has none of the promptings to vociferous play by which boys are impelled? Or is it that, while in boys these promptings are to be regarded as securing that bodily activity without which there cannot be adequate development, to their sisters nature has given them for no purpose whatever—unless it be for the vexation of schoolmistresses? Perhaps, however, we mistake the aim of those who train the gentler sex. We have a vague suspicion that to produce a robust *physique* is thought undesirable; that rude health and abundant vigor are considered somewhat plebeian; that a certain delicacy, a strength not competent to more than a mile or two's walk, an appetite fastidious and easily satisfied, joined with that timidity which commonly accompanies feebleness are held more lady-like. We do not expect that any would distinctly avow this; but we fancy the governess-mind is haunted by an ideal young lady bearing not a little resemblance to this type. If so, it must be admitted that the established system is admirably calculated to realize this ideal. But to suppose that such is the ideal of the opposite sex is a profound mistake. That men are not commonly drawn towards masculine women, is doubtless true. That such relative weakness as calls for the protection of superior strength is an element of attraction, we quite admit. But the difference to which the feelings thus respond is the natural, pre-established difference, which will assert itself without artificial appliances. And when, by artificial appliances, the degree of this difference is increased, it becomes an element of repulsion rather than attraction.

"Then girls should be allowed to run wild—to become as rude as boys, and grow up into romps and hoydens!" exclaims some defender of the proprieties. This, we presume, is the ever-present dread of schoolmistresses. It appears, on inquiry, that at "Establishments for Young Ladies" noisy play like that daily indulged in by boys, is a punishable offence; and it is to be inferred that this noisy play is forbidden, lest unlady-like habits should be formed. The fear is quite groundless, however. For if the sportive activity allowed to boys does not prevent them from growing up into gentlemen; why should a like sportive activity allowed to girls prevent them from growing up into ladies? Rough as may have been their accustomed play-ground frolics, youths who have left school do not indulge in leapfrog in the street, or marbles

in the drawing-room. Abandoning their jackets, they abandon at the same time boyish games; and display an anxiety—often a ludicrous anxiety—to avoid whatever is not manly. If now, on arriving at the due age, this feeling of masculine dignity puts so efficient a restraint on the romping sports of boyhood, will not the feeling of feminine modesty, gradually strengthening as maturity is approached, but an efficient restraint on the like sports of girlhood? Have not women even a greater regard for appearances than men? and will there not consequently arise in them even a stronger check to whatever is rough or boisterous? How absurd is the supposition that the womanly instincts would not assert themselves but for the rigorous discipline of schoolmistresses!

In this, as in other cases, to remedy the evils of one artificiality, another artificiality has been introduced. The natural spontaneous exercise having been forbidden, and the bad consequences of no exercise having become conspicuous, there has been adopted a system of factitious exercise—gymnastics. That this is better than nothing we admit; but that it is an adequate substitute for play we deny. The defects are both positive and negative. In the first place, these formal, muscular motions, necessarily much less varied than those accompanying juvenile sports, do not secure so equable a distribution of action to all parts of the body; whence it results that the exertion, falling on special parts, produces fatigue sooner than it would else have done: add to which, that, if constantly repeated, this exertion of special parts leads to a disproportionate development. Again, the quantity of exercise thus taken will be deficient, not only in consequence of uneven distribution, but it will be further deficient in consequence of lack of interest. Even when not made repulsive, as they sometimes are, by assuming the shape of appointed lessons, these monotonous movements are sure to become wearisome, from the absence of amusement. Competition, it is true, serves as a stimulus; but it is not a lasting stimulus, like that enjoyment which accompanies varied play. Not only, however, are gymnastics inferior in respect of the *quantity* of muscular exertion which they secure; they are still more inferior in respect of the *quality*. This comparative want of enjoyment to which we have just referred as a cause of early desistance from artificial exercises, is also a cause of inferiority in the effects they produce on the system. The common assumption that so long as the amount of bodily action is the same, it matters not whether it be pleasurable

or otherwise, is a grave mistake. An agreeable mental excitement has a highly invigorating influence. See the effect produced upon an invalid by good news, or by the visit of an old friend. Mark how careful medical men are to recommend lively society to debilitated patients. Remember how beneficial to the health is the gratification produced by change of scene. The truth is that happiness is the most powerful of tonics. By accelerating the circulation of the blood, it facilitates the performance of every function; and so tends alike to increase health when it exists, and to restore it when it has been lost. Hence the essential superiority of play to gymnastics. The extreme interest felt by children in their games, and the riotous glee with which they carry on their rougher frolics, are of as much importance as the accompanying exertion. And as not supplying these mental stimuli, gymnastics must be fundamentally defective.

Granting then, as we do, that formal exercises of the limbs are better than nothing—granting, further, that they may be used with advantage as supplementary aids; we yet contend that such formal exercises can never supply the place of the exercises prompted by nature. For girls, as well as boys, the sportive activities to which the instincts impel, are essential to bodily welfare. Whoever forbids them, forbids the divinely-appointed means to physical development.

A topic still remains—one perhaps more urgently demanding consideration than any of the foregoing. It is asserted by not a few, that among the educated classes the younger adults and those who are verging upon maturity are, on the average, neither so well grown nor so strong as their seniors. When first we heard this assertion, we were inclined to disregard it as one of the many manifestations of the old tendency to exalt the past at the expense of the present. Calling to mind the facts that, as measured by ancient armor, modern men are proved to be larger than ancient men, and that the tables of mortality show no diminution, but rather an increase in the duration of life, we paid little attention to what seemed a groundless belief. Detailed observation, however, has greatly shaken our opinion. Omitting from the comparison the laboring classes, we have noticed a majority of cases in which the children do not reach the stature of their parents; and in massiveness, making due allowance for difference of age, there seems a like inferiority. In health, the contrast appears still greater.

Men of past generations, living riotously as they did, could bear much more than men of the present generation, who live soberly, can bear. Though they drank hard, kept irregular hours, were regardless of fresh air, and thought little of cleanliness, our recent ancestors were capable of prolonged application without injury, even to a ripe old age: witness the annals of the bench and the bar. Yet we who think much about our bodily welfare; who eat with moderation, and do not drink to excess; who attend to ventilation, and use frequent ablutions; who make annual excursions, and have the benefit of greater medical knowledge;—we are continually breaking down under our work. Paying considerable attention to the laws of health, we seem to be weaker than our grandfathers who, in many respects, defied the laws of health. And, judging from the appearance and frequent ailments of the rising generation, they are likely to be even less robust than ourselves.

What is the meaning of this? Is it that past over-feeding, alike of adults and juveniles, was less injurious than the under-feeding to which we have adverted as now so general? Is it that the deficient clothing which this delusive hardening theory has encouraged, is to blame? Is it that the greater or less discouragement of juvenile sports, in deference to a false refinement, is the cause? From our reasonings it may be inferred that each of these has probably had a share in producing the evil. But there has been yet another detrimental influence at work, perhaps more potent than any of the others: we mean—excess of mental application.

On old and young, the pressure of modern life puts a still-increasing strain. In all businesses and professions, intenser competition taxes the energies and abilities of every adult; and, with the view of better fitting the young to hold their place under this intenser competition, they are subject to a more severe discipline than heretofore. The damage is thus doubled. Fathers, who find not only that they are run hard by their multiplying competitors, but that, while laboring under this disadvantage, they have to maintain a more expensive style of living, are all the year round obliged to work early and late, taking little exercise and getting but short holidays. The constitutions, shaken by this long continued over-application, they bequeath to their children. And then these comparatively feeble children, predisposed as they are to break down even under an ordinary strain upon their energies, are required to go through a *curriculum* much more ex-

tended than that prescribed for the unenfeebled children of past generations.

That disastrous consequences must result from this cumulative transgression might be predicted with certainty; and that they do result, every observant person knows. Go where you will, and before long there come under your notice cases of children, or youths, of either sex, more or less injured by undue study. Here, to recover from a state of debility thus produced, a year's rustication has been found necessary. There you find a chronic congestion of the brain, that has already lasted many months, and threatens to last much longer. Now you hear of a fever that resulted from the over-excitement in some way brought on at school. And, again, the instance is that of a youth who has already had once to desist from his studies, and who, since he has returned to them, is frequently taken out of his class in a fainting fit. We state facts—facts that have not been sought for, but have been thrust upon our observation during the last two years; and that, too, within a very limited range. Nor have we by any means exhausted the list. Quite recently we had the opportunity of marking how the evil becomes hereditary: the case being that of a lady of robust parentage, whose system was so injured by the *régime* of a Scotch boarding-school, where she was under-fed and over-worked, that she invariably suffers from vertigo on rising in the morning; and whose children, inheriting this enfeebled brain, are several of them unable to bear even a moderate amount of study without headache or giddiness. At the present time we have daily under our eyes, a young lady whose system has been damaged for life by the college-course through which she has passed. Taxed as she was to such an extent that she had no energy left for exercise, she is, now that she has finished her education, a constant complainant. Appetite small and very capricious, mostly refusing meat; extremities perpetually cold, even when the weather is warm; a feebleness which forbids anything but the slowest walking, and that only for a short time; palpitation on going up stairs; greatly impaired vision—these, joined with checked growth and lax tissue, are among the results entailed. And to her case we may add that of her friend and fellow-student; who is similarly weak; who is liable to faint even under the excitement of a quiet party of friends; and who has at length been obliged by her medical attendant to desist from study entirely.

If injuries so conspicuous are thus frequent, how very general must be the smaller and inconspicuous injuries. To one case where pos-

itive illness is directly traceable to over-application, there are probably at least half-a-dozen cases where the evil is unobtrusive and slowly accumulating—cases where there is frequent derangement of the functions, attributed to this or that special cause, or to constitutional delicacy; cases where there is retardation and premature arrest of bodily growth; cases where a latent tendency to consumption is brought out and established; cases where a predisposition is given to that now common cerebral disorder brought on by the hard work of adult life. How commonly constitutions are thus undermined, will be clear to all who after noting the frequent ailments of hard-worked professional and mercantile men, will reflect on the disastrous effects which undue application must produce upon the undeveloped systems of the young. The young are competent to bear neither as much hardship, nor as much physical exertion, nor as much mental exertion, as the full grown. Judge, then, if the full grown so manifestly suffer from the excessive mental exertion required of them, how great must be the damage which a mental exertion, often equally excessive, inflicts upon the young!

Indeed, when we examine the merciless school drill to which many children are subjected, the wonder is, not that it does great injury, but that it can be borne at all. Take the instance given by Sir John Forbes from personal knowledge; and which he asserts, after much inquiry, to be an average sample of the middle-class girl's-school system throughout England. Omitting the detailed divisions of time, we quote the summary of the twenty-four hours.

In bed	9 hours (the younger 10)
In school, at their studies and tasks	9 "
In school, or in the house, the older at optional studies or the work, younger at play	8½ " (the younger 8½)
At meals	1½ "
Exercise in the open air, in the shape of a formal walk, often with lesson-books in hand, and even this only when the weather is fine at the appointed time	1 "
	<hr/> 24 <hr/>

And what are the results of this "astounding regimen," as Sir John Forbes terms it? Of course feebleness, pallor, want of spirits, general ill-health. But he describes something more. This utter disregard of physical welfare, out of extreme anxiety to cultivate the mind—this prolonged exercise of the brain and deficient exercise of the limbs,—he found to be habitually followed, not only by

disordered functions but by malformation. He says:—"We lately visited, in a large town, a boarding-school containing forty girls; and we learnt, on close and accurate inquiry, that there was *not one* of the girls who had been at the school two years (and the majority had been as long) that was not more or less *crooked*!"*

It may be that since 1833, when this was written, some improvement has taken place. We hope it has. But that the system is still common—nay, that it is in some cases carried even to a greater extreme than ever; we can personally testify. We recently went over a training college for young men: one of those instituted of late years for the purpose of supplying schools with well-disciplined teachers. Here under official supervision, where something better than the judgment of private schoolmistresses might have been looked for, we found the daily routine to be as follows:—

- At 6 o'clock the students are called,
- " 7 to 8 studies,
- " 8 to 9 scripture reading, prayers, and breakfast,
- " 9 to 12 studies,
- " 12 to 1½ leisure, nominally devoted to walk or other exercise, but often spent in study,
- " 1½ to 2 dinner, the meal commonly occupying twenty minutes,
- " 2 to 5 studies,
- " 5 to 6 tea and relaxation,
- " 6 to 8½ studies,
- " 8½ to 9½ private studies in preparing lessons for the next day,
- " 10 to bed.

Thus, out of the twenty-four hours, eight are devoted to sleep; four and a quarter are occupied in dressing, prayers, meals, and the brief periods of rest accompanying them; ten and a half are given to study; and one and a quarter to exercise, which is optional and often avoided. Not only, however, is it that the ten and a half hours of recognized study are frequently increased to eleven and a half by devoting to books the time set apart for exercise; but some of the students who are not quick in learning, get up at four o'clock in the morning to prepare their lessons; and are actually encouraged by their teachers to do this! The course to be passed through in a given time is so extensive; the teachers, whose credit is at stake in getting their pupils well through the examinations, are so urgent; and the difficulty of satisfying the requirements is so great; that pupils are not uncommonly induced to spend twelve and thirteen hours a day in mental labor!

It needs no prophet to see that the bodily injury inflicted must be great. As we were told by one of the inmates, those who arrive

* "Cyclopaedia of Practical Medicine," vol. i. pp. 607, 608.

with fresh complexions quickly become blanched. Illness is frequent: there are always some on the sick-list. Failure of appetite and indigestion are very common. Diarrhoea is a prevalent disorder: not uncommonly a third of the whole number of students suffering under it at the same time. Headache is generally complained of; and by some is borne almost daily for months. While a certain percentage break down entirely and go away.

That this should be the regimen of what is in some sort a model institution, established and superintended by the embodied enlightenment of the age, is a startling fact. That the severe examinations, joined with the short period assigned for preparation, should practically compel recourse to a system which inevitably undermines the health of all who pass through it, is proof, if not of cruelty, then of woful ignorance.

Doubtless the case is in a great degree exceptional—perhaps to be paralleled only in other institutions of the same class. But that cases so extreme should exist at all, indicates pretty clearly how great is the extent to which the minds of the rising generation are overtasked. Expressing as they do the ideas of the educated community, these training colleges, even in the absence of all other evidence, would conclusively imply a prevailing tendency to an unduly urgent system of culture.

It seems strange that there should be so little consciousness of the dangers of over-education during youth, when there is so general a consciousness of the dangers of over-education during childhood. Most parents are more or less aware of the evil consequences that follow infant precocity. In every society may be heard reprobation of those who too early stimulate the minds of their little ones. And the dread of this early stimulation is great in proportion as there is adequate knowledge of the effects: witness the implied opinion of one of our most distinguished professors of physiology, who told us that he did not intend his little boy to learn any lessons until he was eight years old. But while to all it is a familiar truth that a forced development of intelligence in childhood entails disastrous results—either physical feebleness, or ultimate stupidity, or early death—it appears not to be perceived that throughout youth the same truth holds. Yet it is certain that it must do so. There is a given order in which, and a given rate at which, the faculties unfold. If the course of education conforms itself to that order and rate, well. If not—if the higher faculties are

early taxed by presenting an order of knowledge more complex and abstract than can be readily assimilated; or if, by excess of culture, the intellect in general is developed to a degree beyond that which is natural to the age; the abnormal result so produced will inevitably be accompanied by some equivalent, or more than equivalent, evil.

For Nature is a strict accountant; and if you demand of her in one direction more than she is prepared to lay out, she balances the account by making a deduction elsewhere. If you will let her follow her own course, taking care to supply, in right quantities and kinds, the raw materials of bodily and mental growth required at each age, she will eventually produce an individual more or less evenly developed. If, however, you insist on premature or undue growth of any one part, she will, with more or less protest, concede the point; but that she may do your extra work, she must leave some of her more important work undone. Let it never be forgotten that the amount of vital energy which the body at any moment possesses is limited; and that, being limited, it is impossible to get from it more than a fixed quantity of results. In a child or youth the demands upon this vital energy are various and urgent. As before pointed out, the waste consequent on the day's bodily exercise has to be repaired; the wear of brain entailed by the day's study has to be made good; a certain additional growth of body has to be provided for; and also a certain additional growth of brain: add to which the amount of energy absorbed in the digestion of the large quantity of food required for meeting these many demands. Now, that to divert an excess of energy into any one of these channels is to abstract it from the others, is not only manifest *a priori*; but may be shown *a posteriori* from the experience of every one. Every one knows, for instance, that the digestion of a heavy meal makes such a demand on the system as to produce lassitude of mind and body, ending not unfrequently in sleep. Every one knows, too, that excess of bodily exercise diminishes the power of thought—that the temporary prostration following any sudden exertion, or the fatigue produced by a thirty miles' walk, is accompanied by a disinclination to mental effort; that, after a month's pedestrian tour, the mental inertia is such that some days are required to overcome it; and that in peasants who spend their lives in muscular labor the activity of mind is very small. Again, it is a truth familiar to all that during those fits of extreme rapid growth which sometimes occur in childhood, the great abstraction of en-

ergy is shown in the attendant prostration, bodily and mental. Once more, the facts that violent muscular exertion after eating will stop digestion, and that children who are early put to hard labor become stunted, similarly exhibit the antagonism—similarly imply that excess of activity in one direction involves deficiency of it in other directions. Now, the law which is thus manifest in extreme cases holds in all cases. These injurious abstractions of energy as certainly take place when the undue demands are slight and constant, as when they are great and sudden. Hence, if in youth, the expenditure in mental labor exceeds that which nature had provided for; the expenditure for other purposes falls below what it should have been: and evils of one kind or other are inevitably entailed. Let us briefly consider these evils.

Supposing the over-activity of brain not to be extreme, but to exceed the normal activity only in a moderate degree, there will be nothing more than some slight reaction on the development of the body: the stature falling a little below that which it would else have reached; or the bulk being less than it would have been; or the quality of tissue being not so good. One or more of these effects must necessarily occur. The extra quantity of blood supplied to the brain, not only during the period of mental exertion, but during the subsequent period in which the waste of cerebral substance is being made good, is blood that would else have been circulating through the limbs and viscera; and the amount of growth or repair for which that blood would have supplied materials, is lost. This physical reaction being certain, the question is, whether the gain resulting from the extra culture is equivalent to the loss?—whether defect of bodily growth, or the want of that structural perfection which gives high vigor and endurance, is compensated for by the additional knowledge gained?

When the excess of mental exertion is greater, there follow results far more serious; telling not only against bodily perfection, but against the perfection of the brain itself. It is a physiological law, first pointed out by M. Isidore St. Hilaire, and to which attention has been drawn by Mr. Lewes in his essay on "Dwarfs and Giants," that there is an antagonism between *growth* and *development*. By growth, as used in this antithetical sense, is to be understood *increase of size*; by development, *increase of structure*. And the law is, that great activity in either of these processes involves retardation or arrest of the other. A familiar illustration is furnished by

the cases of the caterpillar and the chrysalis. In the caterpillar there is extremely rapid augmentation of bulk; but the structure is scarcely at all more complex when the caterpillar is full-grown than when it is small. In the chrysalis the bulk does not increase; on the contrary, weight is lost during this stage of the creature's life; but the elaboration of a more complex structure goes on with great activity. The antagonism, here so clear, is less traceable in higher creatures, because the two processes are carried on together. But we see it pretty well illustrated among ourselves by contrasting the sexes. A girl develops in body and mind rapidly, and ceases to grow comparatively early. A boy's bodily and mental development is slower, and his growth greater. At the age when the one is mature, finished, and having all faculties in full play, the other, whose vital energies have been more directed towards increase of size, is relatively incomplete in structure; and shows it in a comparative awkwardness, bodily and mental. Now this law is true not only of the organism as a whole, but of each separate part. The abnormally rapid advance of any part in respect of structure involves premature arrest of its growth; and this happens with the organ of the mind as certainly as with any other organ. The brain, which during early years is relatively large in mass but imperfect in structure will, if required to perform its functions with undue activity, undergo a structural advance greater than is appropriate to the age; but the ultimate effect will be a falling short of the size and power that would else have been attained. And this is a part cause—probably the chief cause—why precocious children, and youths who up to a certain time were carrying all before them, so often stop short and disappoint the high hopes of their parents.

But these results of over-education, disastrous as they are, are perhaps less disastrous than the results produced upon the health—the undermined constitution, the enfeebled energies, the morbid feelings. Recent discoveries in physiology have shown how immense is the influence of the brain over the functions of the body. The digestion of the food, the circulation of the blood, and through these all other organic processes, are profoundly affected by cerebral excitement. Whoever has seen repeated, as we have, the experiment first performed by Weber, showing the consequence of irritating the *vagus* nerve which connects the brain with the viscera—whoever has seen the action of the heart suddenly arrested by the irritation of

this nerve; slowly recommencing when the irritation is suspended; and again arrested the moment it is renewed; will have a vivid conception of the depressing influence which an over-wrought brain exercises on the body. The effects thus physiologically explained, are indeed exemplified in ordinary experience. There is no one but has felt the palpitation accompanying hope, fear, anger, joy—no one but has observed how labored becomes the action of the heart when these feelings are very violent. And though there are many who have never themselves suffered that extreme emotional excitement which is followed by arrest of the heart's action and fainting; yet every one knows them to be cause and effect. It is a familiar fact, too, that disturbance of the stomach is entailed by mental excitement exceeding a certain intensity. Loss of appetite is a common result alike of very pleasurable and very painful states of mind. When the event producing a pleasurable or painful state of mind occurs shortly after a meal, it not unfrequently happens either that the stomach rejects what has been eaten, or digests it with great difficulty and under prolonged protest. And as every one who taxes his brain much can testify, even purely intellectual action will, when excessive, produce analogous effects. Now the relation between brain and body which is so manifest in these extreme cases, holds equally in ordinary, less-marked cases. Just as these violent but temporary cerebral excitements produce violent but temporary disturbances of the viscera; so do the less violent but chronic cerebral excitements, produce less violent but chronic visceral disturbances. This is not simply an inference—it is a truth to which every medical man can bear witness; and it is one to which a long and sad experience enables us to give personal testimony. Various degrees and forms of bodily derangement, often taking years of enforced idleness to set partially right, result from this prolonged over-exertion of mind. Sometimes the heart is chiefly affected: habitual palpitations; a pulse much enfeebled; and very generally a diminution in the number of beats from seventy-two to sixty, or even fewer. Sometimes the conspicuous disorder is of the stomach; a dyspepsia which makes life a burden; and is amenable to no remedy but time. In many cases both heart and stomach are implicated. Mostly the sleep is short and broken. And very generally there is more or less mental depression.

Consider, then, how great must be the damage inflicted by undue mental excitement on children and youths. More or less of this

constitutional disturbance will inevitably follow an exertion of brain beyond that which nature had provided for; and when not so excessive as to produce absolute illness, is sure to entail a slowly accumulating degeneracy of *physique*. With a small and fastidious appetite, an imperfect digestion, and an enfeebled circulation, how can the developing body flourish? The due performance of every vital process depends on the adequate supply of good blood. Without enough good blood, no gland can secrete properly, no viscus can fully discharge its office. Without enough good blood, no nerve, muscle, membrane, or other tissue can be efficiently repaired. Without enough good blood, growth will neither be sound nor sufficient. Judge then, how bad must be the consequences when to a growing body the weakened stomach supplies blood that is deficient in quantity and poor in quality; while the debilitated heart propels this poor and scanty blood with unnatural slowness.

And if, as all who candidly investigate the matter must admit, physical degeneracy is a consequence of excessive study, how grave is the condemnation to be passed upon this cramming system above exemplified. It is a terrible mistake, from whatever point of view regarded. It is a mistake in so far as the mere acquirement of knowledge is concerned: for it is notorious that the mind, like the body, cannot assimilate beyond a certain rate; and if you ply it with facts faster than it can assimilate them, they are very soon rejected again: they do not become permanently built into the intellectual fabric; but fall out of recollection after the passing of the examination for which they were got up. It is a mistake, too, because it tends to make study distasteful. Either through the painful associations produced by ceaseless mental toil, or through the abnormal state of brain it leaves behind, it often generates an aversion to books; and, instead of that subsequent self-culture induced by a rational education, there comes a continued retrogression. It is a mistake, also, inasmuch as it assumes that the acquisition of knowledge is everything; and forgets that a much more important matter is the organization of knowledge, for which time and spontaneous thinking are requisite. Just as Humboldt remarks respecting the progress of intelligence in general, that "the interpretation of nature is obscured when the description languishes under too great an accumulation of insulated facts;" so it may be remarked, respecting the progress of individual intelligence, that the mind is overburdened and hampered by an excess of ill-digested informa-

tion. It is not the knowledge stored up as intellectual fat which is of value; but that which is turned into intellectual muscle. But the mistake is still deeper. Even were the system good as a system of intellectual training, which it is not, it would still be bad, because, as we have shown, it is fatal to that vigor of *physique* which is needful to make intellectual training available in the struggle of life. Those who, in eagerness to cultivate their pupils' minds, are reckless of their bodies, do not remember that success in the world depends much more upon energy than upon information; and that a policy which in cramming with information undermines energy, is self-defeating. The strong will and untiring activity which result from abundant animal vigor, go far to compensate even for great defects of education; and when joined with that quite adequate education which may be obtained without sacrificing health, they ensure an easy victory over competitors enfeebled by excessive study: prodigies of learning though they may be. A comparatively small and ill-made engine, worked at high-pressure, will do more than a larger and well-finished one worked at low-pressure. What folly is it, then, while finishing the engine, so to damage the boiler that it will not generate steam! Once more, the system is a mistake, as involving a false estimate of welfare in life. Even supposing it were a means to worldly success, instead of a means to worldly failure, yet, in the entailed ill-health, it would inflict a more than equivalent curse. What boots it to have attained wealth, if the wealth is accompanied by ceaseless ailments? What is the worth of distinction, if it has brought hypochondria with it? Surely none needs telling that a good digestion, a bounding pulse, and high spirits are elements of happiness which no external advantages can outbalance. Chronic bodily disorder casts a gloom over the brightest prospects; while the vivacity of strong health gilds even misfortune. We contend, then, that this over-education is vicious in every way—vicious, as giving knowledge that will soon be forgotten; vicious, as producing a disgust for knowledge; vicious, as neglecting that organization of knowledge which is more important than its acquisition; vicious, as weakening or destroying that energy, without which a trained intellect is useless; vicious, as entailing that ill-health for which even success would not compensate, and which makes failure doubly bitter.

On women the effects of this forcing system are, if possible, even more injurious than on men. Being in great measure debarred from those vigorous and enjoyable exercises of body

by which boys mitigate the evils of excessive study, girls feed these evils in their full intensity. Hence, the much smaller proportion of them who grow up well made and healthy. In the pale, angular, flat-chested young ladies, so abundant in London drawing-rooms, we see the effect of merciless application, unrelieved by youthful sports; and this physical degeneracy exhibited by them, hinders their welfare far more than their many accomplishments aid it. Mammæ anxious to make their daughters attractive, could scarcely choose a course more fatal than this, which sacrifices the body to the mind. Either they disregard the tastes of the opposite sex, or else their conception of those tastes is erroneous. Men care comparatively little for erudition in women; but very much for physical beauty, and good-nature, and sound sense. How many conquests does the blue-stocking make through her extensive knowledge of history? What man ever fell in love with a woman because she understood Italian? Where is the Edwin who was brought to Angelina's feet by her German? But rosy cheeks and laughing eyes are great attractions. A finely rounded figure draws admiring glances. The liveliness and good humor that overflowing health produces, go a great way towards establishing attachments. Every one knows cases where bodily perfections, in the absence of all other recommendations, have incited a passion that carried all before it; but scarcely any one can point to a case where mere intellectual acquirements, apart from moral or physical attributes, have aroused such a feeling. The truth is that, out of the many elements uniting in various proportions to produce in a man's breast that complex emotion which we call love, the strongest are those produced by physical attractions; the next in order of strength are those produced by moral attractions; the weakest are those produced by intellectual attractions; and even these are dependent much less upon acquired knowledge than on natural faculty—quickness, wit, insight. If any think the assertion a derogatory one, and inveigh against the masculine character for being thus swayed; we reply that they little know what they say when they thus call in question the Divine ordinations. Even were there no obvious meaning in the arrangement, we might be sure that some important end was subserved. But the meaning is quite obvious to those who examine. It needs but to remember that one of Nature's ends, or rather her supreme end, is the welfare of posterity—it needs but to remember that, in so far as posterity are concerned, a cultivated intelligence based upon a bad *physique* is of little worth, seeing

that its descendants will die out in a generation or two—it needs but to bear in mind that a good *physique*, however poor the accompanying mental endowments, is worth preserving, because, throughout future generations, the mental endowments may be indefinitely developed—it needs but to contemplate these truths, to see how important is the balance of instincts above described. But, purpose apart, the instincts being thus balanced, it is a fatal folly to persist in a system which undermines a girl's constitution that it may overload her memory. Educate as highly as possible—the higher the better—providing no bodily injury is entailed (and we may remark, in passing, that a high standard might be so reached were the parrot-faculty cultivated less, and the human faculty more, and were the discipline extended over that now wasted period between leaving school and being married). But to educate in such manner, or to such extent, as to produce physical degeneracy, is to defeat the chief end for which the toil and cost and anxiety are submitted to. By subjecting their daughters to this high-pressure system, parents frequently ruin their prospects in life. Not only do they inflict on them enfeebled health, with all its pains and disabilities and gloom; but very often they actually doom them to celibacy.

Our general conclusion is, then, that the ordinary treatment of children is, in various ways, seriously prejudicial. It errs in deficient feeding; in deficient clothing; in deficient exercise (among girls at least); and in excessive mental application. Considering the *régime* as a whole, its tendency is too exacting: it asks too much and gives too little. In the extent to which it taxes the vital energies, it makes the juvenile life much more like the adult life than it should be. It overlooks the truth that, as in the foetus the entire vitality is expended in the direction of growth—as in the infant, the expenditure of vitality in growth is so great as to leave extremely little for either physical or mental action; so throughout childhood and youth growth is the dominant requirement to which all others must be subordinated: a requirement which dictates the giving of much and the taking away of little—a requirement which, therefore, restricts the exertion of body and mind to a degree proportionate to

the rapidity of growth—a requirement which permits the mental and physical activities to increase only as fast as the rate of growth diminishes.

Regarded from another point of view, this high-pressure education manifestly results from our passing phase of civilization. In primitive times, when aggression and defence were the leading social activities, bodily vigor with its accompanying courage were the desiderata; and then education was almost wholly physical: mental cultivation was little cared for, and indeed, as in our own feudal ages, was often treated with contempt. But now that our state is relatively peaceful—now that muscular power is of use for little else than manual labor, while social success of nearly every kind depends very much on mental power; our education has become almost exclusively mental. Instead of respecting the body and ignoring the mind, we now respect the mind and ignore the body. Both these attitudes are wrong. We do not yet sufficiently realize the truth that as, in this life of ours, the physical underlies the mental, the mental must not be developed at the expense of the physical. The ancient and modern conceptions must be combined.

Perhaps nothing will so much hasten the time when body and mind will both be adequately cared for, as a diffusion of the belief that the preservation of health is a *duty*. Few seem conscious that there is such a thing as physical morality. Men's habitual words and acts imply the idea that they are at liberty to treat their bodies as they please. Disorders entailed by disobedience to Nature's dictates, they regard simply as grievances: not as the effects of a conduct more or less flagitious. Though the evil consequences inflicted on their dependents, and on future generations, are often as great as those caused by crime; yet they do not think themselves in any degree criminal. It is true, that, in the case of drunkenness, the viciousness of a purely bodily transgression is recognized; but none appear to infer that, if this bodily transgression is vicious, so too is every bodily transgression. The fact is, that all breaches of the laws of health are *physical sins*. When this is generally seen, then, and perhaps not till then, will the physical training of the young receive all the attention it deserves.

GREAT THOUGHTS FROM GREEK AUTHORS.

PREFACE TO SECOND EDITION.

ON this new edition I have endeavored to bring all my previous knowledge to bear, in order that it might be rendered more in keeping with my other works. The poetical translations have been thrown aside, and in every case I have given the passage in prose.

I have taken advantage of Duport's parallelisms from the Holy Scriptures to show the wonderful resemblance that the language of Homer bears more particularly to the sentiments found in the Old Testament. In the other Greek Authors I have also attempted to show the similarity between them and the Sacred Writers.

The volume has been nearly doubled by the addition of new passages, and extracts from many writers have been given, which did not appear in the former edition.

WALLACE HALL, 1st May, 1873.

PREFACE TO FIRST EDITION.

THE Editor is encouraged by the unexpected favor with which his former work has been received to bring forward a companion volume from "Greek Authors," which he ventures to hope will be found equally interesting. While many new topics have been introduced, the reader will here have an opportunity of tracing the original source, from which the master-spirits of Rome derived many of their finest thoughts. So true is the observation of Horace—

*"Græcia capta ferum victorem cepit et artes
Intulit agresti Latio."*

To show how closely the Romans imitated their Greek masters, the Editor has introduced copious illustrations from his former work, and has also taken advantage of Mr. Grocott's valuable volume of "Index of Quotations, Ancient and Modern," to point out how much the English classic authors are indebted to the ancients for many of those gems that are scattered so profusely through their writings. Their bold flights of imagination, and the volumes of wisdom compressed into a phrase, are often but loans derived from the classical au-

thors of Greece and Rome. It has been, therefore, an agreeable task to award to those pure and thoughtful spirits of the olden times, their due meed of praise, by trying to ascertain the exact contributions which each has made to the intellectual riches of the world.

Another peculiar feature in the present work is the numerous references to the Holy Scriptures for points of resemblance. It is impossible, indeed, to examine the heathen doctrines of religion and ethics without being struck with their wonderful likeness to those which are sometimes considered to be peculiar to Christianity; here may be found many of the moral doctrines and sublime sayings of the Gospel, but there is always something wanting to give them life, and bring them home to the heart and feelings of human beings. Noble truths have always been taught by both Eastern and Western sages; yet they want that clear and perfect ring, which they possess when they are known to issue from Divine lips. The Editor has selected much from the writings of Plato, to show how far this resemblance extends; and, no doubt, he has omitted many passages which would have borne equally strong testimony that it is not without good reason that Plato has been called the "Atticising Moses."

It has been well observed, that nothing can be more useful to young minds having capacity and high aspirations than such selections as the Editor has brought together from the works of great men. Each quotation is a separate bait, a temptation to feel greatly, and to do greatly; and a friend, whose delicate health has obliged him to retire from the busy haunts of men, very beautifully remarks that their charm for the old and infirm is scarcely less: to such "it is nothing short of delightful to have a book at hand which will suit itself either to the exigencies or the deficiencies of the minute with an elastic power of adaptability which no living friend can possess." It was for those of lofty aspirations among the young, and for men of cultivated minds among the old, that the Editor has attempted to make a selection from a treasure that has continued to accumulate from the earliest times, till it now comprehends a brief abstract of the wisdom of all ages.

CRAUFURD TAIT RAMAGE.

CHRONOLOGICAL INDEX OF AU-
THORS.

Homer, flourished probably about B.C. 1184
Hesiod.....flourished about B.C. 850
Archilochus.....flourished about B.C. 714-676
Hipponax.....flourished in the sixth century
Tyrtæus.....B.C. 635

GREAT THOUGHTS

FROM

GREEK AUTHORS.

ÆSCHINES.

BORN B.C. 389—DIED B.C. 314.

ÆSCHINES, one of the most celebrated of the Athenian orators, was the son of Tromes, the slave of a schoolmaster, Elpias, and Glaucia, who gained her livelihood by playing and singing at the sacred festivals. His father succeeded to the school of Elpias, and Æschines, in his youth, was employed by his father to clean his schoolroom. When he was somewhat older he assisted his mother in her theatrical performances, being remarkable for a strong and sonorous voice; but in this he does not seem to have been successful, as on one occasion, when he was performing in the character of CEnomäus, he was hissed off the stage. We then find him entering the military service, gaining great distinction at the battle of Mantinea, B.C. 362. It was, however, as an orator that he acquired the reputation which has handed down his name to posterity. At the commencement of his political career he took an active part against Philip of Macedon, though he became convinced, ere long, that nothing but peace with Philip would avert utter ruin from his country. His opponents accused him of having been bribed by the king to support his measures; but there does not appear any reason to believe that he acted treacherously towards his country. He was the opponent of Demosthenes; and though he failed in his attacks, it was to him that we owe the celebrated speech of Demosthenes on the crown, which is considered one of the finest bursts of eloquence which the world has ever produced. The three great speeches of Æschines which still remain were called by the ancients the Graces. They are distinguished by great felicity of diction, wonderful boldness and vigor of description, so that it is generally allowed that he was only second to Demosthenes.

DUTIES OF A JUDGE IN A FREE STATE.

For you ought to be well aware that there are three different forms of government established in the world—monarchy, oligarchy, and democracy. In the two former the government is conducted at the will of the ruling powers, while in

the latter it proceeds according to established laws. Let none of you, therefore, be ignorant, but let it be deeply engraven on the minds of all, that when he enters the tribunal to give judgment on a case where the law has been violated, he is that day giving sentence on his own liberties.

THE PUBLIC AND PRIVATE CHARACTER OF A STATESMAN.

He who hates his own children, he who is a bad parent, cannot be a good leader of the people. He who is insensible to the duties which he owes to those who are nearest, and who ought to be dearest, to him, will never feel a higher regard for your welfare, who are strangers to him. He who acts wickedly in private life can never be expected to show himself noble in his public conduct. He who is base at home will not acquit himself with honor when sent to a foreign country in a public capacity: for it is not the man, but the place merely, that is changed.

A DEFEAT IS NOT THE GREATEST OF CALAMITIES.

For a defeat in war is not the greatest of all evils; but when the defeat has been inflicted by enemies who are unworthy of you, then the calamity is doubled.

CHARACTER OF BOASTERS.

For other boasters, when they lie, try not to speak too particularly or plainly, from fear of being disproved afterwards.

INTEGRITY.

Integrity is to be preferred to eloquence.

A PRODIGAL.

For no wealth can enrich a vicious prodigal.

AMNESTY.

Amnesty, that noble word, the genuine dictate of wisdom.

A MERE CRAFTSMAN OF WORDS.

A fellow, whose tongue is his sole merit, and without it, like a flute, all that there is of him besides, were good for nothing.

THE POWER OF A PRIVATE INDIVIDUAL IN A REPUBLIC.

For in a republican state every private individual shares regal power by means of the laws and his vote; but when he surrenders these to another, he annuls his own sovereignty.

VAUNTING.

For men of real merit, and whose noble and glorious deeds we are ready to acknowledge, are yet not to be endured when they vaunt their own actions.

EDUCATION BY EXAMPLE.

For you are well aware that it is not only by bodily exercises, by educational institutions, or by lessons in music, that our youth are trained, but much more effectually by public examples.

ÆSCHYLUS.

BORN B.C. 525—DIED B.C. 456.

ÆSCHYLUS, the son of Euphorion, a native of Eleusis, in Attica, was the father of the Athenian drama. He was present at the battle of Marathon, B.C. 490, in which he was greatly distinguished along with his brothers; and in a picture representing this battle he was placed in the foreground, and was thus associated in the honors which were paid to Miltiades. Six years afterwards, B.C. 484, the same year in which Herodotus was born, Æschylus gained his first victory as a competitor for the prize of tragedy; and he was successful thirteen times during an interval of sixteen years. He visited the court of Hiero, king of Syracuse, who was a distinguished patron of the learned, and who had induced such men as Pindar and Simonides to reside with him. There is a power in the language, a sublimity in the imagery, with which the poet bodies forth the creations of his genius, that makes him rank among the master spirits of the world.

TIES OF KINDRED ARE STRONG.

Strong are the ties of kindred and long converse.

ALL HAVE THEIR LOT APPOINTED.

Everything has been accomplished except for the other gods to rule; for no one is free save Jove.

WAVES.

And countless dimpling of the waves of the deep.

So Milton ("Paradise Lost," iv. 166)—

"Cheered with the grateful smell, old Ocean smiles."

Lord Byron (opening of the "Glaour")—

"There mildly dimpling ocean's cheek
Reflects the tints of many a peak,
Caught by the laughing tides that lave
Those Edens of the eastern wave."

NECESSITY NOT TO BE RESISTED.

But I must endure my doom as easily as may be, knowing, as I do, that the power of necessity is irresistible.

So Shakespeare ("Richard II.," act v. sc. 1)—

"I am sworn brother, sweet,
To grim Necessity; and he and I
Will keep a league till death."

A TYRANT DISTRUSTS.

For somehow, there is this disease in tyranny, not to put confidence in friends.

So Shakespeare ("Pericles," act i. sc. 3)—

"Tyrants' fears
Decrease not, but grow faster with their years."

EASY TO GIVE ADVICE TO THE AFFLICTED.

'Tis easy for any man who has his foot unentangled by sufferings both to exhort and to admonish him that is in difficulties.

AFFLICTION.

Hence in the same way does affliction, roaming to and fro, settle down on different individuals.

TRUTH.

And thou shalt know that these words are sincere, and not the false glossings of a flattering tongue.

TO KICK AGAINST THE PRICKS.

If thou takest me for thy instructor, thou wilt not kick against the pricks.

PETULANT TONGUE.

What! knowest thou not as certain, highly intelligent though thou art, that punishment is inflicted on a petulant tongue?

SOFT SPEECH TURNETH AWAY WRATH.

Oc. Knowest thou not this, then, Prometheus, that words are the physicians of a distempered mind?

Prom. True, if one soften properly the heart, and do not with rude violence exasperate the troubled mind.

So Milton ("Samson Agonistes")—

"Apt words have power to suage
The tumors of a troubled mind."

And Proverbs (xv. 1)—"A soft answer turneth away wrath but grievous words stir up anger."

THE WISE.

Since it is of the highest advantage for one that is wise not to seem to be wise.

MAN IN A BARBAROUS STATE.

But as to the ills of men, hear how I made those, who were before senseless as children, intelligent and possessed of wisdom. I shall tell you, not with the view of throwing blame upon them, but to show my kindly feelings from what I gave them; who at first seeing, saw not, and hearing, heard not. But like to the baseless fabric of a dream,

for a long time they used to huddle together all things at random: naught they knew about brick-built houses, sun-ward, nor the raftered roof; but, like tiny ants, they dwelt in the excavated earth, in sunless depths of caves. They had no certain sign of winter, or flower-perfumed spring, or fruitful summer; but they did everything without judgment till I instructed them to mark the rising of the stars and their setting, a harder science yet. And verily I discovered for them numbers, the most surprising of all inventions, and the union of letters, and memory, the active mother of all wisdom. I also first taught the patient steer to bear the yoke; and in order with their bodies they might assist mortals in their severest toils, I taught steeds to whirl cars obedient to the reins, to grace the pride of wealth. And no one else than I invented the canvas-winged chariots of mariners that roam over the ocean.

So Matthew (xiii. 14)—"And in them is fulfilled the prophecy of Esaias, which saith, By hearing ye shall hear, and shall not understand; and seeing ye shall see, and shall not perceive."

NECESSITY.

Necessity is stronger far than art.

PLEASURES OF HOPE.

It is pleasant to lengthen out a long life with confident hopes, making the spirits swell with bright merriment.

FEEBLENESS OF MORTALS.

Sawest thou not the powerless weakness, like a dream, in which the blind race of men is entangled? Never at any time shall the plans of mortals get the better of the harmonious system of Jove.

REWARD OF SYMPATHY.

Since to weep and lament over misfortunes, when it draws the sympathizing tear, brings no light recompense.

So Shakespeare (Poems)—

"Companionship in woe, doth woe assuage."

THE SICK.

To the sick, indeed, some gleam of hope flows from a clear knowledge beforehand of the result of their pains.

MARRY IN YOUR OWN RANK.

Wise was the man, ay, wise indeed, who first weighed well this maxim, and with his tongue published it abroad, that to marry in one's own class is best by far, and that a peasant should woo the hand neither of any that have waxed wanton by riches, nor of such as pride themselves in high-traced lineage.

THE WISH IS FATHER TO THE THOUGHT.

Thou indeed art predicting against Jove the things thou wishest.

Shakespeare ("Henry IV.," Pt. II. act iv. sc. 4) says—

"Thy wish was father, Harry, to that thought."

DEAF AS THE BILLOWS.

Thou troublest me with thy advice as vainly as thou wouldst do the billows.

Shakespeare ("Merchant of Venice," act iv. sc. 1) says—

"You may as well go stand upon the beach,
And bid the main flood bate his usual height."

And Milton ("Samson Agonistes")—

"*Dalilah.* I see thou art implacable, more deaf
To prayers than winds or seas."

OBSTINACY.

For obstinacy in a man that is not gifted with wisdom, itself by itself, is worth less than nothing.

GOD KNOWS NOT TO BE FALSE.

The mouth of God knows not to utter falsehood, but brings everything to pass.

So Numbers (xxiii. 19)—"God is not a man, that He should lie; neither the son of man, that He should repent; hath He said, and shall He not do it? or hath He spoken, and shall He not make it good?" And 2 Corinthians (i. 20)—"For all the promises of God in him are yea, and in him Amen, unto the glory of God by us."

THE WISE.

For it is base for the wise to err.

THE LOWLY.

For it is unbecoming in inferiors to assume boldness of speech.

VARIOUS ILLS OF MEN.

King of the Pelasgians, various are the ills of men: nowhere canst thou behold the same wing of trouble.

GOD REGARDS THE AFFLICTED.

Look up to him that beholds from on high, the protector of suffering mortals, who address their kindred in suppliant tones, but obtain not what justice demands. Therefore the wrath of Jove, guardian of the suppliant, waits on the groans of the sufferers, and is not to be appeased.

SLANDER.

But every one bears a ready evil tongue against a stranger, and to speak slander is an easy thing.

DANGERS OF BEAUTY.

But I charge you not to disgrace me, as thou art in the bloom of youth that excitest desire. It is not easy to guard the tender ripe fruit; for beasts and men injure it in some way, and winged insects and four-footed animals. Venus proclaims their opening bloom. I say that rapine is their fate, however much they try to avoid it. And on the fair-formed beauty of virgins every one that passes sends forth a melting dart from his eye, overcome by desire.

A PROSPEROUS STATE.

For a state that is prosperous honors the gods.

WOMAN.

Neither in adversity nor in the joys of prosperity may I be associated with womankind; for when

woman is joyous, her licence is not to be endured; and when she is in terror, she is a still greater plague to her home and city.

OBEDIENCE.

For obedience, woman, is the mother of success, bringing safety; so says the proverb.

DUTIES OF MEN AND WOMEN IN WAR.

It is for men to present victims and offerings to appease the gods, when the enemy are at the gates; 'tis thine, woman, to hold thy peace, and keep within doors.

THE NOBLE AND BRAVE.

Nobly born and honoring the throne of modesty, hating vaunting language—such an one is wont to be slow at base deeds, and no coward.

TO BE, NOT TO SEEM.

For he does not wish to seem, but to be, the noblest, reaping a rich harvest from a deep furrow in his mind, from which sprout forth excellent counsels. Against such an one I charge thee to send wise and prudent champions. Dreadful is the foe that fears the gods.

IMPIOUS FELLOWSHIP.

Alas! it is a bad omen for the just to be associated with the impious. Indeed in everything naught is worse than wicked fellowship, the fruit of which is fraught with death. For whether a good man happens to have embarked with sailors, whose hearts are hot and full of villany, he perishes with the race abhorred of Heaven, or whether, being righteous, he has fixed his seat amidst citizens inhospitably bent and regardless of the gods, he is struck down by the scourge of the Deity, which falls on all alike, having rightly fallen into the same nets with his countrymen.

AN OLD HEAD ON YOUNG SHOULDERS.

In manhood's vig'rous prime
He bears the providence of age.

THE STARS.

I pray the gods that I may be released from these toils, slave of a year-long sentry, during which, lying on my elbows on the roofs of the Atridae, like a dog, I have contemplated the choir of nightly stars, radiant rulers that bring winter and summer, stars shining conspicuously in the firmament, both when they set and when they rise.

WHAT IS FATED.

Things are as they are and will be brought to the issue doomed.

TOTTERING OLD AGE.

But we with our aged frame were left inglorious behind the expedition of those days, propping on staff our steps like children; for both the marrow of youth, while it is springing up in our breasts, is weak as age, and the vigor for war is not yet attained; very advanced age, too, when its foliage

is withered, totters along its three-footed path, and in no way superior to a child, flits like a day-dream.

GOD CHASTENS MAN FOR HIS GOOD.

The man who cheerfully celebrates Jove in triumphal hymns shall ever be crowned with success—him that guides mortals to wisdom, teaching them by suffering to remain firm. But even in slumber the pangs from the memory of ills keep dripping before the heart, and thus wisdom comes to the unwilling. 'Tis a gracious gift of the gods, compulsory as fate, who sit severely on the awful bench.

BE NOT ANXIOUS FOR THE FUTURE.

To those that suffer justice brings wisdom; but for futurity, since it will come, farewell to it. 'Tis but the same with sorrowing beforehand; for the event will come dawning clearly with the morning rays.

GOD PUNISHES THE WICKED.

They feel the stroke of Jove; we may say this, and trace it out exactly; they have fared as they deserved. Some one denied that the gods deigned to care for mortals, who trampled on their laws. Not holy was he who said so; it has come upon the descendants of those who were breathing forth more violently than just a war which they ought not to have dared, while their dwellings were teeming beyond all measure with rich spoils. But may such calm of soul be mine, so as to meet the force of circumstances.

THE IMPIOUS SEEN THROUGH THEIR DISGUISE.

For riches is no bulwark against destruction to the man who has wantonly spurned the great altar of Justice; but wretched Persuasion, preparing intolerable evils for posterity, urges him on, and there is no remedy. Guilt is never hidden, but is seen through her disguise, a light of lurid glare; and like adulterated brass, when proved, is found black by wear and rubbing, fond as a boy to chase the bird light-flitting round. And not a god lends an ear to his prayers, but sweeps away the unrighteous that hath concerned himself with these doings.

THE FATE OF THE WARRIOR.

And Mars, bartering for gold their bodies, and holding the balance in the tug of war, sends to their friends a small fragment of scorched dust from Troy, to be wept with many tears, filling the urns with light ashes instead of the man. And they sigh while they sing the praises of one as renowned in arms, and another as having fallen gloriously amid the carnage in defence of another's wife. Some one mutters these words in silence, and jealous vexation creeps upon the chieftain sons of Atreus.

MURMURS OF THE PEOPLE.

Dreadful are the murmurs of the people if they be accompanied with hate; but this is the tribute greatness pays for its exalted station.

THE OPPRESSOR.

For the gods are not forgetful of those who cause great slaughter. The black Furies in one short hour hurl to perdition the man who is lucky without righteousness by a sad reverse of fortune, nor does he receive aid from his citizens. For a man to be raised aloft is dangerous, as the thunderbolt of Jove is sure to be launched against him.

NONE BUT THE GODS HAVE UNMIXED HAPPINESS.

Yea, the conflict is well o'er; in the passage of so long a time one might say that some things fall out well, while others are open to complaint; for who save the gods can claim through life's whole course an unmixed happiness?

A FOND WIFE.

For what day is more delightful to woman than that when she opens the gate to her husband returning gloriously from war, preserved by the gods? Bear this message to my husband, that he hasten his long-desired return. May he come speedily, where he will find a faithful wife in his house, such as he left her, a watch-dog of his home, to his enemies irreconcilable, and in all other points alike, not having effaced one single seal in the long course of years. I have known no delight with other men, nor has there been any slanderous report against my character, any more than brass can be tinged with dyes.

So Shakespeare ("Much Ado about Nothing," act iv. sc. 1) says—

"If I know more of any man alive
Than that which maiden modesty doth warrant,
Let all my sins lack mercy."

And "Winter's Tale," (act iii. sc. 3)—

"If one jot beyond
The bound of honor, or in act or will
That way inclining, hardened be the hearts
Of all that hear me, and my near'st of kin
Cry, Fie! upon my grave."

HAPPY ARE THOSE WHO DIE NOT CHILDLESS.

There is among mankind an old adage, uttered in ancient times, "that it is great happiness to see our children rise around us, not dying childless; but from good fortune often sprouts the bitter fruit of woe to man."

ONE BASE DEED PRODUCES ANOTHER.

For one base deed engenders more like to its own race; but to those swayed by unbending justice a beauteous race still flourishes.

Shelley, in his "Hellas," says—

"Revenge and wrong bring forth their kind,
The foul evils like their parents are."

JUSTICE.

But justice shines in smoky cottages, and honors the pious. Leaving with averted eyes the gorgeous glare of gold obtained by polluted hands, she is wont to draw nigh to holiness, not reverencing wealth when falsely stamped with praise, and assigning each deed its righteous doom.

THE HYPOCRITE.

Many are desirous to seem good while they do not what is right. Some are ready to weep with those who weep, though the pang of sorrow reaches not the heart; others join in the joys of others, dressing in forced smiles their unwilling face. But when a man is able to discern character, then it is not possible that the eyes of a man, that only seem with sympathetic tear to show a kindly feeling, should deceive him.

ENVY.

Few men have strength of mind to honor a friend's success without a touch of envy; for that malignant passion clinging to the heart doubles the burden of the man infected by it; he is weighed down by the weight of his own woes, and sighs to see the happiness of others. I speak from experience,—for well do I know, that those who bore in public the semblance of my firmest friends, were but the looking-glass of friendship, the shadow of a shade.

THINGS THAT ARE WELCOME.

I would call my husband a watch-dog of the fold, a saving mainstay of the ship, a foundation pillar of the lofty roof, an only child to a fond parent, welcome as land to the mariner which he has desied beyond his hopes, welcome as day after a night of storms, a gushing rill to a thirsty wayfarer. 'Tis pleasant to escape from all constraint.

The following beautiful paraphrase is given in the *Quarterly Review*:—

"Faithful—as dog, the lonely shepherd's pride,
True—as the helm, the bark's protecting guide,
Firm—as the shaft that props the towering dome,
Sweet—as to shipwrecked seaman land and home,
Lovely—as child, a parent's sole delight,
Radiant—as morn that breaks a stormy night,
Grateful—as stream that in some deep recess
With rills unhoped the panting traveller bless,
Is he that links with mine his chain of life,
Names himself lord, and deigns to call me wife."

TO BE FREE FROM EVIL THOUGHTS.

To be without evil thoughts is God's best gift; but we must call him happy who has ended life in prosperity.

THE POPULAR VOICE.

Yet has the popular voice much potency.

THE UNENVIED.

But the unenvied is not of the happy.

BE NOT ELATED.

God from afar looks graciously on him that is mild in victory; for no one willingly submits to the yoke of slavery.

MISERY IS THE LOT OF MANKIND.

For there is a limit to the best of health; disease creeps upon it as a close-adjointing neighbor: and a man's destiny holding on a straight course is apt to dash upon a hidden reef. If timidity fling away a part of his wealth with a well-measured cast of

the sling, the whole fabric sinks not, though teeming with woe, nor founders the bark beneath the sea. For often, by Jove's gracious goodness, the yearly furrows quell the pangs of hunger.

WHO CAN RECALL LIFE?

But who can recall by charms man's purple streaming blood, when it has once fallen on the ground before his feet? Otherwise Jove would not have put an end to the leech (Æsculapius) who could raise the dead. And if fate fixed irrevocably by the gods did not prevent another fate from bringing assistance, I would bring it, and my heart, outstripping my tongue, would have poured forth the tale.

CONTRAST OF AN OLD FAMILY AND AN UPSTART.

If slavery be a man's fate, great is the advantage of having masters of long-established opulence. For they who have reaped a rich harvest unexpectedly are harsh to their slaves in all things, and go beyond the line of right.

PROSPERITY AND ADVERSITY.

Alas for the fate of men! Even in the midst of the highest prosperity a shadow may overturn them; but if they be in adverse fortune, a moistened sponge can blot out the picture.

PROSPEROUS FORTUNE.

All men have boundless wishes for prosperous fortune; none will banish and keep it from their dwelling, saying, "Enter thou no more."

TO KNOW AND TO CONJECTURE ARE NOT THE SAME.

To know and to conjecture differ widely.

TO CIRCUMVENT A FOE UNDER THE FORM OF FRIENDSHIP.

For how could one, conceiving thoughts of vengeance on a foe, achieve the deed more surely than to bear the form of friendship, encircling him with wiles difficult to overleap?

QUALITIES OF WOMAN.

Wiles and deceit are female qualities.

EXILES.

An exile, I well know, feeds on vain hopes.

SUCCESS WORSHIPPED AS A GOD.

Success! to thee,
As to a god, men bend the knee.

JUSTICE.

The swift stroke of Justice comes down upon some in the noonday light; pain waits on others slowly in the midst of darkness, and the gloom of night overshadows them.

ONE FATE ALIKE TO BOND AND FREE.

For destiny awaits alike the free man and him that trembles at the tyrannous hand of a lord,

DOER MUST SUFFER.

But O ye mighty Fates! grant that, by the will of Jove, it may end as justice requires—"In return for a hostile speech, let a hostile speech be paid back," cries Justice, loudly, as she exacts the debt; "and in return for a murderous blow, let him suffer a murderous blow." "Doer must suffer," thus saith the thrice-old proverb.

THE SOUL LIVES.

My child, the consuming fire of the funeral pile quells not the spirit of the dead, but in after times he shows his wrath. The dead is bewailed, and he who wronged him is discovered.

Shakespeare ("Hamlet," act i. sc. 2) says—

"Foul deeds will rise,
Though all the earth o'erwhelm them, to man's eyes."

WORDS ARE DAGGERS.

This pierced quite through my ears, like a dart.

Shakespeare ("Hamlet," act. iii. sc. 8) says—

"Oh speak to me no more;
These words like daggers enter in mine ears;
No more, sweet Hamlet!"

BLOOD FOR BLOOD.

But it is a law that drops of gore poured upon the ground call for other bloodshed in addition.

So Genesis (ix. 6): "Whoso sheddeth man's blood, by man shall his blood be shed."

WHAT IS FOREDOOMED.

That which is foredoomed remains from the olden time, and will come to those who pray for it.

CHILDREN.

For children preserve the fame of the dead with surviving glory, and are like corks that buoy the net, saving the flaxen line from sinking to the bottom.

MURDER CANNOT BE EXPIATED.

For though one were to pour out every kind of libation for a single murder, vain is the labor; so runs the proverb.

THE DARING SPIRIT OF MAN.

One may describe creatures that fly and those that crawl, and the fierce rage of hurricanes, but who can describe the arrogant daring of man and of woman of hardened spirit, and their loves, leading them to endure everything, even the utmost woes of mortals. Unholy love, lording it in female heart, overcomes the conjugal union of brutes and of men.

MISERY OF MAN.

None of mortals can hope to live unscathed a life through its whole course, free from misfortunes. Alas! alas! of troubles one is just upon us, and another will come.

FURIES.

Away! I bid you off with speed from these abodes; out from the oracular shrines, lest, having received the winged swift snake (arrow) hurled

from the golden-twisted string, you disgorge with pain the black gore you sucked from men, vomiting the clots of blood which you have drawn from them. It is in every way unbecoming to enter these abodes of mine; go where heads are wrenched from the body and eyes are gouged, to revengeful deeds and slaughters, maiming of boys and stonings, and where those impaled by the spine groan with loud yellings. Ye hags abhorred, these are the feasts in which you delight; your execrable form is proof of this. It is right that such should inhabit the dens of the blood-ravaging lion, but not to tarry in these prophetic shrines with impure tread. Of such a herd the gods disdain to take the charge.

THE INNOCENT AND THE IMPIOUS.

No vindictive rage from us (the Furies) comes stealthily on him whose hands are free from guilt, but he passes through life without harm. Whereas whoever, like this man, commits crimes and hides his ruffian hands, we are close at hand as witnesses of the deed, appearing as avengers of blood.

THE MURDERER.

For avenging Fate has assigned us (the Furies) this office, saying, "Let those guilty of murders without provocation be pursued till they find refuge in the realms below;" even when dead they are not quite free. But over the victims let this be the song, bringing madness, distracting, mind-destroying, the hymn of the Furies, that charms minds without the lyre, causing shrivelling to mortals.

HEAR BOTH PARTIES.

He hears but half that hears one party only.

SORROW.

It is good to grow wise under sorrow.

THE INIQUITIES OF THE FATHERS VISITED ON THE CHILDREN.

For the Fates have assigned them (the Furies) a despotic sway over men in all things; he who feels their terrors, knows not whence come the ills of life; for the sire's long-passed crimes bring chastening on their sons, and amidst his thoughts of greatness silent ruin with hostile wrath crushes him.

THE MASTER THE EYE OF THE HOUSE.

For I deem the presence of the master to be the eye of the house.

MEN ARE A SUFFICIENT BULWARK.

For while there are men, there is a sure bulwark.

THE AFFLICTED FEAR ALL THINGS.

My friends, whoever has experienced misfortune knows that when a mountain-wave of ills comes upon mortals, they are wont to fear all things; but when the gale of fortune blows smoothly, they are confident that the same deity will constantly propel their bark with a favorable breeze.

THE LOT OF MEN MUST BE BORNE.

Human misfortunes must befall mankind. For afflictions rise, many from sea, and many from land, if life be measured through a lengthened course.

So Job (v. 7)—"Yet man is born to trouble, as the sparks fly upward."

THE DOOMED.

But when a man is rushing on the road to destruction, God also lends a hand.

OPPRESSION.

How unbecoming it is for one that is mortal to entertain proud aspiring thoughts; for presumption, when it has put forth the blade, is wont to produce for fruit an all-mournful harvest of woe.

VOICELESS LAW.

Thou seest voiceless law, which is not seen by thee while thou sleepest, walkest, and sittest, but which accompanies thee now sideways, now behind. For the darkness of night does not conceal thy evil deeds, but whatsoever crime thou hast committed, doubt not some one has seen it.

THE MIGHTY POWER OF GOD.

O Jupiter! father Jupiter! thine is the mighty power of heaven; thou lookest on the villanous and lawless acts of the celestials and of men; it belongs to thee to watch the violence of, and pass sentence on, the deeds of savage beasts.

A PROSPEROUS FOOL.

A senseless fool in prosperity is certainly a heavy burden.

So Proverbs (xxx. 22)—"A fool, when he is filled with meat."

THE RESULT OF INDULGENCE IN WINE.

Bronze is the mirror to reflect the face, wine to reflect the mind.

WORDS.

Words are the cause of senseless wrath.

So Proverbs (xv. 1)—"A soft answer turneth away wrath: but grievous words stir up anger."

OATHS.

Oaths are not the cause why a man is believed, but the character of the man is the cause why the oath is believed.

THE DISTRESSED.

God loves to assist those in distress.

So Psalms (xlii. 1)—"God is our refuge and strength, a very present help in trouble."

THE WICKED IN PROSPERITY.

The wicked in prosperity are not to be borne.

So Psalms (x. 2)—"The wicked in his pride doth persecute the poor: let them be taken in the devices that they have imagined."

THE RACE OF MAN.

For the race of man has thoughts that last merely for a day, and are no more real than the shadows of a smoke.

So Psalms (ciii. 3)—"For my days are consumed like smoke, and my bones are burned as an hearth."

FORTUNE.

Fortune, thou beginning and end of mortals! it is thou that bestowest the glory of wisdom on human works; and the good more than the bad spring from thee. Beauty and grace shine around thy golden wing; and whatever is weighed by thy scales is most blessed. In the midst of distresses thou pointest the way out of difficulties; thou sheddest a bright light in darkness, thou most excellent of divinities.

MAN DIES ONLY AT HIS FATAL MOMENT.

But neither does any one, however many wounds he may have received, die, unless he has run his allotted term of life; nor does any man, though he sits quietly by the fireside under his own roof, escape the more his fated doom.

So Job (vii. 1)—"Is there not an appointed time to man upon earth? are not his days also like the days of an hireling?"

HATE OF DEATH NOT JUST.

Men do not with justice hate death, which is a mighty remedy for many woes.

THE INDUSTRIOUS.

Glory, begotten of labor, is a debt owed by the gods to the man who works laboriously.

So Proverbs (xiii. 11)—"He that gathers by labor shall increase."

POWER AND JUSTICE.

When power and justice unite, what stronger pair is there than this?

DEATH TO BE PREFERRED TO A LIFE OF WICKEDNESS.

Death is more desirable than a wicked life. And not to be born is better than to lead a disgraceful life.

DEATH SPURNS GIFTS.

Death alone of the gods cares not for gifts, nor wilt thou accept sacrifices nor libations. No altar is erected to thee, nor is any hymn sung to thy praise. Persuasion stands aloof from thee alone of the gods.

DEATH THE PHYSICIAN.

O thou savior Death! do not despise me coming to thee, for thou alone art the physician of incurable woes; no sorrow reaches the dead.

JUSTICE WATCHES OVER THE DEAD.

If thou wishest to do good or ill to the dead, thou hast in both ways those who have neither joy nor sorrow; yet recollect that there is an avenging goddess superior to us, and justice feels a jealousy over the character of the dead.

ALCÆUS.

ALCÆUS, of Mitylene, one of the greatest lyric poets of Greece, flourished about the beginning of the 6th century B.C.

BRAVE MEN THE BEST BULWARK OF A CITY.

It is not the stones of a city, well built in, but brave men, that are the bulwark of a city.

ALEXIS.

FLOURISHED B.C. 356.

ALEXIS, a native of Thurii, in Italy, was the uncle of the celebrated Menander, and one of the principal writers of the middle comedy. He flourished B.C. 356, and continued to exhibit till B.C. 306, being upwards of one hundred years old when he died. He wrote 245 plays, of which Athenæus gives the titles of 113.

SEEK AND WE SHALL FIND.

All that thou seekest may be found, if thou shrinkest not nor fliest from labor. For since some have discovered things in heaven, though they are far removed, such as the rising and setting of the stars, the solstices and eclipses of the sun, what common things that are connected with man here below, should be able to escape his search?

THE CHANGES OF LIFE.

This life is like a game played with dice—the same figures do not always turn up: so, too, life has not always the same shape, but is ever changing.

MAN RESEMBLES WINE.

The nature of man is in some respects very much resembling wine. For, like new wine, the youthful mind requires to have its fermentation thrown off, and its roughness skimmed; but when its excessive violence has abated, and the fury, which swam on the top, has disappeared, then it becomes drinkable, and settles down, continuing pleasant to all future time.

TRUST DEEDS, NOT OATHS.

The wise ought not to trust the oaths of men, but always their deeds.

THE EVENING OF LIFE.

For now my life is approaching its evening.

SLEEP.

Neither mortal nor immortal, but having a certain composite nature, so as to live neither the life of man nor of the gods, but to be always springing up anew, and again perishing, invisible to the eye, but known to all.—*B.* Thou always lovest, O woman, to speak in riddles.—*A.* Nay, I speak plainly, and in the utmost simplicity.—*B.* Who, then, can this youngster be with such a nature?—*A.* Sleep, my good girl, the soother of the labor of man.

"RICHES TAKE UNTO THEMSELVES WINGS."

Regard riches as the last of the good things of this life, for they are the least certain of the things we possess: other things remain with those who possess them in a moderate degree.

WOMAN DIFFICULT TO BE GUARDED.

Neither walls nor goods nor anything is more difficult to be guarded than woman.

PLEASURE.

Fly pleasure, which at last brings loss.

THE DREGS OF LIFE ARE LIKE VINEGAR.

Our life has great resemblance to wine; when little of it remains, it becomes vinegar: for all human ills proceed to old age as to a workshop.

AMPHIS.

FOURISHED ABOUT B.C. 332.

AMPHIS, a poet of the middle comedy, flourished about B.C. 332. We have the titles of twenty-six of his plays.

ART.

There is no sweeter consolation in misfortune than the pursuit of art; for the mind employed in acquiring it sails secretly past its mishaps.

EAT, DRINK, AND BE MERRY.

Drink, be merry! life is mortal, the time on earth is short; death is immortal when we are once dead.

A MAN IN DISTRESS.

Apollo, how ill to please is man in distress and annoyed by everything.

SILENCE.

There is nothing more powerful than silence.

ANACREON.

FOURISHED B.C. 550-525.

ANACREON, one of the most celebrated of the Greek lyric poets, was a native of Teos, in Asia Minor, respecting whom we have few facts on which we can depend. He was the contemporary of Cyrus, Cambyzes, and Polycrates of Samos, at whose court we find him, B.C. 531, enjoying high favor, and singing the praises of the tyrant. We next hear of him at the court of Hipparchus at Athens, B.C. 525, where he met the poet Simonides. He died at the age of eighty-five, being choked, as the story goes, by a cherry-stone. Except that he was a voluptuary, and spent his time in singing the praises of love, we know little else respecting his private history. There were five books of Anacreon's poems in the time of Suidas, who is supposed to have lived in the eleventh century, but of these only a few extracts have been preserved. We have given a few extracts from his

odes, though it is supposed that they may be of a later date than the time of Anacreon.

THE BEAUTY OF WOMEN.

Nature has given horns to bulls, hoofs to horses, swiftness to hares, the power of swimming to fishes, of flying to birds, understanding to men. She had nothing more for women. What then does she give? Beauty, which can resist shields and spears. She who is beautiful, is stronger than iron and fire.

LIFE PASSES SWIFTLY AWAY.

For like the chariot's wheel life runs fast away. A little dust we lie, when our body has sunk in dissolution.

ENJOY THE PRESENT.

Since I was born a mortal, to pass over the beaten track of life, the road I have often passed, I know; what I have to run over, of that I am unacquainted. Teasing cares, leave me alone! What have I to do with you? Before my last hour shall come, I shall play, I shall laugh, I shall dance with the fair *Lycæus*.

So *Luke* (xii. 19)—"Take thine ease, eat, drink, and be merry;" and (xv. 23)—"Let us eat and be merry."

ADVANTAGES OF WINE.

When I quaff wine, my cares are lulled to rest. What have I to do with labors, woes, or cares? Die I must, whether I will or no. Why should I wander through life? Let us then quaff the wine of fair *Lycæus*. With it our cares are forgotten.

GOLD.

In consequence of gold there are no brothers, no parents, but wars and murders arise from it. And what is worse, for it we lovers are bought and sold.

OLD AGE.

Now we have gray temples, and a white head; no longer is graceful youth present, but decayed teeth; no longer is there remaining much time of pleasant life. Therefore, often do I drop the tear, dreading *Tartarus*. The gulf of *Hades* is terrific, and the way to it painful, for it is not for man, once down, to reascend.

ANAXANDRIDES.

FOURISHED B.C. 376.

ANAXANDRIDES, a writer of the middle comedy, was a native of the city *Camirus*, in *Rhodes*, or, according to others, of *Colophon*, in *Ionia*. He flourished B.C. 376, and was exhibiting his dramatic pieces till B.C. 347, when he was present at the celebration of the *Olympia* at *Dium* by *Philip*, king of *Macedon*. He is said to have been the first to lay the foundation of a vicious stage by the introduction of love scenes and intrigues. If his play was unsuccessful, he used to consign it as waste paper to the performers, and never deigned to retouch it, as other authors were in the habit

of doing (Athen. ix. 374, a.). His death is said to have been caused by the following circumstance: Euripides had said in one of his tragedies, "Nature has wished it so, who regards not laws." Anaxandrides parodied the verse by substituting "the city" instead of "nature." The Athenians condemned him to die by starvation (Suidas). Athenæus mentions the names of twenty-two of his comedies.

OLD AGE.

Old age is not, father, the heaviest of burdens, as thou thinkest; but whoever bears it unwisely, he is the party who makes it so; if he bears it without grumbling, he sometimes in this way lulls it asleep, dexterously changing its character, taking away pain and substituting pleasure, but making it pain if he is peevish.

A BLABBER.

Whoever receiving a statement in confidence proceeds to repeat it, is a scoundrel, or very leaky. If he does it for personal gain, he is a scoundrel; and if he does so without a personal object, he is leaky: both characters are equally bad.

PLEASURE.

Don't make thyself a slave to pleasure. That is the act of a lewd woman, not of a man.

DEATH.

It is good to die before a man has done anything worthy of death.

ANONYMOUS.

GOOD SPIRITS.

Round thy fiery throne stand labor-loving angels, whose business it is that all things be accomplished for men.

EVIL SPIRITS.

(God) whom the devils fear, and the multitude of gods regard with awe.

"CAST YOUR CARE UPON GOD."

Cast all thy care upon the gods: they often raise men from misfortunes, who are lying on the dark earth: and again, often overthrow those who are enjoying the height of prosperity.

So 1 Peter (v. 7)—"Casting all your care upon him; for he careth for you."

GOD IS ALL-WISE.

God always directs all things and lives in himself, since he is wisdom itself.

GOD IS HOLY.

God differs from the good man this much, that God is virtue pure and uncorrupted, free from all human weakness.

So Revelation (xv. 4)—"For thou only art holy."

GOD IS ALL-WISE.

God always directs all things and lives in himself, since he is wisdom itself.

So Romans (xvi. 27)—"To God, only wise, be glory."

GOD.

God is mind and spirit; and the ruler of the whole mass of the universe. God can neither be seen nor perceived by any sense, but is only comprehended by words and the mind's eye. But his works and what he does are evident, and perceived by all men.

So Corinthians (ii. 14)—"Even so the things of God knoweth no man, but the spirit of God. But the natural man receiveth not the things of the spirit of God. Neither can he know them, because they are spiritually discerned."

Dionysius Cato says—"If God be a spirit, as our poets say, he is to be specially worshipped with a pure mind."

St. John (iv. 24)—"God is a spirit: and they that worship him must worship him in spirit and in truth."

FRIENDS AND ENEMIES.

We must treat our friend kindly, that he may be still more a friend, but make our enemy our friend.

So Romans (xii. 20)—"Therefore, if thine enemy hunger, feed him; if he thirst, give him drink: for in so doing thou shalt heap coals of fire on his head."

ONE GOD.

There is one self-existing being; everything that is generated is produced by him alive, and there is no one that rules except the Almighty king.

So Ephesians (iv. 6)—"One God and father of all, who is above all, and through all, and in you all."

HOLINESS TO THE LORD.

"He who enters within the precincts of the temple full of incense ought to be holy: holiness is to have holy thoughts." This is the inscription in the Temple at Epidaurus.

GOD SEEN BY NONE.

No mortal sees God, but he sees all.

So Exodus (xx. 21)—"But Moses drew near unto the thick darkness where God was."

CONSCIENCE IS A GOD.

Conscience is a God to all men.

Seneca (Ep. 41), says much to the same effect:—"There is a sacred spirit seated within us, the over-observer and guardian of what is good and bad to us; he, according as he is treated by us, so he treats us."

So Romans (ix. 1)—"I lie not; my conscience also bearing me witness in the Holy Ghost."

ANGER.

Anger often has revealed the concealed thoughts of men much more effectually than madmen.

FORCE WITHOUT PRUDENCE.

Force attended by wisdom is very advantageous, but ruinous apart; it brings calamity.

CHILDREN.

A child is either a cause of fear or grief during the whole of life.

INEXORABLE NECESSITY.

For inexorable necessity has power over man; it has no dread of the immortals, who have houses in Olympus away from sad grief.

OLD AGE.

When thou hast got past the sixtieth sun, O Gryllus, die and become ashes; how dark is the angel of life after that! for now the light of life is dimmed.

NO ONE ALWAYS HAPPY.

It is best for mortals not to be born, nor to see the light of the sun. No one is fortunate all his life.

OLD AGE AND MARRIAGE.

Old age and marriage have a great resemblance to each other, for we are in a hurry to obtain both; and when we have obtained them, then we are grieved.

HEALTH.

Health! thou most august of the blessed good-nesses, with thee may I spend the remainder of my life; mayest thou benignly dwell with me; for if there be any pleasure to be derived from riches, or children, or royal power making men equal to the gods, or longing desire, which we hunt after with the secret nets of Venus, or if there be any other delight bestowed on men by the gods, or respite from pains, with thee, blessed Health, all these flourish and beam effulgent like the spring arising from the graces: without thee, no one is happy.

GOD IS SLOW IN PUNISHING.

Such is the way that God punishes, not on every occasion a mortal man, who is quick in temper. Whoever commits transgression is not altogether forgotten, but in every case is found out at last. He punishes one immediately, another at a later period; if they escape, and approaching fate does not come hastily upon them, it comes in every case at last; either their children or their distant posterity suffer for their deeds, though themselves guiltless.

So Sirach (v. 5)—"Say not, I have sinned, and what harm happened to me? for the Lord is long-suffering, He will in no way let thee go."

ANTIPHANES.

BORN ABOUT B.C. 404—DIED ABOUT B.C. 380.

ANTIPHANES, the most highly esteemed writer of the middle comedy, of whose personal history we know nothing. We still possess the titles of about 130 of his plays; but in all they are said to have been 365, or at least 260, as some of the plays ascribed to him were by other writers.

NOT LOST, BUT GONE BEFORE.

We should lament in moderation the loss of our friends, for they are not dead, but have gone before the same road which we must all necessarily pass; then we also will hereafter come to the same place with them, spending eternity in their company.

This idea is often referred to by Seneca—

(Con. Marc., 30).—"Let us think that they are absent, and let us deceive ourselves. . . . We have sent them away, nay, we have sent them before, about to follow them." Again (Epist. 90)—"He has been sent before, whom those think to have perished." Again (Con. Polyb., 38)—"Thou art mistaken, etc. Why do we bemoan what is fated? He has not left us, but gone before." Again (Epist. 68)—"And perhaps, if only the idea of the wise is true, and some place receive us after death, he whom we think to have perished has been sent before us."

So E. Elliot ("The Excursion")—

"The buried are not lost, but gone before."

"THIS NIGHT THY SOUL SHALL BE REQUIRED OF THEE."

No one, master, has ever died who was ready to die; but Charon draws by the legs to his ferry-boat those who are desirous to live, and carries them off in the midst of their banquetings, and with everything around them richly to enjoy. It is hunger that is the medicine for immortality.

OLD AGE.

O old age! how desired thou art by all, how happy thou art thought to be! then, when thou comest, how sad, how full of sorrow; no one speaks well of thee, every one ill of thee, if he speaks with wisdom.

RICHES AND POVERTY.

Riches are a cloak for ills, O mother; poverty is transparent and abject.

THE UPRIGHT.

He who commits no crime requires no law.

UNRIGHTEOUS GAINS.

Unjust gains give short-lived pleasures, but afterwards lengthened griefs.

So Proverbs (xvi. 8)—"Better is a little with righteousness, than great revenues without right."

THE ACQUISITION OF WEALTH DEADENS THE SENSE OF RIGHT AND WRONG.

How unhappy thou art, to whom the base appears preferable to the honorable for the sake of gain; for the acquiring of riches darkens the sense of right and wrong!

MORTALITY OF MAN.

My best of friends, if thou art mortal, think of thy mortality.

A GOOD CONSCIENCE.

To be conscious to one's self of having committed no unjust act throughout life is the cause of much pleasure.

DILIGENCE.

All things are subservient to diligence.

HABITS OF HONOR.

Habits of justice are a most valuable possession.

A SLAVE.

To a slave deprived of his country, I think a good master is his country.

PLEASURES OF LOVE.

If any one says that those in love have no sense, he is certainly stupid and good for nothing; for if we take away the pleasures of love from life, there is nothing left but to die.

WOMAN TO BE TRUSTED ONLY IN ONE THING.

One thing only do I believe in a woman, that she will not come to life again after she is dead; in everything else I distrust her till she is dead.

MIND AND BODY.

Think not about decking thy body with ornaments, but thy heart with pure thoughts and habits.

HONEST POVERTY AND UNJUST GAIN.

It is better to be poor with honor than to be rich through unjust means; the one brings pity, the other censure.

GRIEF.

Grief seems to be next neighbor to madness.

OLD AGE.

Old age is, as it were, the altar of ills; we may see them all taking refuge in it.

MARCUS ANTONINUS, OR AURELIUS.

BORN A.D. 121—DIED A.D. 180.

MARCUS ANTONINUS, OR MARCUS AURELIUS, the sixteenth Emperor of Rome in succession from Augustus, was descended from a family which pretended to trace its origin to Numa, and to be connected with a king of the Salentini, in the south of Italy, called Malennius, who had founded the city Lupiae, now *Lecce*. His more immediate ancestors, however, had come from the small municipal town Succubo, in Spain, and had by their industry and abilities reached the highest dignities in Rome. His father was Annius Verus, the friend of the Emperor Adrian, and his mother was Domitia Calvilla, daughter of Calvisius Tullus, who had been twice consul. Marcus Antoninus was born at Rome, 20th April A.D. 121, in the fifth year of Adrian's reign. He was placed by his grandfather under the ablest masters which Rome could supply, and he seems to have been of a disposition which led him to take pleasure in every intellectual pursuit. Philosophy, in all her various ramifications, was his delight from his earliest years; and while he was scarcely twelve years old, he was so earnest in its pursuit that he began to practice some of those foolish austerities which the Stoics were in the habit of recommend-

ing. He insisted on being allowed to sleep on the ground; and it required all the authority of his mother to make him forego his boyish freak. He received instruction from Herodes Atticus, Com. Fronto, Sextus of Chæroneia the grandson of Plutarch, Apollonius, the friend of Antoninus Pius; and even after he had ascended the throne he did not consider it beneath his dignity to attend the public lectures of the philosophers. From the connection of his father with Adrian, he attracted at an early period the attention of the emperor. Adrian adopted Antoninus Pius, A.D. 138, only on condition that he should admit into his family his young friend, Annius Verus, and Lucius Verus, the son of that Ælius Verus who had been selected by Adrian to succeed him. He was at this time only eighteen, and seems, by his respectful conduct, soon to have won the heart of his adopted father, who gave him the name of Marcus Aurelius, by which he is generally known in history. As soon as Antoninus succeeded to the throne, he raised Aurelius to the dignity of Cæsar; and though he had been betrothed to the daughter of L. Cejonius Commodus, he prevailed on him to forego his engagement, and marry his youngest daughter, Annia Faustina, who became soon equally profligate as her mother. During the whole of the reign of Antoninus, Aurelius lived in the most complete state of harmony with his father-in-law, and on his deathbed was appointed to succeed him. He ascended the throne, A.D. 161, in the fortieth year of his age. On his accession to the throne his history is merged in that of the Roman Empire, which was then beginning to be attacked on all sides by the neighboring nations. The Parthians, in the East, first attracted his attention; and no sooner were they compelled to submit, than a still more formidable war broke out on the side of Germany. Though his time was much occupied with state affairs, his greatest pleasure was derived from philosophy and literature. Music, poetry, and painting were not forgotten; and the severer sciences of mathematics and law engaged no small part of his attention. With the exception of a few letters which were found in the recently-discovered remains of Fronto, the only work of Marcus which has come down to us is a volume composed in Greek,—a kind of commonplace book, in which he put down from time to time his thoughts and feelings upon moral and religious subjects, together with remarkable maxims which he had culled from writers distinguished for wisdom and virtue. The greatest blot on his memory is the severity with which he treated the Christians; and it is the more difficult to understand the reason of his conduct, as it is altogether at variance with his general principles as laid down in his "Meditations."

MAN FORMED OF BODY, SOUL, AND SPIRIT.

Whatever I am, I am formed of body, breath, and spirit; wherefore, as if thou wast now dying, abstain from fleshly lusts.

So 1 Peter (II. 11).—"Abstain from fleshly lusts, which war against the soul."

THE PRESENT IS THE TIME FOR REFORMATION OF CHARACTER.

Thou must now at last perceive of what universe thou formest a part, and of what ruler of the universe thou art an efflux; and that a term of time is allotted to thee, which if thou dost not use for clearing away the clouds from thy mind, it will go and thou wilt go, and it will not again return.

So 2 Corinthians (vi. 2).—"Behold now is the accepted time, now is the day of salvation."

DO EVERYTHING AS IF IT WERE THE LAST ACT OF THY LIFE.

See that thou devote thyself zealously, as a Roman and a man of energy, to every work that thou mayest have on hand, with scrupulous and unfeigned dignity of character, with love of the human race, independence, and a strict adherence to justice, and withdraw thyself from all other thoughts. Thou wilt give thyself relief if thou doest every act of this life as if it were the last.

LIVE THE SAME TO ALL.

Though thou wert about to live three thousand years, and as many myriads, yet thou oughtest never to forget that no man loses any other portion of life than that which he is living at the moment, nor does he live any other than that which he now loses. Therefore the longest life comes to the same point with the shortest, since the present time is equal to all, and therefore what is lost is equal to all. For a man cannot lose either the past or the future.

EVERYTHING IS MERE OPINION.

Everything is mere opinion.

LIFE A WARFARE.

And to say everything in the shortest compass, everything which belongs to the body is a stream, and what belongs to the soul is a dream and vapor; life is a warfare, and a stranger's sojourn, and after-fame is oblivion. What is that, then, which is able to conduct a man? One thing, and only one, philosophy.

So James (iv. 14).—"For what is your life? It is even a vapor."

MAN SHOULD STAND ERECT.

Be cheerful also, and seek not external help, nor the tranquillity which others give. A man then must stand erect, not be kept erect by others.

AN UPRIGHT MAN NEVER UNPREPARED TO LEAVE LIFE.

In the mind of a man that is chastened and purified thou wilt find nothing foul, impure, or any sore skinned over; nor will fate ever overtake him in a state of being that is imperfect, just as one may say of a tragic actor who leaves the stage before he has finished his part.

THE LONGEST POSTHUMOUS FAME IS SHORT.

Short, too, the longest posthumous fame, and even this only continued by a succession of poor

human beings, who will very soon die, and who know not even themselves, much less him who died long ago.

THE VANITY OF ALL THINGS.

But perhaps the love of fame may torment thee. Consider how soon all things will be buried in forgetfulness, and what a bottomless chaos exists on both sides of thee; how vain is the applause of the world, how changeable the opinions of the mob of mankind, and how utterly devoid of judgment they are; in short, within how narrow a space this fame, of which thou art so greedy, is circumscribed. For the whole earth is a point, and how small a nook in it is thy dwelling, and how few are there in it, and what kind of people are they who will praise thee?

DEATH AND BIRTH EQUALLY A MYSTERY.

Death is something like the birth of man, equally a mystery of nature, a composition out of the same elements, and a decomposition into the same; and nothing at all of which any one need be ashamed, for it is not contrary to the nature of a reasonable animal, and not contrary to the reason of our constitution.

DEATH IS ALWAYS IMPENDING.

Do not act as if thou wert about to live ten thousand years. Death is impending. While thou enjoyest life, and while thou mayest, be good and upright.

PREDESTINATION.

Has any good fortune befallen thee? It has been predestinated to thee from the beginning of the world, and whatever happens has been so fated.

NOTHING NEW UNDER THE SUN.

Consider, for example, and thou wilt find that almost all the transactions in the time of Vespasian differed little from those of the present day. Thou there findest marrying and giving in marriage, educating children, sickness, death, war, joyous holidays, traffic, agriculture, flatterers, insolent pride, suspicions, laying of plots, longing for the death of others, newsmongers, lovers, misers, men canvassing for the consulship and for the kingdom;—yet all these passed away, and are nowhere.

So Ecclesiastes (i. 9).—"The thing that hath been, it is that which shall be; and that which is done, is that which shall be done; and there is no new thing under the sun."

WHAT IS AN ETERNAL REMEMBRANCE?

And what is even an eternal remembrance? A mere empty nothing. What is it, then, about which we ought to employ our serious thoughts? This one thing, thoughts just and acts social, words that never are false, a disposition that gladly submits to whatever happens, as necessary, as usual, as flowing from a principle and source of the same kind.

DESCRIPTION OF TIME.

Time is like a river, made up of the things which happen, and a torrent; for as soon as a

thing has been seen, then it is carried off and another comes in its place, and this will be carried away also.

RISE CONTENTED FROM THE FEAST OF LIFE.

To conclude, see how ephemeral and worthless human things are, and what was yesterday a little mucus, to-morrow will be a mummy or ashes. Pass, then, through this little space of time suitably to nature, and end thy journey in content, just as an olive falls off when it is ripe, blessing nature who produced it, and thanking the tree on which it grew.

So Philippians (iv. 11)—"I have learned, in whatsoever state I am, therewith to be content."

NOTHING PERISHES UTTERLY.

I consist of figure and matter: neither of these will be annihilated, as neither of them were created from nothing. Therefore, every part of me, when a change shall take place, will go into something else in the world, and this again will be changed into some other thing, and so on *ad infinitum*.

MAN IS AS HIS MIND.

Such as are thy habitual thoughts, such also will be the character of thy mind; for the soul is dyed by the thoughts.

THE REAL WORTH OF MAN.

Be aware, therefore, that every man is worth just so much as the things are worth about which he busies himself.

OBLIVION OF ALL THINGS.

The time is at hand when thou wilt forget and be forgotten by all.

LOVE YOUR ENEMIES.

It is the duty of men to love even those who injure them.

EVERYTHING IN CHANGE.

Nature, which rules the universe, will soon change all things which thou seest, and out of their substance will make other things, and again other things from the substance of them, that the world may ever be fresh.

OBEY GOD AND LOVE THY NEIGHBOR.

Be simple and modest in deportment, and treat with indifference whatever lies between virtue and vice. Love the human race; obey God.

WHAT HAS BEEN WILL BE.

Look at the past—at the innumerable changes of governments. Thou mayest thus conjecture with safety as to the future, for they will be altogether alike, and it will not be possible for them to deviate from the order of the things which are at present. Wherefore, to contemplate human life for forty years is the same as to have contemplated it for ten thousand years. For what more wilt thou see?

GOD IS MERCIFUL.

The gods, being immortal, are not annoyed, because during so long a time they are obliged to endure men such as they are, and so many of them bad; and, besides this, they also take care of them in all ways.

So Psalm (ciii. 8)—"The Lord is merciful and gracious, slow to anger, and plenteous in mercy."

THE LIAR.

He, too, who transgresses her will (i.e., who lies) is clearly guilty of impiety to the eldest of goddesses, for the universal nature is the nature of things that are, and things that are have an intimate relation to all things that come into existence. Moreover, that universal nature is called truth, and is the first cause of all things that are true. He, therefore, who lies intentionally, acts with impiety, inasmuch as he acts unjustly by deceiving, and he also who lies unintentionally, inasmuch as he is at variance with universal nature, fighting against the nature of the universe; for he fights against it who is borne of himself to that which is contrary to truth, for he had received powers from nature, through the neglect of which he is not able to distinguish falsehood from truth.

DEATH.

Do not despise death, but receive it with gladness, as one of those things which nature wills. For as it is to be young and to grow old, to increase in size and reach maturity, to have teeth, a beard, and gray hairs, and to beget and to be pregnant, and to bring forth, and all other operations which the seasons of thy life bring, such also is thy dissolution.

DEATH.

O death! mayest thou approach quickly, lest perchance I too should forget myself.

THE WRONG-DOER.

He who does wrong, does wrong against himself; he who acts unjustly, acts unjustly to himself by making himself bad.

So John (viii. 34)—"Whosoever committeth sin is the servant of sin."

FORGIVENESS.

If thou art able, correct by teaching those who sin; but if thou art unable, remember that indulgence is given to thee for this purpose; the gods, too, are indulgent to such.

So Matthew (vi. 14)—"For if ye forgive men their trespasses, your heavenly Father will also forgive you."

ALL THINGS ARE THE SAME.

All things are the same, familiar in experience, ephemeral in time, and worthless in matter. Everything now is just as it was in the time of those whom we have buried.

ALL THINGS ARE CHANGING.

All things are changing; and thou thyself art in continuous mutation, and in a manner in constant wasting away; so also is the whole universe.

CHANGES COME LIKE WAVE UPON WAVE.

Soon will the earth cover us all; then, too, the earth will change; and so on things will change forever and ever; for when a man reflects on the changes and transformations which follow one another, like wave upon wave, and their rapidity, he will despise everything that is mortal.

THE VALUE OF A POSTHUMOUS NAME AND REPUTATION.

Look down from above on the countless herds of men and their countless solemnities, their various voyagings in storms and calms, and the contests among those who are born, who live together and die. And consider also the life lived by others in the olden times, and the life of those who will live after thee, and the life now lived among barbarous nations, and how many know not even thy name, and how many will soon forget it, and how they who are now praising thee will very soon blame thee, and that neither a posthumous name is of any value, nor reputation, nor anything else.

MEN CONSTANTLY PASSING AWAY.

All things which thou seest will soon perish, and those who have looked on them, as they pass away, will themselves soon perish; and he who dies at the extreme old age will be brought into the same condition with him who died prematurely.

WHAT HAPPENS IS PREPARED FROM ALL ETERNITY.

Whatever may happen to thee has been prepared to thee from all eternity; and the concatenation of causes was from eternity spinning the thread of thy being and of that which is incident to it.

WHAT TIME IS.

Let the idea of the whole of time and of the whole of substance be constantly before thy thoughts, and thou wilt find that all individual things as to substance are a grain of fig, and as to time, the turning of a gimlet.

WHAT MEN ARE IN REALITY.

Consider what men are when they are eating, sleeping, generating, easing themselves, and so forth; then what kind of men they are when they bear themselves haughtily, or are angry and scold from their lofty place. And then consider to whom they were slaves a short time ago, and for what things; and then think in what condition they will be after a little time.

THE DRAMAS OF LIFE.

Consider, in a word, how all things, such as they are now, were so formerly, and consider that they will be so again; and place before thy eyes whole dramas and stages of the same kind, whatever thou hast become acquainted with from thy own experience or from the history of olden times—such as the whole court of Hadrian, and the whole court of Antoninus, and the whole court of Philip, Alexander, and Croesus, for all these were such dramas as we see at present, only with different actors.

The following passages, which speak of the drama of life, may serve as parallels to the sentiments of Antoninus (Demophilus, *Similitudines*, *Moralia*, l. 10, Orelli opera):—

"Youth is the first part of life, like that of a drama; wherefore all attach themselves to it."

And again Aristonynus, in Stobæus, cap. cvl. 14 (ed. Meineke, 1855)—

"Life is like a theatre, for the worst often occupy the best place in it."

And again one of the epigrams of Palladas (Anthol. Græc. x. 73)—

Life is a scene, and we are players; either learn to play, forgetting the labors, or suffer the pain of losing."

Augustus, on his deathbed (Sueton. Aug. c. 99), said—"Whether did they think that he had acted the drama of life in a becoming manner."

MEN ARE LIKE LEAVES.

Thy children are like leaves. Leaves, too, are they who bawl out as if they were worthy of credit, and give praise, or, in the opposite way, curse, or secretly find fault and sneer; and leaves, likewise, are those who shall receive and transmit a man's fame to aftertimes. For all such things as these "are produced in the season of spring;" then the wind throws them down; then the forest produces others in their stead. But a brief existence is common to all things, yet thou avoidest and formest all things as if they would be eternal. But a little while and thou shalt close thy eyes, and him who has attended thee to thy grave another soon will lament.

SOME ARE ALWAYS GLAD AT THE DEATH OF ANOTHER.

There is no one so fortunate to whom at his death there are not some who are pleased at the calamity that has happened.

BE PREPARED TO DIE AT ANY MOMENT.

What a soul that is which is ready, if at any moment it must be separated from the body, and ready either to be extinguished or dispersed or continue to exist! but so that this readiness comes from a man's own judgment, not from mere obstinacy, as with the Christians, but considerately and with dignity, and in a way to persuade another, without tragic show.

THE VOICE TO BE WRITTEN ON THE FOREHEAD.

The voice ought to be clearly written on the forehead; according as a man's character is, he shows it forthwith in his eyes, just as he who is beloved reads everything in the eyes of the lover. So, also, ought the upright and good man to be like the strong-smelling goat, so that the bystander, as soon as he comes near, should perceive him, whether he wills it or not. But the affectation of honesty is like a crooked stick. Nothing is more disgraceful than a wolfish friendship. Avoid this most of all. The good, simple, and benevolent, show these feelings in the eyes, and there is no concealment of them.

EVERYTHING LIES NAKED BEFORE GOD.

God sees the minds of all stripped bare of their bodily coverings and pollutions.

MAN'S SELF-LOVE.

I have often wondered how every man loves himself more than all the rest of men, yet sets less value on his own opinion of himself than on the opinion of others.

WHERE ARE NOW MEN OF THE GREATEST FAME?

Bring always to thy remembrance that those who have made great complaints about anything, those who have been most remarkable by the greatest fame, or misfortunes, or enmities, or fortunes of any kind; then consider, where are they all now? Smoke and ash and a tale, or not even a tale.

APOLLODORUS.

FLOURISHED B.C. 290.

APOLLODORUS, a native of Gela, in Sicily, flourished between B.C. 300-290. He was a celebrated comic poet, of whose poetry some fragments have been preserved.

A PLEASANT LIFE.

It is pleasant to lead an idle life; it is a happy and delightful life if it be with other idle people: with beasts and apes one ought to be an ape. O *the misery of life!

WHEN NIGHT APPEARS TO BE LONG.

For to those overwhelmed in sorrow and grief every night is sure to appear long.

HOW DEATH APPEARS IN DIFFERENT STAGES OF LIFE.

When I was a young man, I pitied those who were carried off prematurely; but now when I see the funeral of the old, I weep, for this is my concern, the other was not.

THE HABITS OF THE OLD.

Do not despise, Philinus, the habits of the old, to which, if thou reachest old age, thou wilt be subject. But we, fathers, are greatly inferior in this. If a father does not act kindly, you reproach him in some such language as this—"Hast thou never been young?" And it is not possible for the old to say to his son, if he acts imprudently, "Hast thou never been old?"

FELLOW-SUFFERERS.

This is according to nature; every one in misfortune grieves most pleasantly in company with those who are suffering in the same way.

NEVER DESPAIR.

Men, it is not right for him who is in misfortune to despair, but always to expect better fortune.

WHO IS HAPPY?

For it is not right to call the man who possesses much riches happy, but the man who is not in grief.

FORTUNE.

Fortune is a sore, sore thing; but we must bear it in a certain way, as a burden.

TIME.

For if thou takest time into thy affairs, it will ally and arrange all things.

ARATUS.

FLOURISHED B.C. 270.

ARATUS, a Greek poet, of Soli, in Cilicia, flourished B.C. 270, in the reign of Ptolemy Philadelphus, and was the contemporary of Theocritus, by whom he is spoken of in honorable terms (vi. 1-45). Aratus spent much of his time at the court of Antigonus Gonatas, B.C. 282-239. He was the author of a work entitled "Phænomena," which has been preserved, and which is a description of the heavens in hexameter verse. It is a poem of 782 lines, and contains rather a poetical than scientific account of the appearances in the heavens. It seems to have been a great favorite with the Romans, as it was frequently translated into Latin verse. Cicero, in his youth, employed himself in translating it, but it adds little to the reputation of the orator. Another work of Aratus which we possess is entitled "Diosemeia," prognostics of the weather, which was also translated by Cicero.

WE ARE THE OFFSPRING OF GOD.

Let us begin our song from Jupiter; let us never leave his name unuttered; all paths, all haunts of men are full of Jove, the sea and heavens; we all everywhere require the aid of Jove, for we are his offspring. Benevolent, he warns mankind to good; urges them to toil with hope of food.

GOD PLACED SIGNS IN THE HEAVENS.

For God himself placed these signs in the heaven, having set apart the stars.

So Genesis (i. 14)—"And God said, Let there be lights in the firmament of heaven, to divide the day from the night, and let them be for signs."

THE GOLDEN AGE.

They were not then acquainted with miserable strife, nor dissensions, with complaints without end, nor tumults; thus they lived in simplicity. The boisterous sea lay aside, no ships brought food from afar, but oxen and ploughs supplied it; and Justice herself, the bountiful giver of good, furnished boundless gifts to nations; so it was so long as the earth fed a golden race.

ARCHILOCHUS.

ARCHILOCHUS of Paros, in Lydia, flourished about 714-676 B.C. and is regarded as the first of the lyric poets.

SPEAK NOT ILL OF THE DEAD.

For it is not good to jeer at the dead.

ARCHIPPUS.

FLOURISHED B.C. 415.

ARCHIPPUS, an Athenian comic poet of the old comedy, gained a single prize, B.C. 415.

THE SEA.

How sweet it is, mother, to see the sea from the land, when we are not sailing!

ARISTOPHANES.

BORN B.C. 444—DIED ABOUT B.C. 380.

ARISTOPHANES, the only writer of the old comedy of whom any entire works are left, was son of Euphion, an Athenian. Of his private history we know nothing, except that he was fond of pleasure, and spent much of his time in drinking and the society of the witty. There are eleven of his plays still remaining. The period during which he exhibited his plays was one of the most brilliant, and at the same time the most unfortunate, that Athens ever witnessed. It was in the fourth year of the Peloponnesian War, B.C. 427, that he brought on the stage his first play, and for the long period of thirty years he continued to produce a series of caricatures on the leading men of the day, which give us more insight into the private history of the times than we could have got from any other source. The evils of war, the folly of his countrymen in being led by loud-mouthed demagogues, the danger of an education in which scepticism took the place of religion, and the excessive love for litigation, to which the Athenians were addicted, are the subjects against which he inveighs, with a power and a boldness which show him to have been an honest, though not always a wise, patriot. Plato called the soul of Aristophanes a temple for the Graces, and has introduced him into his "Symposium." His lyrical powers were of a high order, as may be seen in many of his choruses, where his fancy takes the widest range: frogs chant choruses, and the grunt of a pig is formed into an iambic verse. The coarseness and indecency which are mixed up with some of his finest passages must be referred more to the age in which he lived than to his own mind.

A ROGUE.

If I get clear of my debts, I care not though men call me bold, glib of tongue, audacious, impudent, shameless, a fabricator of falsehoods, inventor of words, practised in lawsuits, a law tablet, a rattle, a fox, a sharper, a slippery knave, a dissembler, a slippery fellow, an impostor, a rogue that deserves the cat-o'-nine-tails, a black-guard, a twister, a troublesome fellow, a licker-up of hashes. If they call me all this, when they meet me, they may do so if they please.

So that I may but fob my creditors,
Let the world talk; I care not though it call me
A bold-faced, loud-tongued, overbearing bully;
A shameless, vile, prevaricating cheat;

A tricking, quibbling, double-dealing knave;
A prating, pettifogging limb-o'-th'-law;
A sly old fox, a perjurer, a hang-dog,
A ragamuffin made of shreds and patches,
The leavings of a dunghill. Let 'em rail,
Yea, marry, let 'em turn my guts to fiddle-strings,
May my bread be my poison, if I care!

MEMORY OF TWO SORTS.

Oh! as for that,
My memory is of two sorts, long and short:
With them who owe me ought it never fails;
My creditors, indeed, complain of it
As mainly apt to leak and lose its reckoning.

OLD AGE A SECOND CHILDHOOD.

But I would say, in reply, that old men are boys twice over.
And grant they were, the proverb's in your teeth,
Which says old age is but a second childhood.

WE ARE THE CAUSE OF MISFORTUNES TO OURSELVES.

Nay, rather, thou art thyself the cause of these things to thyself, having had recourse to wicked courses.

Evil events from evil causes spring,
And what you suffer flows from what you've done.

EVERYTHING SUBSERVIENT TO RICHES.

And by Jove, if there be anything grand, beautiful, or pleasing to men, it is through thee (riches); for all things are subservient to riches.

SELFISHNESS OF MANKIND.

But to me it is a prodigy, that a man, who hath any good luck, should send for his friends to share it. Surely he hath done a very unfashionable thing.

NO MAN RIGHTEOUS.

I know . . . that there is no man truly honest; we are none of us above the influence of gain.

ADVANTAGE OF POVERTY TO THE HUMAN RACE.

Should this which you long for be accomplished, I say it would not be conducive to your happiness; for should Plutus recover his sight, and distribute his favors equally, no man would trouble himself with the theory of any art, nor with the exercise of any craft; and if these two should once disappear, who afterwards will become a brasier, a shipwright, a tailor, a wheelwright, a shoemaker, a brickmaker, a dyer, or a skinner? Or who will plough up the bowels of the earth, in order to reap the fruits of Ceres, if it was once possible for you to live with the neglect of all these things?

POVERTY IS SISTER OF BEGGARY.

Therefore we say, certainly, that poverty is sister of beggary.

THE EFFECT OF POVERTY AND RICHES ON MAN.

And knowing that I (Poverty) furnish men better than Plutus (Riches) both in mind and body;

for with him they are gouty in feet, pot-bellied, thick-legged, and extravagantly fat; but with me they are thin and wasp-like, and annoying to their enemies.

TO CONVINCE AGAINST OUR WILL.

For thou shalt not convince me, even if thou shouldst convince me.

Gay says—

"Convince a man against his will,
He's of the same opinion still."

A MAN'S COUNTRY WHERE HE LIVES BEST.

That is every man's country, where he lives best.

ELYSIUM.

After that the breath of flutes shall encompass thee, and thou shalt see a most beautiful light, as here, and myrtle groves, and happy bands of men and women, and much clapping of hands.

Onward the dulcet harmony of flutes
Shall breathe around thee, while thou shalt behold
Light's gayest beams, such as we here enjoy,
And myrtle groves, and troops of either sex
Moving in mystic choruses, and marking
With plausive hands their holy ecstasy.

DEBARRING THE PROFANE FROM THE SACRED MYSTERIES.

It is right that he should abstain from ill-omened words, and retire from our choirs, whoever is unskilled in such words, or is not pure in mind, and has neither seen nor cultivated with dances the orgies of the noble Muses, and has not been initiated in the Bacchanalian orgies of the tongue of Cratinus, the bull-eater, or takes pleasure in buffoonish verses, exciting buffoonery at an improper time, or does not repress hateful sedition, and is not kind to the citizens, but, desirous of his private advantage, excites and blows it up; or, when the commonwealth is tempest-tossed, being a magistrate, yields to bribes, or betrays a garrison, or ships or imports from Ægina forbidden goods, being another Thorycion, a vile collector of tolls, sending across to Epidaurus oar-paddings, sail-cloth and pitch, or who persuades any one to supply money for the ships of the enemy.

Hushed be each lawless tongue, and, ye profane,
Ye uninitiated, from our mysteries
Far off retire! Whoe'er a bosom boasts not
Pure and unsullied, nor has ever learned
To worship at the Muses' hallowed shrine,
Or lead in sportive dance their votaries,
Nor in Cratinus' lofty sounding style
Has formed his tongue to Bacchus' praise;—who-

e'er
Delights in flattery's unseemly language;—
Who strives not to allay the rising storm
That threatens the public weal, nor cultivates
The sweets of private friendship, but fomenta
Intestine discord, blows the rancorous flame
Of enmity 'twixt man and man, to serve
Some sordid purpose of his narrow soul;—
Whoe'er intrusted with the government

Of a divided city, by corruption
Is led away from th' even path of justice;—
Whoe'er betrays the fortress he commands,
Gives up his ship, or from Ægina sends
Forbidden stores, as late that vile collector,
Shameless Thorycio, did to Epidaurus;
Whoe'er persuades another to supply
The enemy with money for their fleet.

TORTURE.

In every way, by tying him to a ladder, by hanging, by scourging with a whip, by faying, by racking, and besides by pouring vinegar into his nostrils, by heaping bricks upon him, and in every other way; only don't beat him with leek or young onion.

By every method—

Tie him upon the ladder,—hang him up,—
Give him the bristly strap,—flog, torture him,—
Pour vinegar up his nostrils,—t' his feet
Apply the tiles; question him as thou wilt,
So 'tis not with a rod of leeks and onions.

GOOD FOLKS ARE SCARCE.

Good folks are scarce; and so it is with us.

THE AIM OF POETS.

For it becomes poets to practise this. For see how useful noble poets have been from of old. For Orpheus made known to us noble mysteries and to abstain from bloodshed; Musæus, complete cures of diseases and oracular responses; Hesiod, agriculture, seed-time, and harvest; and by what did the divine Homer gain honor and glory except in this way, that he taught what was useful, military skill, and all the various use of arms?

POETS AND SCHOOLMASTERS.

Yet it is right for a poet to throw a veil over evil deeds, not to bring them unto the light of day, or produce them on the stage; for he who directs little children is their teacher, while poets are to those who are grown up. In truth it is our province, above everything, to instruct men in virtue and truth.

But horrible facts
Should be buried in silence, not bruited abroad,
Nor brought forth on the stage, nor emblazoned
in poetry.

Children and boys have a teacher assigned them—
The bard is a master for manhood and youth,
Bound to instruct them in virtue and truth.

FREE.

NOBLE THOUGHTS PRODUCE NOBLE DICTION.

But you, wretch, it is necessary also to produce words that may correspond with great thoughts and noble sentiments; and besides, it is natural that demigods should employ language grander than ours, for they use a more magnificent attire.

Elevated thoughts and noble sentiments,
Of course, produce a corresponding diction;
Heroes, besides, with much propriety,
May use a language raised above the vulgar,

Just as they wear a more superb attire;—
Which, when I showed thee, thou hast done most
foully.

DEATH SCORNS GIFTS.

The only power that scorns our gifts is death.

LIFE IS DEATH.

Who knows but life is death, to breathe a feast,
To sleep naught else but a warm coverlet?

THE NIGHTINGALE.

O King Jove! the voice of the bird! how has it
filled with melody the whole grove!

O Jupiter! the dear, delicious bird!

With what a lovely tone she swells and falls,
Sweetening the wilderness with delicate air.

FRERE.

WE LEARN FROM OUR ENEMIES.

You're mistaken; men of sense often learn from
their enemies. Prudence is the best safeguard.
This principle cannot be learned from a friend, but
an enemy extorts it immediately. It is from their
foes, not their friends, that cities learn the lesson
of building high walls and ships of war. And this
lesson saves their children, their homes, and their
properties.

"WHAT EYE HATH NOT SEEN NOR EAR HEARD."

He speaks of a mighty bliss, which cannot be
expressed in words nor believed to be possible;
for he will convince you by arguments that all
these things are yours, both what is here and there
and everywhere.

So St. Paul (1 Cor. II. 9)—

"But as it is written, Eye hath not seen nor ear heard,
neither have entered into the heart of man, the things which
God hath prepared for them that love Him."

SLY AS A FOX.

He's as sly as a fox; he's contrivance, adroit-
ness, subtilty itself; he's so cunning that he'd
slip through your fingers like wild-fire.

MORTALS AND IMMORTALS CONTRASTED.

Mortals, that are condemned to live in darkness
—mortals, that fade like the leaves, emblems of
imbecility, images of clay, a race lightsome and
without substance, creatures of a day without
wings—miserable mortals, men that flit away as
dreams! give ear to us who know no decay, to us
who live forever, to us who dwell on high, who
flourish in immortal youth, who harbor thoughts
which perish not; that having received all accurate
information from us on the subject of sublimity,
having learnt correctly the nature of birds, the
birth of the gods, of rivers, of Erebus, and of
Chaos, ye may tell Prodicus, with his philosophy,
to go hang.

PEACE BE UPON THIS PLACE.

Peace be upon this place.

So Luke (x. 5)—"Peace be to this house."

THE ADVANTAGES OF WINE.

Dost thou dare to find fault with wine as merely
giving birth to ideas? Why, canst thou point out
anything more fully engaged in the practical
affairs of life? Consider for a moment: when
men drink, then they are rich, they traffic, are suc-
cessful in lawsuits, are happy, give aid to their
friends. Come, bring out quickly a stoup of
wine, that I may moisten my brain, and say some-
thing clever.

REQUISITE QUALITIES FOR A DEMAGOGUE.

The other qualities requisite for a demagogue
are thine—foul-mouthed, base-born, a low mean
fellow. Thou possessest every quality necessary
to make thy way with the mob.

A PALTRY ORATOR.

"To speak," indeed! No doubt thou wouldst
cleverly take up some case that had fallen to thee,
and handle it properly, tearing it in pieces like a
piece of raw flesh. But knowest thou in what
way thou seemest to me to be placed? Thou art
like the rest of them. If thou hast anywhere
pleaded some paltry suit well against a resident-
alien, babbling the livelong night, and talking to
thyself in the streets, and drinking water, and
showing thyself off, and boring thy friends, thou
thoughtst thyself a dab at oratory—thou silly
coxcomb!

You're like the rest of 'em—the swarm of paltry,
weak pretenders.

You've made your pretty speech, perhaps, and
gained a little lawsuit

Against a merchant-foreigner, by dint of water-
drinking,

And lying long awake o' nights, composing and re-
peating,

And studying as you walked the streets, and wear-
ing out the patience

Of all your friends and intimates with practising
beforehand:

And now you wonder at yourself, elated and de-
lighted

At your own talent for debate—you silly, saucy
coxcomb.—FRERE.

"TO BUILD THE LOFTY RHYME."

Builders of ingenious songs.

Milton, in "Lycidas" (v. 10), says—

"Who would not sing for Lycidas? he knew
Himself to sing, and build the lofty rhyme."

AN AGED BARD.

But now, when you see him in his dotage, you
do not pity him, since the pegs fall out and the
tone is no longer there, and the harmony is dissonant.

Scott in his "Minstrel," says—

"His withered cheek and tresses gray
Seemed to have known a better day."

A DEMAGOGUE FISHING IN TROUBLED WATERS.

For thou art like those who fish for eels. When
the loch is tranquil, they catch nothing; but if

they stir the mud up and down, they take. Thou, too, catchest, if thou disturb the city.

HEAR BOTH SIDES OF A QUESTION.

Of a truth he was a wise man who said, "Thou shouldst not decide till thou hast heard what both have to say."

THE DAYS THAT ARE GONE BY.

O we! who once in days of old were active in dances, brave in battle, and, on this very account alone, most warlike men. This was of old; but now all that is gone, and these hairs now blossom whiter than the swan.

O we! who once were ardent in the dance, And brave in fight, of all men most courageous; But this is of old date—'tis past—and now These hairs of ours are whiter than the swan.

WHEELWRIGHT.

See Percy's "Reliques," vol. II. p. 162—

"His reverend locks
In comely curls did wave;
And on his aged temples grew
The blossoms of the grave."

THE DAYS THAT ARE GONE BY.

Truly then I was terrible so as to fear nothing; and I subdued my foes, sailing thither with the triremes; for we thought not how we should speak rightly nor how we should slander any one, but how we should be the best steersman.

Oh the days that are gone by, oh the days that are no more,

When my eye was bold and fearless, and my hand was on the oar!

Merrily then, oh merrily, I beat the brine to lath, And the sea once crossed, sacked cities were the foot-tracks of my path.

Oh the days that are gone by!
Then with none was care to find
Dainty words and speech refined;
Reasoning much on taste and tact,—
Quick of tongue, but slow to act.—MITCHELL.

THE RESULTS OF DRINKING.

Drinking is bad; for it is from wine that spring the breaking of doors, and the dealing of blows, and the throwing of stones; and then the paying of money after your drunken bout.

So Shakespeare ("Othello," act II. sc. 3)—

"Every inordinate cup is unblessed, and the ingredient is a devil."

WOMAN'S TIME FOR MARRIAGE IS SHORT.

For man, though he be gray-headed when he comes back, soon gets a young wife. But a woman's time is short within which she can expect to obtain a husband. If she allows it to slip away, no one cares to marry her. She sits at home speculating on the probabilities of her marriage.

THE DECEIT OF WOMEN.

A woman is most ingenious in providing money; and when she is at the head of a house, can never

be deceived, for they themselves are accustomed to deceive.

Then, for the ways and means, say who're more skilled

Than women? They, too, are such arch-deceivers, That, when in power, they ne'er will be deceived.—SMITH.

AGRICULTURE.

A. The faithful nurse, housewife, helper, guardian, daughter, sister of beloved, peace to all men, all these epithets are applicable to me.—B. But what is your name, pray?—A. What, Agriculture.—B. O day desired by the just and husbandmen! having seen thee with pleasure, I wish to address the vines.

DEATH.

To fear death is very great folly, for it is fated to all men to die.

ARISTOPHON.

ARISTOPHON, a comic poet, who is supposed to have belonged to the middle comedy, but nothing is known of his life or age. We know the titles of nine of his plays.

POVERTY.

The storm is evident; poverty, like a lamp, shows everything bad and annoying.

ARISTOTLE.

BORN B.C. 384—DIED B.C. 322.

ARISTOTLE, the celebrated philosopher, was a native of Stageira, a seaport town of the district of Chalcidice, which became subject to Philip of Macedon. He was son of Nicomachus, physician to Amyntas II., King of Macedon. He lost his father at an early age, and was intrusted to the guardianship of Proxenus of Atarneus in Mysia, who seems to have performed his duties in a way to entitle him to the grateful acknowledgments of his pupil. Aristotle was attracted by his love of learning to Athens, where Plato was in the zenith of his fame, and that master soon discovered the abilities of his ardent disciple. On account of his industry and unwearied efforts in search of the truth, Plato used to call him the "intellect of his school," and say "that he needed a curb, while Xenocrates needed the spur." For twenty years he continued to be on intimate terms with Plato, though he had himself assembled around him a circle of admiring followers; but at the death of Plato, B.C. 347, he left Athens, and joined his former pupil, Hermias, who had become ruler of Atarneus and Assos. When Hermias was destroyed by the Persians. Aristotle fled to Mitylene, and two years after, B.C. 342, we find him invited by Philip, King of Macedon, to undertake the instruction and education of his son, Alexander, then thirteen years of age. The young prince became so strongly attached to him that he valued

his instructor above his own father. Aristotle spent seven years in Macedon. In the year B.C. 355, soon after Alexander succeeded to the throne, Aristotle returned to Athens, where he collected a large number of pupils from the cities of Europe and Asia. There he continued for thirteen years to teach his doctrines to those who afterwards became distinguished as philosophers, historians, statesmen, and orators. On the death of Alexander, he was accused of impiety, which was the usual prelude to an unjust condemnation. To deprive the Athenians, as he said, of sinning a second time against philosophy, he left Athens, and spent the remainder of his life at Chalcis, in Eubœa, where the Macedonian influence afforded him protection and security. Out of four hundred treatises which he is said to have composed, only forty-eight have been transmitted to the present age:

HAPPINESS.

But concerning happiness, men cannot agree as to its true nature, and the vulgar by no means hold the same opinion respecting it with the educated; for some are inclined to apply it only to what is distinct and marked in its essence, such as pleasure, wealth, or honor; each man thinking differently of it from his neighbors, and often the same person entertains different opinions respecting it at different times. For, when he is ill, he thinks it to be health; when poor to be riches; but, being conscious of their own ignorance, men are apt to be struck with admiration at those who say that it is something great and above them.

ONE SWALLOW DOES NOT MAKE SPRING.

For one swallow does not make spring, nor yet one fine day; so, also, neither does one day, nor a short time, make a man blessed and happy.

THE PRINCIPLE HALF OF THE WHOLE QUESTION.

For the principle seems to be more than the half of the whole question.

THE THREE QUALITIES INCLUDED IN HAPPINESS.

Happiness is the best, most honorable, and most pleasant of all things; nor are these qualities to be disjoined, as in the inscription at Delos, where it maintains "that the most just is the most honorable, that health is what is most to be desired, and the most pleasant thing is to obtain what we love:" for all these qualities exist in the best energies, and we say that these, or the best one if them, is happiness.

HAPPINESS A DIVINE GIFT.

If, then, there is anything that is a gift of the gods to men, it is surely reasonable to suppose that happiness is a divine gift, and more than anything else of human things, as it is the best.

IMPORTANCE OF EARLY EDUCATION.

Therefore it is necessary to be in a certain degree trained from our very childhood, as Plato says, to feel pleasure and pain at what we ought; for this is education in its true sense.

WHAT CONSTITUTES AN ACTION VIRTUOUS.

Then, again, it is not the same in regard to the arts and the virtues, for works of art have their excellence in themselves; it is sufficient, therefore, that they should themselves possess such a character. Whereas virtuous deeds are just and temperate, not if the deeds themselves have this character, but if the agent, who does them, has in himself this character; first, if he does them knowingly; then, if with deliberate choice, and deliberate choice on their own account; thirdly, if he does them on a fixed and unchangeable principle. Now, with regard to all other arts these ideas are not taken into account, with the exception of knowledge; whereas, with regard to virtues, mere knowledge has little or no weight, while the other qualifications are not of small but of infinite importance, since they spring from the habit of just and temperate actions.

TO HIT THE MEAN IS DIFFICULT.

Virtue, then, is a kind of mean state, being at least apt to strike the mean. Again, it is possible to go wrong in many ways (for evil, as the Pythagoreans imagined, is of the nature of the infinite, but good of the finite), whereas we can go right only in one way; therefore the former is easy, the latter is difficult; it is easy to miss a mark, difficult to hit it; and for these reasons the excess and defect belong to vice, but the mean to virtue; "for we are good in one way only, but bad in all kinds of ways."

DEATH IS A LIMIT.

Death is the most terrible of all things; for it is a limit, and it is thought that there is nothing good or bad beyond to the dead.

THE CHARACTER OF THE CELTIC RACE.

If he fear nothing, neither earthquake nor the waves, as they say of the Celts.

SUICIDE AN ACT OF COWARDICE.

To die in order to avoid the pains of poverty, love, or anything that is disagreeable, is not the part of a brave man, but of a coward; for it is cowardice to shun the trials and crosses of life, not undergoing death because it is honorable, but to avoid evil.

THE CONDUCT OF REGULAR TROOPS AND MILITIA CONTRASTED.

Regular troops lose their courage when they see the danger greater than they expected, and when they find themselves surpassed in numbers and equipments. For they are the first to turn their backs. But the militia of a country die at their posts, as happened at Hermœum. For in their eyes it is disgraceful to fly, and death is regarded as preferable to safety procured at such a cost. The others only expose themselves to danger while they think themselves superior, but when they find that they are mistaken, they at once run away, fearing death more than dishonor. This certainly is not the character of the brave man.

BELLY-GODS.

For to eat or drink till a man is surfeited is going beyond the natural desire in quantity; for the object of natural desire is the satisfying our wants. Therefore these are called belly-gods, as they satisfy their wants more than they ought; people of excessively slavish dispositions are apt to do this.

So Philippians (III. 19)—“Whose god is their belly, and glory in shame.”

THE CHARACTERISTIC OF THE MAGNANIMOUS MAN.

It is the characteristic of a magnanimous man to ask no favor, or scarcely any, but to be ready to do kindness to others, to be haughty in demeanor towards men of rank and fortune, kindly towards those of the middle classes, for to rise superior to the former is difficult and honorable, over the latter it is easy; among the former there is nothing ungenerous in showing pride, among those of humble rank it is bad taste, just like making a show of strength to the weak.

FLATTERERS.

All flatterers are mercenary; and low-minded men are flatterers.

MEN-PLEASERS AND THE CROSS-GRAINED CONTRASTED.

In the intercourse of society and life, in conversation and the affairs of the world, some men appear to be parasites, who praise everything, for the sake of giving pleasure, and never contradict an opinion, but think that they ought to give no opinion to those with whom they happen to be; others, the very opposite characters to these, who oppose everything, and are altogether regardless of the feelings of their neighbor, are called cross-grained and quarrelsome.

TRUTH AND FALSEHOOD.

Falsehood is bad and blamable; truth honorable and praiseworthy.

THE REFINED AND GENTLEMANLY MAN.

Now the refined and gentlemanly man will so act, being as it were a law unto himself; and such is he who is in the mean, whether he be called a man of tact or of graceful wit.

A RULER IS NOT A TERROR TO GOOD WORKS.

Wherefore we do not allow man to rule but reason, because man rules for himself, and becomes a tyrant. A ruler is the protector of the just, and, if of the just, then, also, of what is equitable to all.

RIGOR OF LAW.

From this it is evident what is the character of the equitable man; for he who is disposed to do such things, and is active in their performance, who does not assert his rights to the uttermost, but is willing to take something less, even though he may have law on his side, is a man of equity: this habit is equity, being a kind of justice, and not a different habit from justice.

THE PAST.

Therefore well does Agathon say, “Of this alone is even God deprived, the power of making that which is past never to have been.”

FRIENDSHIP.

In poverty and the other misfortunes of life, men think friends to be their only refuge. The young they keep out of mischief, to the old they are a comfort and aid in their weakness, and those in the prime of life they incite to noble deeds.

FRIENDS.

When men are friends, there is no need of justice; but when they are just, they still need friendship.

FRIENDSHIP REQUIRES TIME.

According to the proverb, it is impossible for friends to know each other till they have eaten a certain quantity of salt with each other. Nor can they be on friendly and familiar terms till they appear worthy of each other's friendship and confidence.

THE WICKED.

The wicked have no stability, for they do not remain in consistency with themselves; they continue friends only for a short time, rejoicing in each other's wickedness.

TYRANNY.

The defection of monarchy is tyranny; for both are monarchies, but the difference between them is very marked: for a tyrant thinks only of his own interests, while a king attends to those of his subjects. For he is not a king who is not uncontrolled, and who is not possessed of all kinds of goods, for such a one stands in need of nothing more; therefore he does not require to be looking after his own interests, but devotes himself to his subjects.

A TYRANT.

For a tyrant pursues his own peculiar good, and it is more manifest for this very reason, that it is the worst form of government, for that is worst which is opposite to the best.

BE JUST BEFORE YOU ARE GENEROUS.

We ought rather to pay a debt to a creditor than give to a companion.

GIVE EVERY ONE HIS DUE.

But, since we owe different services to parents, brothers, companions, and benefactors, we ought to take care to pay every one his due, and that which is suitable to his character.

THE INTELLECTUAL PART CONSTITUTES EACH MAN'S SELF.

For the good man agrees in opinion with himself, and desires the same things with all his soul; therefore he wishes what is good for himself, and what appears so, practising it: for it is the part of a good man to labor for what is good, and for his

own sake; for it is for the sake of his intellectual part, which is considered to be a man's own self.

MIND IS THE MAN.

And the thinking principle—or, at least, that rather than any other—must be considered to be each man's self.

A GOOD MAN IS WITHOUT REPENTANCE.

Besides, the good man has abundant subjects for reflection; he sympathizes most with himself in joys and sorrows; for the same always gives to him the same pain or sorrow, and not sometimes one thing and sometimes another. For he is, if we may be allowed to say so, without repentance.

THE COUNSELS OF GOOD MEN.

For the counsels of good men remain fixed, and do not ebb and flow like the Euripus; they desire what is just and proper.

WHY MOTHERS ARE FOND OF THEIR CHILDREN.

For this reason, also, mothers are more fond of their children than fathers are; for the bringing them forth is more painful, and they have a more certain knowledge that they are their own.

THE MASSES LED BY FEAR.

(Treatises) have no power to persuade the multitude to do what is virtuous and honorable. For the masses are formed by nature to obey, not a sense of shame, but fear; nor do they refrain from vicious things on account of disgrace, but of punishment; for they live in obedience to passion, pursuing their own pleasures and the means of gratifying them; they fly also from the contrary pains; but of what is honorable and really delightful, they have not the slightest idea, inasmuch as they never had a taste for them. What power of reasoning, then, could bring about a change on such men as these? For it is not possible, or at least not easy to change what has been impressed for a long time upon the moral character.

EDUCATION THE DUTY OF THE STATE.

It would therefore be best that the state should pay attention to education, and on right principles, and that it should have the power to enforce it; but if it be neglected as a public measure, then it would seem to be the duty of every individual to contribute to the virtue of his children and friends, or at least to make this his deliberate purpose.

St Thomas More ("Utopia," page 21) says—"If you suffer your people to be ill educated, and their manners to be corrupted from their infancy, and then punish them for those crimes to which their first education disposed them,—you first make thieves, and then punish them."

SOME COMMAND AND SOME OBEY.

By nature some command and some obey, that all may enjoy safety; for the being that is able to foresee coming events is a ruler of nature's own appointment; whereas he who is only able to assist by bodily service, is a subordinate and natural

slave. Hence the interest of master and slave is identical.

THE DOMESTIC TIE IS THE FIRST.

Hesiod is right when he says, "First house, then wife, then oxen for the plough;" for the ox stands in place of slave to the poor.

MAN ALONE HAS PERCEPTION OF GOOD AND EVIL.

For this is the distinguishing mark between man and the lower animals, that he alone is endowed with the power of knowing good and evil, justice and injustice. It is a participation in these that constitutes a family and a city.

THE FREEMAN AND THE SLAVE.

Some think that the power of one man over another is contrary to nature; for they maintain that it is only human law that makes one man a slave and another a free man. But in nature there is no such distinction; wherefore it is an unjust arrangement, for it is the result of force and compulsion.

See Milton, "Paradise Lost," xii,—

"But man over men
He made not lord: such title to Himself
Reserving—human left from human free."

WORSE SERVED BY MANY SERVANTS THAN BY FEW.

As in a family we are often served worse when we have many servants than a few.

AFFECTION FOR ONE'S SELF IS NATURAL.

And also in regard to pleasure it is not to be expressed what a difference it makes for a man to think that he has something his own. For possibly it may not be in vain that each person has an affection for himself, for this is natural, but selfishness is justly blamed. This is not merely to love one's self, but to love one's self more than we ought.

MORAL UNITY OF A STATE TO BE PRODUCED BY MORAL MEANS.

But a state consisting of a multitude of beings, as we have before said, ought to be brought to unity and community by education; and he who is about to introduce education, and expects thereby to make the state excellent, will act absurdly if he thinks to fashion it by any other means than by manners, philosophy, and laws.

DIFFERENT SPECIES OF MEN.

For that golden particle, which God has mixed up in the soul of man, flies not from one to the other, but always continues with the same; for he says that some of our species have gold, and others silver, blended in their composition from the moment of their birth.

WHAT IS THE DEFINITION OF A CITIZEN?

The truest definition of a complete citizen that can be given is probably this, that he shares in the judicial and executive part of the government.

TO COMMAND AND OBEY.

But it is a matter of high commendation to know how to command as well as to obey; to do both these things well is the peculiar quality of a distinguished citizen.

HUSBAND AND WIFE.

The domestic employment of husband and wife differs in this, that the former tries to acquire subsistence, and the latter to keep it.

WHEN A STATE IS WELL GOVERNED.

The supreme power must necessarily be in the hands of one person, or of a few, or of the many. When the one, the few, or the many direct their whole efforts for the common good, such states must be well governed; but when the advantage of the one, the few, or the many is alone regarded, a change for the worse must be expected.

WHAT LAW IS A PLEDGE OF.

For the law is an agreement, and, as Lycophron says, a pledge given that citizens will do justice to each other; but yet the law is not able to make all the citizens good and just.

WHAT IS A STATE?

Then it is evident that a state is not a mere community of place; nor is it established that men may be safe from injury, and maintain an interchange of good offices. All these things, indeed, must take place where there is a state, and yet they may all exist and there be no state. A state, then, may be defined to be a society of people joining together by their families and children to live happily, enjoying a life of thorough independence.

AN UNION OF THE MANY WITH THE FEW DESIRABLE.

For the multitude, when they are collected together, have sufficient understanding for this purpose (of electing magistrates), and mingling with those of higher rank, are serviceable to the state; as some kinds of food, which would be poisonous by itself, by being mixed with the wholesome, makes the whole good; in the same way, separately, each individual is unfit to form a judgment by himself.

THE RIGHT MAN IN THE RIGHT PLACE.

A pretension to offices of state ought to be founded on those qualifications, which are part of itself. And for this reason, men of birth, independence, and fortune are right in contending with each other for office; for those who hold offices of state ought to be persons of independence and property. A state should no more consist entirely of poor men than it ought entirely of slaves. But though such persons are requisite, it is evident that there must also be justice and military valor; for without justice and valor no state can be maintained; just as without the former class a state cannot exist, and without the latter it cannot be well governed.

HONORABLE DESCENT OF GREAT ESTEEM.

The free-born and men of high birth will dispute the point with each other as being nearly on an equality; for citizens that are well born have a right to more respect than the ignoble. Honorable descent is in all nations greatly esteemed; besides, it is to be expected that the children of men of worth will be like their fathers, for nobility is the virtue of a family.

LAW OUGHT TO BE SUPREME.

He, then, who orders the reasoning principle of man to be supreme, seems to make God and the laws to be supreme, but he who gives the power to man gives it to a wild beast. For passion may be so called, and it is passion that brings ruin on rulers, even though they be the very best of men: wherefore the law is reason free from passion.

THE MORAL LAW IS SUPERIOR TO WRITTEN LAW.

The moral law is much superior to the written law, and treats of matters of greater weight; for the supreme ruler is more to be trusted than the written law, though he be inferior to the moral.

WHAT FORMS A GOOD MAN.

So that education and morals will be found to be almost the whole that goes to make a good man; and the same things will make a good statesman and good king.

THE CORRUPTION OF THE BEST IS THE WORST.

The corruption of the best and most divine form of government must be the worst.

A DEMOCRACY.

For when a democracy is controlled by fixed laws, a demagogue has no power, but the best citizens fill the offices of state: when the laws are not supreme, there demagogues are found. For the people act like a king, being one body; for the many are supreme, not as individuals, but as a whole.

THERE IS NO FREE STATE WHERE THE LAWS ARE NOT SUPREME.

For there is no free state where the laws do not rule supreme; for the law ought to be above all.

PEOPLE LOVE THEIR ANCIENT CUSTOMS.

For people do not change at once, but love their ancient customs, making gradual changes; so that ancient laws remain in force, while the power continues with those who bring about a revolution in the state.

THE MIDDLE STATE TO BE PREFERRED.

In every state the people are divided into three kinds: the very rich, the very poor, and, thirdly, those who are between them. Since, then, it is universally acknowledged that the mean is best, it is evident that even in respect to fortune, a middle state is to be preferred; for that state is most likely to submit to reason. For those who are very handsome, or very strong, or very noble,

or, on the hand, those who are very poor, or very weak, or very mean, are with difficulty induced to obey reason. And this because the one class is supercilious, and "sin as it were with a cart-ropes," the other rascally and mean; and the crimes of each arise respectively from insolence and villany.

THE BEST STATE WHERE THE MEAN OUTNUMBERS THE EXTREMES.

It is evident, then, that the most perfect political community is that which is administered by the middle classes, and that those states are best carried on in which these are the majority and outweigh both the other classes; and if that cannot be, at least when they overbalance each separate. For, being thrown into the balance, it will prevent either excess from predominating. Wherefore it is the greatest happiness to possess a moderate and competent fortune; since, where some possess too much, and others nothing at all, the government must be either an extreme democracy or else a pure oligarchy, or, from the excesses of both, a tyranny; for this springs from a headstrong democracy or oligarchy, but far more seldom when the members of the community are nearly on an equality with each other.

WHERE THE MIDDLE CLASS IS LARGE LESS SEDITION.

But it is clear that the state where the middle ranks predominate is the best, for it alone is free from seditious movements. Where such a state is large, there are fewer seditions and insurrections to disturb the peace; and for this reason extensive states are more peaceful internally, as the middle ranks are numerous. In small states it is easy to pass to the two extremes, so as to have scarcely any middle ranks remaining; but all are either very poor or very rich.

THE RULE OF HUSBANDMEN AND MECHANICS CONTRASTED.

Should the number of husbandmen be excessive, it will be of the best kind; if of mechanics and those who work for pay, of the worst.

NOBILITY AND MERIT ARE ONLY AMONGST A FEW.

For nobility and worth are to be found only amongst a few, but their opposite amongst the many; for there is not one man of merit and high spirit in a hundred, while there are many destitute of both to be found everywhere.

THE BEGINNING IS THE HALF OF THE BUSINESS.

For the mischief lies in the beginning; for the beginning is said to be "half of the whole."

WHENCE SEDITIONS ARISE IN A DEMOCRACY.

Democracies are chiefly subject to revolutions from the dishonest conduct of demagogues. For partly by lodging informations against men of property, and partly by rousing the common people against them, they induce them to unite; for a common fear will make the greatest enemies to join together.

A HOUSE DIVIDED AGAINST ITSELF.

For a government in a constant state of turmoil is weak.

A FIRM STATE.

The only stable state is that where every one possesses an equality in the eye of the law, according to his merit, and enjoys his own unmolested.

TAKE CARE THAT NOTHING BE DONE CONTRARY TO LAW.

For in states that are well blended particular care ought, above all things, to be taken that nothing be done contrary to law; and this should be chiefly looked to in matters of small moment: for small violations of law advance by stealthy steps, in the same way as, in a domestic establishment, trifling expenses, if often repeated, consume a man's whole estate.

QUALIFICATIONS OF A STATESMAN.

There are three qualifications which ought to be possessed by a man who aspires to fill the high offices of state; first, he must be well disposed, and prepared to support the established constitution of his country; next, he ought to have a special aptitude for the office which he fills; and, thirdly, he should have the kind of virtue and love of justice which suits the particular state in which he lives.

THE GOOD NEVER FLATTER.

On this account tyrants are fond of bad men; for they like to be flattered. No man of high and generous spirit is ever willing to indulge in this habit; the good may feel affection for others, but will not flatter them. Besides, bad men assist them in their evil deeds: "Like to like," as the proverb says.

TYRANTS ARE AT ENMITY WITH MEN OF MERIT.

For which reason they are always at variance with men of merit as disaffected to their government, not only because they are unwilling to be governed despotically, but because they are faithful to their own principles and to their friends, refusing to inform against themselves or others.

DEFINITION OF DEMOCRACY.

On the contrary, a democracy is a government in the hands of men of low birth, poverty, and vulgar employments.

ORIGINAL SIN.

For the power of doing whatever a man pleases is not able to check that evil particle which is in every man.

UNIVERSAL SUFFRAGE.

The last and worst form of democracy is where every citizen has a share in the administration: few states can endure such a form, nor can it exist for any length of time unless it is well supported by laws and purity of manners.

PENALTIES NECESSARY TO KEEP TOGETHER HUMAN SOCIETY.

For if human society cannot be carried on without actions at law, it is impossible that it should exist without the infliction of penalties.

HAPPINESS DEPENDS ON VIRTUE AND WISDOM.

Let us be well persuaded that every one of us possesses happiness in proportion to his virtue and wisdom, and according as he acts in obedience to their suggestion, taking God himself as our example, who is completely happy and blessed, not from any external good, but in Himself, and because He is such by nature.

IMPORTANCE OF GOOD WATER.

Since every attention should be given to the health of the inhabitants, it is of great importance that the city should have a good situation, and, next, that the inhabitants should have good water to drink; and this must not be regarded as a matter of secondary moment. For what is used chiefly and in great quantities for the support of the body must, above all, contribute to its health. And this is the influence which the air and the water exercise over the body. Wherefore, in all wise governments the water ought to be apportioned to different purposes, if all is not equally good, and if there is not abundance of both kinds, that for drinking should be separated from that which is used for other purposes.

INFLUENCE OF NATURE, HABIT, AND REASON ON MANKIND.

Men are made good and honorable in three ways,—by nature, by custom, and by reason. For, in the first place, each individual ought to be a man, and not any other animal; that is, that he should possess a particular character both of body and soul. In some things, however, it is of no consequence to be born with them, for custom makes great changes, there being some things in nature capable of change either for the better or the worse. Now, other animals live chiefly a life of mere nature, and in very few things according to custom, but man lives also according to reason, with which he alone is endowed, wherefore he ought to make all these accord with each other; for, if they are persuaded that it is best to follow some other way, men often act contrary to nature and custom.

A MASTER SHOULD SUPERINTEND ALL THINGS.

The saying of the Persian and of the African are both to be highly commended; for the former being asked what was best for fattening a horse, said, "The eye of the master;" and the African being asked what was the best manure, answered, "The footsteps of the master."

EARLY TO RISE.

It is also well to be up before daybreak, for such habits contribute to health, wealth, and wisdom.

A DISCREET WIFE.

But the prudent and discreet wife will very properly regard the behavior of her husband as the pattern which she ought to follow and the law of her life, invested with a divine sanction from the marriage tie; for if she can induce herself to submit patiently to her husband's mode of life, she will have no difficulty to manage her household affairs; but if not, she will not find it so easy.

PARENTS SHOULD SET A GOOD EXAMPLE TO THEIR CHILDREN.

For unless parents set a good example to their children, they will furnish a plain reason to be used by them against themselves. And this is to be feared, that, if they have not lived an honorable life, their sons will despise them and abandon them in their old age.

MAN AN IMITATIVE ANIMAL.

For imitation is natural to man from his infancy. Man differs from other animals particularly in this, that he is imitative, and acquires his rudiments of knowledge in this way; besides, the delight in it is universal.

THE RIDICULOUS.

For the ridiculous is produced by any defect that is unattended by pain or by fatal consequences; thus an ugly and deformed countenance does not fail to cause laughter, if it is not occasioned by pain.

HAPPINESS SPRINGS FROM ACTION.

But the principal of these parts is the combination of the incidents; for tragedy is imitation not of individuals but of actions in general, of human life, of good and bad fortune, for happiness springs from action; the main purpose of life is action and not quality, and though the manners of men spring from their qualities, their happiness or misery depends on their actions.

NO VERY SMALL OR VERY LARGE ANIMALS CAN BE VERY BEAUTIFUL.

Then as to size, an animal, or any other thing that has constituent parts, in order that it may be beautiful, must not only have those justly connected, but should also have a certain proportion; for beauty depends on size as well as symmetry, for which reason no very small animal can be beautiful, for the view being made in almost an imperceptible space of time, will be confused; nor could a very large one, for, as the whole view cannot be taken in at once, the unity and completeness that should result from it will escape the spectator.

MAN EASILY AFFECTED TO GRIEF OR JOY.

As far as it is possible, the poet should enter into the spirit of the subject while he is composing; for those who are roused by passions are most likely to express those passions with force. He who is really agitated by storms, and he who is really angry upbraids most naturally.

MORAL CHARACTER.

Moral character nearly, so to say, carries with it the highest power of causing a thing to be believed.

A DEMOCRACY.

Thus a democracy, not only when relaxed, but if overstrained, becomes weaker, till at last it will pass into an oligarchy in the same way as hookedness or flatness of the nose not only when they relax approach the mean, but also when they become excessively hooked or flat dispose the nostrils in such a way as no longer to resemble the nasal organ.

DEFINITION OF HAPPINESS.

Let happiness be defined to be good fortune in union with virtue—or independency of life—or the life that is most agreeable attended with security—or plenty of property and slaves, with the power to preserve and augment it; for all mankind agree that one or more of these things amount nearly to happiness.

EVILS BRING MEN TOGETHER.

Whence it is said that misery brings men together, when the same thing happens to be hurtful to both.

So Shakespeare ("Tempest," act II. sc. 2)—

"Misery acquaints a man with strange bedfellows."

"A SOFT ANSWER."

Towards such as acknowledge themselves to be justly punished we cease from our wrath.

So Proverbs (xv. 1)—"A soft answer turneth away wrath."

"NO FEAR IN LOVE."

For no one loves the man whom he fears.

So 1 John (iv. 18)—"There is no fear in love; but perfect love casteth out fear."

SIGNS OF ARROGANCE.

Again, to talk about one's self, and to be one's own trumpeter, and to assert that to be one's own which belongs to another, these are proofs of arrogance.

ALL THINGS FULL OF GOD.

All things are full of the gods.

So Psalms (lxxxii. 19)—"Let the whole earth be full of His glory."

ALL MEN HAVE AN IDEA OF GOD.

All men have some knowledge of the gods.

So Ephesians (iv. 6)—"One God and Father of all."

THE WORLD WAS CREATED.

All say that the world was created.

THE UNIVERSE.

The Power that extends over everything has arranged the whole universe, compelling the most opposite natures to harmonize, and by these ensuring safety to all.

GOD IS A SPIRIT.

In regard to the Deity we must consider Him as (a spirit) the most powerful, immortal, and perfection itself; wherefore, being invisible to mortal eyes, He is seen by his works.

So 1 Timothy (I. 17)—"Now, unto the King eternal, immortal, invisible, the only wise God, be honor and glory forever and ever."

GOD FROM ETERNITY TO ETERNITY.

God extends from eternity to eternity.

So Psalms (xc. 2)—"Before the mountains were brought forth, or ever Thou hadst formed the earth and the world, even from everlasting to everlasting, Thou art God."

GOD IS HAPPY AND BLESSED.

God is happy and blessed from nothing external to Himself, but Himself from Himself.

So 1 Timothy (vi. 15)—"Who is the blessed and only Potentate, the King of kings and Lord of lords."

GOD IS SELF-SUFFICIENT.

It is evident that God stands in need of nothing.

So Psalms (l. 2, 10)—"I will take no bullock out of thy house, . . . for every beast of the forest is mine."

ONE GOD WITH VARIOUS NAMES.

Though he be one Being, God has many names, being called according to the variety of outward conditions of things, which he is always changing.

So 1 Corinthians (viii. 4)—"There is none other God but one."

ARRIANUS.

FOURISHED A.D. 136.

FLAVIUS ARRIANUS, a native of Nicomedia in Bithynia, flourished in the reign of Adrian, when we find him, A.D. 136, governor of Cappadocia. He was one of the most celebrated pupils of the philosopher Epictetus, under whom he studied at Nicopolis in Epirus. The first work which he published was called "Encheiridion" (The Manual), and contains the moral doctrines of his master, being still preserved. He also wrote a work entitled "The Philosophical Disquisitions of Epictetus," of which four books still remain. But the work by which he is best known to us is the "History of Alexander's Campaigns in Asia," in seven books, for which he derived the materials chiefly from the histories of Ptolemy, son of Lagus, and Aristobulus, who both accompanied Alexander. As a continuation to his history, he wrote a little work, still extant, entitled "On India." Another treatise ascribed to him is, "The Periplus of the Erythraean Sea."

THE WISH FATHER TO THE THOUGHT.

When men are doubtful of the true state of things, their wishes lead them to believe in what is most agreeable.

A VIRTUOUS LIFE.

To lead a virtuous life is pleasant, and to die is by no means bitter to these who look forward to immortal fame.

THE EVENTS OF FORTUNE ARE UNEXPECTED.

The events of fortune are unexpected, and therefore can never be guarded against by men.

AXIONICUS.

AXIONICUS, an Athenian poet of the middle comedy, of whom some fragments have been preserved.

LENDING MONEY TO THE WICKED.

When a man lends money to the wicked, he justly gets pain for his interest.

BATON.

FLOURISHED ABOUT B.C. 280.

BATON, an Athenian comic poet of the new comedy, flourished about B.C. 280, of whom we have some fragments.

TO ERR IS HUMAN.

Being a man, thou hast erred; but in life it is a wonder if a man has been prosperous through life.

BION.

FLOURISHED ABOUT B.C. 280.

BION, a bucolic poet, was born at Phlossæ, on the river Meles, near Smyrna, but little is known of his history except what is told us in the third Idyll of Moschus, who laments his untimely death by poison. Some of his poems are extant entire, but of others we have only fragments.

"THE KING OF TERRORS."

Thou fliest far, O Adonis, and comest to Acheron and its gloomy and cruel king, but I live in misery, and am a goddess, and cannot follow thee.

Virgil (Georg. iv. 469) says—"And he approached the Manes and their fearful king, hearts not to be softened by the prayers of men."

In Job (xviii. 14) we find—"His confidence shall be rooted out of his tabernacle; and it shall bring him to the King of Terrors."

Spenser, in his "Faërie Queen," says—

"O what avails it of immortal seed
To been ybred, and never born to die;
For better I it deem to die with speed,
Than waste with woe and wailful miserie."

"HE SHALL FLEE AWAY AS A DREAM."

Art thou dying, O thrice-regretted? Away my love did fly, even as a dream; and widowed is Cytherea, and idle are the Loves along my halls.

Thus Job (xx. 8)—"He shall fly away as a dream, and shall not be found, yea, he shall be chased away as a vision of the night."

A LUXURIOUS LIFE.

Lay him down on those soft vestments, in which he slept the livelong night with thee, on a golden couch. Long thou for Adonis, a sad sight though he be; and lay him amid chaplets of flowers; all with him, since he is dead, ay, all flowers have become withered.

In St. Luke (vii. 35) we find—"Behold, they which are gorgeously apparelled, and live delicately, are in king's courts." Milton in his "Comus," near the end, says—

"Beds of hyacinths and roses
Where young Adonis oft reposes,
Waxing well of his deep wound,
In slumber soft; and on the ground
Sadly sits th' Assyrian queen."

SIGN OF MOURNING.

Around him the weeping Loves set up the wall, having their locks shorn for Adonis; and one was trampling on his arrows, another on his bow, and another was breaking his well-feathered quiver.

In Ezekiel (xxvii. 31) we find the same customs—"They shall make themselves utterly bald for thee." And in Ovid (Amor. iii. 9, 7)—"Behold the son of Venus bears his upturned quiver, and broken bow and quenched torch."

"DANCE TURNED INTO MOURNING."

Hymenæus has quenched every torch at the door-posts, shredded and flung the marriage-wreath away; and no more is Hymen, no more is sung Hymen the song, but alas! alas! is chanted: alas, alas! for Adonis wail the Graces far more than Hymenæus.

In Lamentations (v. 15) we find—"The joy of our heart is ceased; our dance is turned into mourning."

THE OLD.

But the old man, smiling, shook his head, and answered the boy.

In Ecclesiasticus (xii. 18) we find—"He will shake his head and clap his hands and whisper much and change his countenance."

BRIEFNESS OF TIME.

For if Saturn's son or Fate had assigned us a two-fold lifetime, so that one portion might be passed in joys and pleasures, and one in woes, it might be possible that he who had his woes first should have his joys at last. But since the gods have allotted but one life to man, and this a brief one—too brief for all we have to do—why should we, ah! wretched men, toil and moil over never-ending labors? To what end should we waste our health on gains and arts, sighing always for more wealth? We surely all forget our mortal state—how brief the life allotted us by Fate.

Job (xiv. 1) says—"Man that is born of a woman is of few days and full of trouble." And in the Epistle of James (iv. 13)—"Go to now, ye that say, To-day or to-morrow we will go into such a city, and continue there a year, and buy and sell, and get gain; whereas ye know not what shall be on the morrow: for what is life? It is even a vapor, that appeareth for a little time and then vanisheth away."

THE DROP.

From the frequent drop, as the proverb says, ever falling, even the stone is worn at last into a hollow.

BEAUTY AND GRACE.

Beauty is good for women, firmness for men.

CALLIMACHUS.

FLOURISHED FROM B.C. 280 TO B.C. 240.

CALLIMACHUS was a member of the powerful house at Cyrene, named from its founder Battus, the Battiadæ. Born probably at Cyrene, he was a pupil of the grammarian Hermocrates, and flourished in the reign of Ptolemy Philadelphus, dying a that of Euergetes, his son and successor. He was chief librarian of the celebrated library at Alexandria, being contemporary of Theocritus and Crætus. Callimachi quæ supersunt recensuit et cum notarum delectu, edidit C. J. Blomfield, London, 1815.

"LIFT UP YOUR HEADS, YE GATES."

Now ye bolts of your own accord fall back, and ye bars, for the god is at hand.

So Isaiah (vi. 4)—"And the posts of the door moved at the voice of him that cried, and the house was filled with smoke." And Psalm (xlii. 7)—"Lift up your heads, O ye gates; and be ye lift up, ye everlasting doors; and the King of glory shall come in."

THE GOOD SHALL SEE GOD.

Apollo is seen by none except the just; whoso sees him, great is he; little is the man who hath not seen him.

So Matthew (v. 8)—"Blessed are the pure in heart, for they shall see God."

"HEALING IN HIS WINGS."

The tresses of Apollo drop not mere oil, but healing itself.

So Malachi (iv. 2)—"But unto you that fear my name shall the Sun of Righteousness arise with healing in his wings."

CRATES.

FLOURISHED ABOUT B.C. 450.

CRATES, a comic poet of Athens, of the old comedy, flourished B.C. 450, being originally an actor in the plays of Cratinus. He is highly praised by Aristophanes for wit and abilities. He excelled chiefly in mirth and fun.

TIME.

For time has bent me, a wise workman no doubt, but making all things weaker.

CRATINUS.

BORN B.C. 519—DIED B.C. 422.

CRATINUS, one of the most celebrated of the Athenian poets belonging to the old comedy, was the son of Callimedes. He was born B.C. 519, being six years younger than Æschylus, and died at the age of ninety-seven, B.C. 422 (Lucian. Macrob.

25). He is accused of having been much addicted to wine, and in other respects his private character was by no means reputable (Hor. Ep. i. 20, 21; Sch. Aristoph. Pax. 700). He wrote twenty-one plays, and of these he gained the prize nine times (Suid.) Athenæus gives the titles and some fragments of eighteen plays.

THE FOOL.

The fool goes like the sheep, saying, bah, bah!

DEMOSTHENES.

BORN B.C. 382—DIED B.C. 322.

DEMOSTHENES, the most celebrated of the Greek orators, was a native of Athens, being the son of Demosthenes and of Cleobulæ, who was of Scythian extraction. His father died when he was only seven years of age, and left to him a considerable property, which he had amassed by the manufacture of warlike implements. He tells us (Demosth. Cor. 312-22) that his education was such as his fortune entitled him to; though Plutarch states that it was much neglected through the foolish indulgence of his mother. His property was, at all events, greatly mismanaged by his guardians, and he found himself obliged, as soon as he had reached the age of manhood, to call them to account. It is said that he was first excited to devote himself to the study of eloquence by listening to the speech of Callistratus in defence of the city Oropus, and by observing his triumphant reception by the people. He studied under Isæus the art of oratory, though Isocrates was at this time the most eminent in his profession. His first attempt was in the cause against his guardians, B.C. 366; and though he gained it after some difficulty, he found that his property was so much diminished that it would be necessary to apply his talents to business. In the profession which he had chosen he had great difficulties to surmount; his constitution was weak, his manner awkward, and he had besides a very defective utterance. In his first attempts he was repeatedly laughed at; but, by unflinching perseverance, he completely got the better of all his defects, and shone forth the most perfect orator the world ever produced. It was in his twenty-seventh year, B.C. 355, that he made his first appearance in a political cause. Leptines had got a law passed forbidding any citizen, except the descendants of Harmodius and Aristogelton, to be exempted from certain magistracies which entailed very heavy expenses. Demosthenes attacked the justice of this law in the case of Ctesippus, who considered the merits of his father, Chabrias, to confer on him a right of exemption. The same year he composed the speech against Androtion, which he did not deliver. It would appear that Demosthenes was in the habit of writing speeches for citizens, who themselves pronounced them. In one case he actually composed both the accusation and the defence. The fierce and impetuous character of Demosthenes fitted him more pecu-

liar for the part of an accuser; and it has been accordingly remarked that, of the numerous speeches that have come down to us, scarcely any of them are written for the defendant. In the year B.C. 353 he delivered his speech in favor of Megalopolis, a colony protected by the Thebans, but which the Spartans, the allies of Athens, wished to destroy. It is one of the most striking examples not so much of his eloquence as of his art, in which he did not less excel. The great leading idea which seems, from the moment he entered public life, to have directed his whole conduct, was opposition to Philip and his objects of aggrandizement. Eleven speeches, delivered within the space of fifteen years, under the name of "Philippics" and "Olynthiacs," show the unwearied spirit with which he maintained what he considered to be the interest of his country. He was one of the ambassadors who proceeded to Macedon to negotiate a peace with Philip; and he was so dissatisfied with the conduct of his colleague, Æschines, that he brought the matter B.C. 343, before the people in one of his most able and powerful speeches. Æschines defended himself with equal ability, and was so ably supported by the party of Eubulus, that he was acquitted. The battle of Chæronea followed soon afterwards, B.C. 338, which placed Greece at the mercy of Philip; but though the orator had not distinguished himself by his bravery in the field, he did not despair of the cause of his country. Philip fell by the dagger of an assassin, B.C. 336, and Demosthenes again conceived hopes of the entire independence of his country. The destruction, however, of Thebes by Alexander soon dispelled that illusion, and he found himself one of those ten orators whom that prince required the Athenians to deliver up to him. This demand Athens would have found no means of resisting, if Demades, the friend of Alexander, had not succeeded in procuring its remission. During this period of Grecian servitude the energies of Demosthenes were called forth in his own defence. Even after the fatal battle of Chæronea the war party at Athens still continued powerful, and it was no doubt of importance to them that they should show it to the public by some decisive act. With this view Ctesiphon, one of the party, proposed the decree for crowning Demosthenes on account of his services; but as those had reference chiefly to the late unsuccessful war, in was in fact an approval of all that had been done. This was felt by Æschines, who was at the head of the opposite party, and finding that the law had not been observed in every particular, he took advantage of this circumstance to bring the matter before the people; but though the suit was commenced against Ctesiphon the same year, it was not till B.C. 330 that it was tried. It was then that Demosthenes made that celebrated speech, *περὶ Στεφάνου*, which is considered as one of his finest specimens of eloquence. Æschines failed in proving his case, and as a heavy fine would have been the consequence, he preferred to leave his country. When Harpalus fled to Athens with the treasures of Alexander, Demosthenes was accused of accepting a bribe from him, and though he denied the accu-

sation with much vehemence, he was found guilty, and fined fifty talents. He escaped the payment of this fine by retiring to the island Ægina, B.C. 325; but he does not appear to have endured his banishment with the equanimity worthy of his character and high name. On the death of Alexander he was recalled, and proceeded to organize a new league of opposition to the Macedonian power. Antipater, however, soon put an end to it, and the death of Demosthenes was pronounced by his own citizens at the instance of Demades. Demosthenes, with some of his friends who were involved in the same sentence, escaped from Athens by the connivance even of his enemies, and he took refuge in the small island of Calauria in the temple of Neptune. He was followed by some of the friends of Antipater, and, as he saw no means of escape, he placed a poisoned pen in his mouth, and died a short time afterwards.

THE ACTIVE AND INTREPID CONTRASTED WITH THE SLUGGISH.

The dominions of the absent stand naturally to those in the field; the property of the lazy and inactive to those who are willing to undergo labor and danger.

MEN WILLING TO UNITE THEMSELVES WITH THE BRAVE.

For all are willing to unite and to take part with those whom they see ready and willing to put forth their strength as they ought.

CURIOSITY OF THE ATHENIANS.

Or is it your greatest pleasure, tell me, wandering through the public squares to inquire of each other, "What news?"

So Acts (xvii. 21)—"For all the Athenians, and strangers which were there, spent their time in nothing else, but either to tell or to hear some new thing."

ALLIANCES WITH DESPOTS DANGEROUS TO FREE STATES.

For those close and intimate alliances with despots are never safe to free states.

DISTRUST OF DESPOTS THE GREATEST SECURITY OF FREE STATES.

Various are the devices for the defence and security of cities, as palisades, walls, ditches, and other such kinds of fortification, all which are the result of the labors of the hand, and maintained at great expense. But there is one common bulwark, which men of prudence possess within themselves—the protection and guard of all people, especially of free states, against the attacks of tyrants. What is this? Distrust.

A TYRANT.

For every king and tyrant is an enemy to freedom, and an opposer of equal laws.

THE ADVANTAGES OF SOCIETY SHOULD BE SHARED BY ALL ITS MEMBERS.

For, Athenians, all ranks of citizens should have an equal share in the advantages of society: the

rich ought to feel secure, and have no dread of the confiscation of their property, thus being willing and ready to contribute of their wealth to the defence of their country; the rest of the citizens should look upon public property to belong to all, and be satisfied with their just share, but all private fortunes as the inalienable right of the possessors. Thus a small state may expect to rise to eminence, and a great one to maintain its high place in the world.

THE BOND THAT UNITES CONFEDERATE POWERS.

For I am well convinced that, when confederate powers are united by affection and identical interests, their agreement may be expected to last; whereas, if the alliance has been formed to carry out fraudulent and rapacious objects, accompanied by deceit and violence (as has been the case on this occasion), any slight pretext or accident will serve to give it a shock, from which it will not easily recover.

SUCCESS VEILS MEN'S EVIL DEEDS.

For success has a great tendency to conceal and throw a veil over the evil deeds of men.

RESULT OF A REVERSE OF FORTUNE IN GOVERNMENTS.

It happens as in our bodies: when a man is in sound and vigorous health, none of the weak parts of his body are felt; but when he is laid up by illness, every ailment is made worse, whether it be a fracture, or a dislocation, or any other member that has been injured. So in kingdoms and governments: as long as they are favored by victory, little notice is paid to the disorders in the state by the mass of the people; but when a reverse of fortune takes place, what is unsound becomes palpable to every eye.

ABSOLUTE MONARCHIES DANGEROUS TO FREE STATES.

In short free states, in my opinion, ought to have a wholesome dread of absolute monarchies, especially if they are situated in their immediate neighborhood.

THE ULTIMATE EVENT DETERMINES MAN'S JUDGMENT.

If a man succeeds in preserving what he has acquired, he is willing enough to acknowledge the kindness of fortune; but if he squanders it foolishly, in parting with it he parts with any feeling of gratitude. So also in political affairs, those who do not make a good use of their opportunities forget the favors which they may have received from the gods. For it is the end which generally determines man's judgment of what has gone before.

TO FIND FAULT IS EASY.

To find fault, some one may say, is easy, and in every man's power; but to point out the proper course to be pursued in the present circumstances, that is the proof of a wise counsellor.

RESULT OF UNEXPECTED SUCCESS.

For great and unexpected successes are often the cause of the foolish rushing into acts of extravagance.

POWER CANNOT BE FOUNDED UPON INJUSTICE.

For it is not, O Athenians—it is not, I assure you, possible for lasting power to be founded upon injustice, perjury, and treachery. These may, indeed, succeed for once, and for a short time, putting on the gay and gaudy appearance of hope; but they are at last found out, and bring to ruin all who trust in them. For as in buildings of every kind the foundation ought to be the strongest, so the bases and principles of actions should be true and just.

THREATS WITHOUT CORRESPONDENT ACTIONS ARE CONTEMPTIBLE.

For words and threats, if they are not accompanied by action, cannot but appear vain and contemptible.

HELP YOURSELF AND YOUR FRIENDS WILL HELP YOU.

No man, who will not make an effort for himself, need apply for aid to his friends, and much less to the gods.

MAN IS APT TO BLAME EVERY ONE BUT HIMSELF.

For in the emergencies of war no one of those who fly ever think of accusing himself; he will rather blame the general, or his fellow-soldiers, or anything else; yet the defeat was certainly occasioned by the cowardice of each individual. For he who accuses others might have maintained his own post, and if each had done so, success must have been the result.

WE READILY BELIEVE WHAT WE WISH.

So that nothing is so easy as to deceive one's self; for what we wish, that we readily believe; but such expectations are often inconsistent with the real state of things.

We find the same idea in "Achilles Tatius de Leucippes et Clitophonis Amoris" (lib. vi. 17)—"For the words which show the hope of obtaining the wished-for object are readily believed; which arises from this, that the simple desire aiding the wishes excites the hope."

And again, in "Heliodorus" (lib. viii.), we find—

"For what the mind wishes, that it also believes."

LOW PURSUITS ENGENDER LOW SENTIMENTS.

It is impossible for those who are engaged in low and grovelling pursuits to entertain noble and generous sentiments. No; their thoughts must always necessarily be somewhat similar to their employments.

LET THE PROSPEROUS SHOW KINDNESS TO THE UNHAPPY.

Those enjoying prosperity should always be ready to assist the unfortunate, for no one can say what the future may bring forth.

IN POLITICAL TRANSACTIONS THE POWERFUL PRESCRIBE TO THE WEAK.

For in civil society the rights of individuals, without reference to their power or weakness in the state, are determined by the laws. But in national concerns the powerful always prescribe to the weaker.

THE PRAISING OF A MAN'S SELF IS BURDENSOME.

It is the natural disposition of all men to listen with pleasure to abuse and slander of their neighbor, and to hear with impatience those who utter praises of themselves.

So Proverbs (xxvii. 2)—"Let another man praise thee, and not thine own mouth; a stranger, and not thine own lips."

THE TRUE BOND OF FRIENDSHIP.

For it is not words that give strength to friendship, but a similarity of interests.

So Proverbs (xvii. 34)—"A man that hath friends must show himself friendly; and there is a Friend that sticketh closer than a brother."

A TRAITOR.

It is not the benefit of the traitor that is looked to by the man who bribes him, nor, after he has obtained what he bargained for, is he ever afterwards taken into confidence. If it were so, no one would be happier than a traitor. How should it be so? It is impossible. For when the ambitious man has once succeeded in gaining his object, then knowing the utter baseness of the man, he holds him in detestation, distrusts, and treats him with supreme contempt.

ON WHAT MEN'S CONDUCT SHOULD BE MODELLED.

Private individuals and public bodies should take as their pattern those actions by which they have acquired their fame.

THE TRULY BRAVE.

For death is the inevitable close of every man's life, however much he may try to save it by skulking in some obscure corners; but the truly brave should not hesitate to draw the sword on all honorable occasions, armed with fair hopes of success, and, whatever may be the result, to bear with resignation the will of Providence.

A STATESMAN.

And, doing this, you proceed to draw the portrait of a statesman, as if having given a model for a statue, you found that the artist had not attended to your directions, forgetting that the character of a statesman is to be shadowed forth not by words but by actions, and the success of his administration.

THE SOWER OF MISCHIEF.

For the sower of the seed is assuredly the author of the whole harvest of mischief.

So Proverbs (vi. 14)—"Frowardness is in his heart, he deviseth mischief continually; he soweth discord."

THE TRUE COUNSELLOR AND THE SYCOPHANT.

For the true counsellor and the flattering sycophant differ from each other particularly in this.

The former openly declares his opinion on the proper course to be pursued before the event, and makes himself responsible for his advice to fortune, to the times, and to those whom he has influenced. The latter is silent when he ought to speak; but if anything unfortunate takes place, he dwells on it with invidious earnestness.

MISFORTUNES.

Misfortunes are the lot of all men, whenever it may please Heaven to inflict them.

OUR FATHERLAND COMPREHENDS EVERY ENDEAVOUR.

Each of them was firmly convinced that a man was born not merely for his parents but also for his country. You may ask what is the difference. It is very clear, for he who thinks himself born only for his parents awaits the fated hour with calm submission, whereas the other will boldly meet his fate that he may not see his country enslaved, and will consider those insults and disgraces which he must endure in a state of slavery as much more to be dreaded than death itself.

MAN PROPOSES, GOD DISPOSES.

Whatever was the duty of brave men, they were all ready to perform, but the sovereign Lord of the universe decided the fate of each.

AN ACCUSER.

A false accuser is a monster, a dangerous monster, ever and in every way malignant and ready to seek causes of complaint.

A MINISTER OF STATE.

What, then, are the duties of a minister of state?—to watch the rise of every event, to look into the future and forewarn his fellow-citizens of what may happen. This is precisely what I have done. And then, again, to confine within the narrowest limits the fatal results that naturally arise from irresolution, lukewarmness, prejudices, and party spirit; and, on the other hand, to lead men's minds to peace, good understanding, and to rouse them to a vigorous defence of their just rights.

BRIBES.

By resisting his bribes, I conquered Philip; for as the purchaser conquers when a man sells himself, so the man who refuses to be sold, and disdains to be corrupted, conquers the purchaser.

WE KNOW NOT WHAT A DAY MAY BRING FORTH.

The man who is in the highest state of prosperity, and who thinks his fortune most secure, knows not if it will remain unchanged till the evening.

So Proverbs (xxvii. 1)—"Boast not thyself of to-morrow; for thou knowest not what a day may bring forth."

TO REMIND OF KINDNESS IS TO REPROACH.

For it is in accordance with my principles to believe that he who receives a favor must retain it

recollection of it for all time to come, but that he who confers should at once forget it, if he is not to show a sordid and ungenerous spirit. To remind a man of a kindness conferred on him, and to talk of it, is little different from reproach.

THE LOYAL STATESMAN.

It is not the language, it is not the tone of voice of a public speaker that is to be considered, but such an approximation of feelings and interests with his fellow-citizens, that both his enemies and friends are the same with those of his country. For he who is thus animated, he it is who will speak his sentiments with an honest zeal. But he who pays court to those who threaten danger to the state, is not embarked in the same vessel with his fellow-citizens, and therefore does not look forward to the same results for his safety.

THE GODS.

Chance to despise, and fortune to control,
Doth to the immortal gods alone pertain;
Their joys unchanged, in endless currents roll;
But mortals combat with their fate in vain.

THE VIRTUOUS CITIZEN.

There are two qualities which ought always to distinguish a virtuous citizen: he ought, in the high offices of state, to maintain the honor and pre-eminence of his country, and in all times and circumstances to show kindly feelings; these are dependent upon nature, but abilities and success are the gifts of another power.

DIOGENES LAËRTIUS.

DIOGENES surnamed Laërtius, from the town of Laerta in Cilicia wrote the "Lives of the Philosophers." When he lived is unknown, but probably he belonged to the second century of our era.

GOD IS OUR FATHER AND CREATOR.

God is the creator of the universe, and also the father of all things, in common with all, and a part of him penetrating all thing

CHAOS.

There was once a time when all things were huddled together.

So Genesis (I. 1).—"In the beginning God created the heaven and the earth."

GRANDEUR OF THE WORLD.

The world is perfectly beautiful, for it is a work of God.

THE WAY TO THE GRAVE.

The way to the world below is easy, for men go to it with shut eyes.

So I Samuel (xx. 3).—"There is but a step between thee and death."

THE WICKED.

The impure souls are bound by the Furies in chains that cannot be broken.

So Matthew (xxii. 18).—"Blind him hand and foot, and take him away, and cast him into outward darkness."

HEAVEN OUR FATHERLAND.

To one who said to Anaxagoras, "Hast thou no regard for thy fatherland?" "Softly," said he, "I have great regard for my fatherland," pointing to heaven.

So John (xiv. 2).—"In my father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you."

CURSE NOT YOUR ENEMY.

Speak not ill of your friend, and curse not your enemy.

LAW OF GOD.

He (Plato) regarded justice as God's law. There are two divisions of law, the one written, the other unwritten: the one arising from nature and habit is called unwritten.

This is referred to by Seneca (Controv. 1).—"Laws not written, but more certain in their influence than laws that are written."

So Romans (ii. 14, 15).—"For when the gentiles, which have not the law, do by nature the things contained in the law, these having not the law, are a law unto themselves: which show the work of the law written in their hearts, their conscience also bearing witness, and their thoughts the meanwhile accusing or else excusing one another."

WHAT IS GOOD IN THEE IS OF GOD.

Most men are bad; whatever good thing thou doest, ascribe to God.

So Philippians (ii. 13).—"For it is God which worketh in you, both to will and to do of His good pleasure;" and Sirach (vi. 37).—"Let thy mind meditate continually on God's commandments: He shall establish thine heart, and give thee wisdom at thine own desire."

DIONYSIUS OF HALICARNASSUS.

FLOURISHED FROM B.C. 29 TO B.C. 7.

DIONYSIUS, a celebrated writer on Latin antiquities, was a native of Halicarnassus, and came to Rome about B.C. 29, at the close of the civil wars. Here he continued for twenty-two years, making himself acquainted with the customs and transactions of the Romans. His work is entitled "Roman Antiquities," and goes back to the origin of the nations of Italy. It closed with the year B.C. 285, the year before the first Punic war, when the history of Polybius properly begins. It contains many details on the laws and customs of Rome, which are valuable, as they are nowhere else to be found. It was contained in twenty books, of which eleven only have come down to us, with some fragments of the others. They bring the history of Rome down to B.C. 440.

THE WORKS OF AN AUTHOR ARE THE IMAGE OF HIS MIND.

For the general observation is strictly correct, that the works of an author may be considered the representation of his mind.

only in what is necessary, and not add to it by thy folly.

GOOD FORTUNE IS ONLY FOR A DAY.

No misery is unlooked for by men, for we find good fortune lasting only for a day.

TIME.

My friend, time is the workman of the state; it rejoices to mould all things to the worse.

DEATH RELEASES MAN FROM TROUBLES.

There is no life that has not evils, griefs, sorrows, annoyances, torments, diseases; death, appearing as the physician of these, proceeds to release these who are thus affected, making them to cease by sleep.

A SORDID LOVE OF MONEY.

A sordid love of money is certainly a very senseless thing, for the mind much occupied with it is blind to everything else.

CONSCIENCE.

For whosoever is not ashamed when he is conscious to himself of having committed some base act, how will he be ashamed before him who is ignorant of it?

TO BLUSH.

Whoever does not know to blush or be afraid, has the first principles of every kind of baseness.

DIFFICULT TO GATHER, EASY TO SQUANDER.

It is difficult to gather a heap in a long time, but it is easy to squander the whole in a day.

THE POOR.

There is no one more happy than the poor man: he expects no change for the worse.

POVERTY AND BAD CONDUCT.

Poverty united to bad conduct utterly destroys and upturns the life of man.

MAN BORN TO TROUBLE.

I am a mortal; this very thing is the greatest cause of sorrow in life.

THE BLESSINGS AND EVILS OF LIFE.

As fortune, sometimes, when it is bringing up one blessing for us, in pouring out discharges three evils.

NOTHING FIXED IN LIFE.

There is nothing fixed in the life of man; for no one lives steadily in the way that he has chosen.

SHAMELESSNESS.

There is no animal more bold than shamelessness.

MAN.

If thou knowest what man is, thou wilt be more happy.

PRUDENCE.

How completely blessed is prudence in a good disposition!

MORTALITY.

Being born mortal, be not always watching the approach of death; time is the physician of every sorrow.

LIFE IS EVER CHANGING.

The life of man is ever changing.

EUPHRON.

EUPHRON, an Athenian comic poet of the middle comedy, some fragments of whose works have come down to us.

THE FOOL.

For he who manages his own life badly, how is he likely to take proper care of what is external to himself?

SHORTNESS OF LIFE.

Pray, Jupiter, when thou hast granted to us only a short span of life, why dost thou not allow us to pass it without sorrow?

EURIPIDES.

BORN B.C. 481—DIED B.C. 406.

EURIPIDES, the celebrated tragic writer of Athens, son of Mnesarchus and Cleito, is said to have been born on the very day of the battle of Salamis, to which island his parents had been compelled to fly at the time that Athens was threatened by Xerxes. He was a pupil of Prodicus of Chios, and took lessons from the philosopher Anaxagoras. The persecutions which Anaxagoras underwent warned Euripides of the dangerous path he was pursuing, inducing him to renounce the study of philosophy, and direct his attention to the stage. This took place, it is said, in his eighteenth year, and in 455 B.C. he succeeded in gaining the third prize. Of all the plays which he wrote, only five, according to Varro, were reckoned worthy of being crowned; but this fact may be explained by the violent spirit of rivalry and jealousy which seems to have prevailed at Athens at this time. In his domestic affairs he was by no means fortunate; both his wives disgraced him by the irregularity of their lives; and from this circumstance probably arose his violent hatred of the sex, the weakness of which he took every opportunity of ridiculing and exposing. His private grief became the butt of the comic writers of the day, and Aristophanes more particularly held him up to the ridicule of the public. It was no doubt in consequence of these incessant attacks that Euripides determined to leave Athens. He removed first to Magnesia, and thence to the court of Archelaus, King of Mace-

donia, who reigned from 413 to 399 B.C., and was then the beneficent patron of literature and science. By him he was received with all that respect to which his distinguished talents entitled him, and some say that he was appointed one of his principal ministers. Here he resided till his death (406 B.C.), which was as full of tragic circumstances as any story ever exhibited upon the stage. As he was strolling through a wood, a pack of the royal hounds attacked the poet, and tore him in pieces. His remains were removed to Pella by the king, and every honor was shown to his memory. The Athenians were now anxious to procure his ashes, but Archelaus refused to gratify those who had neglected the poet in his lifetime.

THE WORDS OF THE WISE.

When a wise man chooses a fit subject for his discourse, there is no difficulty in speaking well; thou hast indeed a fluent tongue; as if thou wert wisdom itself; but thy words have not her power. A mighty man, when bold and able to speak, is a bad citizen if he lack discretion.

THE TWO BEST THINGS AMONG MEN.

For, young man, there are two things of prime importance among men. Ceres, the goddess, she is the Earth, call her by what name thou wilt: she nourishes mortals with dry food. But he who is come is a match for her, the son of Semele: he has discovered the liquid drink of the grape, introducing it among mortals, causing the wretched to forget their sorrows, when they are filled with the stream of the vine, giving balmy sleep as an oblivion of the anxieties that beset man day by day, nor is there any other medicine that can cure the troubles of life.

GLORY NOT IN THY WISDOM.

But, Pentheus, be persuaded by me, boast not that thy imperial power has rule over men, nor even, if thou thinkest so, glory not in thy wisdom, for thy glorying is vain.

So Jeremiah (ix. 23)—"Thus saith the Lord, Let not the wise man glory in his wisdom, neither let the mighty man glory in his might, let not the rich man glory in his riches."

THE FOOL.

For the fool speaks foolish things.

PRIDE BEFORE A FALL.

Misery is the end of unbridled mouths and lawless folly, but a quiet life accompanied by wisdom remains unmoved, and knits together families; for though the heavenly powers dwell in the far distance, inhabiting the air, they behold the deeds of men. But cleverness is not wisdom, nor yet the musing on things that belong not to this world. Life is short, and who pursuing great things in it would not enjoy the present? These are the manners of madmen and of the ill-disposed in my opinion.

So Matthew (v. 9)—"Blessed are the peacemakers: for they shall be called the children of God."

THE IGNORANT.

A person may seem to be ignorant, even though he speak with wisdom, to be foolish.

BE ANGRY AND SIN NOT.

For it is the part of a wise man to practise moderation in passion.

So Ephesians (iv. 26)—"Be ye angry, and sin not: let not the sun go down upon your wrath."

WINE AND LOVE.

For where there is not wine, love fails, and everything else pleasant to man.

THE DELIGHTS OF LIBERTY.

Shall "I trip it on the light fantastic toe" the livelong night in honor of Bacchus, exposing my neck to the dewy air, frisking like a fawn in the delights of the green meadow, when it has escaped a fearful chase away from the well-woven nets (and the huntsman cheers and hurries on his dogs), and toilfully, like the swift storm, speeds along the plain that skirts the river, rejoicing in the solitude, away from men, and in the thickets of the dark foliaged wood?

CRIME FOLLOWED BY PUNISHMENT.

The power of the divinity is called forth slowly, but then it is unerring, chastising those who insanely pay honor to folly, and show not respect to the gods. The gods cunningly conceal the long step of time, and hunt after the impious. For it is wrong to determine or plan anything contrary to their laws. It is surely a slight matter to regard what is divine as exercising this power, and that what has been law for a long time is eternal, and the dictate of nature.

THE TRULY HAPPY.

Happy the man who has escaped the tempest-tossed sea, and reached the port. Happy he who has got to the end of the labors of life. Men surpass each other in riches and power. Myriads of hopes gay-smiling rise before them. Some continue with them to the close of life, some vanish away. The man who enjoys the smiles of fortune day by day I pronounce to be happy.

REVERENCE OF THE GODS.

To be modest and pay reverence to the gods, this, I think, to be the most honorable and wisest thing for mortals.

DIFFERENT FATES OF MEN.

Various are the fates sent by the gods, and much comes to us that is unexpected; on the one hand, what we look for is not accomplished; and on the other, God finds a way to bring about what we least expected. Such, too, is the end of this awful day.

DIGNITY IN THOSE OF NOBLE BIRTH.

Nobleness is thine, and thy form, lady, is the reflection of thy nature, whoever thou art. For

by looking at external appearance one is generally able to learn whether man is noble by nature.

THINGS AGAINST THE WILL OF THE GODS.

For such things as we strive after against the will of the gods, we possess not as real goods, O lady; but what they give us willingly, by these we are benefited.

EVILS OF LIFE.

Countless are the woes of mortals, and various are their forms; but one single blessing for a lengthened period one will scarcely find in the life of men.

A WIFE.

For woman's condition among men is full of ills; for the good women being mixed up with the bad, we are objects of hatred, so wretched are we by nature.

THE BASE PUNISHED BY THE GODS.

For whosoever of mortals is of a base nature, him the gods chastise.

THE CHILDLESS AND THOSE WITH CHILDREN CONTRASTED.

For there is a constant spring of surpassing happiness to mortals when handsome youths flourish in the paternal hall, with wealth to transmit in succession from sires to children; for they are an ever-present aid in troubles, a joy in good fortune, and in war they bring help to their country with their spear. May the nurturing care of kind children be mine in preference to riches and alliances with kings. Childless life I abhor, and I blame him who approves of it. But with a competency of this world's goods may I have a noble offspring.

THINGS NEAR APPEAR DIFFERENT FROM THOSE AT A DISTANCE.

The appearance of things does not appear the same when seen far off and close at hand.

RIVALS IN POLITICAL HONORS.

The good and wise lead a quiet life, and aim not at the honors of the state; with them I shall incur ridicule, not living tranquilly in the midst of a city full of turmoil. Again, if I aspire to the dignity of those who direct the affairs of the nation, I shall be watched more closely, and subject to hostile votes; for such is usual, my father; those who possess influence are most inimical to those who are their rivals.

ROYAL AND HUMBLE LIFE CONTRASTED.

The outward aspect of vainly-praised sovereignty is indeed delightful, but its inward state is misery. For who can be happy, who can be blessed, dragging on a life full of terrors, and every moment in dread of violence? I would rather live happy in humble life than be a tyrant, forced to choose my friends from the wicked, and hating the good

from fear of death. Thou wilt say, no doubt, that gold has sovereign power over such things, and that it is pleasant to be rich. I love not to hear reproach while watching over my riches, and to be subject to toils. What I wish for is a competency, unattended by pains. Now hear, my father, the advantages I have enjoyed in this place. First, indeed, leisure, which is most beloved by men, and no bustling crowd around; nor am I jostled from the path by a knave, for it is intolerable to be obliged to give way to some insolent wretch. I was ever employed in the worship of the gods or in the service of men, who were surrounded by the happy and not by the mourning. Some, indeed, I sent away, while other strangers came in their place, so that I was always joyful, being new with new faces. That which men should pray for, even if it be against their will, to be just before the gods, custom and nature together brought about in me. Taking these things into consideration, my father, I deem my lot better here than there. Suffer me, then, to live here, for there is equal pleasure to be got in humble life as in the palaces of the great.

A FRIEND.

For it is pleasant to enjoy good fortune with one's friends; but (avert it, Heaven!) if any ill befall, a friend's kind eye beams comfort.

THE DESIGNING AND THE SIMPLE.

Alas! how I always hate ill-designing men, who, devising evil deeds, gild them over with artificial ornament. I would rather have an honest, simple friend, than one whose quicker wit is trained to evil.

THE SLAVE.

For one thing brings shame to slaves—the name. In everything else the slave is nothing worse than the free-born, if he be virtuous.

A STEP-MOTHER.

Thou hast rightly judged; for it is a proverb that step-mothers bear hatred to their step-children.

AID OF HEAVEN.

Slow, indeed, at times, is the aid of the gods, but in the end not weak.

THE GOOD.

But him whose house is threatened with calamities it becomes to worship the gods and be of good cheer; for in the end the good obtain their due, but the wicked, as they are naturally so, will never fare well.

A STEP-MOTHER.

For a step-mother is enemy to the children of the former marriage, no milder than a viper.

THE DEAD.

Time will soften thy grief; he that is dead is nothing.

WISDOM IN THE GOOD.

In the good there is all kind of wisdom.

So John (vii. 17)—"If any man will do his will, he shall know of the doctrine, whether it be of God."

THE PIOUS.

My heart is confident that the man who reveres the gods will fare prosperously.

So Psalms (cxl. 10)—"The fear of the Lord is the beginning of wisdom."

OLD MAN.

It is vain for old men praying for death, complaining of age and the length of life, since if death come near, not one is willing to die; then old age is no longer burdensome to them.

TO-MORROW UNCERTAIN.

Knowest thou of what nature mortal things are? I think not; how shouldst thou? Death is a debt that all mortals must pay, and there is not one of them who knows whether he shall see the coming morrow; for what depends on fortune is uncertain how it will turn out, and is not to be learned, neither is it to be caught by art. Having, therefore, heard and learned these things from me, be merry, drink, and regard the life granted to thee day by day as thine own, but the rest to be Fortune's.

EFFECT OF WINE.

And well do I know that the trickling of the cup down thy throat will change thee from thy present gloomy and pent state of mind. Being mortals, we should think as mortals; since to all those who are morose and of sad countenance, if they take me as judge at least, life is not truly life, but misery.

HUSBAND AND WIFE.

This is the surest tie of conjugal happiness, when the wife is not estranged from the husband. But everything here is at variance, and the dearest ties are weakened.

YOUTH.

For youth holds no society with grief.

EVERY ONE LOVES HIMSELF MORE THAN HIS NEIGHBOR.

Dost thou only now know this, that every one loves himself more than his neighbor, some, indeed, with justice, but others for the sake of gain?

ROYAL AND HUMBLE LIFE.

The acts of tyrants are terrible; being seldom controlled, in most things acting despotically, they lay aside with difficulty their passion. To be accustomed to humble life is far better; may it be my lot then to grow old, not in gorgeous state, but without danger. There is a protection in the very name of moderation, and to enjoy it is far the best for man. Towering greatness remains not long to mortals, and has often brought the greatest woes on families when the Deity is enraged.

MUSIC.

Thou wouldst not err in calling men of the olden time silly and in no way wise who invented songs for festivals, banquets, and suppers, delights that charm the ear; but no one has found out how to soothe with music and sweet symphony those bitter pangs by which death and sad misfortunes destroy families. And yet to assuage such griefs by music were wisdom. For when the banquet is spread, why raise the song? When the table is richly piled, it brings of itself a cheerfulness that wakes the heart to joy.

WOMAN.

Of all beings who have life and sense, we women are most wretched. First of all, we must buy a husband with money, and receive in him a lord; for this is a still greater ill than the former. And then the question is whether we receive a bad or good one. For divorces are not honorable to women, nor is it right to repudiate our husband. For coming to new tempers and new laws, we must be endowed with powers of prophecy if we can know what sort of yoke-fellow we shall have. But should a husband dwell with us, diligently engaged in the performance of our duties, who treats us with kindness, our lot is deserving of envy; if not, death is to be preferred. If a man find aught displeasing in his house, going abroad, he seeks relief among his compeers or friends. We must look for happiness to one only. Men say of us that we live a life of ease at home, while they are fighting with the spear. Misjudging men! thrice would I engage in fierce conflict than once suffer the pangs of childbirth.

A FIERY IS BETTER THAN A SULLEN SPIRIT.

For a woman that is quick in anger, and a man too, can be more easily guarded against than one that is crafty and keeps silence.

EXILE.

Exile draws many evils in its train.

IMPUDENCE.

The worst of all diseases among men is impudence.

THE WICKED.

O Jove! why hast thou given us certain proofs to know adulterate gold, but stamped no mark, where it is most needed, on man's base metal?

THE POWER OF THE RHETORICIAN.

For in my opinion, the unjust man, whose tongue is full of glozing rhetoric, merits the heaviest punishment. Vaunting that he can with his tongue gloze over injustice, he dares to act wickedly, yet he is not over-wise.

GIFTS OF A BAD MAN.

The gifts
Of a bad man can bring no good with them.

TEMPERANCE.

Temperance, the noblest gift of Heaven.

THE POWER OF GOLD.

The saying is that gifts gain over even the gods; gold has greater power over men than ten thousand arguments.

THE EVILS OF LIFE MUST BE BORNE.

A mortal must bear calamities with meekness.

So Philippians (i. 28)—"For I am in a strait betwixt two, having a desire to depart, and to be with Christ; which is far better: nevertheless to abide in the flesh is more needful for you."

"THE EVIL THAT I WOULD NOT, THAT I DO."

I know, indeed, the ills I am about to commit, but my inclination gets the better of me.

So Romans (vii. 14)—"For we know that the law is spiritual; but I am carnal, sold under sin."

THE BACHELOR.

I maintain that those entirely free from wedlock, and who claim no title to a father's name, surpass in happiness those who have families; those who are childless, not knowing whether children give delight or anguish, are relieved of much misery. But those who have a sweet blooming offspring of children in their house, I see worn out with care the whole time; first of all, how they shall bring them up honorably, and how they shall leave what may sustain them; and besides, they know not whether they are toiling for good or bad children. But one ill to mortals, the worst of all, I now shall mention. For let us suppose that they have got together a sufficient fortune, and that their children have reached manhood, behaving honorably, yet if this should happen, that death, bearing away their sons, vanishes with them to the shades of darkness, I ask, why do the gods heap on mortals this grief in addition, the most bitter of all, to drop the tears on the lost son's untimely bier?

NO MORTAL MAN IS HAPPY.

But what belongs to mortals I do not now for the first time deem to be a mere shadow, nor would I fear to say that those who boast most of their wisdom and acquired knowledge, stray widest in the paths of folly. No mortal is happy; if the tide of wealth flow in upon him, one may be more fortunate than another, more happy he cannot be.

THE RESTLESSNESS OF THE LOVE-SICK.

Alas! the evils of mortals and their hateful diseases! What shall I do for thee? what not? Here is the bright light of day, here the clear air; and now thy couch on which thou liest sick is out of the house; for every word thou spakest was to bring thee hither; but soon thou wilt be in a hurry to return back to thy chamber; thou art soon changed, and rejoice in nothing; nothing present pleases, thou reckonest what is not present as more agreeable. It is better to be sick than to tend the sick: the one is a simple ill, but with

the other is joined both pain of mind and toil of body. The whole life of men is full of pain and trouble, knows no rest. But whatever else there is more precious than life, darkness hangs round it, concealing it in clouds; hence we appear to dote on this present state, because it gilds the earth, for we know nothing of our future life, and cannot discover aught of the realms below; but all is wrapped in perplexing fables.

A plague on the whimsies of sickly folk:

What am I to do? what not?

Why, here's the fair sky,

And here you lie,

With your couch in a sunny spot.

For this you were pulling, whenever you spoke,

Craving to lie outside,

And now you'll be sure not to bide;

You won't be here for an hour—

You'll want to be back to your bower;

Longing and never enjoying,

Shifting from yea to nay;

For all that you taste is cloying,

And sweet is the far away.

'Tis bad to be sick but worse

To have to sit by and nurse;

For that is single, but this is double,—

The mind in pain, and the hands in trouble.

The life men live is a weary coil;

There is no rest from woe and toil;

And if there's aught, elsewhere, more dear

Than drawing breath as we do here,

That darkness holds

In black inextricable folds.

Love-sick it seems are we

Of this, whate'er it be,

That gleams upon the earth,

Because that second birth,

That other life, no man hath tried;

What lies below

No god will show,

And we, because the truth's denied,

Drift upon idle fables to and fro.

—FROM THACKERAY'S "Anthologia Græc., Fr. 2."

SICKNESS OF THE HEART.

The cares of life, they say, if carried too far, bring more of pain than pleasure, and war against the health. Thus I praise less what is in extreme than the sentiment of "Nothing in excess," and the wise will agree with me.

PURE HANDS BUT IMPURE THOUGHTS.

My hands are clean, but my heart has somewhat of impurity.

So Romans (xiii. 9)—"Thou shalt not covet."

WE KNOW THE GOOD BUT DO IT NOT.

What is good we understand and know, but practise not, some from sloth, and others preferring some other pleasure to what is right. For there are many pleasures in life—lengthened hours of frivolous conversation, indolence, a pleasing ill, and shame; but there are two, the one indeed not base, but the other, the weight that pulls down houses; but if the occasion in which each is used

were clear, the two things would not have the same letters.

THE INFLUENCE OF HIGH RANK.

For when base deeds appear right to those of highest rank, all below them esteem them as objects of honest imitation.

A PARENT'S MISDEEDS.

For it enslaves a man, though he be valiant-hearted, when he is conscious of a mother's or a father's misdeeds. This alone, an honest and good name, to whomsoever it belongs, possesses a worth exceeding life; it is time, when it so chances, that shows the bad, as a mirror reflects a virgin's fair face; never among such may I be seen.

PRIDE.

For this is nothing else than pride to wish to be superior, to be gods.

So Proverbs (xvi. 3)—"Every one that is proud in heart is an abomination to the Lord."

FLATTERY.

It is this that ruins many a well-built city and houses—this glowing speech. We want not words that charm the ear, but what excites to virtuous deeds.

DECEIT RECOMMENDED.

My tongue indeed hath sworn, but not my mind.

WOMAN.

By this, too, it is evident that woman is a great evil; for the father, who begot and brought her up, gives her a dowry and sends her away, to be rid of her evil. But the husband, on the other hand, when he has received the bane into his house, rejoices, and puts splendid ornaments on the vile wretch, tricking her out with robes, unhappy man! exhausting all the riches of his house upon her. But he makes a virtue of necessity, for, having lied himself to noble kinsmen, he retains with seeming joy his uneasy bed, or, if he has received a good bride, but worthless parents-in-law, he forgets the evil in consideration of the good. Happier is he who leads to his house a plain, gentle-hearted, simple wife. I hate the knowing dame; nay there not be in my house one more wise than woman ought to be. For Venus with ease engenders wiles in these knowing dames; but a woman of simple capacity, by reason of her small understanding, is removed from folly.

WE JUDGE BY THE EVENT.

If I had been successful, I would have assuredly been ranked among the wise; for our reputation and wisdom depends much on our success.

THE FOOL.

O men erring in many things! why do ye teach a thousand arts, contriving and inventing everything? but one thing you know not, nor yet have reached out, to teach that man wisdom who is void of sense.

THE DEMAGOGUE.

For those who are worthless among the wise are best fitted to charm the rabble.

EXILE.

For a speedy death is best to the wretched; but wandering an exile from thy fatherland, thou shalt drag out a life of bitterness; for this is the reward for the impious.

THE RIGHTEOUS AND THE GUILTY.

For gods rejoice not when the pious die; the wicked, however, with their children and houses, we utterly destroy.

THE GREAT.

For the sad stories of the great make a deep impression.

THE ENMITY OF RELATIONS IS DREADFUL.

How dreadful, mother, is the enmity of relations, and how difficult a reconciliation.

BEAR WITH PATIENCE THE CALAMITIES OF LIFE.

We ought to submit to the inflictions of the gods.

So 2 Corinthians (vi. 4)—"But in all things approving ourselves as the ministers of God, in much patience."

RICH HAVINGS WIN RESPECT.

It is a proverb long ago sung, but which I shall nevertheless repeat, "Wealth is most honored among men, and brings to them the greatest power."

PRECIPITATE HASTE.

Precipitate haste leads to injustice, but slowly-matured counsels bring forth deeds of wisdom.

HOW A RECONCILIATION OUGHT TO BE BROUGHT ABOUT.

When a friend is angry with his friend, let him meet him face to face, and fix his eyes on his friend's eyes, remembering only the object for which he is come, and forgetting all former grievances.

IF ALL JUDGED ALIKE, THERE WOULD BE NO DISPUTES.

If the same thing were judged honorable alike by all, and also wise, no contest or debate would arise among men; but now nothing is the same or like except the names; each gives his own meaning to them.

AMBITION.

Why, my child, dost thou court ambition, the most baneful of deities? Do it not, she is an unjust goddess. For often hath she entered into houses and flourishing cities, and issued forth again, bringing destruction on those who welcomed her. Of such an one thou art madly enamored. My child, it is nobler to pay honor to equality, which ever knits friends to friends, states to states,

and allies to allies; for equality is sanctioned both by nature and by human laws. Whereas the less is always at enmity with the greater, and hence springs the day of hatred. For it was equality that established measures among men, and weights and numbers. The dark eye of night and the light of the sun equally walk their yearly round, and neither of them being inferior, envies the other. Thus the sun and the night equally serve mortals, and wilt thou not brook equality and give up his share to him? Then, where is justice? Why dost thou honor so extravagantly the royal state—a prosperous injustice—and think so highly of her? To be conspicuous?—a mere empty glory. Or wouldst thou labor to have thy house full of riches? And what is this abundance? 'tis nothing but a name, since what is sufficient is abundance to the wise. Man enjoys his stores, not as his own, but as the gifts of the gods, who, when they choose, again resume them.

So Proverbs (xxiii. 5)—“Wilt thou set thine eyes upon that which is not? for riches certainly make themselves wings; they fly away as an eagle toward heaven.”

THE NECESSITY OF FATE.

For a mortal must endure the necessity of fate proceeding from the gods.

THE RICH AND THE POOR.

It is good for the prosperous to cast their eye on the poor, and for the poor to look upward to the rich with a feeling of rivalry, that the desire of wealth may spur on the one, and the high fortune of the other may fear a sad change.

THE BENEFICENCE OF THE DEITY.

With others, indeed, I have disputed the question: for some assert that the ills of life outweigh the good to man. But my opinion is the opposite, I believe that blessings are more abundant; for, if it were not so, we should not enjoy the light of life. The Being who called us forth from foul and savage life I thank, enduing us with reason, and then giving us the tongue as the messenger of words, so as to distinguish speech; the growth of fruits he gave, and for that growth the heaven-descending rain, that it might nourish the fruits of the earth and sustain the stomach; besides, he invented coverings against the cold of winter, and to ward off the burning heat of the sun, and the sailing over the sea, that we might exchange with each other the fruits which each wants.

See St. Paul's speech at Lystra (Acts xiv. 17)—“He left not Himself without witness, in that He did good, and gave us rain from heaven, and fruitful seasons, filling our hearts with food and gladness.” See also Psalm civ. throughout.

THE INNOCENT INVOLVED WITH THE GUILTY.

For the Deity, deeming fortune the same to all, is wont to involve with him that is guilty the man that is innocent and has done no evil.

THERE ARE THREE CLASSES IN EACH STATE.

There are three classes of citizens; some are rich, listless, and yet ever craving for more; oth-

ers, having nothing, and short of the means of life, are clamorous, much addicted to envy, aiming their bitter shafts against the rich, and led away by the tongues of evil leaders. Betwixt these extremes there are those who save the state, guarding the laws which the state may appoint.

NO ONE HAPPY TO THE END OF LIFE.

For in regard to the affairs of mortals, there is nothing happy throughout.

THE DUTY OF A SON TO HIS PARENTS.

Unhappy the child who does not help his parents, a most honorable service; for he receives back from his children what he has bestowed on his parents.

THE DEMAGOGUE.

We have not there the inflated demagogue, who puffing the people up with words, turns them as interest prompts him. For he that is pleasant, and winds himself into their hearts to-day, offends to-morrow; then, with fresh calumnies cloaking his former errors, he escapes from justice. And the how can a people rightly guide a city who do not examine minutely the reasons that are brought forward? For time gives wisdom superior to imprudent haste. But a poor laborer of the soil, even if he were not unschooled in knowledge, cannot from his very employment, be able to look to the common weal. Surely ill fares it with the better ranks when those of low degree hold dignity “wielding at will the fierce democracy,” rising from base obscurity.

“THE LAND WHERE, GIRT WITH FRIENDS OR FOR A MAN MAY SPEAK THE THING HE WILL.”

There is no greater evil to a state than a tyrant when in the first and chiefest place the laws hold not one common tenor, but one man, lording over the laws, keeps it to himself; here is no equality. Where the laws are written, the weak and powerful have equal justice, and the low ranks, when wronged, can answer the higher bold words; the weaker, with justice on its side, triumphs over the great. This is to be free. There a man fraught with good counsel, useful to the state? He speaks it, and becomes illustrious else, if he chooses, he holds his peace. What can there be more just than this? And then, when the people are sovereigns of the land, it glories in its valiant youth; while a tyrant hates such state of things, and slays the best men, who think are wise, fearing for his power. He then, can a state become strong, when ruthless power cuts off each brave spirit, and mows down each opening floweret, like the crops in the vernal meadow?

DISCRETION IS VALOR.

A wise man's love streams first to his children then to his parents and country, which he should desire to raise to glory and not to crush. Daring is a daring pilot and sailor in a ship; wis-

he who knows his time to moor it in safety. To my mind discretion is valor.

Shakespeare makes Falstaff ("King Henry IV." part I. act v. scene 4) say—

"The better part of valor is discretion."

And "Othello" (act II. scene 3)—

"Let's teach ourselves that honorable stop,
Not to out-sport discretion."

WAR NOT WITH THE DEAD.

I deem it right to bury the dead, from no desire to injure the city or bring on man-slaying contests, but preserving the common law of Greece. What is there wrong in this? For suppose you have suffered from the Argives, they are now dead; ye have driven them away with credit to yourselves and disgrace to them, and thus justice has been done. Allow the dead to be entombed in the earth; for each part that forms the frame of man, must return whence it came, the soul to the ethereal sky, the body to the earth. For we do not possess this body as our own save to dwell in during this breathing space of life, and then we must give it back to the earth that sustained it. Dost thou think to do injury to Argos only by not burying the dead? By no means; this is a question common to all Greece, if any deprive the dead of their right, keeping them unburied; for it would be a disgrace to the brave if such a law were allowed to hold good.

LIFE IS A STRUGGLE.

But, ye silly men, learn the state of man; our life is a struggle: some gain the prize early, some hereafter, some now; for fortune plays the wanton. By the wretched she is greatly honored, that she may favor him, while the prosperous hold her in high honor, dreading the veering gale.

COURAGE VAIN.

Courage profits men naught, if God denies His aid.

VANITY OF MEN.

Vain mortals! stretching the bow beyond what is fitting, and justly suffering many ills, ye yield not to the advice of friends, but learn only from circumstances.

THE BRAVE MAN.

For when a man is brought up honorably, he feels ashamed to act basely; every one trained to noble deeds blushes to be found recreant; valor may be taught, as we teach a child to speak, to hear those things which he knows not; such love as the child learns he retains with fondness to old age—strong incitements to train your children well.

TO BE TWICE YOUNG.

Alas! why is it not permitted to mortals twice to be young, and thence return once more to old age? For in our domestic affairs, if aught be ill-conducted, we put it right by after thoughts, but we have not this power over life. If we could be

twice young, twice old, when we made a mistake, having this twofold life, we could correct it.

MOURNING FOR THE DEATH OF A DAUGHTER.

Be it so. What must I, wretched, do? Go home, and there see the sad desolation of my home, and loneliness of my life? Or shall I go to the dwelling of this Capanus? Most pleasant, indeed, it was to me before, when my daughter was yet living, but she lives no longer; then she used to caress my beard and stroke this head with her hand. Nothing is dearer to an aged sire than a daughter; sons have spirits of higher pitch, but are less inclined to endearing fondness. Will you not speedily lead me to my house, and give me up to darkness, when I may perish, wasting away my aged frame with fastings? What will it avail me to touch the bones of my child? O age! difficult to be contended with, how I hate thee when I have reached thee, and hate all who are anxious to lengthen out existence with food, drink, and spells, turning aside the stream of life so as not to die! It is more fitting for thee, naught but a use less burden upon earth, to pass away in death and make room for the young.

AFFLICTION FOR DEATH OF CHILDREN.

For what greater grief canst thou find out for mortals than to see their children dead?

HOPE ALWAYS.

That is the noble man, who is full of confident hopes; the abject soul despairs.

THE GOOD.

Are not the good, though slow to speak, oft provoked to give vent to their feelings?

SEDITION.

For a city does not prosper that shakes with sedition and is rent by evil counsels.

FATE.

For whosoever strives against heaven-sent calamities, his striving is folly. What must be, no one will ever make so that it be not.

INCONSTANCY OF HUMAN THINGS.

But ye old men, brief is the space of life allotted to you; pass it as pleasantly as ye can, not grieving from morn till eve. Since time knows not how to preserve our hopes, but, attentive to its own concerns, flies away.

YOUTH AND AGE.

Youth is dear to me, but age ever lies upon my head a heavier burden than the rocks of Ætna, dimming mine eyelids with sober veil. I would not have the riches of Asia's throne, nor that my house should shine with gold, in preference to youth, which is fairest in wealth and fairest in poverty. Sad and funereal age I abhor. Hence may it perish in the billows, and never enter the houses and cities of men, but be borne on wings through the air. But if the gods had understood and been wise in the affairs of men, they would

have bestowed a twofold youth, as an undoubted mark of virtue, upon such as shared it; and after death they would have returned a second time to the light of the sun, whereas baseness would have had a single term of life, and in this way would the bad and good have been distinguished, in the same way as amidst the clouds the stars are a guide to the sailors. Whereas now there is no certain mark given by the gods to distinguish the good and bad, but time, as it revolves, is studious of wealth alone.

DESCRIPTION OF MADNESS.

Iris. The wife of Jove did not surely send thee hither, to show thy wisdom.

Madness. I swear by the sun that I am doing what I desire not to do. But if I must needs be subservient to Juno and thee, I must follow swiftly and with a rush, as dogs follow the hunter. On I go; not the sea raging with billows, nor the rocking earthquake, nor the thunder's rage inflicting pangs, is so furious as I when I rush with racing speed against the breast of Hercules. And I shall break down these walls and desolate his house, having first caused him to slay his children; but he that kills them shall not know that they are his sons who fall beneath his hands, till he has respite from my madness. See even now he shakes his head, standing at the barriers, and rolls in silence his distorted gorgon eyes. And he has no command over his breathing; like a bull prepared for the onslaught, he bellows dreadfully, invoking the Furies from Tartarus. Quickly shall I rouse thee to the dance, and give forth music rife with terror. Away, Iris, to Olympus, raising thy noble foot; but we shall enter unseen the abode of Hercules.

INGRATITUDE.

I abhor the gratitude of friends that grows old, and those, too, who wish to share the prosperous gale, but forsake the bark in adverse storms.

GOD IS ALL-SUFFICIENT.

For God, if he be really God, wants nothing. These are but the miserable tales of poets.

THE VIRTUOUS.

For among the virtuous disgrace is considered before life.

So Revelation (II. 10).—"Be thou faithful unto death, and I will give thee a crown of life."

TWO TO ONE IS ODDS.

Weak the conflict of one hand.

WOMAN.

For silence and modesty are the best ornaments of a woman, and to remain quietly within the house.

So 1 Corinthians (xiv. 34).—"Let your women keep silence in the churches: for it is not permitted unto them to speak."

NO ONE HAPPY BEFORE HIS DEATH.

By his present fortune he proclaims aloud to all this truth, not to envy the man who seems prosperous, ere we see his death, as fortune is but for a day.

THE HIGH-BORN OUGHT TO BE TRUTHFUL.

In such noble people as you the mouth ought to be truthful.

HIGH AND HUMBLE LIFE.

I envy the man who has passed through life without danger, to the world, to fame unknown, not those raised to greatness.

THE WILY TONGUE.

The tongue cunning to excite envy is an evil.

THE WAVERER.

The wavering mind is a base possession, not to be trusted by friends.

THE CUNNING CANDIDATE FOR POWER.

Thou knowest when thou wast striving to gain the leadership of the Greeks against Troy—in appearance careless of the honor, but secretly desirous of it—how humble thou wast, shaking every one by the hand, and keeping open door to all who wished to enter; giving audience to all in turn, even if he wished it not, seeking by affability to buy popularity among the multitude. And then when thou wert successful, changing thy mode of acting, thou wast no longer the same to thy old friends, difficult of access, and seldom within doors. Ill does it become an honest man when prosperous to change his manners, but rather then to be staunch to his friends, when by his changed position he can serve them.

THE RULER OF A STATE.

I would not make any one ruler of a state or general of an army on account of his wealth: the leader should have wisdom: every man sage in counsel is a leader.

THE NOBLE AND IGNOBLE.

What advantages attend ignoble birth! Such persons are at liberty to weep and bemoan themselves, but to the noble this is denied. We have pride as the guide of our life, and are slaves to the people.

LOVE.

Blest are they who enjoy the nuptial couch of Aphrodite, the temperate and modest goddess, obtaining a calm from those maddening stings, when Love with golden locks bends both his bows of graces, one for a prosperous fate, the other for life's wild tumult. I deprecate, O fairest Venus, the latter; but mine be love's temperate stings, the holy flame of chaste desire; mine be mild Venus and not ungoverned passion.

THE POWERFUL.

To th' inferior ranks of life
The powerful and the wealthy are as gods.

A DAUGHTER.

It is good that a daughter leave her home, but yet it pains a father's heart when he delivers a child to another house, the object of his tender care.

A WIFE.

A wise man should have a useful and good wife in his house, or not marry at all.

A MOTHER.

Childbirth is painful, and yet a child is a matter of great endearment; 'tis common to the whole human race to toil on behalf of children.

LEAN NOT TO YOUR OWN UNDERSTANDING.

There is a time when it is pleasant not to build too much on our own wisdom; but then, again, there is a time when it is useful to exert our judgment.

So Proverbs (III. 5).—"Trust in the Lord with all thine heart; and lean not unto thine own understanding."

TO TOUCH WITH THE TIP OF THE FINGER.

King Agamemnon will not touch thy daughter even with the tip of his finger, so as to lay hold of her garment.

Our Saviour (Luke xi. 45) says of the Pharisees, that they "will not touch with one of their fingers" the burthens which they lay on others; and Cicero (*pro Coel.* 12) says—"To touch, so to speak, with the finger-tips."

EXCESS OF PRAISE.

The noble, if praised, hate in a certain degree those who praise them, if they praise too much.

THE DISTRESSED.

But, in fact, the good man, even though he be a stranger, has good reason to assist the distressed.

So Burns ("Winter Night")—

"Affliction's sons are brothers in distress;
A brother to relieve, how exquisite the bliss."

SILENCE GIVES CONSENT.

E'en thy silence and thy sighs
Confess it.

DUTY OF A WIFE.

When I was reconciled to thee and thy house, thou wilt thyself bear witness how irreproachable a wife I was, modest and adding to the splendor of thy house, so that both going in and going out thou wast blest. A wife like this is a rare prize; the worthless are not rare.

LIFE.

To enjoy the light of heaven is most sweet to mortals; things below are nothing; mad is he who prays for death; to live in misery is better than anything there is of good in death.

THE MULTITUDE.

The many are, indeed,
A dreadful ill.

THE GODS SAVE WHOM THEY LOVE.

The gods dispense to men what is unlooked for, and those whom they love they save.

ENDURE DEATH WITH PATIENCE.

I esteem not him to be wise who, when he sees death near, tries to overcome its terrors with wallings, being without hope of safety, since he thus has two ills instead of one, and makes his folly known, dying none the less. But one must needs let fortune have its way.

WOMAN QUICK TO FORM DEVICES.

To form devices quick is woman's wit.

WOMEN A FAITHLESS RACE.

See how faithless is the female race! and ye are partners in what has been done.

TO FIGHT AGAINST THE GODS.

What benefit is there to fight against the powerful gods?

THE COWARD IS VALIANT IN THE DARK.

In darkness a runaway has mighty strength.

MEN HAVE DIFFERENT NATURES.

Nature grants to none to know all things; one gift belongs to one, another to another; to thee, indeed, to fight,—but to others, to give good counsel.

A GLORIOUS DEATH.

To die, if a man must die, is no doubt painful to him that dies: for how should it not be so? but if with glory to the living, it is a pride and renown for one's family.

A STATE IN ADVERSITY.

For when sad calamity befalls a state the gods are neglected, and there is no desire to honor them.

AFFLICTION.

Yet there is good reason to invoke the gods when we fall into affliction.

THE DEAD.

The tearless dead forgets his sorrows.

TEARS.

How sweet are tears to those who have fared ill, and strains of lamentation and the Muse, who tunes her notes to woe!

THE DEAD.

My child, to die is not the same as to behold the light of day; for the one is nothing, while in the other there are hopes.

TO FALL FROM HIGH FORTUNE.

Not to be born and to die I deem to be the same; but to die is far better than to live in misery, for he knows no grief who does not feel his misery. But to fall from high fortune to abject wretched-

ness distracts the soul with the feeling of former happiness.

A WIFE.

With silence of the tongue and cheerfulness of look I entertained my husband. I knew in what things I ought to command my husband, and how to yield obedience in what it behooved me.

A SECOND MARRIAGE.

And yet they say that short time changes a woman's unwillingness to a new love. I abhor her who, discarding from her thoughts a former husband, loves another. For not even the mare, which has been separated from its fellow, will easily draw the yoke; and yet the race of beasts is without articulate voice, and fails in reason, being less excellent by nature.

GOD RULES WITH JUSTICE.

O Jove, who rulest this revolving globe, and hast thy throne above it, whoever thou art, hard to be known even by conjecture, whether the necessity of nature or the ruling mind, I adore thee; for, proceeding by a noiseless track, thou guidest with justice all mortal affairs.

So Psalms (cxlv. 17)—"The Lord is righteous in all his ways, and holy in all His works."

LAMENT OF HECUBA OVER ASTYANAX.

O wretched one! how miserably have thy ancestral walls, the towers by Phœbus raised, rent the crisped ringlets from thy head, which thy mother fondly cherished with kisses, whence, amidst the crushed bones, murder grins out, to abstain from words more shocking! O hands! which once bore the dear image of thy father's, but now lie with loosened joints. O thou dear mouth! which utterdest many a pleasantry, thou hast perished; thou hast deceived me, when, flinging thyself on my couch, thou wouldst exclaim, "O mother! I shall cut off these clustering locks for thee, and to thy tomb shall lead bands of compeers, hailing thee with dear address." Thou dost not bury me, but I, old, left of my children, of my country, bury thee, dead in thy early bloom, a wretched corpse. Alas! those fond embraces, those nursing cares, those lullabies, have all vanished. And on thy tomb what verse shall the bard inscribe?—"This boy who lies here the Greeks once slew, for they feared him,"—a verse recording the disgrace of Greece.

FORTUNE.

Foolish I deem him who, thinking that his state is blest, rejoices in security; for fortune, like a man distempered in his senses, leaps now this way, now that, and no man is always fortunate.

THE DEAD.

I deem that it is of little importance to the dead whether he obtain costly obsequies; this is the vain affectation of the living.

TO DIE IS BETTER.

But death, a better fate, has befallen me.
So Philippians (i. 21)—"To die is gain."

THE DEMAGOGUE.

A thankless race you are, who try to gain honor from the mob by oratory; would that you were not known to me, who reck not of injuries done to friends if your fine speech wins you favor with the people.

WEIGHT OF COUNSEL.

It is not the counsel but the speaker's worth that gives weight to his eloquence.

NOBILITY.

To be born of noble parents is a great and distinguishing badge among men, and the name of nobility among the illustrious advances from great to greater still.

THE GOOD AND THE BAD.

To all eternity the bad can never be but bad, the good but good; nor in misfortune does man degenerate from his nature, but he is always good. Is this difference from parents or from education? To be brought up well instils, indeed, the principles of honor; and he that is thus taught knows, by the law of honor, what is base.

THE SAILOR.

In a large army the rabble are riotous, and the sailors' insolence runs like wildfire; not to join in wickedness is a crime.

THE GODS.

The gods are strong, and powerful is their law; for by the law we judge that there are gods, and form our lives, having right and wrong strictly defined.

PERSUASION.

Wretch that I am, why should we poor mortals strive after sciences of all kinds as matter of duty, diving into them, while we slight, as nothing worth, Persuasion, the sole mistress o'er the minds of men, refusing to pay money for that by which we might persuade and gain what we wish?

THE EVENTS OF LIFE.

How strange the events of human life! laws control even the Fates, changing the sternest foe to a kind friend, and making enemies of those who before were on good terms.

THE BOASTED LIBERTY OF MAN.

There is no man free; for he is a slave either to wealth or fortune, or else the populace of the city or the laws prevent him from acting according to the dictates of his will.

THE WICKED.

For this is for the general good of all—individuals and states, that punishment should overtake the wicked, and that the virtuous should enjoy happiness.

WOMEN.

To be brief, if any one in past times has reviled women, if any one now does, or hereafter shall revile them, in one brief sentence I shall comprise the whole: it is a breed which neither sea nor earth produces the like; he who is always with them knows them best.

FRIENDSHIP.

In adversity the friendship of the good shines most clearly; prosperity never fails in friends.

MAN'S EVIL MANNERS.

Would that the Greeks had forgotten the evil fortune which I now endure, but preserved the good in memory as they preserve my bad.

Shakespeare ("Henry VIII.," act iv. sc. 4) says—

"Men's evil manners live in brass; their virtues
We write in water."

A RUDE HUSBAND.

When a husband treats a woman roughly, it is better to die.

NOTHING STRONGER THAN NECESSITY.

Not mine

This saying, but the sentence of the sage,
Nothing is stronger than necessity.

DIFFERENT FORTUNES TO DIFFERENT MEN.

My daughter, how God assigns to different men fortunes different and inscrutable! But well I ween He turns affairs upside down, bearing them hither and thither: one toils, another knows not toil, but ruin overwhelms him, having no firm hold on fortune.

PRUDENCE.

No one ever grew rich on hallowed flames by idly gazing: discernment and prudence are the best of prophets.

LIGHT LIES THE EARTH ON THE BRAVE.

For, if the gods be wise, they will lay the earth lightly on the grave of the brave, but cast the craven beneath a hard mound of earth.

THE UNRIGHTEOUS.

No one that is unrighteous has ever prospered, but hopes of safety never forsake the just.

"WHO HATH KNOWN THE MIND OF THE LORD?"

Whether it was a god, or not a god, or something between, who of mortals by searching to the end can find out?

THE LABORER.

It is pleasant for a laborer returning from a distance to find things in his house aright.

THE NOBLE TO BE JUDGED BY MANNERS AND BY DEEDS.

There is no outward mark to note the noble, for the inward qualities of man are never clearly to be distinguished. I have often seen a man of no worth spring from a noble sire, and worthy chil-

dren arise from vile parents, meanness grovelling in the rich man's mind and generous feelings in the poor. How, then, shall we discern and judge aright? By wealth? we shall make use of a bad criterion. By poverty? poverty has this disadvantage: it prompts a man to evil deeds. Shall it be by arms? But who, by looking to the spear, could thereby discern the dauntless heart? It is best to leave these things to be decided as they may. For this man, neither great among the Argives nor puffed up by the honors of his house, being plebeian, has proved his nobility by nature. Will ye not, then, learn wisdom, ye who wander in the paths of vanity? Will ye not learn to judge the noble by manners and by deeds? For such men as these discharge their duties with honor to the state and to their house. Mere flesh without a spirit is nothing more than statues in the Forum. For the strong arm does not abide the shock of battle better than the weak: this depends on nature and an intrepid mind:

JUDGE NOT BY OUTWARD APPEARANCE.

They are noble in appearance, but this is mere outside; for many noble-born are base.

MARRY YOUR EQUAL.

And among all the Argives thou didst hear such words as these—"The man obeys the wife, and not the wife her husband." This is shameful for the woman, that the man should not rule the household; and I hate those children who are spoken of as sprung from the mother, not the father. For he who weds a wife of higher rank and nobler blood sinks into nothing, lost in her superior splendor.

UNJUST WEALTH.

Nature is immovable, not riches; she remains forever and uplifts her head: but wealth unjustly acquired, and in the possession of the base, is wont to flit from the house, having flourished for some short space.

A WOMAN.

When a wrong idea possesses a woman, much bitterness flows from her tongue.

WOMAN.

The woman who, in her husband's absence, seeks to set her beauty forth, mark her as a wanton; she would not adorn her person to appear abroad unless she was inclined to ill.

VICE HOLDS A MIRROR TO THE GOOD.

Evil deeds hold up an example and mirror to the good.

WED NOT A VICIOUS WOMAN.

Whoever, allured by riches or high rank, marries a vicious woman is a fool; for an humble yet modest partner is better in our house than a noble one.

WOMAN.

Fortune rules in nuptials; for some I see to be a source of joy to mortals, others turn out badly.

THE HAPPY.

Whoever is able to pass through life calmly, and labors not under affliction, we deem to be blest.

AN UNBRIDLED TONGUE.

He had an unbridled tongue, the worst of diseases.

NATURE.

O nature, how great an ill thou art among the bad, but in the virtuous a safeguard.

SLEEP.

O precious balm of sleep, thou that soothest disease, how pleasant thou camest to me in the time of need! O divine oblivion of my sufferings, how wise thou art, and a goddess to be invited by all in distress!

Shakespeare ("Henry IV.," part II. act III. sc. 1)—

"O sleep, O gentle sleep!

Nature's soft nurse, how have I frightened thee,
That thou no more wilt weigh my eyelids down,
And steep my senses in forgetfulness."

MAN THAT IS FORTUNATE IN HIS CHILDREN.

Happy the man who is blest in his children, and hath not in them experienced grievous calamities.

A HAPPY MARRIAGE.

Life is blest to those whose connubial state is well arranged; but to those to whom it falls not out well, their affairs are unfortunate at home and abroad.

A FRIEND IN NEED.

Friends should assist friends in misfortunes; when fortune smiles, what need of friends? For God himself sufficeth, being willing to assist.

AN EXCITED MOB.

When the excited populace is in full fury, it is as difficult to control them as it is to extinguish a rolling flame; but if we yield to their violence as it is spreading, watching our opportunity, they may perhaps exhaust their rage, and, as their fury abates, thou may then turn them as thou pleassest. Their passions vary, now melting to pity, now rough with rage, affording an excellent advantage to one who watches carefully his opportunity.

A FRIEND IN NEED.

In distress a friend comes like a calm to the tempest-tossed mariner.

SYMPATHY.

Since the man who melts with social sympathy, though not allied in blood, is more valuable as a friend than ten thousand kinsmen.

THE SMOOTH TONGUE.

After him rises up a man of licentious tongue, intemperate, an Argive, yet not an Argive, forced

upon us, trusting to thoughtless tumult, and prompt to lead with empty words the populace to mischief. For the smooth tongue that charms to ill brings great evil on the city. Whereas those who give good advice with forethought, though not immediately, yet eventually are of use to the state; but the far-seeing ruler ought to look to this.

THE MAN OF INTEGRITY AND PRUDENCE.

But another rose altogether different, not made to please the eye, but of manly form, one who rarely joined the city circles, a yeoman. which class of men alone preserve the country, prudent, wishing his conduct to be in harmony with his words, passing a pure and blameless life.

THE WISE FRIEND.

There is no blessing like a prudent friend, neither riches nor the power of monarchs: popular applause is of little value in exchange for a generous friend.

LIFE IS SWEET.

To every man, even though he be a slave, the light of heaven is sweet.

WOMEN.

For women are formed by nature to feel some consolation in present troubles, by having them always in their mouth and on their tongue.

WOMAN BROOKS NOT A RIVAL.

Woman is prone by nature to jealousy, and brooks not a rival in the nuptial bed.

THE HIGH-BORN.

For those who are puffed up with pride will brook the speech of their inferiors though urged with reason.

A BAD WOMAN.

Strange that one of the gods should have given healing medicines against the venom of savage serpents, yet none have found a cure against a bad woman, more noxious than the viper or fire itself; so pestilent an ill are we to men.

GLORY.

Glory, O glory! thou hast uplifted high in life countless mortals who were naught: those I deem to be happy who have acquired glory truthfully; but those who have it falsely I consider to have it not; it is the mere wantonness of fortune that has given it to them.

THE SEMBLANCE OF POWER.

Those who only wear the semblance of worth have splendid outsides, but within are found like other men, unless they gain some eminence for wealth; this, indeed, hath mighty power.

THE DAUGHTER OF A BAD MOTHER.

Before his nuptials, I warned my son not to form alliance with thee, nor receive within his

house the foal of a bad mother, for such bring with them their mother's faults; wherefore remember this, ye woovers, make your brides daughters of a virtuous mother.

THE TONGUE.

From a small beginning the tongue excites mighty strife among men; but the prudent guard against contention with their friends.

SOCIAL INTERCOURSE.

Social intercourse is the teacher of all things to mortals.

OLD AGE.

The race of old men is by nature hasty and impatient of control, through choler.

THE PASSIONATE.

If he be passionate, he will meet with passion, and shall receive deeds in return for deeds.

So Matt. (v. 31)—"Ye have heard that it was said by them of old time, Thou shalt not kill; and whosoever shall kill shall be in danger of the judgment: but I say unto you, that whosoever is angry with his brother without a cause shall be in danger of the judgment."

A VOICE AND NOTHING MORE.

What thou sayest I bear unmoved; for thou hast a voice void of power, like a shadow: thou canst do naught but talk.

CALAMITIES SOONER OR LATER.

Calamities sent by the gods come to all mortals sooner or later.

So Proverbs (xvi. 33)—"The lot is cast into the lap; but the whole disposing thereof is of the Lord."

FEMALE BUSYBODIES.

But never, never (for I shall repeat it more than once), should the wise allow females to frequent their house; they are instructors to evil deeds. One corrupts the wife to make gain by it; another, who has fallen from virtue, wishes to make her vile like herself; and many do this from mere wantonness; hence the homes of men are ruined. Against such let him guard well his gates with bolts and bars; for these visits of women from without do no good, but abundant ill.

FATES OF MEN.

Seekest thou not what various fates the Divinity makes man to pass through, changing and turning them from day to day.

TIME.

Time will discover everything to posterity: it is a babbler, and speaks even when no question is put.

FATHERLAND.

What is more dear to a man than his fatherland?

DEATH.

The debt of nature must be paid; even by the man who remains at home, away from all dangers.

VIRTUOUS LIFE.

Virtuous and noble deeds are better than high descent.

THE TONGUE.

If thou wilt not restrain thy tongue, it will bring evil upon thee.

RICH AND POOR.

Do you think that a land can prosper where the whole government is in the hand of the poor, without any admixture of the rich? The rich and poor should not be separate; but there should be a mixture, that the country may prosper. For the rich supply what the poor have not; and what we rich men do not possess, we can obtain by employing the poor.

WICKED ACTIONS OF MEN.

Do you think that the evil deeds of men fly on wings to heaven, and are there registered in the books of Jove, and that he, examining each, inflicts punishment on men? If it were so, the whole expanse of heaven would not be sufficient to contain the sins of mankind, nor could Jove have time to read and punish each. Yet Vengeance, if we only carefully watch, dwells always near us. O woman, the gods send this to take vengeance on those men whom they hate, for no bad man is beloved by them.

VENGEANCE OVERTAKES THE WICKED.

Whoever thinks that he can go on committing sin without the knowledge of the gods, acts foolishly; he will be overtaken, when Vengeance finds leisure, and will suffer for all his former misdeeds.

VENGEANCE SLOW OF FOOT.

Vengeance comes not openly, either upon you or any wicked man, but steals silently and imperceptibly, placing his foot on the bad.

FORTUNE ATTENDS ON THE WISE.

Experience has shown that whoever first uttered the proverb was right when he said "that Fortune is the constant attendant on the wise and prudent."

VARIOUS INCLINATIONS OF MEN.

Various are the inclinations of man: one desires to be considered noble; another cares nothing for high birth, but wishes to be possessed of much wealth. Others, long for eloquence to persuade their audience to anything, however audacious. Others, again, prefer gain to honor; so dissimilar are men. For my own part, I care for none of these, but pray for a good name and reputation.

A BAD BEGINNING BRINGS A BAD ENDING.

A bad ending follows a bad beginning.

DEATH THE FATE OF ALL.

All must die; it is wisdom to submit with patience to the common lot.

CHILDREN LIKE THEIR FATHER.

Son of Creon, how true is the observation, that noble children spring from noble fathers; and that the children of the bad are like in nature to their parents.

NEVER DESPAIR.

The wise should possess their lives in hope.

GOD DEPRIVES OF REASON HIM WHOM HE WISHES TO DESTROY.

When God is contriving misfortunes for man, He first deprives him of his reason.

PLEASANT TO REMEMBER PAST LABORS.

How pleasant it is for him who is saved to remember his danger.

A FATHER'S ADVICE TO HIS SON.

In the first place, thou must have a gentle disposition: pay respect to all, giving the rich not more than an equal portion: be not opinionative when one of two things must be determined: get not riches by unjust means, if thou wishest them to continue in thy family, for riches unjustly acquired quickly vanish; yet try to get them, for riches and high descent enable a man to marry well: in poverty there is dishonor, even though a man be wise, and also disgrace: get friends who are not willing to yield to thy wishes, and shut the bars of thy doors against the wicked, who are anxious to gratify thy desires: love the conversation of those who are older than thyself, and hate those of intemperate habits, only pleasant to joke with; the enjoyment of unholy pleasure is of short duration.

ENVY.

Who was the mother or father that produced ill-omened envy, such a great ill to mortals? Where does she dwell, and in what part of the body? Is she in our hands, or heart, or eyes? What a dreadful labor for physicians to remove this greatest of all diseases in men, whether by the knife, by potions, or drugs!

PEACE.

Peace, thou richest and most beautiful of the happy gods, the envy of all, why dost thou loiter? I fear lest old age overtake me with its ailments before I behold thy delightful produce, songs with the dance and garland-crowned revellings. Thou benignant goddess, visit my city, and drive off from my house bloody sedition and frantic contention, delighting in the sharp-pointed sword.

GOD HELPS THEM THAT HELP THEMSELVES.

Call in self-help, then ask the gods to aid,
For the gods aid the man who helps himself.

HERODOTUS.

BORN B.C. 484—WAS ALIVE B.C. 408.

HERODOTUS, the father of history, was a native of Halicarnassus, a town of Caria, in Asia Minor.

Of his private history very little information, on which reliance can be put, has come down to us. He was the son of Lyxes and Dryo, being descended from a family not less distinguished for its wealth and political influence than for its love of literature. His uncle, Panyasis, was highly esteemed as an epic poet. The tyranny of Lygdamis drove him from his native town, and though he assisted in delivering his country, the disputes among the citizens after their liberation were so little to his taste that he withdrew again, and settled at Thurii, in the south of Italy, where he spent the remainder of his life, and wrote, according to Pliny, his work in his old age. According to Lucian, Herodotus read his work to the assembled Greeks at Olympia, B.C. 456, with the great applause of the audience, in consequence of which the nine books of the work have been honored with the name of the Nine Muses. He also states that Thucydides, then about fifteen or sixteen years of age, was present at this recitation, and was moved to tears. To this work we are indebted for our knowledge of the origin and progress of the Persian monarchy; of that of the Medes and Assyrians.

SEEING BETTER THAN HEARING.

I am satisfied that we are less convinced by what we hear than by what we see.

ATTEND TO OUR OWN AFFAIRS.

Many are the precepts recorded by the sages for our instruction, but we ought to listen to none with more attention than that, "It becomes a man to give heed to those things only which regard himself."

LIFE IS NOTHING BUT MISERY.

Thus, Croesus, does our nature appear an uninterrupted series of misfortunes.

So Ecclesiastes (I. 14)—"I have seen all the works that are done under the sun; and, behold, all is vanity and vexation of spirit."

THE RICH MAN AND THE POOR CONTRASTED.

The man of affluence is not, in fact, more happy than the possessor of a bare competency; unless, in addition to his wealth, the end of his life be fortunate. We often see misery dwelling in the midst of splendor, whilst real happiness is found in humbler stations.

THE HAPPY MAN

The rich man, indeed, is better able to indulge his passions, and to bear up against any harm that may befall him. The poor man's condition prevents him from enjoying such advantages; but then, as a set-off, he may possess strength of body, freedom from disease, a mind relieved from many of the ills of life, is blessed in his children, and active in his limbs. If he shall, besides, end his life well, then, O Croesus, this is the happy man, about whom thou art curiously inquiring. Call no man happy till thou knowest the end of his life; up till that moment he can only be called fortunate.

LOOK TO THE EVENT.

It is the part of wisdom to wait to see the final result of things; for God often tears up by the roots the prosperous, and overwhelms with misery those who have reached the highest pinnacle of worldly happiness.

HEAVY PUNISHMENTS FOR GREAT CRIMES.

The gods inflict heavy punishment on great crimes.

So Psalms (xlv. 18)—“Come, behold the works of the Lord what desolations He hath made in the earth. He maketh wars to cease unto the end of the earth; He breaketh the bow, and cutteth the spear in sunder; He burneth the chariot in the fire. Be still, and know that I am God.”

ALL WORK AND NO PLAY MAKES JACK A DULL BOY.

They who are skilled in archery bend their bow only when they are preparing to use it; when they do not require it, they allow it to remain unbent, for otherwise it would be unserviceable when the time for using it arrived. So it is with man. If he were to devote himself unceasingly to a dull round of business, without breaking the monotony by cheerful amusements, he would fall imperceptibly into idiocy, or be struck by paralysis. It is the conviction of this truth that leads to the proper division of my time.

CUSTOM.

Such is the force of custom; and Pindar seems to me to have spoken with peculiar propriety when he observed that custom was the universal sovereign.

UPS AND DOWNS OF LIFE.

It is no doubt pleasant to hear of the prosperity of a friend and ally; but, as I know the envious nature of Fortune, and how jealous she is of our success, thou must not be surprised that I feel some apprehensions respecting thee. In fact, if I could be allowed to choose for myself, and for those dear to me, I should prefer that the gale blew sometimes favorable and sometimes adverse. I would rather that my life was checkered with good and evil than that I should enjoy an uninterrupted course of good fortune. I do not remember of having ever heard of a man remarkable for a long run of good luck who did not in the end close his life with some extraordinary calamity. If, then, thou wilt attend to my advice, thou wilt provide the following remedy against the excess of thy prosperity. Consider in thy own mind on what thou placest the highest value, and the loss of which thou wouldst most deplore; cast this from thee, so that there may be no possibility of its return. If thy good fortune still continue, thou wilt do well to repeat the remedy.

BETTER TO BE ENVIED THAN PITIED.

Thou hast learned by experience how much better it is to be envied than pitied.

POWER IS PRECARIOUS.

Power, which many so assiduously court, is in its nature precarious.

CHARACTER OF TYRANTS.

For insolence is the natural result of great prosperity, while envy and jealousy are innate qualities in the mind of man. When these two vices are combined, they lead to the most enormous crimes: some atrocities are committed from insolence, and others from envy. Princes ought to be superior to all such feelings; but, alas! we know that this is not the case. The noble and the worthiest are the object of their jealousy, merely because they feel that their lives are a reproach to them; with the most abandoned they rejoice to spend their time. Calumny they drink in with greedy ears. But what is the most paradoxical of all, if thou showest them merely respectful homage, they take umbrage because thou art not sufficiently humble; whereas, if thou bend the knee with the most submissive looks, thou art kicked away as a flatterer.

ENVY.

Envy is implanted by nature in man.

So Proverbs (xiv. 30)—“Envy is the rottenness of the bones.”

FORCE OF LITTLE AVAIL.

For where wisdom is required, force is of little avail.

POWERS OF MIND STRENGTHEN AND GROW WEAK WITH THE BODY.

For the powers of the mind gather strength with those of the body; and in the same way, as old age creeps on, they get weaker and weaker, till they are finally insensible to everything.

BENEFITS OF DISCUSSION.

Unless a variety of opinions are laid before us, we have no opportunity of selection, but are bound of necessity to adopt the particular view which may have been brought forward. The purity of gold cannot be ascertained by a single specimen; but when we have carefully compared it with others, we are able to fix upon the finest ore.

So Thomson (“Liberty,” Part II.)—

“Friendly free discussion calling forth
From the fair jewel Truth its latent ray.

DELIBERATION AND FORETHOUGHT.

For my own part, I have found from experience that the greatest good is to be got from forethought and deliberation; even if the result is not such as we expected, at all events we have the feeling that we have done all in our power to merit success, and therefore the blame must be attached to fortune alone. The man who is foolish and inconsiderate, even when fortune shines upon him, is not the less to be censured for his want of sense. Dost thou not see how the thunderbolts of heaven lay prostrate the mightiest animals, while they pass over the weak and insignificant? The most splendid palaces and the loftiest trees fall before these weapons of the gods. For God loves to humble the mighty. So also we often see a powerful army melt away before the more contemptible force. For when God in His wrath sends His terrors

among them, they perish in a way that is little worthy of their former glory. The Supreme Being allows no one to be infinite in wisdom but Himself.

So Psalms (cxlvii. 5, 6)—"Great is our Lord, and of great power; His understanding is infinite. The Lord lifteth up the meek; He casteth the wicked down to the ground." And Mark (x. 27)—"With God all things are possible."

CALUMNY.

Calumny is a monstrous vice; for, where parties indulge in it, there are always two that are actively engaged in doing wrong, and one who is subject to injury. The calumniator inflicts wrong by slandering the absent; he who gives credit to the calumny, before he has investigated the truth, is equally implicated. The person traduced is doubly injured—first by him who propagates, and secondly by him who credits, the calumny.

DREAMS.

Dreams, in general, take their rise from those incidents which have most occupied the thoughts during the day.

DEATH IS THE REFUGE OF THE UNFORTUNATE.

Brief as this life is, there is no one in the multitude, nor yet in the whole universe, that has been so happy at all times as not repeatedly to have prayed for death rather than life. Heavy trials in worldly affairs, the pangs of disease, render the short span of life of too long duration. Thus death, when life becomes a burden, is a delightful hiding-place for wearied man; and the Divinity, by giving us pleasures, and thereby inducing us to wish for length of days, may in reality be considered as doing us an injury.

CIRCUMSTANCES COMMAND MEN.

Remember that men are dependent on circumstances, and not circumstances on men.

GREAT RESULTS FROM GREAT DANGERS.

Great results usually arise from great dangers.

So Acts (xiv. 22)—"That we must through much tribulation enter into the kingdom of God."

"WE KNOW IN PART."

Can one who is mortal be infallible? I believe that he cannot.

So 1 Corinthians (xiii. 9)—"For we know in part and we prophecy in part."

INACTIVITY CONDEMNED.

It is better by a noble boldness to run the risk of being subject to half of the evils which we anticipate, than to remain in cowardly listlessness for fear of what may happen.

So 1 Thessalonians (i. 6)—"Having received the Word in much affliction, with joy of the Holy Ghost."

A WISE MAN RECEIVES A KINDNESS.

Wherefore it is not to be supposed that a wise man should refuse a kindness that is offered to him, but rather be anxious to embrace it.

So Luke (vi. 38)—"And if ye do good to them which do good to you, what thank have ye? for sinners also do even the same."

ENVY.

One man envies the success in life of another, and hates him in secret; nor is he willing to give him good advice when he is consulted, except it be by some wonderful effort of good feeling, and there are, alas! few such men in the world. A real friend, on the other hand, exults in his friend's happiness, rejoices in all his joys, and is ready to afford him his best advice.

So James (iii. 16)—"Where envying is, there is confusion and every evil work."

PRUDENCE AND RASHNESS.

Those who are guided by reason are generally successful in their plans; those who are rash and precipitate seldom enjoy the favor of the gods.

So Ecclesiastes (v. 2)—"Be not rash with thy mouth, and let not thine heart be hasty to utter anything before God: for God is in heaven, and thou upon earth; therefore let thy words be few."

KINGS HAVE LONG ARMS.

For the power of a king is superhuman, and his hand is very long.

THE WILL OF PROVIDENCE CANNOT BE RESISTED.

My friend, it is vain for man to contend with the will of Providence; though the words of the wise are seldom listened to. Many of the Persians think as I do, but, forced by necessity, they yield to what they find it impossible to avoid. This is one of the saddest evils to which mankind is subject, that the advice of the wise is little attended to.

So Hebrews (xii. 5)—"My son, despise not thou the chastening of the Lord, nor faint when thou art rebuked of him."

CHARACTER OF MEN DEPENDS ON THE NATURE AND CLIMATE OF THE COUNTRY.

It is a law of Nature that faint-hearted men should be the fruit of luxurious countries, for we never find that the same soil produces delicacies and heroes.

HESIOD.

FLOURISHED PROBABLY ABOUT B.C. 850.

HESIOD, a celebrated poet, was a native of Ascra, in Boeotia, whither his father had emigrated from the Æolian Cuma, in Asia Minor. The early years of the poet were spent in the mountains of Boeotia, in the humble capacity of a shepherd; but his circumstances seem to have improved, as we find him engaged on the death of his father, in a lawsuit with his brothers, respecting the property left by his father. The judges of Ascra gave judgment against him, and in consequence of this he left his native city, and retired to Orchomenos, where he spent the remainder of his life. The ancients attributed to Hesiod a variety of works, but few of them have come down to us. The "Works and

Days" is considered the most valuable, not so much from its own intrinsic worth as for having suggested to Virgil the idea of the Georgics. Its style is plain and homely, without much poetical imagery or ornament; but it must be looked upon as the most ancient specimen of didactic poetry.

WISE KING.

The people all look up to him as he administers justice with impartial judgment; with wise words quickly he calms even the wildest tumult, for kings are endued with wisdom that they may easily quell factious deeds when the people are misled by demagogues, soothing them with soft words; as he goes through the city all hail him as a god, with gentlest awe, and he stands conspicuous midst the assembled council.

THE BARD.

Blessed is he whom the Muses love! sweetly do his words flow from his lips. Is there one afflicted with fresh sorrow, pining away with deep grief? then if the minstrel, servant of the Muses, sings the glorious deeds of men of yore, the praise of the blessed gods who dwell in Olympus, quickly does he forget his sorrows, nor remembers aught of all his griefs; for the gifts of these goddesses swiftly turn his woes away.

THE DRONES.

As when bees in close-roofed hives feed the drones, partners in evil deeds, the former all day long, to the setting sun, their murmuring labors ply, filling the pure combs; while the drones, remaining within, reap the labors of others for their own maws.

SLEEP AND DEATH.

There dwell Sleep and Death, dread gods, the progeny of gloomy Night; the sun never looks upon them with its bright rays, neither when he mounts the vault of heaven nor when he descends; the former in silence passes over the earth and the wide expanse of sea, giving pleasure to mortals; of the other, iron is the heart, and his brazen breast is merciless; whomsoever of men he first seizes he holds, and is hostile even to the immortal gods.

FATE OF MAN DETERMINED BY GOD.

By whom mortal men are raised to fame or live obscurely, noble or ignoble, by the will of Jove; with ease he lifts or brings low, with ease he dims the brightest name and ennoble the meanest; with ease high-thundering Jove, who dwells on high, makes the crooked straight and unnerves the strong.

So 1 Samuel (ii. 7, 8)—"The Lord maketh poor, and maketh rich: He bringeth low, and lifteth up. He raiseth up the poor out of the dust, and lifteth up the beggar from the dunghill, to set them among princes, and to make them inherit the throne of glory: for the pillars of the earth are the Lord's, and He hath set the world upon them." And Psalms (cxlii. 7, 8)—"He raiseth up the poor out of the dust, and lifteth the needy out of the dunghill; that He may set him with princes, even with the princes of His people." And Luke (i. 51-53)—"He hath showed strength with His arm: He hath

scattered the proud in the imagination of their hearts. He hath put down the mighty from their seats, and exalted them of low degree. He hath filled the hungry with good things; and the rich He hath sent empty away."

EMULATION IS GOOD.

Emulation is good for mankind.

THE ENVIOUS.

The potter envies the potter, the carpenter the carpenter, the poor is jealous of the poor, and the bard of the bard.

HALF BETTER THAN THE WHOLE.

Fools that, they are, they know not how much the half is better than the whole, nor how great pleasure there is in wholesome herbs—the mallow and the asphodel.

GOD LAUGHS AT VAIN DESIGNS.

Thus he spoke; and the sire of men and gods out-laughed.

So Psalms (li. 4)—"He that sitteth in the heavens shall laugh: the Lord shall have them in derision." And Milton, "Paradise Lost" (Bk. v. 785)—

"Mighty Father, thou my foe
Justly hast in derision, and secure,
Laugh'st at their vain designs and tumults vain."

THE WORLD FULL OF ILLS.

For the earth is full of woes, and also the sea; diseases go about noiselessly, bearing of themselves sorrows to mortals night and day, since Jove has taken from them the power of speech; so impossible is it to avoid the will of Jove.

EASY DEATH.

They died as if overcome with sleep.

GUARDIAN SPIRITS.

These are the aerial spirits of great Jove, beneficent, walking over the earth, guardians of mankind; they watch our actions, good and bad, passing everywhere over the earth, invisible to mortal eyes; such royal privilege they possess.

So Psalms (xcii. 11)—"For He shall give His angels charge over thee, to keep thee in all thy ways."

JUSTICE AND RIGHT PREVAIL.

For insolence is unsuited to wretched mortals, often even the high and powerful allow themselves to be carried away by arrogance, and, yielding to this feeling, subject themselves to misery and losses. On the other hand, the road leading to justice is the safer; justice at last gets the better over wrong: this truth even the fool knows by experience.

THE UPRIGHT GOVERNOR.

Those who administer the laws with justice to strangers and natives, never transgressing what is right, by these the city flourishes in peace, and the people prosper. Peace is a good nursing-mother

to the land, nor does far-seeing Jove send among them troublous war.

A SINNER.

Of a whole state suffers for the acts of a bad man, who breaks the laws of heaven and devises evil. On them Jove brings great calamity, both famine and pestilence, and the people perish.

THE WICKED BRING EVIL ON THEMSELVES.

What calamities does a man contriving evil for his neighbor bring upon himself! An evil design is worst for the contriver. The eye of Jove, that sees and knows all things, looks upon these things if he wills it, nor is it concealed from him what kind of justice a state administers.

ROAD TO WICKEDNESS EASILY FOUND.

It is easy for thee to get associates in wickedness; the road is smooth, and the dwellers are all around thee. But the immortal gods have placed the sweat of the brow before virtue: long and steep is the path that leads to it, and rough at first; but when the summit is reached, then it is easy, however difficult it may have been. That man is by far the wisest who is able of himself, to determine what is best both for the present moment and for the future: next, he is wise who yields to good advice; but he that is not wise himself, nor can hearken to wisdom, is a good-for-nothing man.

Milton, in his "Essay on Education," seems to have imitated this passage—"I shall detain you now no longer in the demonstration of what we should not do, but straight conduct you to a hill-side, where I will point you out the right path of a virtuous and noble education; laborious indeed at the first ascent, but also so smooth, so green, so full of goodly prospect and melodious sounds on every side, that the harp of Orpheus was not more charming."

THE SLUGGARD.

Both gods and men are indignant with him who lives a sluggard's life like to the stingless drones, who lazily consume the labors of the bees.

LABOR NO DISGRACE.

Work is no disgrace, but idleness is a disgrace.

SHAME.

It is not well for false shame to accompany the needy, shame that both injures greatly and aids mankind; false shame leads to poverty, but confidence to wealth; wealth should not be got by plunder: what is given by God is far better.

So Ecclesiasticus (iv. 21)—"For there is a shame that bringeth sin; and there is a shame which is glory and grace."

A BAD NEIGHBOR.

A bad neighbor is as great a misfortune as a good one is a blessing.

RETURN LOVE FOR LOVE.

Return love for love, and assist him who assists thee; give to him who gives to thee, and give not to him who gives not.

EVIL GAINS EQUAL TO A LOSS.

Do not make unjust gains; they are equal to a loss.

EVERY LITTLE ADDS TO THE HEAP.

For if thou addest little to little, and doest so often, soon it will become a great help to him who gathers, and he will thus keep off keen hunger.

"ONE SOWETH AND ANOTHER REAPETH."

They reap the labors of others, for their own belly.

Callimachus, the poet of Alexandria (circ. 300 B.C.), has a line in his "Hymn to Ceres" (137)—

"And those who ploughed the field shall reap the corn." Thomas Fuller, an excellent quoter of and commentator on proverbs, better than any moralist we know, purveys an antidote to bitterness at seeing others reap what we ourselves have sown, in his "Holy State." "The preacher of the Word," he says, "is in some places like the planting of woods, where, though no profit is received for twenty years together, it comes afterwards. And grant that God honoreth not thee to build His temple in thy parish, yet thou mayest with David provide metals and materials for Solomon thy successor to build it with."

MONEY IS LIFE.

Money is life to us wretched mortals.

HOW TO CHOOSE A WIFE.

In the spring-time of life, neither much above nor below thirty, lead home thy wife. Marriage at this age is seasonable. Thy wife should be in her nineteenth year. Marry a virgin, that thou mayest teach her discreet manners, and be sure to marry thy neighbor's daughter, acting with all prudence, lest thou marry one who may prove a source of pleasure to thy neighbors. For there is nothing better than a good wife, and nothing worse than a bad one, who is fond of gadding about. Such a one roasts her husband, stout-hearted though he may be, without a fire, and hands him over to a premature old age.

A SPARING TONGUE.

The best treasure among men is a frugal tongue, and that which moves measurably is hung with most grace.

So Proverbs (xv. 23)—"A word spoken in due season, how good is it!"

AN EVIL REPORT.

There is also an evil report; light, indeed, and easy to raise, but difficult to bear, and still more difficult to get rid of.

HIPPARCHUS.

FLOURISHED ABOUT B.C. 320.

HIPPARCHUS, an Athenian comic poet of the new comedy, was a contemporary of Diphilus and Menander.

SKILL.

By far the most valuable possession of all to all men for life is skill. Both war and the chances of fortune destroy other things, but skill is preserved.

HIPPONAX.

HIPPONAX of Ephesus flourished in the 6th century B.C. He is placed third, after Archilochus and Simonides, among the classic iambic poets of Greece.

THE TWO PLEASANTEST DAYS OF WOMEN.

The two pleasantest days of a woman are her marriage day and the day of her funeral.

HOMER.

HOMER, the greatest epic poet of Greece, lived at so remote a period that his existence is considered by some as a myth. At all events, he lived beyond what may be regarded the strictly historical epoch of Greek literature, the date of the period when he flourished varying no less than 500 years (from B.C. 1184-684). Many towns claimed to be his birth-place, but Smyrna seems to have established the best claim: he is said to have died at Ios, one of the Cyclades.

ANGER.

O goddess! sing of the deadly wrath of Achilles, son of Peleus, which brought unnumbered woes upon the Greeks, and hurled untimely many valiant heroes to the viewless shades.

So Proverbs (xxvii. 4)—"Wrath is cruel, and anger is outrageous."

"THE COUNSEL OF THE LORD."

And yet the will of Jove was being accomplished.

So Psalms (xxxiii. 11)—"The counsel of the Lord standeth forever, the thoughts of His heart to all generations."

A PESTILENCE.

For Apollo, enraged at the king, sent throughout the host a deadly pestilence, and the people died.

So 2 Samuel (xxiv. 15)—"So the Lord sent a pestilence upon Israel, from the morning even to the time appointed, and there died of the people, from Dan even to Beersheba, seventy thousand men."

A DREAM.

Come now let us consult some prophet or priest, or some vision-seer, since even visions are from Jove.

So Numbers (xii. 6)—"And he said, Hear now my words: if there be a prophet among you, I the Lord will make myself known unto him in a vision, and will speak unto him in a dream."

TO KNOW THE PAST, THE PRESENT, AND FUTURE.

Who knew the present, the future, and the past.

In Isaiah (xli. 25) we have—"Shew the things that are to come hereafter, that we may know that ye are gods."

THE ANGER OF A KING.

For a king is the more powerful of the two when he is enraged with a man of low degree; for though he may veil his wrath for awhile, yet in

his heart it still is nursed till the time arrive for his revenge.

A PROPHET OF ILL.

Thou prophet of ill, thou never speakest what is pleasing; ever dost thou take delight to augur ill.

So also in 1 Kings (xxii. 8)—"And the King of Israel said unto Jehoshaphat, There is yet one man, Micaiah the son of Imlah, by whom we may inquire of the Lord: but I hate him; for he doth not prophesy good concerning me, but evil."

"NO PLEASURE IN THE DEATH OF THE WICKED."

I wish rather my people's safety, than that they should perish.

So Ezekiel (xxxiii. 11)—"Say unto them, As I live, saith the Lord God, I have no pleasure in the death of the wicked; but that the wicked turn from his way and live;" and 2 Peter (iii. 9)—"The Lord is not slack concerning His promise, as some men count slackness: but is long-suffering to us-ward, not willing that any should perish, but that all should come to repentance;" and 1 Timothy (ii. 4)—"Who will have all men to be saved, and to come to the knowledge of the truth."

"GLORY NOT IN THY WISDOM."

If thou art stronger, some deity, I believe, has bestowed this gift on thee.

The idea is found in Jeremiah (ix. 23)—"Thus saith the Lord, Let not the wise man glory in his wisdom, neither let the mighty man glory in his might, let not the rich man glory in his riches;" and in 1 Corinthians (iv. 7)—"For who maketh thee to differ from another? and what hast thou that thou didst not receive? now if thou didst receive it, why dost thou glory, as if thou hadst not received it?"

THE GODS.

Those who revere the gods, the gods will bless.

So Proverbs (xv. 29)—"The Lord is far from the wicked; but He heareth the prayer of the righteous;" and John (ix. 31)—"Now we know that God heareth not sinners; but if any man be a worshipper of God, and doeth His will, him He heareth."

THE SCEPTRE OF THE KING.

Yea, by this sceptre, which shall never again put forth leaves and branches, since first it left its parent trunk upon the mountain-side, nor will it blossom more, since all around, in very truth, has the axe lopped both leaf and bark; and now 'tis borne emblem of justice by the sons of the Greeks, those who watch over the laws received from Jove.

WORDS SWEETER THAN HONEY.

From whose tongue, also, flowed the stream of speech sweeter than honey.

So Psalms (cxix. 103)—"How sweet are thy words unto my taste! yea, sweeter than honey to my mouth!"

THINE ENEMIES WILL REJOICE.

In very truth, what joy for Priam, and the sons of Priam, and what exultation for the men of Troy, if they should hear of feuds between you!

So Psalms (lxxxix. 48)—"Thou hast set up the right hand of his adversaries; thou hast made all his enemies to rejoice;" and 2 Samuel (i. 30)—"Publish it not in the streets of Askelon; lest the daughters of the Philistines rejoice, lest the daughters of the uncircumcised triumph."

"YE YOUNGER, SUBMIT YOURSELVES TO THE ELDER."

But obey, for ye are both younger than I am.

So 1 Peter (v. 5)—"Likewise, ye younger, submit yourselves unto the elder."

SUBMIT TO THE KING.

Do not, son of Peleus, feel inclined to fight with the monarch, since never to sceptred king has Jove given such glory as to Atreides.

So 1 Peter (ii. 13)—"Submit yourselves to every ordinance of man for the Lord's sake; whether it be to the king, as supreme."

NOD OF JUPITER.

The son of Saturn spoke, and nodded with his dark eyebrows; thereupon the ambrosial locks streamed down from the head of the immortal king, and he caused the mighty Olympus to tremble to its base.

GOD NOT TO BE RESISTED.

For the Olympian king is difficult to be opposed.

So Romans (ix. 19)—"Thou wilt then say unto me, Why doth He yet find fault? For who hath resisted His will?"—and 1 Corinthians (x. 29)—"Do we provoke the Lord to jealousy? are we stronger than He?"

THE LEADER OUGHT TO BE AWAKE.

It is not right for a statesman to sleep to whom nations are intrusted, and the public weal.

"THE POOR MAN'S WISDOM IS DESPISED."

If any other of the Greeks had related to us this vision, we should in all likelihood have deemed it false, and laughed to scorn the idle tale; but now he who is the noblest of the Greeks has seen it.

So Ecclesiastes (ix. 16)—"Then said I, Wisdom is better than strength; nevertheless the poor man's wisdom is despised, and his words are not heard."

BEES.

Even as go swarms of closely-thronging bees, always issuing in fresh numbers from the hollow rock: they fly in clusters to the vernal flowers; some have sped their flight in crowds here, others there.

THE POWER OF GOD.

Such, I suppose, now appears the sovereign will of Jove, who oft has destroyed, and again will pull down, lofty cities: for his power is omnipotent.

So Ezekiel (xxxv. 4)—"I will lay thy cities waste, and thou shalt be desolate; and thou shalt know that I am the Lord."

THE WRATH OF A KING.

Great is the wrath of a king under the protection of Jove; his high office, too, is from Jove, and counselling Jove loves him.

So Proverbs (xvi. 14)—"The wrath of a king is as messengers of death: but a wise man will pacify it;" and (viii. 15)—"By me kings reign and princes decree justice;" and Daniel (ii. 21)—"And He changeth the times and the seasons: He removeth kings and setteth up kings: He giveth wisdom unto the wise, and knowledge to them that know understanding;" and Romans (xiii. 1)—"Let every soul be subject unto the higher powers. For there is no power but of God: the powers that be are ordained of God."

THE MOB.

The government of the multitude is not good: let there be one lord, one sole monarch, to whom wise Saturn's son commits the sway and ministry of law, in token of sovereign power.

So Judges (ix. 13)—"Then said the trees unto the vine, Come thou and reign over us;" and 1 Samuel (viii. 5)—"Now make us a king to judge us like all the nations;" and Proverbs (xxviii. 9)—"For the transgression of a land many are the princes thereof; but by a man of understanding and knowledge the state thereof shall be prolonged;" and James (iii. 1)—"My brethren, be not many masters, knowing that we shall receive the greater condemnation."

CHARACTER OF A DEMAGOGUE.

But Thersites alone with unmeasured words, kept still clamoring among the throng, for he had store of them, to rate the chiefs; not over-seemly, controlled by no respect, but, with witty malice, uttering what might move the Greeks to laughter. He was, moreover, the ugliest man that came beneath the walls of Troy: bandy-legged, and lame in one foot; shoulders crooked, and drawn together toward his breast; his head pointed upwards, while thin woolly hair bestrewed it; he was specially hateful to Achilles and Ulysses, for he was ever reviling them.

"THE PRINCE THAT WANTETH UNDERSTANDING."

It is not proper for a ruler to bring evils on the sons of the Greeks.

So Proverbs (xxviii. 16)—"The prince that wanteth understanding is also a great oppressor."

"BE WISE, O YE KINGS!"

But, O king, be well-advised thyself, and yield to wholesome advice.

So Psalms (ii. 10)—"Be wise now therefore, O ye kings: be instructed, ye judges of the earth."

"WHATSOEVER THY HAND FINDETH TO DO."

No longer let us be talking here, nor put off the work which God has trusted to our hands.

So Ecclesiastes (ix. 10)—"Whatsoever thy hand findeth to do, do it with thy might; for there is no work, nor device, nor knowledge, nor wisdom in the grave, whither thou goest."

FLOCKS OF BIRDS.

Just as a numerous flock of winged fowl—of geese, or cranes, or long-necked swans—in the Asian mead, beside the streams of the Cayster, fly about, making a loud flapping with their wings, then settle down with clamorous noise, while all the mead resounds.

INSECTS.

As the thickly-swarming flies which gather round some shepherd's pen in spring-tide, while the milk is frothing in the pails.

DIVERSITY OF TONGUES.

The widespread nations spoke a variety of languages.

So Genesis (xi. 9)—"Therefore is the name of it called Babel; because the Lord did there confound the language of all the earth;" and Acts (ii. 4)—"They began to speak with other tongues, as the Spirit gave them utterance."

A SON SLAIN FOR DISOBEDIENCE TO HIS FATHER.

The two sons of the Perceosean Merops, who was killed above all in prophetic lore, nor would give permission to his sons to be present in the life-destroying war; but they refused to listen to him, his fate led them on to gloomy death.

So Samuel (ii. 35)—"Notwithstanding they hearkened not unto the voice of their father, because the Lord would slay him."

PROPHETIC LORE SAVES NOT A MAN.

But he did not ward off black death by his knowledge of future events.

So Isaiah (xviii. 18)—"Let now the astrologers, the stargazers, the monthly prognosticators, stand up and save thee from these things that shall come upon thee."

THE THIEF IN THE NIGHT.

As when the south wind spreads a mist on the peaks of the mountain, in no way a friend to the shepherd, but better to the thief than even the light.

So Job (xxiv. 14)—"The murderer rising with the light seeketh the poor and needy, and in the night is as a thief;" and 1 Thessalonians (v. 2)—"For yourselves know perfectly that the day of the Lord so cometh as a thief in the night."

THE GIFTS OF GOD NOT TO BE DESPISED.

The glorious gifts of the gods are not to be despised which they may have bestowed on thee, for we cannot select them ourselves.

So Ecclesiastes (iii. 13)—"And also that every man should eat and drink and enjoy the fruit of all his labor; it is the gift of God;" and 1 Timothy (iv. 4)—"For every creature of God is good, and nothing to be refused, if it be received with thanksgiving."

SWEAR NOT FALSELY.

Let no one violate what is ratified by oath by vain violence.

So Leviticus (xix. 12)—"And ye shall not swear by my name falsely, neither shall you profane the name of thy God; I am the Lord;" and Matthew (v. 33)—"Again, ye have heard that it hath been said by them of old time, Thou shalt not forswear thyself, but shalt perform unto the Lord thine oaths."

THE AGED.

For the spirits of the young are too quickly stirred; but in what things the old take a part, he looks before and after, that due provision be made for all interests.

So Ecclesiastes (xi. 10)—"Therefore remove sorrow from thy heart, and put away evil from thy flesh: for childhood and youth are vanity;" and Titus (ii. 6)—"Young men likewise be sober-minded."

A MAN OF FEW WORDS.

Few words, but in very clear and musical tones, since he was not a babbler nor a random talker, though young in years.

So Proverbs (x. 19)—"In the multitude of words there is much sin; but he that refraineth his lips is wise."

THE SUN.

And thou, O sun! thou seest all things and hearst all things in thy daily course.

So Psalm (xix. 6)—"His going forth is from the end of the heavens, and his circuit unto the ends of it; and there is nothing hid from the heat thereof."

YIELDING PACIFIETH GREAT OFFENCES.

But we shall give way to each other in these matters, I to thee and thou to me; and the other immortal gods will follow us.

So Ecclesiastes (x. 4)—"If the spirit of the ruler rise up against thee, leave not thy place; for yielding pacifieth great offences."

A METEOR.

Like to a bright meteor which the son of deep-designing Saturn sends, a portent to sailors or the broad army of the people scattering fiery sparks around.

Shakespeare ("Henry VI.," part I, act I, sc. 1) says—

"Hung be the heavens with black, yield day to night!
Comets, importing change of times and states,
Brandish your crystal tresses in the sky;
And with them scourge the bad revolting stars,
That have consented unto Henry's death."

"THE BATTLE IS THE LORD'S."

Jove, who dispenses peace and war to men.

So 1 Samuel (xvii. 47)—"And all this assembly shall know that the Lord saveth not with sword and spear; for the battle is the Lord's, and he will give you into our hands;" and Proverbs (xxi. 31)—"The horse is prepared against the day of battle: but safety is of the Lord."

"GOD SHALL AVENGE."

For though Olympian Jove does not avenge at once, he will avenge, though it may be after many days, and that severely,—with their own lives, and the lives of their wives and children.

So Habakkuk (i. 8)—"Why dost thou show me iniquity, and cause me to behold grievance? for spoiling and violence are before me: and there are that raise up strife and contention;" and Luke (xviii. 7)—"And shall not God avenge His own elect, which cry day and night unto Him, though He bear long with them? I tell you that He will avenge them speedily. Nevertheless when the son of man cometh, shall He find faith on the earth?"

THE LIAR.

For Jove shall not assist the liar.

So Proverbs (xix. 9)—"False witness shall not be unpunished; and he that speaketh lies shall perish."

"YEARS TEACH WISDOM."

But I shall still go forth with the chariots and give counsel and commands, for this is the privilege of the old, while the younger shall fight in the ranks.

So Job (xxxii. 7)—"I said, Days should speak, and multitude of years should teach wisdom."

LYING.

Son of Atreus, what kind of words has escaped from thy lips?

So Colossians (iii. 9)—"Lie not one to another, seeing that ye have put off the old man with his deeds."

THE ROAR OF THE SEA.

As when the ocean waves dash forward on the far-resounding shore, driven by the west wind, wave upon wave; first it curls with whitening crests; but anon it breaks upon the beach with thundering roar, and, recoiling, flings in great curves its head aloft, and tosses high the spray of the sea.

SILENT MARCH OF AN ARMY.

The rest in silence marched, nor couldst thou have said that all that moving host had voice in their breast: awe for their leaders wrought silence deep; while round all flashed the varied armor with which they were girt.

DISCORD.

Discord, restless without ceasing, sister and companion of man-slaying Mars, small at her birth, but afterwards with her head reaching heaven, while she stalks upon earth; then she rouses dire fury, rushing into the midst of the crowd, adding woe to mortals.

So Proverbs (xvii. 4)—"A wicked doer giveth heed to false lips; and a liar giveth ear to a naughty tongue;" and James (iii. 5)—"Even so the tongue is a little member, and boasteth great things. Behold how great a matter a little fire kindleth!"

MOUNTAIN TORRENT.

As when wintry torrents rushing down the mountains join together their furious waters from mighty springs within some deep ravine, while from afar the shepherd hears the roar on the far mountain's top.

AN UNSTABLE MAN.

As for Diomedes, thou couldst not know on which side he was.

So James (i. 8)—"A double-minded man is unstable in all his ways."

"LET US NOT FIGHT AGAINST GOD."

Fight not against the other immortal gods.

So Acts (xxiii. 9)—"And there arose a great cry: and the scribes that were of the Pharisees' part arose, and strove, saying, We find no evil in this man; but if a spirit or an angel hath spoken to Him, let us not fight against God."

THE WRATH OF GOD.

The wrath of God is difficult to be withstood.

So Psalms (li. 12)—"Kiss the Son, lest He be angry, and ye perish from the way, when His wrath is kindled but a little. Blessed are all they that put their trust in Him;" and (xc. 11)—"Who knoweth the power of thine anger? even according to thy fear so is thy wrath;" and Revelations (vi. 17)—"For the great day of His wrath is come; and who shall be able to stand?"

BLOOD OF THE GODS.

An immortal stream flowed from the god, ichor, such as flows from the blessed gods; for they do not feed on bread nor drink sparkling wine, therefore they are bloodless, and become immortal.

AFFLICTION AT THE DEATH OF A FATHER.

No children shall any longer, clinging to his knees, call him sire, returning safe from the war and fields of death.

CONTENT NOT WITH THE GODS.

Be advised, son of Tydeus; retire, and esteem not thyself a god, since not alike is the race of immortal gods and men, mere reptiles of the earth.

So Isaiah (xli. 8)—"Hearken unto me, O house of Jacob and all the remnant of the house of Israel, which are borne

by me from the belly, which are carried from the womb and Acts (v. 39)—"But if it be of God, ye cannot overthrow; lest haply ye be found even to fight against God."

THE HOURS.

Heaven's gates spontaneous open, guarded by the Hours, to whom great heaven and Olympus is given in charge, either to roll aside or draw the veil of thick clouds.

STENTORIAN VOICE.

Likening herself to strong Stentor, endued with brazen lungs, whose shout surpassed the force of fifty tongues.

QUIT YOU LIKE MEN.

My friends, quit ye like men, and be firm in the battle.

So 1 Samuel (iv. 9)—"Be strong, and quit yourselves like men, O ye Philistines! that ye be not servants unto the Hebrews as they have been to you: quit yourselves like men and fight;" and 1 Corinthians (xvi. 13)—"Watch ye, stand fast in the faith, quit you like men, be strong."

RACE SUCCEEDS RACE LIKE LEAVES.

As is the race of leaves, such is man: the wind scatters some on the ground, others the wood-budding puts forth, and the season of spring brings out; so also the race of men, one generation flourishes, another decays.

So Sirach (xiv. 18, 19); and Ecclesiastes (i. 4)—"One generation passeth away, and another generation cometh: but the earth abideth for ever."

FIRST IN WORTH AS IN COMMAND.

He sent me to Troy, and enjoined me oft to stand the first in worth as in command, nor bring discredit on my father's race, who had always held the foremost rank in Ephyre and Lycia's wide domain.

So 1 Corinthians (xii. 31)—"But covet earnestly the best gifts: and yet show I unto you a more excellent way;" and (xiv. 12)—"Even so ye, for as much as ye are zealous of spiritual gifts, seek that ye may excel to the edifying of the Church."

THE ADVANTAGE OF WINE.

Wine gives much strength to wearied man.

So 1 Timothy (v. 23)—"Drink no longer water, but use a little wine for thy stomach's sake, and thine often infirmities."

WINE.

Mine honored mother, bring me not luscious wine, lest thou unnerve my limbs, and make me lose my wonted prowess and strength.

TO OFFER SACRIFICES WITH POLLUTED HANDS.

I fear to offer a libation of rosy wine with unwashed hands.

So Isaiah (i. 15)—"And when ye spread forth your hands, I will hide mine eyes from you; yea, when ye make many prayers, I will not hear: your hands are full of blood;" and Psalms (cxvi. 6)—"I will wash mine hands in innocence: will I compass thine altar, O Lord."

MAN PROPOSES, GOD DISPOSES.

Victory changes oft her side.

AN EXAMPLE OF A LOVING WIFE.

Hector, thou art my father and honored mother, and brother; thou, too, my blooming husband.

Lord Derby thus translates it:

"But, Hector, thou to me art all in one,
Sire, mother, brethren; thou, my wedded love!

FRIGHTENED CHILD.

The babe clung crying to his nurse's breast, scared at the sight of his father, startled by the brazen helm and horse-hair plume, seeing it nodding fearfully on the warrior's crest: but his affectionate father and honored mother laughed fondly.

THE FATE OF ALL IS FIXED.

For no man can antedate my doom; though I am aware that no one can escape his fate, neither the coward nor the brave, as it has been determined at his birth.

So John (vii. 30)—"Then they sought to take him: but no man laid hands on Him, because His hour was not yet come."

A LADY'S WORK.

But going to thy house, attend to thy household cares, thy web and thy spindle, and assign thy maidens their several tasks.

So Proverbs (xxxix. 19)—"She layeth her hands to the spindle, and her hands hold the distaff."

MAN IN THE HANDS OF GOD.

But the decision of the victory is placed in the hands of the immortal gods.

So Proverbs (xxi. 30)—"There is no wisdom, nor understanding, nor counsel, against the Lord;" and 1 Corinthians (i. 27)—"But thanks be to God, which giveth us the victory, through our Lord Jesus Christ."

THE BRAVE MAN.

And think not to contend with a man mightier than thou.

So Ecclesiastes (vi. 10)—"That which hath been is named already, and it is known that it is man: neither may he contend with him that is mightier than he."

NIGHT APPROACHETH.

Now the night is at hand; it is wise to obey the night.

So Judges (xix. 9)—"Behold, now the day draweth toward evening, I pray you tarry all night: behold, the day groweth to an end; lodge here, that thine heart may be merry; and to-morrow get you early on your way, that thou mayest go home;" and Luke (xxiv. 29)—"But they constrained Him, saying, Abide with us; for it is toward evening, and the day is far spent. And He went in to tarry with them."

THE WISDOM OF THE GODS.

Father Jove, is there any of mortals on the wide-spread earth who will rival us in wisdom and understanding?

So Isaiah (xl. 15)—"Who hath directed the Spirit of the Lord, or being His counsellor, hath taught Him?"—and Romans (xi. 34)—"For who hath known the mind of the Lord, or who hath been His counsellor?"

GLOOMY TARTARUS.

Be assured that I shall seize and hurl him into gloomy Tartarus deep down, where is the lowest

abyss beneath the earth, where are iron gates and brazen floors, as far below Hades as heaven is from the earth.

So 2 Peter (ii. 4)—"For if God spared not the angels that sinned, but cast them down to hell, and delivered them into chains of darkness, to be reserved unto judgment."

THE GOLDEN CHAIN.

Having suspended a golden chain from heaven, do you, gods and goddesses, all of you lay hold of it: yet would you fail to drag the mighty and all-wise Jove from heaven to earth, strive as you may.

So Isaiah (xl. 15)—"Behold, the nations are as a drop of a bucket, and are counted as the small dust of the balance: behold. He taketh up the isles as a very little thing."

STRENGTH OF GOD IRRESISTIBLE.

Our father, son of Saturn, mightiest of kings, we all know well that thy strength is not to be resisted.

So Job (xiii. 9)—"I know that Thou canst do everything, and that no thought can be withholden from Thee."

"GOD WEIGHS ACTIONS."

And then the father of heaven hung out his golden scales.

So 1 Samuel (ii. 3)—"By Him actions are weighed;" and Proverbs (xvi. 3)—"But the Lord weigheth the spirits;" and Isaiah (xl. 12)—"Who hath measured the waters in the hollow of His hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance?"

THE IRRESISTIBLE POWER OF GOD.

No man can withstand the will of Jove, however powerful he be, for he is much mightier.

So Job (ix. 12)—"Behold, He taketh away, who can hinder Him? who will say unto Him, What dost Thou?"—and 1 Corinthians (i. 25)—"Because the foolishness of God is wiser than men; and the weakness of God is stronger than men."

THE FIXEDNESS OF FATE.

For such is the unalterable decree of fate; but I reckon not of thy wrath, nor should I care even though thou wert thrust beneath the lowest depths of earth and sea, where Jäpetus and Saturn dwell, uncheered by rays of sun and fanned by no cool breeze, encompassed by the profound abyss of Tartarus,—not even, I say, though thou wert there consigned to banishment, do I care, but hear thy reproaches unheeded, since nothing is more vile than thou.

LOVELY NIGHT.

As when in heaven the stars around the glittering moon beam loveliest amid the breathless air, and in clear outline appear every hill, sharp peak, and woody dell; deep upon deep the sky breaks open, and each star shines forth, while joy fills the shepherd's heart.

A KING DESTITUTE OF BRAVERY.

The son of deep-designing Saturn bestows his gifts in differing measure; he has granted to thee to be honored for thy royal command, but valor

he has got granted thee, which is the noblest boon of heaven.

THE MAN DELIGHTING IN WAR.

That man is bound by no social, religious, and domestic tie who would court civil war with all its horrors.

THE MAN FAVORED BY GOD.

The man whom Jove loves is a match for many.

So Joshua (xxiii. 10)—"One man of you shall chase a thousand: for the Lord your God, He it is that fighteth for you, as he hath promised you;" and 2 Samuel (xviii. 3)—"But now thou art worth ten thousand of us."

PLUTO.

Pluto, the merciless and inexorable, and therefore the most hatefull of all the gods to mortals.

NO REMEDY TO AN EVIL ONCE ENDURED.

There will be grief to thee thyself hereafter, nor will there be found a remedy to the evil that is done.

RESTRAIN THY PASSION.

Do thou restrain thy haughty spirit in thy breast, for better far is gentle courtesy.

So Proverbs (xvi. 32)—"He that is slow to anger is better than the mighty: and he that ruleth his spirit than he that aketh a city."

"LEAVE OFF FROM CONTENTION."

And cease from angry strife.

So Proverbs (xvii. 14)—"The beginning of strife is as when one letteth out water; therefore leave off contention, before it be meddled with."

THE HYPOCRITE.

For that man is detested by me as the gates of hell whose outward words conceal his inmost thoughts.

So Psalms (lv. 31)—"The words of his mouth were smother than butter, but war was in his heart: his words were softer than oil, yet were they drawn swords;" and (cxix. 168)—"I hate and abhor lying."

THE BRAVE AND THE COWARD DIE ALIKE.

The same fate awaits him that fights or fights not. The coward and the brave are held in equal honor. The man who yields ignobly and he who exerts himself die alike.

So Ecclesiastes (ix. 2)—"All things come alike to all: there is one event to the righteous, and to the wicked; to the good, and to the clean, and to the unclean; to him that sacrificeth, and to him that sacrificeth not: as is the good, so is the sinner; and he that sweareth, as he that feareth an oath."

Seneca (Ep. 91) says: "Æquat omnes cinis: impares nascimur, pares morimur." "The dust levels all; we are born in unequal conditions, but die equal."

WHAT ADVANTAGE HAVE I BY EXPOSING MYSELF TO DANGER.

There is no profit to me after all my labors, though I am always setting my life at stake.

So Job (xxxv. 3)—"For thou saidst, What advantage will it be unto thee? and, What profit shall I have if I be cleansed from my sin?"—and Psalms (lxxiii. 18)—"Verily I have cleansed my heart in vain, and washed my hands in innocency:" and Ecclesiastes (vi. 8)—"For what hath the wise more than the fool?"

A WIFE.

Every wise and sensible man loves the wife of his choice; so I too loved her in my heart's core, slave though she was, taken by my spear.

So Colossians (iii. 19)—"Wives, submit yourselves unto your own husbands, as it is fit in the Lord."

LIFE NOT TO BE BOUGHT.

Life is not to be weighed against all the treasures which they say Troy, that well-inhabited city, possessed formerly in peaceful times, ere the sons of the Greeks came, nor yet by all that is contained within the stone-built temple of the archer Apollo in rocky Pytho. For oxen and goodly sheep may be provided by successful forays, tripods and chestnut mares; but the soul of man can never more be recalled when the spark of life has passed his lips.

So Job (ii. 4)—"Skin for skin, yea, all that a man hath will he give for his life;" and Matthew (xvi. 26)—"For what is a man profited, if he shall gain the whole world, and lose his own soul? or what shall a man give in exchange for his soul?"—and Job (xiv. 13)—"So man lieth down, and riseth not: till the heavens be no more, they shall not awake, nor be raised out of their sleep. If a man die, shall he live again. All the days of my appointed time will I wait, till my change come."

"THEY SAY, AND DO NOT."

To be a speaker of words, and also a doer of deeds.

So Matthew (vii. 21)—"Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven:" and (xxiii. 3)—"For they say, and do not;" and 2 Corinthians (x. 11)—"Let such an one think this, that such as we are in word by letters when we are absent, such will we be also in deed when we are present."

PRAYERS ARE DAUGHTERS OF HEAVEN.

But, Achilles, curb thy furious rage: thou shouldst not cherish an implacable heart, for the gods themselves, excelling in virtue, honor, and strength, may yet be mollified, for they may be soothed by incense, humble suit, libations, and sacrifices, when they may have transgressed and gone astray. For Prayers are the daughters of mighty Jove,—lame, indeed, of foot, looking askance,—who, coming after the Temptress, are heedful of their course. But the Temptress is bold, swift of foot, for she far outruns them, and gets before them over all the earth, bringing sad disaster on mankind. But Prayers behind her heal the wrongs she has done to him who bows in reverence to these daughters of Jove as they approach: such an one they greatly aid, and listen to his entreaties; but whosoever rejects, and boldly refuses their assistance, Prayers, approaching their father, Jupiter, beg that the Temptress may follow him, that he may suffer and pay a due penalty.

So Genesis (viii. 21)—"And Noah offered burnt-offerings on the altar: and the Lord smelled a sweet savor;" and 1 Kings (viii. 28, 39)—"What prayer and supplication soever be made by any man, or by all Thy people Israel, which shall know every man the plague of his own heart, and spread forth his hands toward this house; then hear Thou in heaven Thy

swelling-place, and forgive, and do, and give to every man according to his ways, whose heart Thou knowest; (for Thou even Thou only, knowest the hearts of all the children of men)."

A FRIEND.

It is right that my friend should honor him who honors me.

PRUDENT COUNSEL.

Godlike Menelaus, both I and you have need of greatest counsels to guard and protect us.

So Proverbs (xx. 18)—"Every purpose is established by counsel; and with good advice make war;" and (xxiv. 6)—"Far by wise counsel thou shalt make war: and in multitude of counselors there is safety."

WATCH CAREFULLY.

Dear children, now guard carefully; let not sleep come upon you, lest we be a laughing-stock to our enemies.

So Nehemiah (vii. 8)—"Appoint watches . . . every one in watch and every one to be over against his house;" and Jeremiah (li. 12)—"Make the watch strong, set up the watchmen;" and Mark (xiii. 37)—"And what I say unto you I say to all, Watch."

HOW GREAT DEEDS ARE DONE.

When two go together, the one may perceive before the other how an enterprise may be best accomplished; and even though a man by himself discover the better course, yet his judgment is weaker, and his resolution less firm.

So Genesis (ii. 18)—"It is not good that the man should be alone;" and Ecclesiastes (iv. 9, 10)—"Two are better than one; because they have a good reward for their labor. For if they fall, the one will lift up his fellow: but woe to him that is alone when he falleth; for he hath not another to help him up."

THE ADVANTAGES OF PRUDENCE.

Should he attend us, we shall both return safe from the midst of burning fire, since he is wonderfully wise.

So Psalms (lxvi. 12)—"We went through fire and through water; but Thou broughtest us out into a wealthy place;" and Isaiah (xliii. 2)—"When thou passest through the waters, I will be with thee; and through the rivers, they shall not swallow thee: when thou walkest through the fire, thou shalt not be burnt; neither shall the flame kindle upon thee."

IMPUTING THE INIQUITY OF THE FATHERS UPON THE CHILDREN.

Now in truth you shall pay for the heavy sins of your father.

So Exodus (xx. 5)—"I the Lord thy God am a jealous God, punishing the iniquity of the fathers upon the children;" and Isaiah (lxviii. 3)—"The fathers have eaten sour grapes and the children's teeth are set on edge."

GOD SHALL PROTECT THEE.

Jove withdrew Hector from darts, dust, slaughter, blood, and turmoil.

So Psalms (xci. 7)—"A thousand shall fall at thy side, and a thousand at thy right hand; but it shall not come nigh thee."

THE LORD SHALL DELIVER THEE INTO MY HAND.

Assuredly I shall end thee if I shall hereafter meet thee, at least if any of the gods assist me.

So 1 Samuel (xvii. 46)—"This day will the Lord deliver thee into mine hand, and I will smite thee, and take thine head from thee."

THE COWARD AND THE BRAVE.

A worthless coward's weapon has no point: that from my hand is not so, even if it slightly touch; it is sharp, and when it strikes it slays; his widow's cheeks are disfigured with scars of grief, and his children orphans; but he, reddening the ground with blood, rots, while his funeral rites are paid by carrion birds, and not by women.

So Judges (viii. 21)—"For as the man is, so is the strength."

THE BRAVE MAN.

For I know that cowards fly from battle; but the warrior distinguished in fight must, above all, stand undaunted, wounded or wounding.

A WOUNDED STAG.

As spotted lynxes pursue in the mountains a wounded stag with bushy antlers, whom a hunter has wounded with an arrow from his bow; flying, it has escaped by its swiftness, while its blood ran warm and its limbs yet served. But when the swift arrow has drained its strength, the ravenous lynxes, tearing, devour it in the shady wood, till chance brings a furious lion; then the lynxes fly in terror, while the lion feeds on the prey.

AN INUNDATION.

As when an overflowing river descends to the plain, rushing from the mountains, swollen by the storms of heaven, it carries off many blighted oaks and many pines, throwing much mud into the ocean.

THE LION.

As a furious lion is driven from the cattle-fold by dogs and rustics, who, watching all night, balk him of his prey. Eager for food, he renews the attempt; but still in vain, for numerous darts are hurled from vigorous hands, and blazing torches, from which he retires, though maddened. In the morning he slinks off with saddened heart.

THE ASS.

As when a stubborn ass entering the corn-field overpowers the boys, on whose back many clubs are broken: going in, it crops the rich corn, while the boys ply their cudgels; but their strength is puny, yet they drive him out with ease when he is satisfied with food.

THE ADVICE OF A FRIEND.

The advice of a friend is good.

So Proverbs (xxvii. 9)—"Ointment and perfume rejoice the heart: so doth the sweetness of a man's friend by hearty counsel."

"SHALL THE SWORD DEVOUR FOREVER?"

A slight breathing-time from war is pleasant.

So 2 Samuel (ii. 36)—"Shall the sword devour forever?"

"PHYSICIAN, HEAL THYSELF."

I think that a physician, being wounded, also requires a leech's aid.

So Luke (iv. 23)—"Physician, heal thyself."

AGAINST THE WILL OF GOD.

It was done against the will of the immortal gods; wherefore it did not long endure.

So Acts (v. 38)—"And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men it will come to naught."

OAKS.

They stood as oaks raise their high heads on the mountain-side, which many a day have borne the wind and rain, firm rifted by their strong, far-extending roots.

LET US OBEY GOD.

Let us obey the will of mighty Jove, who rules over mortals and immortals.

So Acts (v. 39)—"We ought to obey God rather than men."

THE BRAVE.

Let the best omen be our country's cause.

So 2 Samuel (x. 12)—"Be of good courage, and let us play the men for our people, and for the cities of our God; and the Lord do that which seemeth Him good."

ALL ARE NECESSARY.

My friends, whoever of the Greeks is of noble spirit, of moderate or inferior strength, since all men are not with equal powers, here is work for all.

So 1 Corinthians (xii. 21, 22)—"And the eye cannot say unto the hand, I have no need of thee; nor again the head to the feet, I have no need of you. Nay, much more those members of the body, which seem to be more feeble, are necessary."

THE SNOW-STORM.

As thick as the snow-flakes on a winter's day, when all-wise Jove has begun to snow, showing his power to mortals. Stilling the winds, he pours snow down on the ground, so that the tops of the lofty mountains, the sharp peaks, the lotus-plains, and man's productive labors are buried deep. It is scattered over the hoary sea, lakes, and shores; but the wave, as it approaches, controls it: everything else is wrapped up beneath, when the storm of Jove rages with fury.

THE FORCE OF UNION.

The force of powerful union conquers all.

GOD IS EASILY KNOWN.

'Tis easy to discern the outward signs of a god.

So Psalms (lx. 16)—"The Lord is known by the judgment which He executeth;" and (lxxvi. 1)—"In Judah is God known."

THE INCLINATIONS OF THE GOOD.

A brave man's spirit its vigor soon regains.

So Proverbs (xxi. 11)—"When the scorner is punished, the simple is made wise;" and (xxiv. 16)—"For a just man falleth seven times and riseth up again."

"TO WHOM MUCH IS GIVEN."

All who are the best and bravest of the host should not desist from the battle: I might not

blame them, if meaner men should shrink; but I am highly indignant with you.

So Matthew (xxv. 15)—"And unto one he gave five talents, to another two, and to another one; to every man according to his several ability;" and Luke (xii. 48)—"For unto whomsoever much is given, of him shall be much required."

SLOTHFULNESS.

Dear friends, you will certainly sustain some heavier misfortune by this dastardly remissness: let each of you reflect on the shame of your conduct and feel keen remorse.

So Ecclesiastes (x. 18)—"By much slothfulness the building decayeth; and through idleness of the hands the house droppeth through."

A HUGE BOULDER.

As some huge boulder detached from a rock, which the wintry torrent has hurled down the cliff's steep face, having undermined the firm hold of the massive rock by constant rains: with giant bounds it flies, and the wood crashes beneath it still it hurries on, until it reaches the level plain, and then it no longer rolls, however much impelled.

UNITED STRENGTH.

The strength even of weak men when united avails much.

So Ecclesiastes (iv. 12)—"And if one prevail against him, two shall withstand him; and a threefold cord is not quickly broken."

A DAUGHTER WHO EXCELS ALL.

The father and revered mother loved her with deep affection; for she surpassed all of her own age in beauty, in skill, and mind: therefore the noblest man of wide Troy married her.

So Proverbs (xxxii. 29)—"Many daughters have done virtuously, but thou excellest them all."

SATIETY OF EVERYTHING.

With everything men are sated: sleep, love, sweet singing, and the joyous dance—of all these man gets sooner tired than of war; the Trojans are insatiable in fight.

So Proverbs (xxv. 16)—"Hast thou found honey? eat so much as is sufficient for thee, lest thou be filled therewith, and vomit it."

MEN HAVE DIFFERENT TALENTS.

But thou alone canst not engross all gifts of heaven: to one man God has granted the knowledge of what belongs to the affairs of war, to another the power of dancing, to another song and music; but in the breast of another loud-thundering Jove places the spirit of wisdom, of which many enjoy the fruit, for by him cities are preserved, and he himself specially feels the value of the precious gift.

So 1 Corinthians (xii. 4-6)—"Now there are diversities of gifts, but the same Spirit. And there are differences of administrations, but the same Lord. And there are diversities of operations, but it is the same God which worketh all in all;" and (vii. 7)—"But every man hath his proper gift of God, one after this manner, and another after that."

ACCORDING TO THAT A MAN HATH.

Beyond his power the bravest cannot fight.

So 2 Corinthians (viii. 12)—"For if there be first a willing mind, it is accepted according to that a man hath, and not according to that he hath not."

AVOID EVILS.

For a man is not to be blamed if he flies from an impending evil, though by night; he will act more wisely who by flying escapes, than he who is overtaken by the threatened danger.

So Butler ("Hudibras," Part III., c. 3, l. 948) says:

"For those that fly may fight again,
Which he can never do that's slain."

So Matthew (x. 23)—"But when they persecute you in this city, flee ye into another."

WHAT IS THY PETITION?

Tell me thy wish; my inclination urges me to grant it if my power may aught avail, and if it can be done.

So Esther (v. 6)—"And the king said unto Esther at the banquet of wine, What is thy petition? and it shall be granted thee: and what is thy request? even to the half of the kingdom it shall be performed."

THE CHARMS OF LOVE.

She said, and unloosed from her breast her zone embroidered with various colors, wrought with every charm to win the heart; there dwelt love, amorous desire, fond discourse, persuasion, which often steals away the senses even of wisest men.

So Proverbs (vii. 31)—"With her much fair speech she caused him to yield, with the flattering of her lips she forced him."

SLEEP THE BROTHER OF DEATH.

There he met with Sleep, twin-born with Death.

So John (xi. 11-13)—"Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep. Then said his disciples, Lord, if he sleep, he shall do well. Howbeit Jesus spake of his death: but they thought that He had spoken of taking of rest in sleep."

LOVE SEIZED HIM.

When he saw her, suddenly love overshadowed his mind.

So Genesis (iii. 6)—"And when the woman saw that the tree was good for food, and that it was pleasant to the eyes, and a tree to be desired to make one wise, she took of the fruit thereof and did eat;" and (vi. 1)—"The sons of men saw the daughters of men that they were fair, and they took them wives of all which they chose."

WINE MAKETH MERRY.

And Semele brought forth Bacchus, causing joy to mortals.

So Judges (ix. 18)—"Should I leave my wine, which cheereth God and man?"—and Psalms (civ. 15)—"And wine that maketh glad the heart of man;" and Ecclesiastes (x. 19)—"And wine maketh merry."

DREADFUL TO FALL INTO THE HANDS OF THE LIVING GOD.

The lightning of mighty Jove is fearful.

So Hebrews (x. 31)—"It is a fearful thing to fall into the hands of the living God."

THE POWER OF RECOLLECTION.

As when the mind of man wanders in thought over the many lands which he hath traversed, and thinks "Here was I such a day, or here," thinking of his numerous adventures.

"THEY HAVE EARS, BUT HEAR NOT."

Madman, void of reason, thou art lost; surely thou hast ears in vain, thy mind and sense of reverence are utterly destroyed.

So Psalms (cxv. 6)—"They have ears, but they hear not;" and Matthew (xi. 15)—"He that hath ears to hear, let him hear."

"A FAITHFUL AMBASSADOR."

Tell all these things, and be not a false messenger.

So Proverbs (xiii. 17)—"A faithful messenger is health;" and Acts (xx. 30)—"And how I kept back nothing . . . but have shown you;" and (xx. 37)—"For I have not shunned to declare unto you all the counsel of God."

ALL THINGS DIVIDED INTO THREE.

Threefold was our partition, and each enjoys his meed of honor.

So 1 John (v. 7)—"For there are three that bear record in heaven, the Father, the Word, and the Holy Ghost: and these three are one."

THE NOBLE.

Noblest minds are easiest bent.

So Psalms (xlv. 19)—"They have no changes, therefore they fear not God;" and Ezekiel (xxxiii. 11)—"Turn ye, turn ye from your evil ways; for why will ye die?"

HONOR THE HOARY HEAD.

Thou knowest that the Furies always watch to avenge the aged.

So Leviticus (xix. 32)—"Thou shalt rise up before the hoary head, and honor the face of the old man."

THE STALL-FED HORSE.

As when a stall-fed horse, fattened on barley, having broken his halter, scours the plain, stamping with his feet, accustomed to bathe in the beautiful-flowing stream, exulting; he tosses his head aloft, while his mane streams o'er his shoulders; in conscious pride, his limbs bear him with ease to the accustomed pastures of the mares.

A CHILD PLAYING ON THE SEA-SHORE.

As when a child heaps up sand near the sea, making playthings with infantine folly; again in wanton play he scatters it with hands and feet.

TO DIE FOR ONE'S COUNTRY.

A glorious death is his who dies fighting for his country, while his wife is safe, children and home and heritage unimpaired.

So 2 Samuel (x. 18)—"Be of good courage, and let us play the men for our people, . . . and the Lord do that which seemeth Him good."

THE COWARD.

For more of the brave are saved than die; but to the coward there is neither glory nor safety.

STORM AT SEA.

As when a wave descends heavily on the swift ship, raised rapidly by the wind bursting from the clouds; the deck is drenched with spray, while the fierce blast howls in the shrouds; the affrighted sailors tremble, but little way removed from death.

So Jonah (i. 5)—"Then the mariners were afraid, and cried every man unto his god, and cast forth the wares that were in the ship into the sea, to lighten it of them: but Jonah was gone down into the sides of the ship."

A GOOD SON FROM A WICKED FATHER.

A son distinguished for his many virtues was born from a wicked father.

So Ezekiel (xviii. 14, 17)—"Lo, if he beget a son, that seeth all his father's sins which he hath done, and doeth not such like, . . . he shall not die for the iniquity of his father, he shall surely live."

A SKILFUL RIDER.

As a man skilled in feats of horsemanship, having selected four from a troop of horses, drives swiftly from the plains to the great city, along the public road, while many men and women gaze in wonder at him: leaping always without missing, he springs from horse to horse as on they fly.

ON WHAT VICTORY DEPENDS.

There is safety in vigor of hand and not in giving way in the battle.

So Isaiah (ix. 15)—"For every battle of the warrior is with confused noise, and garments rolled in blood."

ONE CALAMITY UPON ANOTHER.

Everywhere one calamity is heaped upon another.

So Job (i. 17, etc.)—"While he was yet speaking, there came also another," etc.; and Isaiah (xxx. 1)—"That they may add sin to sin;" and Job (v. 19)—"He shall deliver thee in six troubles; yea, in seven there shall no evil touch thee."

RICHES, BUT NO ENJOYMENT.

Father Jove has granted half his prayer, and half denied.

So Ecclesiastes (vi. 1)—"There is an evil which I have seen under the sun, and it is common among men: a man to whom God hath given riches, wealth, and honor, so that he wanteth nothing for his soul of all that he desireth, yet God giveth him not power to eat thereof, but a stranger eateth it: this is vanity, and it is an evil disease."

A PILLAR IN HONOR OF THE DEAD.

A tomb and a pillar: the fitting tribute to the mighty dead.

So 2 Samuel (xviii. 18)—"Absalom had reared up for himself a pillar, for he had said, This shall be a memorial of my name."

DEEDS AND NOT WORDS.

Hands are meet for battle, but words for council; wherefore now we must use not words, but fight.

SLEEP AND DEATH.

Sleep and death twin-born.

So Matthew (ix. 24)—"The maid is not dead, but sleepeth."

THE POWER OF JOVE.

But Jove's will is always mightier than the will of man: who strikes panic into the bravest, and

easily robs him of victory, and anon urges to battle.

So Ecclesiastes (ix. 11)—"I returned, and saw under the sun, that the race is not to the swift, nor the battle to the strong, neither yet bread to the wise, nor yet riches to men of understanding, nor yet favor to men of skill; but time and chance happeneth to them all."

"THIS NIGHT THY SOUL SHALL BE REQUIRED OF THEE."

Thou shalt not long survive me, but death and irresistible doom now hang over thee.

So Luke (xii. 20)—"Thou fool, this night thy soul shall be required of thee: then whose shall those things be which thou hast provided?"—and 2 Timothy (iv. 6)—"The time of my departure is at hand."

WHY BOASTEST THOU THYSELF?

It ill beseems a man to vaunt arrogantly.

So Psalms (lxxi. 1)—"Why boastest thou thyself?"—and Romans (xi. 18)—"Boast not against the branches;" and 1 Corinthians (v. 6)—"Your glorying is not good;" and James (iv. 16)—"All such rejoicing is evil."

FOOLS.

Even the fool is wise after the event.

So Proverbs (xxii. 3)—"A prudent man foreseeth the evil, and hideth himself: but the simple pass on, and are punished."

THE LION.

As when a lion, bred in the mountains, in pride of strength, has carried off a heifer amid the pasturing herd—the choicest; he breaks her neck, first seizing her with strong teeth, then gorging on her entrails, laps the blood; though dogs and shepherds roar loudly from afar, yet none venture to come near, but pale fear seizes them.

"HE THAT HATH LABORED FOR THE WIND."

Thou indeed so runnest, pursuing what cannot be reached.

So Ecclesiastes (v. 16)—"And what profit hath he that hath labored for the wind?"—and Galatians (ii. 2)—"Lost by any means I should run, or had run, in vain."

TO FIGHT AGAINST A MAN HONORED BY GOD.

When a man strives, against the Divine will, with one beloved of heaven, a bitter doom comes quickly upon him.

So Exodus (xiv. 25)—"The Egyptians said, Let us flee from the face of Israel, for the Lord fighteth for them against the Egyptians;" and Isaiah (xli. 11-13)—"Behold, all they that were incensed against thee shall be ashamed and confounded: they shall be as nothing; and they that strive with thee shall perish. Thou shalt seek them, and shalt not find them, even them that contended with thee: they that war against thee shall be as nothing, and as a thing of naught. For I the Lord thy God will hold thy right hand, saying unto thee, Fear not; I will help thee."

OF EVILS THIS IS THE LEAST.

Of evils this would be the best to be chosen.

So 2 Samuel (xxiv. 14)—"And David said unto Gad, I am in a great strait; let us fall now into the hand of the Lord (for His mercies are great), and let me not fall into the hand of man."

GOD OMNIPOTENT.

But the will of ægis-bearing Jove is uncontrollable, who confounds the strong, and easily robs him of victory, and anon excites to war.

"THE SWORD DEVORETH ONE AS WELL AS ANOTHER."

Wherefore let each, rushing boldly onward, either perish or escape safe; for such is the chance of war.

So 2 Samuel (xi. 25)—"For the sword devoureth one as well as another."

"HONOR THY PARENTS."

Neither had he an opportunity of paying back their early care to his dear parents, for short was his term of life.

So Exodus (xx. 12)—"Honor thy father and thy mother;" and 1 Timothy (v. 4)—"Let them learn to show piety at home, and to requite their parents."

KIND WORDS AND THREATS.

He addressed many honeyed words and many curses.

So Deuteronomy (xxx. 19)—"I have set before you life and death, blessing and cursing."

NOTHING MORE WRETCHED THAN MAN.

For there is naught of all that breathe and creep upon the earth more wretched than man.

So Job (xiv. 1)—"Man that is born of a woman is of few days, and full of trouble;" and (xxv. 6)—"How much less man, that is a worm; and the son of man, which is a worm?"

MAN PROPOSES, GOD DISPOSES.

For I shall hurl the spear, but Jove directs the blow.

So James (iv. 15)—"Ye ought to say, If the Lord will, we shall live, and do this and that;" and 1 Kings (xxii. 34)—"And a certain man drew a bow at a venture, and smote the King of Israel between the joints of the harness."

SAD NEWS.

Assuredly thou shalt hear woful tidings, which would to Heaven, I had not to impart: Patroclus lies in death.

Pliny (Ep. iv. 11) says—"Herennius Senecio said, in defence of the absent Licinianus, some such thing as, 'Patroclus is gone.'"

So 1 Kings (xiv. 6)—"I am sent to thee with heavy tidings."

"A FOOL'S MOUTH."

In sooth, my son, thou wilt be short-lived if thou talkest thus.

So Proverbs (xviii. 7)—"A fool's mouth is his destruction, and his lips are the snare of his soul."

STRIFE AND RAGE.

Would that strife were far removed from gods and men, and anger, which impels even the wisest to violence, which mounts in the breast of man like smoke, and is sweeter to the taste than honey.

So Romans (xiii. 13)—"Not in strife and envying;" and Philippians (ii. 3)—"Let nothing be done through strife or vainglory;" and Ecclesiastes (vii. 9)—"Be not hasty in thy spirit to be angry; for anger resteth in the bosom of fools."

DEATH WHEN GOD WILLS IT.

I shall then meet death when it is the will of Jove and the other gods.

So Job (xv. 14)—"All the days of my appointed time will I wait, till my change come."

DEATH.

I shall lie a senseless clod when I die; but now is the time to win glory.

So Ecclesiastes (ix. 10)—"Whatsoever thy hand findeth to do, do it with thy might; for there is no work, nor device, nor knowledge, nor wisdom, in the grave, whither thou goest."

FATE OF MAN IN WAR.

The fortune of war is common to all, and oft slays the slayer.

So 2 Samuel (xi. 25)—"For the sword devoureth one as well as another."

DESIGNS OF MAN CUT SHORT.

But Jove does not accomplish all that man designs.

ANGER.

Now indeed I here abjure my wrath, for it is not right that it should burn forever unappeased.

So Jeremiah (iii. 12)—"I will not keep mine anger forever;" and Ephesians (iv. 26)—"Let not the sun go down upon your wrath."

A NOISY MEETING.

'Tis meet to listen in silence without interruption, for it is difficult for a man even skilled in speaking to deliver his sentiments amidst interruptions. In a great tumult who can hear or speak? Even the best of orators in injured in such a case.

So 1 Corinthians (xiv. 31-33)—"If anything be revealed to another that sitteth by, let the first hold his peace. For ye may all prophesy one by one, that all may learn, and all may be comforted. And the spirits of the prophets are subject to the prophets. For God is not the author of confusion, but of peace, as in all churches of the saints."

"WHY DO YOU STAND HERE ALL THE DAY IDLE?"

For it is not meet to stand here wasting our time, or idly loitering, for there is still a great work to be done.

So Matthew (xx. 6)—"Why stand ye here all the day idle?"

FOOD NECESSARY FOR THE WARRIOR.

For no man all day till set of sun may fight without food. Even though his spirit may prompt him to fight, yet his limbs by degrees sink under him; worn out by thirst and hunger, his knees shake as he advances. But the man satiated with wine and food all day maintains the combat with his enemy; his spirit remains unbroken, and his limbs are unwearied, till both armies quit the field of battle.

So Psalms (civ. 15)—"Bread which strengtheneth man's heart;" and 1 Samuel (xiv. 28)—"Cursed be the man that eateth any food this day. And the people were faint. Then said Jonathan, Mine eyes have been enlightened, because I tasted a little of this honey; how much more, if haply the people had eaten freely to-day, for had not there been now a much greater slaughter among the Philistines?"

NO SOONER SAID THAN DONE.

Then, soon as the word was uttered, the work was done.

So Genesis (i. 3)—"And God said, Let there be light: and there was light;" and Psalms (xxxiii. 3)—"For He spake, and it was done: He commanded, and it stood fast."

THE PERJURED.

The Furies, ye who wreak vengeance beneath the earth on souls of men forsworn.

So Exodus (xx. 7)—"The Lord will not hold him guiltless that taketh His name in vain;" and Zechariah (v. 4)—"And it shall enter into the house of the thief and into the house of him that sweareth falsely by my name."

GOD CAUSES GRIEFS TO MAN.

Father Jove, thou certainly bringest sad woes on men.

So Job (xxi. 17)—"God distributeth sorrows in His anger;" and Isaiah (xiv. 7)—"I form the light, and create darkness; I make peace, and create evil. I the Lord do all these things;" and Amos (iii. 6)—"Shall there be evil in a city, and the Lord hath not done it?"

WHAT IS FATED TO MAN.

The time shall come when he shall meet the doom which Fate has spun with its thread at his birth.

So Job (xxiii. 14)—"He performeth the thing that is appointed for me."

THE GODS.

The gods are terrible to be seen.

So Exodus (xxxiii. 22)—"There shall no man see me and live;" and Job (xxxvii. 23)—"With God is terrible majesty."

COURAGE.

It is Jove that at will gives and takes courage from men; for he is lord of all.

So 1 Corinthians (xii. 11)—"Dividing to every man severally as He will;" and Ephesians (iv. 2)—"Unto every one of us is given grace according to the measure of the gift of Christ."

A WAR OF WORDS.

But come, let us not talk to each other like babbling fools, standing in the midst of the battlefield. For we might both find terms of reproach enough to sink a hundred-oared galley; so voluble is the tongue of man, glibly giving words without end of all kinds; wide is the range of language; such words shalt thou hear as thou speakest; but why should we rail and fight like women, who, arrayed in fierce contest, jar in the streets with wordy war, using opprobrious terms, some true, some false, for so their rage suggests.

So Job (xviii. 6)—"A fool's lips enter into contention, and his mouth calleth for strokes;" and James (iii. 5, etc.)—"And the tongue is a fire, a world of iniquity; so is the tongue among our members, that it defileth the whole body, and setteth on fire the course of nature; and it is set on fire of hell: the tongue can no man tame; it is an unruly evil, full of deadly poison;" and Matthew (vii. 3)—"With what measure ye mete, it shall be measured to you again;" and 2 Timothy (ii. 23)—"The servant of the Lord must not strive;" and Proverbs (xxx. 33)—"The forcing of wrath bringeth forth strife."

EVEN THE STRONGEST CANNOT ACCOMPLISH ALL THINGS.

Nor will Achilles be able to make all his words good: some things he will fulfil, and in others he will fail.

So Psalms (xxi. 11)—"They imagined a mischievous device, which they are not able to perform."

"YOUR FATHERS WHERE ARE THEY?"

But, my friend, thou, too, must die: why vainly wail? Patroclus, too, is dead, thy better far.

So Zechariah (i. 5)—"Your fathers where are they? and the prophets, do they live forever?"—and John (viii. 58)—"Art Thou greater than our father Abraham, which is dead? and the prophets are dead: whom makest Thou thyself?"

DEATH COMES AT ALL TIMES.

Seest thou not how fair and stalwart I am? I am the son of noble sire, and goddess-mother born; but death and stubborn fate will come upon thee and me at morn, or eve, or midday.

So Ecclesiastes (iii. 2)—"A time to die;" and Hebrews (ix. 27)—"It is appointed unto men once to die;" and Mark (xiii. 35)—"Watch ye therefore; for ye know not when the master of the house cometh, at even, or at midnight, or at the cock-crowing, or in the morning."

And Shakespeare ("Hamlet," act i. sc. 2)—

"All that lives must die,
Passing through nature to eternity."

THE GODS MORE POWERFUL THAN MEN.

The gods are more powerful than men.

So 1 Corinthians (i. 25)—"Because the foolishness of God is wiser than men; and the weakness of God is stronger than men."

LIFE OF MEN.

If indeed I should fight for the sake of wretched mortals, who, like leaves, sometimes flourish in beauty, and eat the fruits of earth, and then again wither on the ground.

So Isaiah (lxiv. 6)—"We all do fade as a leaf."

"GOD'S WAYS ARE PAST FINDING OUT."

Why, son of Peleus, pursuest thou me with swift feet, who am an immortal, while thou art a mortal? Hast thou not yet discovered my godhead?

So Psalms (lxxvii. 19)—"Thy footsteps are not known;" and Acts (ix. 4)—"Why persecutest thou me?"—and Romans (xi. 33)—"His ways are past finding out."

TO DIE IN YOUTH.

It is honorable for youth to die in battle, struck with the sharp spear; all things are becoming to him in death; but when dogs disfigure the hoary head and hoary beard of the old man lying in death, this is misery the last and worst to mortals.

FAMILIAR TALK.

This is not the time to hold light talk, like youth and maid under the shade of oak or rock, as youth and maid might hold.

THE BALANCE IN WHICH MAN'S FATE IS WEIGHED.

And then the father of gods hung out the golden scales, and put in each the lots of doom,—the one of Achilles, the other of horse-taming Hector,—and weighs with equal hands their destinies; down sank the scale, weighted with Hector's death, down to Pluto; and then even Apollo abandons him to his fate.

Milton ("Paradise Lost," iv. 999) says:—

"First He weighed
The pendulous round earth, with balanced air
In counterpoise; now ponders all events,
Battles and realms: in these He puts two weights,
The sequel each of parting and of fight;
The latter quick flew and kicked the beam."

THE WOLF AND THE LAMB.

As no firm concord can exist between lions and men, nor do wolves and lambs unite in harmony, but ceaseless enmity dwells between them.

So Isaiah (lxv. 25)—"The wolf and the lamb shall feed together;" and Luke (x. 8)—"I send you forth as lambs among wolves."

EVERY KIND OF VIRTUE.

Be mindful of every kind of virtue.

So 2 Peter (i. 5-7)—"And besides this, giving all diligence, add to your faith, virtue; and to virtue, knowledge; and to knowledge, temperance; and to temperance, patience; and to patience, godliness; and to godliness, brotherly kindness; and to brotherly kindness, charity."

THE SOUL.

Strange, but true, that there are souls and spectres in the abodes of Hades, but corporeal materials there are none at all.

So Ecclesiastes (ix. 5)—"For the living know that they shall die: but the dead know not anything, neither have they any more a reward; for the memory of them is forgotten."

GRIEF.

There is also a satiety of grief.

So 1 Samuel (xvi. 1)—"How long wilt thou mourn?"

NOT STRENGTH BUT SKILL OBTAINS THE PRIZE.

The woodman is superior by knowledge of his art rather than by strength; the pilot guides the swift ship in the dark-blue sea by skill, when it is tempest-tossed; the charioteer is superior to his rival by his skill.

So Ecclesiastes (ix. 16)—"Wisdom is better than strength;" and (x. 10)—"If the iron be blunt, and he do not whet the edge, then must he put to more strength; but wisdom is profitable to direct."

BE CAUTIOUS.

Beware of striking thy foot against a stone, a source of joy to others, a shame to thyself; but, my friend, be cautious and be guarded.

So Psalms (xci. 12)—"Lest thou dash thy foot against a stone."

JUDGE IMPARTIALLY.

Decide between both justly, and not with favor.

So Deuteronomy (i. 17)—"Ye shall not respect persons in judgment, but ye shall hear the small as well as the great;" and Proverbs (xxviii. 5)—"It is not good to accept the person of the wicked, to overthrow the righteous in judgment."

THE FOLLIES OF YOUTH.

Thou knowest the over-eager vehemence of youth; quick in temper, but weak in judgment.

So Job (xviii. 5)—"Thou makest me to possess the iniquities of my youth;" and Psalms (xxv. 7)—"Remember not the sins of my youth."

THE FAILING OF OLD AGE.

For thou no more canst box or wrestle, or throw the javelin in sportive strife, or race with flying feet in running; for now the heavy hand of age rests upon thee.

So John (xvi. 18)—"When thou wast young, thou girdedst thyself, and walkedst whither thou wouldst, but when thou shalt be old, thou shalt stretch forth thy hands, and others shall gird thee, and carry thee whither thou wouldst not."

MAN DOOMED TO LOSE FRIENDS.

For some may have lost a friend dearer than brother or son; but after having wept and lamented, he dismisses his care, for the Fates have bestowed a patient mind on man.

So Job (v. 7)—"Yet man is born unto trouble, as the sparks fly upward."

GRIEF.

My son, why, weeping and grieving, dost thou wear away thy soul, forgetful both of food and sleep?

So 1 Samuel (i. 8)—"Why weepest thou? and why eatest thou not? and why is thy heart grieved?"—and Proverbs (xi. 18)—"By sorrow of the heart the spirit is broken."

LOSS OF CHILDREN.

Unhappy that I am, since I had the noblest children, and now I have none of them left.

So Genesis (xlii. 36)—"Me have ye bereaved of my children: Joseph is not, and Simeon is not, and ye will take Benjamin away;" and Jeremiah (xxxi. 15)—"A voice was heard in Ramah, lamentation, and bitter weeping, Rachel weeping for her children, refused to be comforted for her children, because they were not."

TWO URNS CONTAINING GOOD AND EVIL.

For there is no advantage to be gained from woful lamentation: the gods have spun the thread for wretched mortals that they should live in sorrow, while they themselves are free from cares. Two urns lie beside the door of Jove, one full of evil gifts, and one of good, from which thundering Jove, mingling, gives portions, now of the bad and now of the good. To whomsoever he gives of the bad, he makes him wretched indeed; grinding misery drives him an outcast over the earth; he wanders abroad, honored neither by gods nor men.

So Job (ii. 10)—"What! shall we receive good at the hand of God, and shall we not receive evil?"—and Psalms (lxxv. 9)—"In the hand of the Lord there is a cup; it is full of mixture;" and Isaiah (xlv. 7)—"I form the light, and create darkness; I make peace, and create evil."

FOOLS PERISH BY THEIR OWN FOLLY.

Fools! they perished in their mad arrogance.

So 1 Chronicles (x. 13)—"So Saul died for his transgressions;" and Proverbs (xi. 5)—"The wicked shall fall by his own wickedness;" and (xxiii. 6)—"Wickedness overthroweth the sinners;" and Hosea (xiii. 9)—"Thou hast destroyed thyself."

MAN THE CAUSE OF HIS OWN ILLS.

Strange that men should blame the gods, laying all their woes on us, while it is they themselves that bring, by their own senseless acts, pangs which fate had never decreed.

So Lamentations (iii. 33)—"For he doth not afflict willingly, nor grieve the children of men. Wherefore doth a living man complain, a man for the punishment of his sins?" and Ezekiel (xviii. 24)—"In his trespass that he hath trespassed, and in his sin that he hath sinned, in them shall he die. Yet ye say, The way of the Lord is not equal. Hear now, O house of Israel, Is not my way equal? are not your ways unequal?"

IT IS A WISE SON WHO KNOWS HIS OWN FATHER.

My mother says in sooth that I am sprung from him, but I myself do not know, for no one can by himself by any means know his own father.

AFFLUENCE.

Would that I were the happy son of some blest man whom old age has overtaken in full enjoyment of his wealth.

REMEMBER THAT THOU ART NO LONGER A CHILD.

Thou shouldst not follow after childish things, since thou art no longer a child.

So 1 Corinthians (xiii. 11)—"When I was a child, I spake as a child, I understood as a child, I thought as a child; but when I became a man, I put away childish things."

FEW SONS RIVAL THEIR BRAVE SIRES.

For few sons are equal to their sires; most of them are less worthy; only a few are superior to their father.

So Ecclesiastes (ii. 18)—"Yea, I hated all my labor which I had taken under the sun; because I should leave it unto the man that shall be after me. And who knoweth whether he shall be a wise man or a fool?"

WALK NOT IN THE WAYS OF THE UNGODLY.

Fly the advice and ways of fools, since they are neither sensible nor just; they 'know not that death and gloomy fate are close by.

So Psalms (i. 1)—"Blessed is the man that walketh not in the counsel of the ungodly;" and Ecclesiastes (ix. 12)—"For man also knoweth not his time: as the fishes that are taken in an evil net, and as the birds that are caught in the snare; so are the sons of men snared in an evil time, when it falleth suddenly upon them."

ENJOY THE PRESENT.

Let no thoughts of outrage, let no rough words, hanker in thy bosom, but eat and drink as of old.

THIS IS NOT WITHOUT THE WILL OF GOD.

Be of good cheer, my nurse, since this counsel is of heaven.

So 2 Kings (xviii. 26)—"Am I now come up without the Lord against this place to destroy it?"—and Acts (xxvii. 22)—"And now I exhort you to be of good cheer; for there stood by me this night the angel of God."

MODESTY.

It is a shame for a young man to question men of riper years.

So Job (xxxii. 6)—"I am young, and ye are very old; wherefore I was afraid, and durst not show you mine opinion."

GOD WILL SUGGEST SOME THINGS.

Thou thyself wilt imagine some things in thine own inmost breast, and a god will suggest others.

So Luke (xii. 12)—"For the Holy Ghost shall teach you in the same hour what ye ought to say."

ALL REQUIRE THE AID OF GOD.

Pray, for all mankind require the assistance of the gods.

So Acts (xvii. 25)—"As though God needed anything, seeing He giveth to all life and breath and all things; that they should seek the Lord, if haply they might feel after Him and find Him; for in Him we live, and move, and have our being;" and James (i. 5)—"If any of you lack wisdom, let him ask of God;" and 1 Timothy (ii. 4)—"Who will have all men to be saved, and to come unto the knowledge of the truth."

THE MIND OF GOD IS UNCHANGEABLE.

For the mind of the ever-existing gods is not lightly changed.

So Malachi (iii. 6)—"For I am the Lord; I change not;" and James (i. 17)—"With whom is no variableness, neither shadow of turning."

GOD OMNIPOTENT.

God can easily, if He wills, save man even from the most remote part of space.

So Jeremiah (xxiii. 23)—"Am I a God at hand, and not a God afar off?"

DEATH.

But death is the common lot of all; nor are the gods able to ward it off even from their favorites when the destroying fate which is to lay him out at length has come upon him.

So Psalms (xlix. 10)—"For he seeth that wise men die, likewise the fool and the brutish person perish, and leave their wealth to others."

A LITTLE STONE.

A rock, however small, may keep back a great wave.

So James (iii. 4)—"Behold also the ships, which, though they be so great, and are driven of fierce winds, yet are they turned about with a very small helm, whithersoever the governor listeth."

WANDER NOT FAR FROM YOUR HOME.

And thou, my friend, be not long at a distance from thy home.

So Proverbs (xxvii. 8)—"As a bird that wandereth from her nest; so is a man that wandereth from his place."

NO ONE CAN CONTEND WITH JOVE.

Assuredly no one mortal-born would think to vie with Jove.

So Isaiah (xlv. 9)—"Woe unto him that striveth with his Maker."

MOURNING FOR THE DEAD.

I do not deem it improper to shed tears over him who has died and met a gloomy fate: the rites of woe are all that the living can bestow, to shear the graceful curl and let fall the tender tear down the cheek.

So Ecclesiastes (xii. 5)—"Man goeth to his long home, and the mourners go about the streets."

WISDOM OF SILENCE.

Thou hast spoken as much as a prudent man ought.

So Proverbs (x. 19); and Ecclesiastes (v. 2)—"Let thy words be few."

A MIRTH-INSPIRING BOWL.

Forthwith Helen mixed a mirth-inspiring bowl from which they drank, assuager of sorrow and

wrath, that makes man forgetful of all the ills of life. Whoever swallows the draught, when it has been mixed in the bowl, will not let fall a tear for one whole day adown his cheek, not even though his father and mother were lying in the throes of death, not even though a man should slay before his eyes a brother or a son; no, not even though his own eyes beheld it.

So Proverbs (xxxix. 5)—"Give strong drink unto him that is ready to perish, and wine unto those that be of heavy hearts. Let him drink, and forget his poverty, and remember his misery no more."

REMEMBER THE COMMANDS OF GOD.

The gods have always wished men to be mindful of their precepts.

So Numbers (xv. 38)—"Let them make fringes, that he may look upon them, and remember all the commandments of the Lord."

PUT A GUARD ON THY TONGUE.

And he would have escaped death, even though hated by Minerva, if he had not uttered arrogant words, and thus fallen into great crime.

So Proverbs (xii. 13)—"The wicked is snared by the transgression of his lips;" and (xiii. 3)—"He that keepeth his mouth keepeth his life: but he that openeth wide his lips shall have destruction;" and (xviii. 7)—"A fool's mouth is his destruction, and his lips are the snare of his soul."

ELYSIUM.

But the immortal gods shall send thee to the plains of Elysium, and the utmost bounds of earth, where dwells Rhadamanthus with auburn hair: there man's whole existence is a state of ease: no snow is there, nor violent storms, nor rain; but Oceanus ever sends the gently-blowing western gales to refresh wearied men.

Tennyson ("Morte d'Arthur") says—

"Where falls nor hail or rain or any snow,
Nor ever wind blows loudly."

Swinburne ("Atalanta in Calydon") says—

"Lands undiscoverable in the unheard-of west,
Round which the strong stream of a sacred sea
Rolls without wind forever, and the sun
There shows not her white wings and windy feet,
Nor thunder, nor swift rain saith anything,
Nor the sun burns, but all things rest and thrive."

TO SPEAK TO THE AIR.

It is base to speak vain words.

So Job (xv. 2)—"Should a wise man utter vain words, and fill his belly with the east wind?"—and (xvi. 3)—"Shall vain words have an end?"

A SYLVAN SCENE.

Around the cave trees grew in utmost beauty—alders and poplars and fragrant-scented cypresses, in which all birds of ample wing had nests—owls, hawks, and long-tongued water-fowl, that plunge into the sea-waves. The cave in front was spread with a green vine, clustering with ripe grapes; four springs ran with limpid water near to each other, flowing here and there; around, a meadowy ground was seen, covered with violets and green parsley: such a spot even a god might well admire and wander over with delight.

THE WILL OF GOD.

But assuredly it is by no means possible that any other god should dare to disobey the will of Jove, or render it null.

So Job (xxiii. 13)—"But He is in one mind, and who can turn Him;" and Proverbs (xix. 21)—"There are many devices in a man's heart; nevertheless the counsel of the Lord, that shall stand."

BEWARE OF THE ANGER OF GOD.

Beware of the wrath of Jove, lest at some future period he wreak his anger upon thee.

So Psalms (li. 12)—"Kiss the Son, lest He be angry, and ye perish from the way, when His wrath is kindled but a little."

THE OMNISCIENCE OF GOD.

The gods, who dwell in the broad heaven, superior to me in knowledge and understanding.

So Psalms (xciv. 10)—"He that teacheth man knowledge, shall He not know?"—and 1 Corinthians (i. 25)—"Because the foolishness of God is wiser than men; and the weakness of God is stronger than men."

A MERCIFUL DISPOSITION.

For I have a kind disposition, nor am I iron-hearted, but pitiful.

So Psalms (xxxvii. 26)—"A good man is ever merciful;" and (cxli. 4)—"He is gracious and full of compassion; a good man sheweth a favor."

DIANA.

Like the huntress Diana, whose delight is set on her arrows, in the mountains, either on lofty Taygetus or Erymanthus, delighting in boars and swift stags; with her the rural nymphs, daughters of ægis-bearing Jove, sport in playful games, while her mother, Latona, is glad at heart; in head and shoulders she overtops them all, but is easily distinguished, even where all are lovely. So also did the virgin excel all her maidens.

So Proverbs (xxxii. 28)—"Her children arise up and call her blessed; her husband also, and he praiseth her."

DESCRIPTION OF THE HAPPY LIFE OF WOMAN.

May the gods grant to thee all thy heart's desire, a husband, and home, and firm union of soul with thy partner; for there is nothing more delightful than when husband and wife manage their affairs in close union, exciting envy in their foes and joy to all who wish them well; they themselves feel and enjoy their happy state.

So Ecclesiastes (ix. 9)—"Live joyfully with the wife whom thou lovest all the days of the life of thy vanity, which He hath given thee under the sun, all the days of thy vanity: for that is thy portion in this life, and in thy labor which thou takest under the sun."

HAPPINESS.

God himself metes out happiness to men, to the good and bad, to each as to Him seems best.

So 1 Chronicles (xxix. 12)—"Both riches and honor come of Thee, and Thou reignest over all; and in Thine hand is power and might; and in Thine hand it is to make great, and to give strength unto all;" and Ecclesiastes (ix. 1)—"No man moveth either love or hatred by all that is before them; all things are alike to all, there is one event to the righteous and to the wicked."

WHAT WE GIVE TO THE POOR WE LEND TO GOD.

For strangers and poor are all sent by Jove; a gift, however little, is grateful to them.

So Proverbs (xix. 17)—"He that hath pity upon the poor lendeth unto the Lord; and that which he hath given will He pay him again."

RUGGED MARINERS.

For they do not endure foreigners, nor do they care for those who come from other lands. Trusting in their swift-sailing ships, they make their way over the mighty deep, since the Ruler of the sea has given it to them; their ships are swift as winged bird, or even thought.

So Job (ix. 26)—"My days are passed away as the swift ships;" and Psalms (xc. 9)—"We spend our years as a tale that is told."

MANLY FIRMNESS.

Let not thy spirit fail thee, for the undaunted does best in every enterprise, even though he come from realms unknown.

So Deuteronomy (xxxi. 8)—"Fear not, neither be dismayed."

HE DESTROYS AND IS DESTROYED.

He extirpated the godless race, but perished in their ruin.

So Proverbs (xxix. 2)—"But when the wicked beareth rule, the people mourn."

A BELOVED QUEEN.

Thus she was honored from the heart, and is so both by dear children, by Alcinous and people, in whose eyes she is as it were a goddess, as she passes through the city; for she lacks nothing in sound sense and judgment, healing the strife among those whom she loves.

A GARDEN.

Outside the palace, near the door, a spacious garden lies, four acres in extent; round it a fence on all sides; tall trees spring in abundance, pears, pomegranates, apple-trees with fair fruit, luscious fig-trees and luxuriant olives; their fruit is always there, nor fails all the year round, winter and summer, but ever the western breeze causes some to bud and others to ripen; each dropping pear another pear supplies, on apples apples, grapes on grapes, figs on figs arise.

THE FATE OF MAN.

There shall he suffer whatever destiny and the dread Fates have spun for him with their thread of doom when his mother gave him birth.

HUNGER.

For there is nothing more importunate than a hungry stomach, which will not allow a man to forget it, whatever be his cares and sorrows.

So Ecclesiastes (vi. 7)—"All the labor of man is for his mouth, and yet the appetite is not filled;" and Proverbs (xvi. 26)—"He that laboreth, laboreth for himself; for his mouth craveth it of him."

MEN A JEALOUS RACE.

For we, the race of men, are jealous in temper.

So Numbers (v. 14)—"If the spirit of jealousy come upon a man."

DRINKING ACCORDING TO THE PLEASURE OF EACH.

And beside him a cup of wine to drink at his pleasure.

So Esther (i. 8)—"And the drinking was according to the law, that they should do according to every man's pleasure."

GOD GIVES DIFFERENT TALENTS TO DIFFERENT MEN.

God gives not noble gifts to all men, neither nature's charms, nor intellect, nor eloquence, for one man is inferior in outward form, while God makes up for this defect by eloquence, and thus he is admired by all; he speaks sweeter than honey, and with modesty steals away our souls, distinguished amidst the surrounding multitude; in public he appears a god; while another is fair as the ethereal beings in form, but "round his words grace sits not like a coronet."

So Psalms (xlv. 4)—"Grace is poured into thy lips;" and Song of Solomon (iv. 8)—"Thy speech is comely;" and 1 Corinthians (xii. 4)—"Now there are diversities of gifts, but the same Spirit;" and Matthew (xxv. 15)—"And unto one he gave five talents, to another two, and to another one; to every man according to his several ability."

WOMEN SHOULD REMAIN IN THEIR HOMES.

The goddesses remained each modestly at home.

So Titus (ii. 5)—"Discreet, chaste, keepers at home."

THE GODS GIVERS OF BLESSINGS.

The gods, givers of what is good.

So Matthew (vii. 11)—"God will give good things to them that ask Him;" and James (i. 17)—"Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning."

EVIL DEEDS.

Evil deeds prosper never.

So Proverbs (xi. 31)—"Though hand join in hand, the wicked shall not be unpunished;" and (xxix. 6)—"In the transgression of an evil man there is a snare."

SURETY FOR THE UNJUST.

He suffers who gives surety for the unjust.

So Proverbs (vi. 1)—"If thou be surety for thy friend, thou art snared with the words of thy mouth;" and (xi. 15)—"He that is surety for a stranger shall smart for it; and he that hateth suretyship is sure."

THE POET.

Poets are worthy of honor and respect from all men upon the earth, because the Muse has taught them to sing lays, and loves the harmonious race.

A FEAST.

Let us all rejoice together, hosts and guests, since it is best so.

So Ecclesiastes (viii. 15)—"Then I commended mirth, because a man hath no better thing under the sun than to eat, and to drink, and to be merry;" and (x. 19)—"A feast is made for laughter."

THE WILL OF THE LORD BE DONE.

Some things God will bring to pass, and others will be unaccomplished, according to His will.

So Acts (xxi. 14)—"The will of the Lord be done;" and James (iv. 15)—"If the Lord will, we shall do this or that."

THE CALAMITY IS FROM GOD.

The gods have contrived this misfortune, and destined it for men, that it might be a theme of future song.

So 2 Kings (vi. 33)—"This evil is of the Lord;" and Amos (iii. 6)—"Shall there be evil in the city, and the Lord hath not done it?"

AN EQUAL DIVISION.

We have divided the many possessions which we received, so that no one has gone away deprived of his share.

So 1 Samuel (xxx. 24)—"As his part is that goeth down to the battle, so shall his part be that tarrieth by the stuff: they shall part alike."

ALL GROW SPONTANEOUSLY.

They neither plant nor sow, but all things grow without ploughing or sowing, wheat, barley, and vine.

See 2 Kings (xix. 29)—"Ye shall eat this year things that grow of themselves."

THOU CANST NOT ESCAPE THE DISEASE SENT BY GOD.

Thou canst by no means escape the disease sent by mighty Jove.

So 1 Samuel (iv. 8)—"Who shall deliver us out of the hand of these mighty Gods? these are the Gods that smote the Egyptians;" and 1 Peter (v. 6)—"Humble yourselves therefore under the mighty hand of God."

DO NOT IRRITATE THE IRASCIBLE.

Unhappy man, why dost thou exasperate a savage wretch?

So Judges (xviii. 25)—"Let not thy voice be heard among us, lest angry fellows run upon thee, and thou lose thy life, with the lives of thy household."

FOLLY.

For we perished by our own folly.

So Proverbs (i. 33)—"The turning away of the simple shall slay them;" and (xi. 8)—"The perverseness of transgressors shall destroy them;" and Hosea (xiii. 9)—"Thou hast destroyed thyself."

THE ADVICE OF BAD COMPANIONS.

The bad counsel of my companions got the better of me.

So 2 Samuel (xvii. 14)—"And Absalom and all the men of Israel said, The counsel of Hushai the archite is better than the counsel of Ahithophel: for the Lord had appointed to defeat the good counsel of Ahithophel, to the intent that the Lord might bring evil upon Absalom;" and 1 Kings (xii. 18)—"And the king answered the people roughly, and forsook the old men's counsel that they gave him; and spake to them after the counsel of the young men, saying, My father made your yoke heavy, I will add to your yoke: my father also chastised you with whips, but I will chastise you with scorpions."

BAD COMPANIONS.

Bad companions have ruined me, and in addition to these, excessive sleep.

So Proverbs (xxiii. 20)—"Be not among the wine-bibbers; among riotous eaters of flesh; for the drunkard and the glutton shall come to poverty, and drowsiness shall clothe a man with rags."

"LOVE NOT SLEEP."

A man who does not sleep has a double reward.

So Proverbs (xx. 13)—"Love not sleep, lest thou come to poverty: open thine eyes, and thou shalt be satisfied with bread."

TEARS VAIN IN MISERY.

But tears in mortal miseries are vain.

A MIND NOT TO BE CHARMED.

In thy breast there is a mind that cannot be gained over by charming.

So Psalms (lvi. 5)—"Which will not hearken to the voice of charmers, charming never so wisely."

WHY DOST THOU SIT LIKE A DUMB MAN.

Why, Ulysses, dost thou sit thus like a man bereft of speech, wasting away thy heart, and touching neither bread nor drink?

See 1 Samuel (i. 8); and 1 Kings (xxi. 5)—"Why is thy spirit so sad, that thou eatest no bread?"

A WILD SCAMP.

Elpenor was the youngest, neither famed in war nor for sense, who, away from his companions in the sacred hall of Circe, delighting in a cool recess, slept, overcome with wine.

WHO CAN SEE GOD?

Who can see God with his eyes if He wills not, going hither and thither?

So Isaiah (xlv. 15)—"Verily Thou art a God that hidest Thyself;" and John (i. 18)—"No man hath seen God at any time;" and 1 Timothy (vi. 16)—"Whom no man hath seen, nor can see."

VISIONARY GHOSTS.

The shades of the dead came thronging forth from Erebus—virgins, youths, and old men who in their day had endured much, and tender little maidens overwhelmed with recent grief; many a man, too, wounded by the brazen spear, slain in the battlefield in mail, and all blood-stained, who flitted by in numbers beside the trench, here and there, with loud wailings; pale, I trembled with fear.

THE EVILS OF DRUNKENNESS.

I have been ruined by an evil fate and excess in wine.

So Proverbs (xxiii. 30)—"Who hath woe? who hath sorrow? They that tarry long at the wine; they that go to seek mix'd wine."

THE DEAD.

But this is the law of mortals when they die: their muscles hold no longer flesh and bones, but the strong force of flaming fire destroys these parts, after the spirit has first left the white bones, while the soul wings its flight, vanishing like a dream.

So Luke (xxiv. 39)—"A spirit hath not flesh and bones."

LYING VAGRANTS.

Ulysses, we do not suspect in looking at thee that thou art capable of guile and tricky frauds, though such the earth produces in numbers, vagrants, artful to deceive, so as to elude detection; to thee there is a grace of language, and gifts of mind; thou hast told thy story skilfully, like some bard the sad woes of all the Greeks and of thyself.

So Titus (l. 10)—"There are many unruly and vain talkers and deceivers;" and 2 John (7)—"For many deceivers are entered into the world."

A TIME FOR EVERYTHING.

A time for talking, however prolonged; a time, too, for sleep.

So Ecclesiastes (iii. 7)—"A time to keep silence, and a time to speak."

WOMEN.

Than woman there is no fouler and viler fiend, when her mind is bent to ill.

TRUST NOT A SECRET TO A WOMAN.

Though thou lovest thy wife, tell not everything which thou knowest to her; but unfold some trifle, while thou concealst the rest.

So Micah (vii. 5)—"Keep the doors of thy mouth from her that lieth in thy bosom."

THINK ALL WOMEN FALSE.

There is no trust to be placed in women.

RATHER BE A SLAVE ON EARTH THAN REIGN IN HELL.

I would rather be a peasant and slave to some poor hind of slenderest means, than reign over the dead who have passed from life.

Milton ("Paradise Lost," l. 253) says the reverse of this—

"Better to reign in hell than serve in heaven!"

"TO GO DOWN ALIVE INTO THE PIT."

Unhappy wretches, who alive go down into the pit of Hades, dying twice, while other men die only once.

So Numbers (xvi. 33)—"They went down alive into the pit;" and Psalms (lv. 15)—"Let them go down into hell;" and Hebrews (ix. 27)—"And it is appointed unto men once to die."

WE ARE NOT IGNORANT OF MISFORTUNES.

O friends! we have by no means been unacquainted with woes.

So Romans (v. 4)—"Patience worketh experience;" and 2 Corinthians (ii. 11)—"We are not ignorant of his devices."

DEATH BY HUNGER.

Death in all shapes is hateful to unhappy man, but the most dreadful is to die and meet our fate by hunger.

A TWICE-TOLD TALE.

And what so tedious as a twice-told tale?

So Matthew (vi. 7)—"Use not vain repetitions."

HONOR TO THE OLD.

It would be improper to afflict with disgrace the oldest and worthiest.

So Proverbs (xvi. 31)—"The hoary head is a crown of glory, if it be found in the way of righteousness."

THE OPPRESSED ARE CARED FOR BY GOD.

May they be punished by Jove, the protector of suppliants, who watches over men, and makes those who commit wrong pay a due penalty.

So Psalms (x. 14)—"Thou beholdest mischief and spite, to requite it with Thy hand."

ENDURE WHAT HAPPENS FROM NECESSITY.

Whatsoever sorrows may be thy doom, bear them with patience if necessity entail them.

So Hebrews (xii. 1)—"Let us run with patience the race that is set before us;" and James (i. 4)—"Let patience have her perfect work."

ENDURE.

Submit in silence to many ills, enduring the violence of men.

So Isaiah (liii. 7)—"He was oppressed and He was afflicted, yet He opened not His mouth."

I CANNOT LEAVE THEE.

Wherefore I am not able to leave thee, since thou art unfortunate.

So Psalms (xxxvii. 23)—"The Lord forsaketh not His saints."

"IF GOD BE FOR US."

Would that thou wouldst stand by me and encourage me, thou blue-eyed goddess; with thee on my side would I be willing to encounter three hundred men.

So Psalms (lxxvi. 6)—"I will not be afraid of ten thousands of people that have set themselves against me round about;" and Romans (viii. 31)—"If God be for us, who can be against us?"

THE TORMENT OF A GUILTY CONSCIENCE.

The blessed gods love not impious acts, but honor justice and the pious deeds of men; the foes of peace and scourges of mankind, who overrun the lands of others, given to them by Jove as a prey, filling their vessels with ill-got spoil, proceed homeward, yet great fear of divine vengeance falls upon them.

So Psalms (v. 5)—"Thou art not a God that hath pleasure in wickedness; neither shall evil dwell with thee; Thou hatest all workers of iniquity;" and (xxxiii. 6)—"Thou lovest righteousness and judgment."

A WIFE LONGING FOR HER LOST HUSBAND.

Old man, it is not every vagrant that coming with his stories can persuade the wife and son; for needy strangers, that they may have a kind reception, are prone to manufacture stories; nor do they care to speak the truth. Every vagrant who comes to Ithaca goes to my mistress with his falsehoods. She receives them kindly, inquiring each particular, while tears drop from her eyelids, like a woman who has lost her husband in some foreign land.

YOU CAN GUESS THE GRAIN FROM THE STUBBLE.

I think that, looking at the stubble, thou mayest guess the grain.

THE VARIOUS EMPLOYMENTS OF MEN.

The things which God suggested were agreeable to me; for men take delight in various employments.

So Genesis (iv. 2)—"Abel was a keeper of sheep, and Cain was a tiller of the ground;" and Matthew (xxii. 5)—"And went their ways, one to his farm, another to his merchandise."

"LIE NOT ONE TO ANOTHER."

Why shouldst thou, being such as thou art, lie rashly?

So Colossians (iii. 9)—"Lie not one to another."

ENJOY THE PRESENT.

Enjoy such things as thou hast; for God will give one thing and one withhold.

So Philippians (iv. 11)—"I have learned, in whatsoever state I am, therewith to be content;" and Hebrews (xiii. 5)—"Be content with such things as ye have."

POWERS OF WINE.

For wine leads to folly, making even the wise to laugh immoderately, to dance, and to utter what had better have been kept silent.

So Proverbs (xx. 1)—"Wine is a mocker, strong drink is raging; and whosoever is deceived thereby is not wise;" and Isaiah (xlviii. 7)—"They have erred through wine, and through strong drink are out of the way."

WOMAN MARRIED A SECOND TIME.

For thou knowest the dispositions of women; whoever marries a second time wishes her family to prosper, forgetting her former children and dead husband, never thinking of them.

So 1 Timothy (v. 9)—"A widow having been the wife of one man; but the younger widows refuse; for when they have begun to wax wanton against Christ, they will marry."

"WELCOME THE COMING, SPEED THE PARTING GUEST."

Who loves too much hates in the same extreme; the golden mean is to be preferred. It is equally wrong to urge the unwilling to come back and to detain him who desires to depart. True friendship's rule is "to welcome the coming, to speed the parting guest."

So Ecclesiastes (iii. 8)—"A time to love, and a time to hate; a time of war, and a time of peace;" and Romans (xii. 18)—"Given to hospitality;" and Hebrews (xiii. 2)—"Be not forgetful to entertain strangers;" and 1 Peter (iv. 9)—"Use hospitality one to another without grudging;" and Genesis (xviii. 14)—"And Abraham went with them to bring them on the way;" and Romans (xv. 24)—"For I trust to see you in my journey, and to be brought on my way thitherward by you;" and 3 John (6)—"Whom if thou bring forward on thy journey, thou shalt do well."

MEN OF MEAN ESTATE.

With the good-will of the messenger Mercury, who imparts grace and honor to the works of men, we could with me cope in dexterous service, to kindle the fire, to split the dry wood, to cut up the carcass, roast the flesh, pour out the wine, offices which the humble wait upon the rich.

THE EMIGRANT.

There is nothing worse for mortals than a vagabond life.

So Proverbs (xxvii. 8)—"As a bird that wandereth from her nest; so is a man that wandereth from his place."

TOO MUCH REST.

For too much rest itself becomes a pain.

So Proverbs (vi. 9)—"How long wilt thou sleep, O sluggard? when wilt thou arise out of thy sleep? Yet a little sleep, a little slumber, a little folding of the hands to sleep."

THE RETURN OF AN ONLY SON.

The father receiving his only son, the child of his old age, embraces him affectionately, as he returns from some far distant land after an absence of ten years, for whom he has suffered many a bitter pang of anxious care.

So Luke (xv. 20)—"And when he was yet a great way off, his father saw him, and had compassion, and ran and fell on his neck and kissed him."

I KNOW AND UNDERSTAND.

I know, I understand; thou art giving directions to one who is acquainted with these things.

So Job (xiii. 1)—"Lo, mine eye hath seen all this, mine ear hath heard and understood it. What ye know, the same do I know also: I am not inferior unto you."

GOD INVISIBLE.

For the gods do not make themselves visible to all.

So Exodus (xxxiii. 20)—"Thou canst not see my face: for there shall no man see me and live;" and 1 Timothy (vi. 16)—"Whom no man hath seen, nor can see."

I AM NOT A GOD.

I am no god; why dost thou liken me to the immortals?

See 3 Kings (v. 7)—"Am I God?"—and Psalms (lxxxix. 6)—"Who in the heaven can be compared unto the Lord?"—and Isaiah (xli. 5)—"To whom will ye liken me, and make me equal and compare me, that we may be like?"

THE POWER OF GOD.

It is easy for the gods, who inhabit the wide heaven, to raise or cast down mortal man.

See 1 Samuel (ii. 7); and 3 Chronicles (xxv. 8)—"God hath power to help and cast down;" and Psalms (lxxv. 7)—"God is the judge; He putteth down one and setteth up another;" and Luke (i. 53)—"He hath put down the mighty from their seats, and exalted them of low degree."

READY SWORDS OFT CAUSE BLOODSHED.

The steel blade itself oft incites to deeds of violence.

CONTRIVE NOT EVIL AGAINST ONE ANOTHER.

Men ought not to devise evils against one another.

So Proverbs (iii. 30)—"Devise not evil against thy neighbor;" and (xxiv. 8)—"He that deviseth to do evil shall be called a mischievous person."

ONE ROGUE IS USHER TO ANOTHER.

Here sure one rogue leads on another; thus it is that God for evermore links like with like.

So Matthew (xv. 14)—"Blind leaders of the blind."

THE IDLE.

Since he has learned evil deeds he will not be willing to turn to labor; but at the people's heels forever cowering, he wishes to feed his insatiable belly by begging.

So Proverbs (xix. 24)—"A slothful man hideth his hand in his bosom, and will not so much as bring it to his mouth again."

BAD SHEPHERDS.

Bad shepherds destroy their sheep.

So Ezekiel (xxxiv. 2)—"Woe be to the shepherds, ye eat the fat, and ye clothe you with the wool, ye kill them that are fed, but ye feed not the flock;" and John (x. 12)—"But he that is an hireling, and not the shepherd, whose own the sheep are not, seeth the wolf coming, and leaveth the sheep, and fleeth; and the wolf catcheth them, and scattereth the sheep."

WANT.

It is not possible for the hungry belly to conceal her wants, causing unnumbered woes to mortals, for which well-benched galleys are equipped for the barren sea, bearing ills to the enemy.

So Ecclesiastes (vi. 7)—"All the labor of man is for his mouth, and yet the appetite is not filled."

PLAYTHINGS OF THE GREAT.

Eumæus, surely this is very wonderful, this dog lies in the dirt, beauteous in form, but I do not know whether or not he was swift in running as he is handsome, or like those lap-dogs which the rich keep for their beauty.

A SLAVE.

For loud-thundering Jove takes away half the worth of a man when he has made him a slave.

So Proverbs (xxix. 19)—"A servant will not be corrected by words; for though he understand, he will not answer."

THE BEGGAR.

Modesty is not good for a needy beggar.

So Luke (xi. 8)—"Though he will not rise and give him, because he is his friend, yet because of his importunity, he will rise and give him as many as he needeth."

PRUDENCE NOT EQUAL TO BEAUTY.

My good friend, thy wisdom is not equal to thy good looks.

So Proverbs (xi. 22)—"As a jewel of gold in a swine's snout, so is a fair woman which is without discretion."

GOD PROTECTS THE POOR.

The gods and avenging Furies are the protectors of the poor.

So Psalms (xii. 5)—"For the oppression of the poor, for the sighing of the needy, now will I arise, saith the Lord;" and (lix. 38)—"For the Lord heareth the poor."

GOD WATCHES THE INJUSTICE OF MEN.

The gods, like strangers from some foreign land, assuming different forms, wander through cities, watching the injustice and justice of men.

So Proverbs (xv. 3)—"The eyes of the Lord are in every place, beholding the evil and the good;" and Acts (xiv. 11)—"The gods are come down to us in the likeness of men."

ENVY NOT THY NEIGHBOR'S PROPERTY.

Thou oughtest not to envy the wealth of thy neighbor.

So Matthew (xx. 15)—"Is it not lawful for me to do what I will with mine own? Is thine eye evil, because I am good?"

MAN SUBJECT TO VICISSITUDES.

The earth produces nothing feebler than man, of all that breathes or creeps on earth; for he thinks himself exempt from evil in years to come, while the gods give him strength and his knees are able to support him. But when the blest gods bring sorrow, he is unwilling to bear it with patience. For men are such as the Father of men and gods wills it.

So Job (xxv. 6); and Psalms (xxxix. 5)—"Verily every man at his best state is altogether vanity;" and (xc. 5)—"Thou carriest them away as with a flood; they are as asleep: in the morning they are like grass which groweth up. In the morning it flourisheth, and groweth up; in the evening it is cut down, and withereth;" and (xxx. 6)—"And in my prosperity I said, I shall never be moved;" and Psalms (xxxix. 15)—"My times are in Thy hand;" and Ecclesiastes (vii. 14)—"In the day of prosperity be joyful, but in the day of adversity consider: God also hath set the one over against the other, to the end that man should find nothing after Him."

TO SORROW WITHOUT CEASING.

It is wrong to sorrow without ceasing.

So 2 Corinthians (ii. 7)—"Lest perhaps such an one should be swallowed up with overmuch sorrow;" and (vii. 10)—"The sorrow of the world worketh death."

"I THOUGHT AS A CHILD."

But I know and understand everything, good and bad; in days gone by I was a mere child, yet I am not able to perceive what is prudent in all circumstances.

So 1 Corinthians (xiii. 11)—"When I was a child, I spake as a child, I understood as a child, I thought as a child: but when I became a man, I put away childish things;" and (xiii. 9)—"We know in part."

A HYPOCRITE.

He soothed him with honeyed words, but his intentions were far otherwise.

So Psalms (xxviii. 8)—"Which speak peace to their neighbors, but mischief is in their hearts;" and Jeremiah (ix. 8)—"One speaketh peaceably to his neighbors with his mouth, but in heart he layeth his wait."

TO REJECT A GIFT.

It is not good to refuse a gift.

So 1 Timothy (iv. 4)—"For every creature of God is good, and nothing to be refused, if it be received with thanksgiving."

EFFECTS OF WINE.

Surely wine possesses thy senses, or else thou art always such as to speak in a foolish way.

So Isaiah (xxviii. 7)—"They also have erred through wine, and through strong drink are out of the way;" and Acts (ii. 13)—"Others mocking said, these men are full of new wine."

ATTEND TO YOUR HOUSEHOLD AFFAIRS.

I wish, my son, that thou wouldst look with care after thy household, and guard all thy possessions.

So Proverbs (xxvii. 35)—"Be thou diligent to know the state of thy flocks, and look well to thy herds;" and 1 Timothy (iii. 4)—"One that ruleth well his own house."

THE IDLE.

I shall not allow any one to be idle who lives at my expense, though he has come from far.

So Genesis (iii. 19)—"In the sweat of thy face shalt thou eat bread;" and Proverbs (xx. 4)—"The sluggard will not plough by reason of the cold; therefore shall he beg in harvest, and have nothing;" and 2 Thessalonians (iii. 10)—"If any would not work, neither should he eat."

CONFUSION OF TONGUES.

There was a great confusion of tongues.

So Genesis (xi. 9)—"There the Lord did confound the language of all the earth;" and Acts (ii. 4)—"They began to speak with other tongues."

SHORTNESS OF LIFE.

Mortals have a short span of life.

So Job (viii. 9)—"For we are but of yesterday, and know nothing, because our days upon earth are a shadow;" and (xiv. 1); and Psalms (cxxxix. 5)—"Behold thou hast made my days as an hand-breadth, and mine age is as nothing before thee: verily every man at his best state is altogether vanity;" and (xc. 10)—"The days of our years are threescore years and ten; and if by reason of strength they be fourscore years, yet is their strength labor and sorrow: for it is soon cut off, and we fly away."

BE PATIENT.

Be patient, my soul; thou hast at another time suffered something still worse than this.

So Psalms (xlii. 5)—"Why art thou cast down, O my soul? and why art thou disquieted in me?" and Romans (v. 4)—"And patience worketh experience: and experience, hope."

GOD KNOWS ALL THINGS.

For God knows all things well, the evil and good that befalls men.

So Psalms (cxxxix. 1-4)—"O Lord, Thou hast searched me, and known me. Thou knowest my down-sitting and mine up-rising: Thou understandest my thought afar off. Thou compassed my path, and my lying down, and art acquainted with all my ways. For there is not a word in my tongue, but, O Lord, Thou knowest it altogether."

EVEN KINGS SUFFER CALAMITIES.

The gods overwhelm those men with misfortunes who ramble about, when even on kings they impose toil.

So Job (v. 6)—"Although affliction cometh not forth of the dust, neither doth trouble spring out of the ground."

THEY SMILED AGAINST THEIR INCLINATION.

They smiled with the jaws of another.

So Proverbs (xiv. 13)—"Even in laughter the heart is sorrowful, and the end of that mirth is heaviness."

DO NOT PUT OFF BY PRETEXTS.

But come, do not put off under false pretexts.

So Proverbs (iii. 28)—"Say not unto thy neighbor, Go, and come again, and to-morrow I will give; when thou hast it by thee."

BETTER TO DIE THAN TO LIVE.

It is much better to die than to live, being balked in our objects about which we are always employed, living in hope every day.

So 1 Corinthians (ix. 15)—"It were better for me to die, than that any man should make my glorying void."

TO PERISH BY OUR OWN FOLLY.

He proceeded on, destroyed by his own folly, bearing his own evils in his arrogant mind.

So Galatians (vi. 5)—"Every man shall bear his own burden."

THOU SHALT SUFFER WHAT THOU INTENDEST FOR ANOTHER.

What thou thoughtest to perpetrate, that thou shalt suffer in thy own person.

So Psalms (vii. 16)—"His mischief shall return upon his own head;" and 1 Kings (ii. 44)—"The Lord shall return thy wickedness upon thine own head."

TO BRING DEATH BY WICKED CONDUCT.

But they did not obey me to keep their hands from evil, therefore they met a shameful death for their folly.

So Proverbs (xi. 3)—"The perverseness of transgressors shall destroy them;" and (xxiii. 6)—"Wickedness overthroweth the sinner."

INSULT NOT THE DEAD.

It is impious to insult the dead.

So Proverbs (xxiv. 17)—"Rejoice not when thine enemy falleth, and let not thine heart be glad when he stumbleth."

A STONY HEART.

Thy heart is always harder than stone.

So Ezekiel (xi. 19)—"I will take the stony heart out of their flesh."

THE POOR MAN IS DESPISED.

Now, because I am in squalor, and clothed in rags, he despises me, and says that I am not the person I assume to be.

So James (ii. 2)—"For if there come unto your assembly a man with a gold ring, in goodly apparel, and there come in also a poor man in vile raiment; and ye have respect to him that weareth the gay clothing, and say unto him, Sit thou here in a good place; and say to the poor, Stand thou there, or Sit here under my footstool."

HIS FAME SHALL NEVER PERISH.

The fame of his virtuous deeds shall never be forgotten, while the gods will in beauteous song preserve the name of wise Penelope.

So Psalms (cxli. 6)—"The righteous shall be in everlasting remembrance;" and Proverbs (x. 7)—"The memory of the just is blessed."

A WISE SON.

What a joyful day is this, ye friendly gods! I am in the height of joy: my son and grandson are contending for the prize of merit.

So Proverbs (x. 1)—"A wise son maketh a glad father."

LONGINUS.

BORN ABOUT A.D. 213—DIED A.D. 278.

LONGINUS, a distinguished Greek philosopher of the third century of our era, is believed to have been born at Athens, where he was educated by his uncle, Phronto, and on his death he inherited his fortune. He had travelled through various

countries with his parents, and got acquainted with all the principal philosophers of his time, of whom the most distinguished were Ammonius Saccas, Origen, Plotinus, and Amelius. He then settled at Athens, where he collected a large number of pupils, to whose instruction he devoted himself with such zeal that he had little time for the composition of any literary production. Towards the end of his life he travelled to the East, and was induced to remain at Palmyra in the service of Queen Zenobia. He encouraged her to assert her independence, and is said to have dictated a spirited letter to the Emperor Aurelian, renouncing the allegiance of the Romans. When Aurelian took the city of Palmyra, A.D. 273, Longinus was given up to the Romans, who ordered him to be executed, a fate to which he submitted with the utmost firmness. Of all his works, which were numerous, all that has come down to us consists of a considerable part of his work "On the Sublime."

IN WHAT DOES MAN MOST RESEMBLE THE GODS?

For well did Pythagoras answer the question, "In what do we most resemble the gods?" when he replied, "In doing good and speaking truth."

So Proverbs (xiv. 22)—"Mercy and truth be to them that devise good;" and Ephesians (vi. 14)—"Stand, having your loins girt about with truth;" and Psalms (xcviii. 3)—"He hath remembered His mercy and His truth."

THE SUBLIME.

But the sublime, when it is introduced at a seasonable moment, has often carried all before it with the rapidity of lightning, and shown at a glance the mighty power of genius.

GENIUS.

Genius may at times want the spur, but it stands as often in need of the curb.

FROM THE SUBLIME TO THE RIDICULOUS.

Little by little we depart from the terrible and reach the ridiculous.

[Napoleon adopted this idea when he said, "There is only a step from the sublime to the ridiculous"]

GREAT ATTEMPTS.

They call to remembrance the maxim, that "In great attempts 'tis glorious e'en to fall."

PUERILITY.

What is the idea implied in puerility? Why, it is certainly nothing more than the expressions and ideas that naturally occur to a schoolboy, and which become flat and insipid from being overwrought. And those persons are apt to fail in this particular who, aiming at an over-subtle, accurate, and, above all, a sweet style, imperceptibly degenerate into vulgar language and frothy affectation.

WHAT IS REALLY SUBLIME?

That is really grand and sublime which, the more we consider, the more difficult, nay, I would say impossible, it is to withstand; the impression of which sinks so deep, and is so engraven on the mind, that it cannot be effaced. In a word, you may pronounce that to be truly and really sublime

which pleases at all times, and delights all kinds of men. For when men of different pursuits, modes of life, inclinations, ages, and reasoning powers, all unite in admiration of a particular work, then this united assent, and combination of so many different judgments, stamps a high and unequivocal value on that work which meets with such admiration.

GREATEST THOUGHTS UTTERED BY THE GREATEST SOULS.

For it is impossible for those who have low, mean, and grovelling ideas, and who have spent their lives in mercenary employments, to produce anything worthy of admiration, or to be a possession for all times. Grand and dignified expressions must be looked for from those, and those alone, whose thoughts are ever employed on glorious and noble objects.

LET THERE BE LIGHT.

In the same way the Jewish lawgiver, a man of no ordinary genius, when he had conceived in his mind a just idea of the grandeur of the Supreme Being, has given expression to it in noble language, in the beginning of his work containing His laws:—"And God said," "What?" "Let there be light: and there was light. Let the earth be: and the earth was."

So Genesis (i. 3)—"And God said, Let there be light: and there was light."

HOMER.

So that, in the Odyssey, we may liken Homer with justice to the setting sun, whose glory, indeed, still remains, though the excessive heat of his beams has abated.

SUBLIME SPIRIT OF THE ANCIENTS.

In like manner, from the sublime and lofty spirit of the ancients there flow certain emanations, like vapors from the sacred vents, which penetrate imperceptibly into the breasts of imitators, inspiring those who are not distinguished for genius with the fire and vigor of others.

FEELINGS OF AN AUTHOR RESPECTING HIS WORK.

For if any man, at the very moment he is composing a work, should be filled with dread lest he should be producing what will not live beyond his own life and time, it must necessarily be that the labors of such a man, who feels so little confidence in himself that he cannot look forward to the esteem and applause of succeeding ages, should be imperfect and abortive.

FANCY IN ORATORY.

What, then, is the use of allowing full play to the fancy in oratory? It is, perhaps, that it enables us to make our speeches impassioned and full of vigor.

IT IS AN ART TO CONCEAL ART.

For art may then be termed perfect and complete, when it seems to be nature; and nature then is most successful, when she conceals what aid she receives from art.

WHAT NATURE DESIGNED MAN FOR.

Nature never meant man to be a low, groveling creature; but, placing him in the world, as in a wide and crowded theatre, intended that he should be the spectator of her mighty works, giving him an eager desire for every honorable pursuit. From the first moment of his birth, she implanted in his soul an inextinguishable love for all that is good and noble, and a constant longing to approach nearer to the Divine nature.

FREE GOVERNMENT THE NURSE OF GENIUS.

Must we at last give credit to that common observation so highly praised, that free government is the true nurse of genius, and that in such a state alone do perfect orators flourish, and with it decline or die? For Liberty, it is said, is alone fitted to bring out the noble thoughts of men of genius, filling them with hopes of success, with a generous emulation and desire for victory. And above all, as the labors of orators are nobly rewarded in free states, it brings into full play the innate powers of their mind, which are sharpened and polished by constant practice; and the freedom of their thoughts, as might be expected, shines forth clearly in the liberty of their debates.

SLAVERY.

Slavery, however easy may be its chains, cannot be altogether divested of its bitterness, and can only be regarded as a prison of the soul, and a public dungeon.

LOVE OF MONEY AND LOVE OF PLEASURE.

For love of money is the disease which renders us most pitiful and grovelling, and love of pleasure is that which renders us most despicable.

LUCIAN.

LUCIAN, a classic satirist and humorist of the first merit, was born at Samorata, in Syria, in the early part of the second century of our era.

THE WORLD TO COME.

Dost thou not know what punishment awaits the wicked after this life, and in what happiness the good live?

So Matthew (xxv. 46).—"And these shall go away into everlasting punishment: but the righteous into life eternal."

MEN KNOW NOT THE TRUTH.

As they are men, they know not the truth.

So Ephesians (iv. 8).—"Having the understanding darkened because of the blindness of their hearts."

GOD IS OMNISCIENT.

When thou committest a sin, thou mayest perhaps conceal it from men, but thou wilt not conceal it from God, however much thou strivest.

MENANDER.

BORN B.C. 342—DIED B.C. 291.

MENANDER, the most celebrated poet of the new comedy, was a native of Athens, son of Diopelthes and Hegesistrate, flourishing in the time of the successors of Alexander. He was born the same year his father commanded the Athenian forces on the Hellespont, against Philip of Macedon. He was educated under the eye of his paternal uncle, Alexis, the comic poet, and received instruction from Theophrastus, the philosopher. He was the intimate friend of Epicurus, enjoyed the friendship of Demetrius Phalereus, and was greatly admired by the first Greek king of Egypt, Ptolemy, the son of Lagus. He is said to have been drowned while he was swimming in the harbor of Peiræus, near which he had an estate. Notwithstanding his fame as a poet, his public dramatic career, during his lifetime, was not particularly successful; for, though he composed upwards of a hundred comedies, he only gained the prize eight times.

THE BACHELOR IS HAPPY.

Happy am I, who have no wife.

CHILDREN TO BE BOUND TO YOU BY GENTLENESS.

We ought to lead our child to the right path, not by severity, but by persuasion.

THE RELATIVES OF THE POOR.

It is difficult to discover the relatives of a poor man, for no one likes to acknowledge his relationship with one who is in want, lest he should be asked for assistance.

THE POOR.

The poor man is full of fears, and imagines himself despised by all mankind. The man who enjoys only a moderate fortune is apt to look on the dark side of life.

THE POOR.

Whoever first discovered the means to support the poor increased the number of the miserable; for it would have been more simple for the man who could not live happily to die.

A DAUGHTER.

A daughter is an embarrassing and ticklish possession.

So Sheridan ("The Duenna," act I. sc. 3).—

"If a daughter you have, she's the plague of your life,
No peace shall you know, though you've buried your wife!
At twenty she mocks at the duty you taught her—
Oh, what a plague is an obstinate daughter!"

HAIL, FATHERLAND.

Hail, beloved land! I embrace thee, seeing thee after a long time; for it is not every land I so address, but only when I see my own; for what supports me with food, that I regard as a god.

So Scott ("Lay of the Last Minstrel," can. vi. st. 1).—

"Breathes there the man with soul so dead,
Who never to himself has said—
This is my own, my native land?"

LOVE.

Love blinds all men, both those who act reasonably and those who act foolishly.

HABITS.

For habits are never to be neglected.

THE EVENTS OF LIFE.

Man must be prepared for every event of life, for there is nothing that is durable.

SON AND DAUGHTER.

A wise son is a delight to his father, while a daughter is a troublesome possession.

So Proverbs (x. 1)—"A wise son maketh a glad father; but a foolish son is the heaviness of his mother."

GOD.

All places are the temple of God, for it is the mind which prays to God.

So Acts (vii. 48)—"Howbeit the most High dwelleth not in temples made with hands; as saith the prophet, Heaven is my throne, and earth is my footstool: what house will ye build me? saith the Lord; or what is the place of my rest? Hath not my hand made all these things?"

HOW THE CHARACTER OF MAN IS KNOWN.

The character of man is known from his conversation.

THE WISH IS FATHER TO THE THOUGHT.

He who sees and expects only what he wishes is a foolish judge of what is true.

So Shakespeare ("King Henry IV.," part iii., act iv., sc. 4)—

"Thy wish was father, Harry, to that thought."

RICHES.

Riches are blind, and render men blind who set their affections upon them.

ANNOYANCES OF LIFE.

In everything thou wilt find annoyances, but thou oughtest to consider whether the advantages do not predominate.

TO DIE YOUNG.

He whom the gods love dies young.

EVERY DIFFICULTY IS OVERCOME BY LABOR.

He who labors diligently need never despair. We can accomplish everything by diligence and labor.

WHAT IS UNEXPECTED.

I have not been unfortunate, whence I might have expected; but all things that are unexpected cause surprise.

A MODEST ASSURANCE NECESSARY.

Thy modesty, if thou art of grave demeanor, will appear suitable in the eyes of the world, my friend; if thou humblest thyself, and makest little of thyself, this is thought a just despising of thyself.

FIGHT NOT AGAINST GOD.

Fight not against the decrees of God, nor add other annoyances to the occurrences of life; bear patiently whatever happens.

So Acts (v. 29)—"We ought to obey God rather than man."

THE ILLS OF FORTUNE.

The noble ought to bear with patience the evils of life which Fortune brings upon them, when they have not themselves to blame.

EVIL COMMUNICATIONS.

Evil communications corrupt good manners.

A PROPHET.

The wisest man is the best prophet and counsellor.

PRUDENCE.

Prudence and forethought are the origin of much that is good, if they be applied to a proper object.

IMPRUDENCE.

It requires little exertion on our part to bring misfortune upon ourselves.

KNOW THYSELF.

In many things thou dost not well to say, "Know thyself;" for it would be better to say, "Know others."

THE SLUGGARD.

A procrastinator, born merely to consume the fruits of the earth; a miserable wretch; a useless being on earth, acknowledging that he has been brought up in vain.

INDUSTRY.

Who can be happy without strenuous labor?

FOLLY.

It is not in the power of a foolish person to escape misfortune.

So Proverbs (x. 10)—"A prating fool shall fall;" and (xxvii. 22)—"Though thou shouldst bray a fool in a mortar."

GOOD RESULTS.

That which turns out well is better than any law.

CHANCE.

Chance is, as it seems, a kind of god, for it preserves many things which we do not observe.

THE JUST.

No just man has ever become suddenly rich.

ADVERSITY.

No one ought ever to despond in adverse circumstances, for they may turn out to be the cause of good to us.

So Job (v. 17)—"Behold, happy is the man whom God correcteth; therefore despise not thou the chastening of the Almighty;" and Hebrews (xii. 6)—"For whom the Lord lov-

eth He chasteneth, and scourgeth every son whom he receiveth."

So Shakespeare ("As You Like It," act. II, sc. 1)—

"Sweet are the uses of adversity;
Which, like the toad, ugly and venomous,
Wears yet a precious jewel in his head."

And "Measure for Measure," (act. IV, sc. 6)—

"'Tis a physic
That's bitter to sweet end."

KNOW THYSELF.

That saying, "Know thyself," has this meaning, that thou get acquainted with thy own abilities, and with what thou art able to accomplish.

THE POOR.

The poor are always considered to be under the peculiar care of the gods.

So Psaumes (lxxx. 35)—"For the Lord heareth the poor, and despiseth not His prisoners."

THE CONTINGENCIES OF FORTUNE.

It does not become any living man to say, "This will not happen to me."

THE GOOD ARE KNOWN BY A BLUSH.

Whoever blushes seems to be good.

So Young (Night vii., l. 495)—

"The man that blushes is not quite a brute."

THE HONORABLE.

A good and honorable character is a safe provision for every event and every turn of fortune.

GOD.

God takes particular care of the good.

COUNTRY LIFE.

Men are taught virtue and a love of independence by living in the country.

PLEASURE AND PAIN CLOSELY UNITED.

There is no pleasure of life, sprouting like a tree from one root, but there is some pain closely joined to it; and, again, nature brings good out of evil.

THE PAINS OF LIFE.

If thou expungest from life all that part which thou passest unhappily, it reduces life to a small infinitesimal fragment.

A SERVANT.

It is safest for a servant to do what he is ordered, as the proverb says.

PLEASANT AT TIMES TO PLAY THE FOOL.

It is not always suitable to be wise; to play the fool in some things is proper.

So Ecclesiastes (III. 4)—"A time to mourn and a time to dance."

TRUTH.

Truth when not sought after, sometimes comes to light.

MAN.

I maintain that he is most happy who, after contemplating at his ease those beautiful objects of nature, the sun, stars, water, clouds, fire, has departed speedily to the home whence he came. Whether he live a hundred years or a few, he will always have the same objects before him. Consider, therefore, the time of which I speak to be merely the place of meeting and sojourning for men, where we meet together, traffic, are cheated, gamble, and amuse ourselves. If thou departest early, thou wilt enjoy the better fate; thou hast gone furnished with provisions for the way, hated by no one. He who remains a longer time in the world, after all his labors, at last comes to an end, and, reaching a miserable old age, finds himself in want of everything. Roaming about, he finds enemies, who lay snares for him: having at last come to an end, the spirit parts from the body with great difficulty.

LEAN NOT ON YOUR OWN UNDERSTANDING.

Cease to lean on your own understanding, for the wisdom of man is nothing else but the dictates of chance, whether that be considered Divine inspiration or pure intellect. It is this that rules, turns, and preserves all things, while the wisdom of man is mere smoke and idle talk; believe what I say, and you will not have cause to blame me. All things that we do or meditate are the results of chance, though we ascribe them to our own wisdom. Chance directs all things: we ought to call this, whether intellect or forethought, as the only goddess, unless we foolishly take pleasure in vain appellations.

So Proverbs (III. 5)—"Lean not unto thine own understanding."

TRUTH.

To speak the truth is always the best policy; this I maintain to be the safest course in life.

WOMAN.

Of all wild beasts on earth or in sea, the greatest is a woman.

SOCIAL LIFE.

How pleasant is life if you live with those with whom you think you should live, and not merely for yourself!

THE WICKED.

If we were all eager to resist the man who inflicted injury, and were ready to bring aid, regarding any injury done as done to ourselves, and if we were prepared to assist each other, there would be less mischief done by the bad; for when these men found that they were watched and properly punished, they would either be few in number, or would disappear altogether.

FRIENDS.

Not only are the riches of friends common property, but their wisdom and forethought also ought to be so.

HEIGHT OF IMPUDENCE.

The man who cannot blush, and who has no feelings of fear, has reached the acme of impudence.

IGNORANCE.

There is nothing more daring than ignorance.

UNFORESEEN MISFORTUNE.

Ah me! unforeseen misfortune is apt to bring on madness.

GOOD HEALTH.

In good health we are ready to give advice to the sick.

LOVERS.

The wrath of lovers lasts only a short time.

LAW.

Law when kept is nothing else but law; whereas law broken is both law and executioner.

LAW.

If thou respect the law, thou wilt not be terrified by the law.

LAW.

Do not first suffer the punishment of the law, and then learn its nature; but, before thou suffer, anticipate it by thy respect for it.

FALSEHOOD AND TRUTH.

It is better to prefer falsehood to truth when it is injurious.

MUTUAL ASSISTANCE.

If we gave assistance to each other, no one would be in want of fortune.

WICKEDNESS.

Wickedness does not act according to reason.

ABUSING THE GOOD THINGS OF LIFE.

For he who abuses the good things of life is a senseless being and not happy.

INJURE NO MAN.

Do injury to no man.

THE PLAUSIBLE.

The plausible has sometimes greater power than the truth, and more influence over the multitude.

A LIE.

Every wise and honorable man hates a lie.

So Proverbs (xiii. 5)—"A righteous man hateth lying."

A LIAR.

No liar long escapes discovery.

So Proverbs (xix. 5)—"He that speaketh lies shall not escape."

THE PURSE-PROUD.

When thou seest a man elated with pride glorying in his riches and high descent, rising even above fortune, look out for his speedy punishment, for he is only raised the higher that he may fall with a heavier crash.

WHO KNOWS THE FUTURE.

The proud and supercilious are like fools when they say, "I shall think of it by and by;" for since thou art mortal, how dost thou know that thou wilt have time to consider anything, miserable even in the midst of prosperity? For thy fortune, of its own accord, even while thou sleepest, sometimes is improving, and again goes to wreck.

THE MOTE IN OUR BROTHER'S EYE.

No one sees his own faults, but is lynx-eyed to those of his neighbor.

So Luke (vi. 41)—"And why beholdest thou the mote that is in thy brother's eye, but perceivest not the beam that is in thine own eye?"

CONSCIENCE.

The man who is conscious to himself of crime, even though he be of the boldest nature, becomes a coward.

So Shakespeare ("Hamlet," act III, sc. 1)—

"Thus conscience does make cowards of us all."

SILENCE.

Nothing is more useful to man than silence.

A WORD SPOKEN.

It is as easy to draw back a stone thrown with force from the hand as to recall a word once spoken.

GOODNESS OF DISPOSITION.

How sweet is goodness of disposition when tempered with wisdom!

GOODNESS OF DISPOSITION.

By Minerva, goodness of disposition and honesty of character are happy possessions and a wonderful provision for life. Conversing with such a man, even for a short time, I become well inclined to him. Some will say, in opposition to this, that it is eloquence, particularly of the wise, that inspires confidence. Why, then, do I curse others who are equally eloquent? It is not so, but it is the character of the speaker, and not merely his words, that persuades us to feel confidence in what is said.

THE ENVIOUS.

The envious man is an enemy to himself, for his mind is always spontaneously occupied with its own unhappy thoughts.

ENVY.

O young man, thou dost not seem to me to be aware that everything is deteriorated by its own imperfections, and that what hurts comes from within. Thus rust corrodes iron, if thou rightly

consider the matter; the moth eats away the garment; the worm gnaws the wood. But of all the ills of life, the worst is envy, which has done, will do, and does, most mischief,—the base attendant of an impious soul.

SLANDER.

Whosoever lends a greedy ear to a slanderous report is either himself of a radically bad disposition, or a mere child in sense.

SILENCE.

O boy hold thy tongue, silence has many advantages.

COUNTRY LIFE.

The life of those who live in the country possesses pleasures, comforting the sorrows and annoyances of man with hope.

LISTEN BEFORE DECIDING.

He who condemns before he has heard clearly the case is himself a bad man, ready to believe ill of his neighbor.

IMPUDENCE.

There is no better provision for life than impudence and a brazen face.

WISDOM COMES NOT FROM YEARS.

It is not hoary hairs that bring wisdom; but some have an old head on young shoulders.

PEACE AND WAR.

Peace gives food to the husbandman, even in the midst of rocks; war brings misery to him, even in the most fertile plains.

A BARREN COUNTRY.

The country which is cultivated with difficulty produces brave men.

WOMAN.

Where are women, there are all kinds of mischief.

AN ATTACHED SERVANT.

When one has got an attached servant, there is no nobler possession on earth.

WIFE AND CHILDREN.

To have a wife, and to be the father of children, brings many anxieties to life.

A WIFE IS A NECESSARY EVIL.

To marry a wife, if we regard the truth, is an evil, but it is a necessary evil.

A HOUSE WITHOUT AN HEIR.

The man who has abundance of this world's riches, and is without an heir to inherit them, is to be pitied.

A FATHER.

It is not difficult to know a father, for he loves much; is also irritated at the smallest faults in those he loves.

A FATHER.

How delightful is a father, gentle and cheerful in his manners!

BROTHERS.

How pleasant a thing it is for brothers to dwell together in unity!

So Psalms (cxxxviii. 1).—"Behold, how good and how pleasant it is for brethren to dwell together in unity!"

FOLLY OF PRIDING ONESELF ON HIGH BIRTH.

My high birth suffocates me. If thou love me, mother, thou wilt not on all occasions quote my high rank; it is those only who have no peculiar good in their own nature who have recourse to splendid monuments and their noble birth, and who count up all their ancestors who have preceded them. But thou canst not see nor name a man who has not had ancestors. For how otherwise could they have come into existence? Those who are not able to name them, from change of country or want of friends, why are they less noble than those who can enumerate them? He who is by nature good and virtuous, though he be a blackamoor, is noble-born. Is some Scythian a rascal? Yet was not Anacharsis a Scythian?

THE WELL-BORN IN ADVERSITY.

Those who have been well born, and honorably brought up, though they have fallen into adversity, ought to pay regard to the world's opinion.

TRUE RICHES.

It is the mind that ought to be rich; for the riches of this world only feed the eyes, and serve merely as a veil to cover the realities of life.

THE WIFE OUGHT TO GIVE WAY TO THE HUSBAND.

The wife ought to play the second part, the husband ruling in everything; for there is no family in which the wife has had the upper hand that has not gone to ruin.

HAPPINESS AND PAIN EQUALLY DISTRIBUTED.

There are men who seem to the world around to be happy; but, inwardly, men are very much alike.

AN OLD WOMAN.

It is much worse to irritate an old woman than a dog.

SANITARY LAWS.

The plague dwells where the sanitary laws are neglected.

THE MALICIOUS.

When a malicious man puts on a kind and agreeable manner, it is a mere trap set for his neighbor.

TITTLE-TATTLE.

There is nothing so pleasant to men as to talk of the affairs of their neighbors.

VINE NATURE.

the essence of the Divine
impious, wishing to know
realed.

TIATED BY A PURE HEART.

sacrifices of numerous bulls
Jupiter, of any such things,

MOSCHUS.

ED ABOUT B.C. 210.

He poet of Syracuse, lived
third century B.C., of whose
now little more than that he
and was acquainted with the
chus. Theocritus was his
inferior to that poet in sim-

IFULNESS OF LOVE.

peak the same as he thinks;
but, if he be enraged, he is
ever telling the truth. Willy
he beguiled.

AVE, AND THE LEARNED LIE
BEGOTTEN.

the mallows have died in a
a parsley, or blooming crisp
bloom another year. But we,
the learned, soon as the hand
ur eyes, unheard of, in hollow
long and endless slumber, to
on too in the earth will be

buried with the silent dead; but it has appeared
good to the nymphs that the frog should croak for-
ever. Yet I do not envy him: for 'tis no pretty
song he sings.

In Job (xiv. 7) we find—"There is hope of a tree, if I be cut
down, that it will sprout again, and that the tender branch
thereof will not cease. Though the root thereof wax old in
the earth, and the stock thereof die in the ground; yet through
the scent of water it will bud and bring forth boughs like a
plant. But man dieth and wasteth away: yea, man giveth
up the ghost, and where is he?"

Spenser says—

"Whence is it that the flow'ret of the field doth fade
And lieth buried long in winter's vale?
Yet soon as spring his mantle hath displayed,
It flow'reth fresh, as it should never fall,
But thing on earth that is of most avail,
As virtue's branch and beauty's bud,
Reliven not for any good."

A BIRD OVER HER YOUNG.

As when a bird bewails her callow brood as they
perish, which, still young, a fierce snake devours
in the thick bushes, while she, kind mother,
hovers over them, shrieking wildly, yet is not able,
I ween, to aid her children; for she, in truth, her-
self is in great dread to come nearer to the cruel
monster.

Virgil (Georg. iv., 512) has imitated this very closely—
"As the sad nightingale under the shade of the poplar be-
wails the loss of her young, which a hard-hearted ploughman
has found unfledged in her nest and carried off, while she
laments the night long, and, sitting on the branch, renews
her piteous song, and fills far and wide the woods with her
mournful complaints."

WEEPING.

But thou meltest away like water, weeping both
at night and as many days as are given by Jove.

Thus in Joshua (vii. 5) we find—"Wherefore the heart
of the people melted and became as water;" and in Psalms
(xxii. 14)—"I am poured out like water; my heart also in the
midst of my body is like melting wax;" and Psalms (lxxii. 7)
—"Let them melt away as waters which run continually."

NICOSTRATUS.

FLOURISHED ABOUT B.C. 380.

NICOSTRATUS, the youngest of the three sons of
Aristophanes, was also a comic poet; the titles of
nineteen of his plays have come down to us.

A CHATTERER.

If to speak without ceasing, and much and
quickly, were the sign of sense, the swallows would
be regarded much wiser than we are.

NO MAN HAPPY IN EVERY RESPECT.

"No man is happy in every way." By Minerva,
beloved Euripides, thou hast described human
life in one verse.

OLD THINGS BECOME NEW AGAIN.

Old things become new again in course of time
There is nothing more difficult to please than
Time. The same things never continue to please
this god.

POVERTY.

Dost thou know that freedom of speech is the arms of poverty? If any one lose that, he has thrown away the shield of life.

PHARECRATES.

OLD AGE.

O old age! how burdensome and grievous everywhere art thou! only not in one thing; for when we fail in strength and power, thou teachest us at that time to use our understanding with wisdom.

PHILEMON.

BORN ABOUT B.C. 360—DIED B.C. 262.

PHILEMON, a Greek dramatist; who stands next to Menander among the poets of the new comedy, was the son of Damon, and a native of Soli, in Cilicia. He flourished in the reign of Alexander, a little earlier than Menander, whom, however, he long survived, and spent his life at Athens. His career seems to have been singularly prosperous. Though inferior to Menander, he was a greater favorite with the Athenians, and often conquered his rival in the dramatic contests. He continued to write till he had produced ninety-seven comedies. He died, it is said, from excessive laughter at a ludicrous incident.

NATURE OF MAN.

How radically bad is the nature of man! for otherwise he would stand in need of no laws to restrain him. Dost thou think that he differs in any respect from other animals? In nothing certainly, but in figure. Other animals are bent; but man is a wild beast upright in form.

OUR EVILS FOUND LIGHT WHEN COMPARED WITH THOSE OF OTHERS.

If thou only knowest the evils which others suffer, thou wouldest willingly submit to those which thou now bearest.

HOW SELDOM MAN OBTAINS HIS WISHES.

If we were all to perish who did not succeed in obtaining what we wished, all mankind would die.

TEARS.

A. If tears proved a remedy for our misfortunes, and if he who wept always ceased to grieve, we would buy tears with gold. But, alas! our affairs are in no way influenced by tears, pursuing their own course whether we weep or not. What wilt thou do, then? B. I am in no way influenced by such thoughts; for grief, like a tree, has tears for its fruit.

ADVICE.

It is easy for a man to give advice to his neighbor; but to follow it oneself is not so easy. As a proof of this, I have known physicians lecturing their patients most eloquently on the benefits of abstinence; then, if they are themselves overtaken by disease, doing the very same things which they would not allow their patients to do. Theory and practice are very different.

THE HUSBANDMAN.

The husbandman is always to be rich the next year.

MAN AND OTHER ANIMALS CONTRASTED.

Why, pray, did Prometheus, who, they say, formed us and all other animals, give to each of the beasts his own peculiar nature? All lions are brave, whereas all hares are timid. Then, as to the foxes, one is not cunning and another simple in its nature; but if thou wert to collect three myriads of foxes, they would all have the same nature and the same habits. With man it is different; whatever number of persons there are, the same will be found the number of minds and of characters.

THE JUST MAN.

The just man is not he who does no man an injury, but he who, being able to inflict it, does not wish to do so; nor yet is it the man who has abstained from seizing petty gains, but who determines not to lay hold of great possessions, when he might do so, and might hold them with impunity; nor is it the man who observes all these things, but who, endued with a noble and ingenuous disposition, wishes to be just, and not merely to seem so.

THE FOOL AND THE WISE MAN.

The man who never utters a word of sense consider to be tedious, even though he only give forth two syllables. The man who speaks with prudence, do not think him to be tedious, though he speak much and long. Take Homer as a proof of this: he writes myriads of words, yet no one ever called Homer tedious.

THE SNAIL.

How ingenious an animal is a snail, by God! When it falls in with a bad neighbor, it takes up its house, and moves off; for it dwells without anxiety, always flying the bad.

THE DIVINE NATURE.

Believe that there is a God, worship Him, but do not inquire too curiously into His essence; for thou wilt have nothing for thy trouble except the labor of inquiry. Do not care to know whether He exists or not; worship Him as if He existed, and were present.

A SLAVE.

Though a man be a slave, he is the same flesh as thyself; for no one has ever been born a slave by nature; but Fortune subjected his body to servitude.

ANGER.

We are all mad when we are in a passion; for it is a difficult task to restrain anger.

BYGONE EVILS.

How pleasant it is to think of former evils! for if I had not then been in difficulties, I would not now be in joy.

THE DIFFERENCES OF MEN.

In this thing one man is superior to another, that he is better able to bear adversity and prosperity.

WHAT WE OUGHT TO PRAY FOR.

I pray, first, for good health; then, for prosperity; thirdly, for happiness; and, lastly, to owe no man anything.

So Romans (xiii. 8)—"Owe no man anything."

ANTICIPATION OF EVIL.

Grief is apt to imagine to itself evils more than double the reality.

A GIFT OF AFFECTION.

Every gift which is given, even though it be small, is in reality great if it be given with affection.

HONOR YOUR FATHER AND MOTHER.

Before all things, pay respect to thy parents.

So Exodus (xx. 12)—"Honor thy father and mother."

AN AFFECTIONATE FATHER.

A father is dear if he treat affectionately his children.

THE SWALLOW.

O woman! it is the swallow which announces the spring.

GOD.

A. Tell me what thou understandest by God.
B. The Being who sees all things, and yet is seen by none.

THE DEAD.

Dost thou think that the dead who have enjoyed the good things of this life have escaped the notice of the Divinity, as if they were forgotten? Nay, there is an eye of Justice which sees all things; for we believe that there are two roads to the lower regions, one for the just and one for the impious. For if the just and the impious are to have one and the same road, and if the grave covers them both forever, then thou mayest rob, steal, plunder, and do every mischief thou chooseth. Yet do not be mistaken, for there is a place of judgment below, which God the Lord of all shall occupy, whose name is terrible, and which I dare not utter, who gives a long license to sinners.

PHILIPPIDES.

FLOURISHED B.C. 335.

PHILIPPIDES, one of the principal writers of the new comedy, who flourished B.C. 335, and is said to have written forty-five comedies. He is said to have died at an advanced age from excessive joy at having conquered unexpectedly in a contest with other poets.

TO COMMIT A FAULT.

When thou hast committed some fault, be glad that thou hast failed, for it is chiefly in this way that the becoming is preserved.

DIFFERENCE BETWEEN SAYING AND DOING.

It is not difficult for one feasting to say to another in a sorry plight, "Don't be miserable:" it is not hard to find fault with a boxer fighting, but it is no easy matter to fight: there is a great difference between saying and doing.

MAN IS BORN TO TROUBLE.

When it has happened to thee to be unfortunate, master, remember the saying of Euripides, and thou wilt be more easy—"There is no man who is happy in every way." Then imagine thyself to be one of the great crowd of mankind.

TIME.

Time, the common physician, will heal thee.

PHILISCUS.

FLOURISHED ABOUT B.C. 400.

PHILISCUS, an Athenian comic poet of the middle comedy, of whom little is known.

THE BED.

The bed usually possesses powerful reasons of persuasion to obtain what one wishes.

NOT EASY TO GAIN WITHOUT LABOR.

O fool! it is not with ease that one can get without exertion the possessions of those who exert themselves.

PINDAR.

BORN B.C. 522—DIED B.C. 442.

PINDAR, the greatest lyric poet of Greece, was a native of Boeotia, born either at Thebes, the capital of that country, or at Cynoscephala, a village in the territory of Thebes. We know very little of his private history, but he belonged to one of the noblest families of his country. He was sent by his father to Athens, where, under the celebrated dithyrambist, Lasos of Hermione,

he learned music, dancing, and all the mysteries of the chorus requisite for his training as a lyric poet. He also attended the school of Agathoules and Apollodorus. Between the age of twenty and twenty-two Pindar began his professional career as a poet, but in the great events that took place in Greece during his time, Pindar seems to have taken no share.

WATER AND GOLD.

Water is the best of all things: gold, like a blazing fire that gleams conspicuous from afar in the night, shines prominently amidst lordly riches.

POETICAL FICTIONS.

Truly many things are wonderful: and it is not unlikely that in some cases fables decked out in cunning fictions beyond the truth give false accounts of the traditions of man. But Poesy, that smooth enchantress of mankind, by causing credit to be given to these myths, oftentimes makes the incredible to appear credible: the rolling years, however, are the surest test of truth. Now it is wise for man to speak nothing unseemly of the gods, and thus he will be free from guilt.

SLANDERERS.

Oftentimes slanderers get no good for their pains.

GOD IS NOT TO BE DECEIVED.

If a man expects that his deeds will escape the all-seeing eyes of God, he is mistaken.

LIFE NOT TO BE PASSED INGLORIOUSLY.

A danger that is great does not allow man to be a coward. Since death is the fate of all men, why should we sit in the dark, and spend to no purpose a nameless life, taking no part in any glorious deeds?

DIFFERENCES IN MANKIND.

Some are great in this, others in that; but the highest point of glory is reached in kings.

WHAT IS DONE CANNOT BE UNDONE.

Of deeds that have been done, whether rightly or wrongly, not even Time, the sire of all things, can annul their accomplishment; yet oblivion may come with prosperity. For by success a rankling sore is got the better of and put an end to, when kind Heaven causes happiness to spread from far.

OUR FUTURE LOT UNKNOWN.

There is no appointed term to men for their death; nor do we know when we shall pass through a quiet day, the child of the sun, with never-failing good; for currents run now this way, now that, bringing both pleasures and sorrows to mortals.

WEALTH WITH VIRTUE.

It is wealth, when adorned by virtues, that brings the attainment of our different aims, suggesting to the mind a deep care for them, a conspicuous star, the brightest lamp to men.

THE WICKED PUNISHED IN THE INFERNAL REGIONS.

But he who possesses wealth is well aware of what is in store for him,—that the guilty souls of those who die here have to dree their penance in another life,—for there is one beneath the earth who judges the crimes committed in this empire of Zeus, passing sentence by a hateful constraint.

THE GOOD IN ELYSIUM.

But the good, enjoying eternal sunshine night and day, pass a life free from labor, never stirring the earth by strength of hand, nor yet the waters of the sea in that blessed abode, but with the honored of the gods, all such as took pleasure in keeping their plighted faith, spend a tearless existence, while the impious have to endure woes too horrible to look upon.

THE MAN OF GENIUS.

That man is a true poet who knows much by inherent genius, while those who have acquired their knowledge, loquacious, like crows, chatter vainly against the divine bird of Zeus.

DEEDS OF VALOR WITHOUT RISK.

Deeds of valor without risk are unhonored either among men or in hollow ships; whereas many speak of it if a noble action has been done with labor.

UNCERTAINTY OF HUMAN LIFE.

Countless mistakes hang about the minds of men; and it is a difficult thing to discover what now and also in the end is best to happen to a man.

MAN TURNED FROM HIS PURPOSE.

Now it is respectful obedience arising from forethought on which the merit and success of men depend; but it sometimes happens, in an incomprehensible way, that a cloud of forgetfulness comes over the mind, and causes the right way of doing things to be unattended to, and to pass from the memory.

THE UPS AND DOWNS OF LIFE.

But at one and the same point of time different breezes go rapidly in different directions.

VARIOUS FORTUNES OF MEN.

Still different blessings come to different people, and many are the roads to fortune by the favor of the gods.

TO REPROACH THE GODS IS WISDOM MISAPPLIED.

To reproach the gods is wisdom misapplied.

WHAT COMES BY NATURE IS THE BEST.

That which comes by nature is in all cases the best, though many men have tried to gain glory by taking lessons in valor. Whatsoever is done without the aid of the god had better be kept quiet. For there are different roads to glory, one better than another, yet one training will not lead us all alike. Perfect skill is difficult to attain.

NATURE REMAINS EVER THE SAME.

For their inborn character neither tawny fox nor roaring lions are likely to change.

FUTURITY UNKNOWN TO MAN.

No man on earth has ever yet found any sure passage from Heaven about his future success. For the indications of coming events are impervious to mortals. Many things befall men contrary to expectations, often against their wishes; while others, meeting the stormy waves of woe, have in the twinkling of an eye exchanged their deep sorrow for some substantial good.

MAN PROPOSES, GOD DISPOSES.

At present I live in hope, but the issue is in the hand of the gods.

ERUPTION OF ÆTNA.

From it are belched out of its abysses the purest jets of unapproachable fire. By day the streams of lava pour forth a lurid torrent of smoke; but in the dark the ruddy flame, rolling in volumes, carries rocks into the deep, level sea, with a fearful roar.

JOY OF MARINERS RETURNING HOME.

And to seafaring men, what first cheers them on their departure is a favorable breeze for the voyage; for it is expected, too, in the end, that they will obtain a better passage home.

EVERYTHING PROCEEDS FROM THE GODS.

For all the means of mortal valor come from the gods; they make men to be wise, mighty in deeds, and eloquent in language.

ENVY.

For the mind is offended by hearing the constant praise of an individual; and the gossip of the citizens gives secret pain to the mind chiefly when the merit of others is the theme.

ENVIED RATHER THAN PITIED.

To be envied is a nobler fate
Than to be pitied.

TRUTH.

Point thy tongue on the anvil of truth.

THE POSTHUMOUS VERDICT OF PUBLIC OPINION.

The posthumous verdict of public opinion alone shows the life of the dead to historians and poets.

WHAT IS TO BE DESIRED IN LIFE.

The enjoyment of prosperity is what is first to be desired; to be well-spoken, is the next best thing in life; but he who has enjoyed both, and really felt them, has received the highest crown of all.

A BENEFACTOR SHOULD BE REPAID.

It is by the express direction of the gods, as the story goes, that Ixion warns mortals, as he writhes and sprawls on the revolving wheel, "to pay back to one's benefactor, requiting him by kindly returns."

A STRAIGHTFORWARD, PLAIN-SPEAKING MAN.

In every form of government a straightforward, plain-speaking man is most respected, whether it be a despotism, or tumultuous democracy, or where the educated few hold the sway.

WE MUST NOT FIGHT AGAINST GOD.

We should not fight against God.

FOOLS.

But that set of men is the most foolish of all who despise things at home, and feel pleasure at what is far off, pursuing vain objects with silly hopes.

SELF-INTEREST GETS THE BETTER OF WISDOM.

For even wisdom is got the better by self-interest.

ASK OF THE GODS WHAT IS REASONABLE.

It is right to ask of the gods what is suitable to reason, recollecting what is before our feet, and of what nature we are. Do not, my soul, be anxious for an immortal life, but draw only on what is practicable.

GOOD AND EVIL.

The immortals award to mortals a couple of woes with every good. These woes the silly cannot submit to with patience, but only the well-born, who turn the fair side outwards (as we do old clothes).

WISDOM AND FORTUNE NECESSARY TO BE JOINED.

But if any one has found the way of truth by his understanding, his prosperity he must obtain from the gods. Yet there are different currents of violent winds at different times. Man's happiness does not continue long if it be excessive.

"THERE IS A TIDE IN THE AFFAIRS OF MEN."

For the right time of action has a brief limit for men.

WEALTH GIVES INFLUENCE.

'Tis their wealth that gives men their influence, when they have received it from fortune combined with disinterested virtue, and take it to their house as an attendant that finds him many friends.

EXCUSE.

In that he did not take with him Excuse, the child of late-minded Afterthought.

WE ARE CREATURES OF A DAY.

We are creatures of a day; what man is no one can say. Man is but a shadowy dream; and yet, when glory comes to them from Heaven, a bright light shines around them, and a pleasant life attends them.

VARIOUS PARTS TO VARIOUS MEN.

Various parts are assigned to various men, but every one should proceed in a straightforward path, and contend with his understanding. For strength succeeds in action, but mind in counsel in those who naturally foresee the future.

THE MISER.

I care not to keep buried in my hall great wealth, but I would rather enjoy what I have, and be regarded as liberal to my friends, for the hopes of much-toiling men proceed on common interests.

OUR OWN SORROWS.

For a family trouble seizes on every one alike, though for another's woes the heart soon ceases to grieve.

INBORN MERIT.

'Tis by inborn merit that a man acquires pre-eminence; whereas he who acts by precepts is a man of naught, swaying from this side to that, never setting down a firm, well-directed foot; much he attempts, but to little purpose.

MIRTH THE BEST PHYSICIAN FOR MAN'S TOILS.

Mirth is the best physician for man's toils, when brought to a close. Songs, the wise daughters of the Muses, soothe him by their gentle approach. Nor does the warm water of the bath so soften the limbs as pleasing words set to the music of the harp relieve toil. A poem lives longer than deeds, when by the aid of the Graces the tongue draws it forth from the depth of the heart.

TRUTH NOT ALWAYS TO BE TOLD.

Truth is not always the best thing to show its face; silence is often the wisest thing for man to observe.

DESTINY DECIDES MAN'S ACTIONS.

It is the destiny that is born with man which determines all his actions.

THE RACE OF GODS AND MEN.

There is one and the same race of gods and men; it is from the same mother that we draw the breath of life; but powers wholly distinct separate us, for the one race is naught, while the brazen vault of heaven remains for all time a secure abode to the others. Yet we are in some respects like to the immortals both in mighty intellect and in form; though we are ignorant of the goal that fate has marked out for us to run to, both by night and by day.

PUSILLANIMITY.

But among mortals the one is deprived of success by empty boasting, so another, too much distrustful of his strength, fails to secure the honors that rightfully belong to him, being dragged backward by a spirit deficient in daring.

SEEDS OF LINEAL WORTH APPEAR AT INTERVALS.

The brave deeds of their ancestors are reproduced in men, alternating in generations. Lands of black loam do not continuously give forth their produce, nor will trees bear a rich perfume on every returning season, but only in turns. And thus, likewise, is the human race led on by fate, and the signs that men get from Zeus are not

clear. Yet withal we enter upon proud schemes, and eagerly attempt many enterprises, for we are led on by insatiate hopes, while the currents of events lie far beyond our knowledge.

CUSTOM.

Custom is the sovereign of mortals and of gods; with its powerful hand it regulates things the most violent.

"SUFFICIENT UNTO THE DAY IS THE EVIL THEREOF."

That which is present it is best at all times to look to; for an age of calamities hangs over men, making the path of life to be winding; and yet even these evils are able to be amended, if men enjoy but freedom. A man ought to indulge in good hopes.

PLATO.

BORN B.C. 428—DIED B.C. 347.

PLATO, the celebrated philosopher of Athens, is said to have been the son of Ariston and Perictione, or Potone. His paternal family boasted of being descended from Codrus, and his maternal ancestors traced their descent from Solon. He received instruction from the most distinguished masters of his time in grammar, music, and gymnastics; but he attached himself, in his twentieth year, to Socrates, and from that time was devoted to philosophy. Towards the close of his life he thanked God that he had been made a contemporary of Socrates. On the death of Socrates, he betook himself to Eucleides, at Megara; and through his eagerness for knowledge, he was induced to visit Egypt, Sicily, and the Greek colonies of Lower Italy.

During his residence in Sicily he became acquainted with the elder Dionysius; but soon quarrelled with that tyrant. On his return to Athens, he began to teach in the gymnasium of the Academy, and its shady avenues near the city. His occupation as a teacher was twice interrupted by journeys to Sicily. He is said to have died while writing, in his eighty-first, or, according to others, in the eighty-fourth year of his age.

THE WISDOM OF THE WORLD OF NO VALUE.

The God, O men, seems to me to be really wise; and by His oracle to mean this, that the wisdom of this world is foolishness, and of none effect.

OBEY GOD RATHER THAN MAN.

If you were to offer, as I said, to dismiss me on such conditions, I would exclaim, O Athenians! I regard you with the utmost respect and affection, but I shall obey God rather than you; and, as long as I have life, and am able, I shall not cease devoting myself to the pursuit of wisdom, and warning every one of you whom I happen to meet.

TAKE CARE OF THE SOUL RATHER THAN OF THE BODY.

For I go about doing nothing else than preaching to young and old among you that it is not the duty of man to take care of the body, and of riches, so much as to look after the soul, how it may be made into the most perfect state; telling you that virtue is not acquired from riches, but men derive riches, and every other blessing, private and public, from virtue.

FEAR NOT THEM THAT KILL THE BODY.

For neither Meletus nor Anytus can injure me. It is not in their power; for I do not think that it is possible for a better man to be injured by a worse.

A JUDGE IS BOUND TO DECIDE WITH JUSTICE.

For a judge sits on the judgment-seat, not to administer laws by favor, but to decide with fairness; and he has taken an oath that he will not gratify his friends, but determine with a strict regard to law.

WHAT IS DEATH?

Besides, we may conclude that there is great hope that death is a blessing. For death is one of two things, either the dead may be nothing and have no feeling, or, as some say, there is a certain change and transference of the soul from one place to another. Well, then, if there be no feeling, but it be like sleep, when the sleeper has no dream, death would surely be a wonderful gain. For I should think, if any one having picked out a night on which he had slept so soundly that he had no dream, and having compared all the nights and days of his life with this night, should be asked to consider and say how many days and nights he had lived better and more pleasantly than this night during his whole life, I should think that not only a private person, but even the great king himself, would find them easy to number in comparison with other days and nights. If, then, death be a thing of this kind, I call it gain, for thus all futurity appears to be nothing more than one night. If, on the other hand, death be a removal hence to another place, and what is said be true, that all the dead are there, what greater blessing can there be than this, ye judges?

RETURN NOT EVIL FOR EVIL.

Neither ought a man to return evil for evil, as many think; since at no time ought we to do an injury to our neighbors.

"FROM WHENCE COME WARS AND FIGHTINGS AMONG YOU?"

For nothing else but the body and its desires cause wars, seditions, and fightings.

THE SPIRIT AT WAR WITH THE FLESH.

As long as we are encumbered with the body and our soul is polluted with such an evil, we shall never be able sufficiently to obtain what we desire.

So Matthew (xxvi. 41).—"The spirit indeed is willing, but the flesh is weak."

WISDOM IS THE RIGHT COIN.

That alone—I mean wisdom—is the true and unalloyed coin, for which we ought to exchange all these things; for this, and with this, everything is in reality bought and sold—fortitude, temperance, and justice; and, in a word, true virtue subsists with wisdom.

THE SOUL.

Is it possible, then, that the soul, which is invisible, and proceeding to another place, spotless, pure, and invisible (and, therefore, truly called Hades—*i.e.* invisible), to dwell with the good and wise God (where, if God so wills it, my soul must immediately go),—can this soul of ours, I say, being such and of such an essence, when it is separated from the body, be at once dissipated and utterly destroyed, as many men say? It is impossible to think so, beloved Cebes and Simmias; but it is much rather thus—if it is severed in a state of purity, carrying with it none of the pollutions of the body, inasmuch as it did not willingly unite with the body in this present life, but fled from it, and gathered itself within itself, as always meditating this—would this be anything else than studying philosophy in a proper spirit, and pondering how one might die easily? would not this be a meditation on death?

So 1 John (iii. 2).—"Beloved, it doth not yet appear what we shall be: but we know that, when He shall appear, we shall be like Him; for we shall see Him as He is."

TRANSMIGRATION OF SOULS.

For example, those who have given themselves up to gluttony, sensuality, and drunkenness, and have put no restraint on their passions, will assume the form of asses, and such like beasts. And those who have preferred to lead a life of injustice, tyranny, and rapine, will put on the appearance of wolves, hawks, and kites.

CAUSE OF MISANTHROPY.

For misanthropy arises from a man trusting another without having a sufficient knowledge of his character, and, thinking him to be truthful, sincere, and honorable, finds a little afterwards that he is wicked, faithless; and then he meets with another of the same character. When a man experiences this often, and, more particularly, from those whom he considered his most dear and best friends,—at last, having frequently made a slip, he hates the whole world, and thinks that there is nothing sound at all in any of them.

PUNISHMENT OF THE WICKED.

But when, being borne along, they arrive at the Acherusian lake, there they call upon and entreat some those whom they slew, others those whom they injured, entreating them, they implore and humbly pray that they would allow them to go into the lake and receive them.

So Luke (xvi. 23).—"And in hell he lifted up his eyes, being in torments, and seeth Abraham afar off, and Lazarus in his bosom. And he cried and said, Father Abraham, have mercy on me, and send Lazarus that he may dip the tip of his finger in water, and cool my tongue; for I am tormented in this flame."

THE BODY THE GRAVE OF THE SOUL.

For some say that the body is the tomb of the soul, as being buried at the present time.

WISDOM.

It would be well, Agatho (said Socrates), if wisdom were of that nature that it would flow from the person who was filled with it to the one who was empty, when we touched each other, like the water in two cups, which will flow through a flock of wool from the fuller into the emptier, until both are equal.

DRUNKENNESS.

For from my knowledge of medicine, it has become very clear to me that drunkenness is a bad thing to men, and I would neither myself be willing to drink far on nor advise any one else to do so, especially if they were suffering from a surfeit of the night before.

TO DIE FOR ANOTHER.

As to what Homer said, that a god breathed strength into some heroes, Love furnishes this, produced from himself to all lovers.

Moreover, to die for another lovers alone are ready, not only men, but also women.

MEN OF SENSE CONTRASTED WITH THE MULTITUDE.

For to a man of any mind a few persons of sense are more awful than a multitude of fools.

LOVE MAKES A MAN TO BE A POET.

Each becomes a poet when Love touches him, though he was not musical before.

Shakespeare ("As You Like It," act II., sc. 7) speaks of a lover—

"With his woful ballad, made to his mistress' eyebrow."

THE EFFECT OF LOVE.

For it is Love that causes peace among men, a calm on the sea, a lulling of the winds, sweet sleep on joyless beds. It is he who takes from us the feeling of enmity, and fills us with those of friendship; who establishes friendly meetings, being the leader in festivals, dances, and sacrifices, giving mildness and driving away harshness; the beneficent bestower of goodwill, the non-giver of enmity; gracious to the good, looked up to by the wise, admired by the gods; envied by those who have no lot in life, possessed by those who have; the parent of luxury, of tenderness, of elegance, of grace, of desire, and regret; careful of the good, regardless of the bad; in labor, in fear, in wishes, and in speech, the pilot, the defender, the bystander and best savior; of gods and men, taken altogether, the ornament; a leader the most beautiful and best, in whose train it becomes every man to follow, hymning well his praise, and bearing a part in that sweet song which he sings himself, when soothing the mind of every god and man.

"IF THY RIGHT HAND OFFEND THEE CUT IT OFF."

Since men are willing to have their feet and hands cut off, if their own limbs seem to them to be an evil; nor do they cherish and embrace that which may belong to themselves merely because it is their own: unless, indeed, any one should choose to say that what is good is attached to his own nature, and is his own, while that which is evil is foreign and accidental; since there is nothing else of which men are in love but good alone.

VIRTUE IS FROM GOD.

The virtue that is in us comes not from nature, nor is it taught, but is put in us by the Divinity.

So 2 Corinthians (iii. 5)—"Not that we are sufficient of ourselves to think anything as of ourselves; but our sufficiency is of God."

THE ATHEIST.

Those are profane who think that nothing else exists except what they can grasp with their hands.

So Psalms (xiv. 1)—"The fool hath said in his heart, There is no God. They are corrupt; they have done abominable works; there is none that doeth good."

THE PHILOSOPHER.

Whether a man dwelling in the city is nobly or ignobly born, whether some unfortunate event has taken place to one of his ancestors, man or woman is equally unknown to him as the number of measures of water in the sea, as the proverb goes. And he is not aware of his own ignorance; nor does he keep aloof from such things from mere vanity, but, in reality, his body only dwells in the city and sojourns there, while his mind regarding all such things as trivial, and of no real moment, despising them, is carried about everywhere, as Pindar says, measuring things under the earth and upon its surface, raising his eyes to the stars in heaven, and examining into the nature of everything in the whole universe, never stooping to anything near at hand.

FOLLY OF PRIDE OF BIRTH.

And when they praise nobleness of birth,—how some great man is able to show seven rich ancestors,—he thinks that such praise can only proceed from the stupid, and from men who look merely at trifles; in fact, from those who, through ignorance, are not able to take a comprehensive view of the question, nor to perceive that every man has countless myriads of ancestors and progenitors, amongst whom there must have been myriads of rich and poor, kings and slaves, barbarians and Greeks.

EVIL.

It is not possible, Theodorus, to get rid of evil altogether; for there must always be something opposite to good; nor can it be placed among the gods, but must of necessity circulate round this mortal nature and world of ours. Wherefore we ought to fly hence as soon as possible to that upper region; but this flight is our resembling the Divinity as much as we are able, and this resemblance is that we should be just, and holy, and wise.

So John (iii. 6).—"That which is born of the flesh is flesh."

GOD AND MAN.

God is in nowise in the least unjust, but is as just as possible; and there is no one more like to Him than the man among us who has become as just as possible. It is on this that the real excellence of a man depends, and his nothingness and worthlessness.

So Psalms (xi. 7).—"For the righteous Lord loveth righteousness."

"WHO SHALL DELIVER ME FROM THE BODY OF THIS DEATH?"

Being initiated, and beholding perfect, simple, and happy visions in the pure light—being ourselves pure, and, as yet, unclothed with this, which, carrying about us, we call the body, to which we are bound as an oyster to its shell.

EVERY GOOD GIFT IS FROM ABOVE.
